

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

THE
JOURNAL OF EDUCATION

A Monthly Record and Review.

JANUARY TO DECEMBER, 1902.

VOL. XXIV
NEW SERIES.

LONDON
PUBLISHED BY WILLIAM RICE, AT THE OFFICE OF THE JOURNAL,
3 BROADWAY, LUDGATE HILL, E.C.

Among the Contributors to THE JOURNAL OF EDUCATION may be mentioned :—

DR. E. A. ABBOTT.
 PROF. S. ALEXANDER.
 PROF. H. E. ARMSTRONG.
 PROF. BAIN.
 JANE BARLOW.
 P. A. BARNETT, H.M.I.S.
 DOROTHEA BEALE.
 PROF. BEESLY.
 J. R. BLACKISTON, H.M.I.S.
 F. W. BOURDILLON.
 H. COURTHOPE BOWEN.
 C. S. BREMNER.
 CLOUDESLEY BRERETON.
 DR. J. H. BRIDGES.
 OSCAR BROWNING.
 MRS. DR. BRYANT.
 B. BUISSON.
 DR. H. M. BUTLER.
 PROF. LEWIS CAMPBELL.
 MARY E. CHRISTIE.
 C. COLBECK.
 SIR W. M. CONWAY.
 PROF. CONWAY.
 E. COOKE.
 ALICE J. COOPER.
 SARAH CORBETT.
 F. W. CORNISH.
 J. F. CORNISH.
 DR. COUPLAND.
 CANON EVAN DANIEL.
 DR. CHARLES DAVISON.
 J. D. DUFF.
 W. DYCHE.
 PROF. F. Y. EDGEWORTH.
 H. W. EVE.
 DEAN FARRAR.
 W. A. FEARON.
 E. M. FIELD, H.M.I.S.
 W. G. FIELD.
 DR. J. J. FINDLAY.
 SIR JOSHUA FITCH.
 DR. W. GARNETT.
 M. G. GLAZEBROOK.
 EDMUND W. GOSSE.
 SIR W. R. GOWERS, F.R.S.
 A. P. GRAVES, H.M.I.S.
 MRS. WILLIAM GREY.

PROF. J. W. HALES.
 G. E. HALLAM.
 T. O. HARDING.
 DR. JANE C. HARRISON.
 DR. F. HEATH.
 ASCOTT R. HOPE.
 MISS E. P. HUGHES.
 WILLIAM HUNT.
 SIR RICHARD JEBB, M.P.
 F. G. JENKINSON.
 W. JOLLY, H.M.I.S.
 PROF. LATTA.
 PROF. S. S. LAURIE.
 WALTER LEAF.
 COLONEL LLOYD, R.E.
 SIR OLIVER LODGE.
 J. W. LONGSDON.
 SYDNEY LUPTON.
 HON. THE REV. E. LYTTTELTON.
 DR. D. MACALISTER
 H. MACAN.
 G. C. MACAULAY.
 SIR PHILIP MAGNUS.
 J. S. MANN.
 ANNIE MATHESON.
 P. E. MATHESON.
 A. L. MAYHEW.
 J. E. B. MAYOR.
 DR. KUNO MEYER.
 EMILY MIALL.
 PROF. L. C. MIALL, F.R.S.
 PROF. MINCHIN.
 F. C. MONTAGUE.
 PROF. LLOYD MORGAN.
 E. D. A. MORSHEAD.
 PROF. MURISON.
 G. G. A. MURRAY.
 ALICE OLDHAM.
 T. E. PAGE.
 J. F. PAYNE, M.B.
 PROF. KARL PEARSON.
 WALTER C. PERRY.
 A. PLATT.
 A. W. POLLARD.
 DR. J. P. POSTGATE.
 JAMES G. REID.

JAMES RHOADES.
 PROF. WALTER RIPPMMANN.
 PROF. D. G. RITCHIE.
 C. ROBERTS, F.R.C.S.
 JAMES ROBERTSON.
 SIR HENRY ROSCOE.
 W. H. D. ROUSE.
 JOHN RUSSELL.
 M. E. SADLER.
 DAVID SALMON.
 ARTHUR SIDGWICK.
 PROF. SKEAT.
 G. C. M. SMITH.
 JAMSON SMITH.
 J. HUNTER SMITH.
 G. L. MOORE SMITH.
 W. G. POGSON-SMITH.
 A. SONNENSCHN. ¹²
 PROF. VICTOR SPIERS.
 SIR C. V. STANFORD.
 F. STORR.
 PROF. HERBERT STRONG.
 ESMÉ STUART.
 PROF. JAMES SULLY.
 HON. L. A. TOLLEMACHE.
 PAGET TOYNBEE.
 E. A. TWENTYMAN.
 L. E. UPCOTT.
 DR. VERRALL.
 AGNES J. WARD.
 PROF. JAMES WARD.
 FABIAN WARE.
 DR. F. WARNER.
 H. LEE WARNER.
 PROF. FOSTER WATSON.
 WENTWORTH WEBSTER.
 PROF. A. S. WILKINS.
 HERBERT WILKINSON.
 C. S. WILLIAMS.
 J. A. WILLIS, H.M.I.S.
 ARCHDEACON WILSON.
 G. H. WOLLASTON.
 DR. WORMELL.
 PROF. JOSEPH WRIGHT.
 SIR GEORGE YOUNG.
 HELEN ZIMMERN.

INDEX.

PAGES 1 to 84 are in the January Number ; 85 to 160, February ; 161 to 220, March ; 221 to 288, April ; 289 to 356, May ; 357 to 424, June ; 425 to 492, July ; 493 to 544, August ; 545 to 628, September ; 629 to 700, October ; 701 to 772, November ; 773 to 844, December.

ARTICLES, &c.

Advertisement, An Educational, by S. W., 616.
 Amazing Heurist, The, by G. C. Fry, 320.

THE TEACHING OF EUROPEAN HISTORY. BY E. M. WILMOT-BUXTON	80

OCCASIONAL NOTES.

IN a pamphlet entitled "The Budget Opened," Sir R. Walpole was compared, *à propos* of his forthcoming Excise Bill, to a mountebank opening his wallet of quack medicines and conjuring tricks. "I do not pretend," said the anonymous scribbler who has given a new word to every European language—"I do not pretend to understand the art of political legerdemain." We likewise know that Mr. Balfour is pledged to give "an early and very honourable place" to the forthcoming Education Bill, a more momentous measure than any Excise Bill; we know too what in the opinion of all disinterested experts the Bill should contain, but how our State empiricks will dispense their packets no man knoweth, not even the elect, and it were idle to prophesy. We have a Central Board which reigns but does not govern—a line in *Hazell's Annual* sums up its action: "It has inspected twenty-seven secondary schools." We have under it a Consultative Committee which sat and reported at the beginning of last year—the report is still pigeon-holed. The Local Authorities over whose action the Board is to exercise a general supervision are still to be created or re-created, and all is at a standstill. It may be that, while we

Seem here no painful inch to gain,
Comes silent flooding in the main,

but we can discern no signs of a flowing tide. Rumour has it that Mr. Balfour himself will introduce a refurbished Bill No. 1, with a clause enabling voluntary schools to be aided from the rates. *Absit omen.*

"THE question which underlies the efficiency of our nation as a whole—I mean education—in which we are lagging sadly, and with which we shall have peacefully

Lord
Rosebery's
Speech.

to fight other nations with weapons like the bow and arrow, if we do not progress. We have nothing like a national system, but a great chaos of almost haphazard arrangement."—No public utterance of an English statesman since Mr. Gladstone's Midlothian campaign has been so widely read and commented on as Lord Rosebery's speech at Chesterfield, and it is therefore worth while to give textually his brief reference to education, which is coupled in the same paragraph with housing. Like most of his critics, we welcome back a leader of men who has lain too long in his tent, and, at the same time, regret that he has not given us a more distinct watchword. That Dinos is still king and that from the present chaos a cosmos must be evolved is a commonplace that Sir John Gorst has uttered on a hundred platforms. Is Lord Rosebery the magician who will raise the wind for which the Duke is still whistling? That is the question. Educate in order that you may keep out German-made goods and check-mate American trusts—that does not, we confess, sound to us like a magic spell. Education is an end in itself, and, to the educated man or nation, all else shall be added. That was the gospel of Luther and Pestalozzi, of Froebel and Herbart, and it is faith in that gospel that has given Germany its present pre-eminence.

THE Kent Secondary School Conference has raised its capful of wind to help the Duke's barque along. The Conference, in urging the Government to undertake the organization of secondary education, would have the Local Authority formed from the County Council, with the addition of not less than one-third elected from outside the Council; and, among those elected from the outside, not less than half should be "persons, male and female, who have had experience of teaching in secondary schools," and the Authority should also include persons familiar with the management of elementary schools. These resolutions are naturally framed from the point of view of the secondary teacher, and the Conference has stopped short of pressing the need for one Education Authority. Further recommendations, cautiously worded, suggest that private schools should not be excluded from participation in public money when such schools are filling a gap in the educational provision of the locality; and that the Board of Education should intervene to prevent the establishment of rate-aided schools in competition with private schools already established. It is, no doubt, fair that, as in the case with primary schools, the need for a school should be proved before public money is expended.

To decentralize secondary education means to subordinate it to two interests, that of the teachers of the present (not ideal) primary schools, and that of the devotees of commerce. To the first, education is a profession; to the second, a trick. The first may warp secondary education, of which they are not trained to be judges, to fit that education which they know. The second may give as education what will not educate but stultify. I call for a Central Authority if we are going to make any new beginning in secondary education.

SO writes the Oxford correspondent of the *Pilot* anent Dr. Macnamara's article in the *Fortnightly Review*. From Dr. Macnamara's manifesto, which is discussed on another page, we differ as widely perhaps as does the *Pilot*, but Dr. Macnamara at least makes his meaning clear, while we have not a notion what the *Pilot* is driving at, unless, indeed, he intends by a *reductio ad absurdum* to show that everything is for the best in the best of all possible worlds. First, the N.U.T. are ruled out of court as

The "Pilot"
in a
Balloon.

dwellers in Flat Land ; secondly, the County Councils are despatched as commercials, and, lastly (unkindest cut of all), the Board of Education is passed over as non-existent—"I call for a Central Authority."

THE Association of School Boards have issued, in their official *Gazette*, an exhaustive historical account of the origin, progress, and present position of evening continuation schools. It is unnecessary to mention here that a great part of this document consists of attacks on Sir John Gorst, the new Minute, and the Cockerton judgment. We do not intend to deal with these comments in detail. Their basis is that what Sir John Gorst said in Parliament as regards certain School Board evening continuation schools is proved to be false by the reports of his own inspectors, published in Blue-books signed by himself and the Duke of Devonshire. Copious extracts from inspectors' reports are given. In three-fourths of them the comments (very favourable) refer to groups of schools which are mainly *not* under School Boards, and in all cases the conclusions of the inspectors, that this efficiency (in country districts) is due to County Council organization and County Council aid, are carefully suppressed. Then we have the old Cockerton controversy as to the effect of School Board free evening classes upon polytechnics disposed of upon the *ex parte* statement of Lord Reay. Time after time it has been shown that the increase in the number of students at polytechnics (as shown by the London County Council grants) has been regular and continuous in *trade subjects* only, which are those specially encouraged by the London Technical Board, and in which the School Board schools have never competed. This has been so large as to mark the diminution in lower-grade science, art, and commercial subjects, in which the free evening schools have been able to compete with success. But it is still more disingenuous to quote increases in "student-hours" at schools of art, when it is well known that longer attendance, and not more students, has been the sole cause of this result.

BUT when we come to the tabular matter referring to the present position of School Board evening schools we stand amazed at the audacity of the statements and the inadequacy of the information. There are in England, in towns, 171 School Boards, and in parishes, 2,013. Of these the School Board Association have been able to induce 135 only to give particulars as to how their evening schools have suffered, and how many have been closed owing to the operation of the Cockerton Act and the Minute of last Session. In one county alone, where seven School Boards conduct twenty schools, and where there has been a large increase both in schools and in scholars this winter, we are presented with a return from one School Board only representing two schools. But we will go farther and say that the statement—"the Return supplies ample proof that there has been a large decrease in the number of pupils in *School Board* evening schools"—if intended to imply (as it is) that the Act and Minute have thus handicapped *School Board* evening schools is a *suggestio falsi* of the first magnitude. There has been all over the country a large decrease (some 30 per cent. in many cases) in the *voluntary* evening schools, due to the new rule excluding day-school children ; this rule is absolutely fair as between the two classes of schools, but, as the voluntary schools are more rural, it hits them the harder. It is, however, based on sound educational principles, and must stand. Even this Return, however, biassed as it is, must

admit that "the County Councils (with one County Borough exception) have wisely allowed the School Boards . . . to carry on evening schools much on the lines of the previous year." As in nine-tenths of the rural counties they obeyed County Council rules in the previous year, this was not difficult. We also learn that "there appears to have been, excepting in a few cases, practically no friction."

WE regret to notice a recrudescence of the mischievous activity of the non-county boroughs which wrecked the Bill of 1896. At the October meeting of the Municipal Corporations' Association, the spokesman made a grievous complaint against the Government because, in no case, had they allowed the option of No. 2 Bill of last Session, whereby a non-county borough or urban body might be accepted (with the consent of the Board of Education) as the licenser of every school, in lieu of the County Council, to become operative. As a matter of fact, the Board of Education sent a circular to County Councils before the Act was passed, indicating that only in their default would a minor authority be recognized. Now it is just in this very connexion that the counties have the strongest case. The annual Hobhouse returns show that, as far as continuation schools are concerned, it is the counties, and not the boroughs, which have subsidized them, and that to a very large extent ; and, moreover, this aid has had to be given direct to borough evening schools, or it would have been diverted to other purposes if allowed to filter through Town Council hands. Somewhat violent resolutions as regards the Bill of next Session were passed demanding autonomy for non-county boroughs for all education within their area. Parliament, we are sure, will make it quite plain that secondary education proper is not, except in very exceptional cases, to be provided by the average non-county borough, nor is the Council of such fit to control it. The lower grades of secondary, technical, and primary education, we are sure, the County Councils will be happy to hand over to the various urban bodies, subject to a well considered scheme of county co-ordination.

THE severest blow which the School Board, or *ad hoc*, theory of Education Authorities has yet received has been dealt by the Welsh National Liberal Council. The General Purposes Committee of that body presented a report on education to the annual general meeting. In this it was declared, *inter alia*, that no measure will be satisfactory which does not provide that "educational bodies be directly and solely elected to promote and control education." Mr. Albert Spicer, Mr. Humphreys-Owen, Mr. H. Roberts, and other Welsh members of Parliament arose in their wrath and pointed out that this resolution would upset the Intermediate system, which had been "so conspicuously successful because it had kept out clericalism." Forthwith the resolution was unanimously deleted, and the general resolutions so amended as to cover the whole control of education by the Intermediate Committees and the Central Board. This means that the whole body of Welsh Liberal members will accept the Local Authority of the Government Bill. The *School Board Chronicle* is very angry, and opines that "the Welsh Intermediate school system is in no manner of danger from bodies directly elected." Considering that only a week earlier the Welsh Federation of School Boards had resolved that such (*i.e.*, *ad hoc*) bodies must at once be constituted to control all education (which, of course, includes intermediate), this "no manner of danger" is about the strangest

*Statistics
of Evening
Schools.*

*An
Object-Lesson
from Wales.*

negation of facts we have yet seen, and savours of the "Will you walk into my parlour?" policy. The Welsh members are not to be deceived; the system and the schools are one, and the whole essence and strength of the scheme would be gone if bodies elected on sectarian and clerical issues (we care not of what denomination the elected are) were brought into any kind of intimate relation with the schools.

WHEN the Government pension scheme came into operation, it was reasonable that the London School Board should seek to abolish its own scheme. Long and

The London School Board Superannuation Scheme.

bitter have been the discussions upon the subject. The Board's offer to pay back contributions without interest does not seem to be a generous one; though, if the management has swallowed up the profits, there may, perhaps, be no possibility of more liberal terms. The scheme could only be abolished by the consent of all the subscribers. At last, with strenuous effort, the Board has reduced the number of malcontents to five, and has cut the Gordian knot by dismissing the five teachers from the service of the Board. Their reinstatement, upon fresh conditions, will probably be instantly effected. But, even so, the squabble is not at an end, for one of the recalcitrant teachers is applying for an injunction to restrain the Board from distributing the funds. We are inclined to think that fairness demands that those who wish should remain under the scheme, even if the small number of subscribers should entail some contribution from the ratepayers to carry out its provisions.

THE question of tenure is again coming actively to the front. Both Head Masters and Assistant Masters have been discussing the matter. At present there is no absolute

Tenure and the Consultative Committee.

agreement, nor little immediate probability of such. But the Head Masters' Association addresses a letter to the Board of Education which points to a possible solution of the difficulty. The letter states that, for various reasons, the existing conditions of tenure will undoubtedly be altered in future schemes, and therefore the Association asks permission to lay before the Board reasons why the Consultative Committee should investigate and report upon the question before further steps are taken. This would be an excellent move if the Consultative Committee were a reality. As things are, the Board's treatment has turned the whole affair into a farce. Schoolmasters asked for a Consultative Committee of experts. They have got it. More than a year ago this Committee met—several times: it was admitted, with an air of mystery, that they were considering the question of the registration of teachers. They reported, last February, it is believed. The report remains a secret document; no apparent action has resulted, and the Committee is practically non-existent. If the Duke would make the Consultative Committee a reality, we should like to see the question of tenure referred to it.

WHAT is known as "drill" in many schools is a bore to the boy and cause of loss of temper to the sergeant. Its popularity, and consequent usefulness, is in

Military Drill.

some cases prevented by what is called "punishment drill." In itself, drill may be a most valuable adjunct to school life, especially in the case of town day schools with scanty playgrounds. It produces a better carriage, with resultant increase of self-respect, and makes for improvement in health and morals. We are glad, therefore, to receive

Lord Roberts's letter, in which he suggests that, in schools where the formation of a cadet corps is not found possible, boys over twelve may yet be encouraged to learn elementary drill, under the supervision of the military authority. The Commander-in-Chief calls upon general officers commanding districts to aid in this matter as much as they can. We schoolmasters are men of peace, and rightly so. We do not want to develop the martial spirit. But the glamour of uniform, the assistance of a big organization, and the hope of acquiring a "Morris tube" are useful encouragements to what may be almost called a physical necessity in town day schools.

WE are not impressed with the wisdom of the resolution proposed at the Head Masters' Conference by Mr.

Swallow and Mr. Rutty, to the effect that *in all cases* an appeal should lie from the Local to the Central Authority. We do not know what "all cases" means. The Royal Commission awarded an appeal in certain definite

cases, such as alleged unfair competition of schools, &c. No doubt, certain professional questions, as regards tenure, &c., might also be matters to be thus safeguarded. But, if it means that the distribution of the ratepayers' money by the ratepayers' representatives is to be called in question at South Kensington by every school which thinks it has received £1 or so too little, then the impolicy of the proposal is as marked as its impracticability. During the debates on the Cockerton Act of last Session it was proposed that the Board of Education, and not the County Councils, should have the expenditure of the School Board rate. It was conclusively pointed out by the Government that such a proposal would be entirely alien to the Constitution, as giving a Department power over money belonging to the ratepayers; for this reason the amendment was rejected. Now it is perfectly plain to any man of common sense that no County Council will raise a rate if its allocation is subject to such restrictions. It cannot, we hope, be in the minds of those responsible for this resolution that thus non-local schools will be able to claim, in face of the emphatic declaration of the Royal Commission to the contrary, a share of local rates. If not, Mr. Rutty's attitude, at any rate, is inexplicable, as his school is so entirely non-local that it never has, nor can possibly have, the slightest claim to a share of a local rate—or interference from a local official.

IF there is to be any local option at all in the next Education Bill, it must relate to function and not to constitution, and should affect elementary education only.

Local Option on School Boards.

The Municipal Authority everywhere must be charged with the duty of supply and control over secondary education. But there is no reason why there should not be a transition period during which the secondary body shall "opt" for or against assuming elementary powers. In some of the towns, no doubt, the Authority would prefer to let the School Board go on for another three years at any rate. It might be provided that a poll of the free library nature should be taken in any town where the Town Council resolves to supersede the School Board, and, if the verdict be adverse, the School Board shall have another lease of life. Of course the converse could not hold. Once a School Board is absorbed or extinguished, it is gone for ever. Or the precedent of the Cockerton Act of last Session might be followed, and power given to a Council to license a School Board to continue to supply elementary education for a further period of three years upon terms to be arranged. Naturally a School Board desiring to commit suicide and

extinguish itself in favour of the Town Council should be enabled to do so, and a School Board election might well be fought everywhere on this issue. Doubtless, in the rural counties any kind of *referendum* will be very difficult, and we can see nothing for it but for the County Council to resolve, if it so desire, to take over elementary education, and for its resolution to become operative when approved by the Board of Education.

MR. GILKES complains in the *Times* that its leading article gives a wrong impression as to the attitude of the Head Masters with regard to the teaching of modern languages. The Head Masters were already familiar with Mr. Bell's five methods, and they were so impressed with the completeness of the paper that they thought nothing remained to be said. Further, it is Mr. Gilkes's impression that "in almost all schools able teachers of foreign languages are carrying out in full the suggestions made in the paper, with the full sympathy of all their colleagues." Methinks the Head Master of Dulwich doth protest too much. If all is for the best in the best of all possible worlds, if the Head Masters already know all about modern language teaching, and practise what they know, why should they vote that Mr. Bell's paper be printed and distributed? We advise Mr. Gilkes, as a corrective to his optimism, to read a recent work by a former colleague, which is reviewed in this number. Had he attended the debate of the Modern Language Association on the previous Thursday, he would have learned two things: that experts (and neither Mr. Gilkes nor Mr. Bell would claim to be an expert) are not agreed as to method, and that modern language teachers in public schools are far from being satisfied with the conditions under which they teach. We should be curious to know how many members of the Head Masters' Conference have shown their "full sympathy" by joining the Modern Language Association. Is Mr. Gilkes himself a member?

MR. WHITEHEAD writes an indignant letter to the *Spectator*, protesting against the narrow, short-sighted, illiberal policy and want of enlightenment on the part of the London School Board in issuing a notice intimating that they cannot hold out the assurance of reappointment to teachers who accepted one of the Government posts in South Africa. "Government servants, that is, if accepting a temporary post also under Government, and at no little sacrifice to themselves, may not look forward to reinstatement after a year's laborious work among Boer children in South African camps." Then follows a whole column of irrelevant matter about large-minded conquerors, Boer rebels, leave of absence granted to the heads of normal schools in America, and the educative influence of travel, &c. All this sentiment and rhetoric is pricked by one pointed fact. For the one hundred appointments the Board has received nearly four thousand applications, and Mr. Sadler's difficulty has been to choose among so many good candidates.

MR. ALFRED MOSELY, C.M.G., one of our South African millionaires, has undertaken to defray the cost of a commission of inquiry into foreign methods of commercial and industrial education. A preliminary meeting was held on the 16th, at the Board of Education Office, to settle the scheme of inquiry. Sir John Gorst and Sir George Kekewich were present, and the chair was taken by Lord Reay. It was decided that the commission-

ers should begin their work in the autumn of next year. Whilst applauding Mr. Mosely's generosity, we cannot help thinking that, thanks to Royal Commissions and Mr. Sadler's Reports, we know all we need to know about foreign schools and institutions, and that Mr. Mosely would be well advised to take the hint given by Mr. Glazebrook, and devote a quarter of a million to found a commercial public school, or, if this is too large an order, provide the funds for classes in Russian and Chinese, for which there is a considerable demand among commercial clerks in London.

THE HEAD MASTERS AT CAMBRIDGE.

THE surroundings of the Head Masters' Conference this year were stately and appropriate. The meetings were held in the Senate House; the Vice-Chancellor of the University and the Reception Committee entertained royally in the Hall of Trinity, and, in the late evening, the superb Library, Combination Room, and Hall of St. John's were thrown open to the members of the Conference and their friends in Cambridge. But we are afraid the debates of this august body were hardly up to the level of their surroundings. There was an air of unreality and indifference over the whole of the proceedings, produced, doubtless, by the knowledge that, however a vote may go, its practical result will almost certainly be *nil*.

The first item was the new Education Bill, and it might have been anticipated that so intricate and weighty a matter would have provoked keen discussion and occupied the best part of the afternoon; but the Head Masters regarded Mr. Keeling's pronouncement and Mr. Swallow's rider in the same light as a Yorkshire boy regards the suet dumpling which preludes the roast beef:

Let School Boards, higher schools, and science die,
But leave us still our old nobility

—*videlicet* the grammar schools—so sang our Lord John Manners, and our pedagogic lords purred approval. A Thersites in the *agora* of assistant masters was overheard to mutter: "I wonder whether Keeling ever read Fitch's report on Yorkshire grammar schools to the Endowed Schools Commission."

Dr. Rendall brought forward a motion in favour of the abolition of set books in examinations imposed upon schools by external authorities. But he had not taken the trouble to inform himself of the facts. He did not, for example, seem to be aware that the books set by colleges are in very many cases the same as those set for Little-go or Responsions, or that unseens have for some time been set at Cambridge as an alternative to books in the Little-go. And he gave away his whole case by the strange statement at the end of his speech that it was almost impossible to bring dull boys successfully through the ordeal of an unseen examination.

But the most remarkable feature of the Conference is the immense anxiety it displays that somebody else should do something, and the reluctance it manifests to bind itself to do anything at all. It urges reforms upon the Universities, it endeavours to put pressure upon private schools, it has views about Local Authorities for Secondary Education, from whose jurisdiction its own schools shall be exempted; but it has no mind to set its own house in order. On the second day Mr. Bell read a sound, careful, and laborious paper on "The Methods of Modern-Language Teaching." He cautiously summed up in favour of a system not unlike that of Mr. Siepmann, which he believed would make it possible to teach French and German not only as literary, but also as spoken, languages. Now here was a practical matter. It is no secret that in some of our public schools the modern-language teaching is not perfect; and it might have been expected that the Head Masters would seize an opportunity of discussing what many of them must find a difficulty. There was not one single speaker.

But the next motion was one that concerned the action, not of schools, but of colleges at Oxford and Cambridge, and therefore aroused something as near warmth as is compatible with the attitude of genial indifference that becomes a head master. Mr. Glazebrook proposed that the age of all scholarship candidates should be reckoned from a fixed date—that

they should be required to be under nineteen on the 1st of July. He contended that, at present, boys often, to their own detriment, remain at school till they are nearly twenty. Then uprose Mr. Lyttelton and Dr. James and smote him. It appeared that it was just these aged persons who were indispensable to the discipline of a school, and that it was by their retention that our public-school system had attained that rare excellence that makes it the admiration and despair of the Continental onlooker. Dr. James, looking back on his undergraduate days, could recollect the idleness and wrecked careers of lads who went up to the University at eighteen and a half. For once the Conference was aroused, and Mr. Glazebrook was handsomely defeated. But it is worthy of notice that his motion would merely have effected what is intended by the existing statutes of the colleges. The rise in the age of freshmen is due to the present early date of scholarship examinations. We are loth, too, to believe the Head Masters when they tell us that they could hardly carry on their schools without these boys of nineteen; and we are also of opinion that in the majority of cases the right place for boys of nineteen is not the school, but the University. It is a long and expensive matter preparing for any profession. There is surely no need to lengthen it by a year. We should like, by the way, to know what is Mr. Lyttelton's authority for stating that boys stay longer at school in England than on the Continent. Our impression is that the average age of the *Prima* in a German *Gymnasium* is quite as high as that of the sixth form in an English public school.

Then came Mr. Phillpotts with a motion partly about extorting English from the private school-master, partly about the duty of the public schools to teach it themselves. Mr. Phillpotts talked about the latter half of his motion, the Congress chiefly about the former. Mr. Phillpotts is no mere theorist: he has experimented; he has even made his whole school write a letter on a given subject, and looked over some part of the resulting mass of matter. So exhaustive was his treatment of the subject that the Chairman was compelled to use the guillotine.

Dr. Armour thought masters might set a valuable example by their own grammatical and eloquent speech; and, while his listeners grew pale at the thought, hinted at the painful "records" that might be made by a phonograph in some classrooms. But it may be doubted whether a lesson that was a model of literary form might not lose greatly in vigour and stimulus. Homeliness of speech, and even direct abuse, are not without their usefulness.

Remaining speakers were chiefly concerned with the interesting question whether English deserved "great" encouragement or "more" encouragement in public schools. Some who were satisfied with their own efforts said "great"; others, who were conscious of the shortcomings of their neighbours, said "more," until the Chairman lost count of the amendments, and the motion was finally passed as Mr. Phillpotts had drafted it.

As the *Times* remarked in its leader, the Head Masters' Conference does not take itself very seriously, nor is it taken very seriously by the public. "What are we going to discuss?" one asked of his neighbour in the train to Cambridge, and was answered: "Something about commerce and County Councils and colloquial French; but I haven't had time to study the agenda. The palaver is common form that don't interest me; but it's jolly meeting old friends and making new acquaintances."

PARENTS.

By A SCHOOLMASTER.

AS a parent and a pedagogue combined, I am tempted to take up the challenge that Mr. Andrew Lang threw down some month or two ago in the *Morning Post*, and, in default of a worthier representative of my profession, to write an essay on "Parents whom I have known." I, too, like Mr. Lang and "J. K. S." before him, have sighed for the season when "a boy's eccentric blunder shall not bring success to pass," when head masters shall find some better theme to write to the newspapers about than abuse of crammers or the Henley Regatta or whether the Saturnalia of Lord's shall last two or three days, and turn their minds to the discussion of serious educational problems, one of which undoubtedly is the relation of school-masters to parents.

"Educationist" may be an ugly word, it may have been "defamed by every charlatan," including Mr. Lang's Orbilius, who whopped a boy to death; but it has come to stay, and we can no more get on without it than "pianist" and "publicist" and "socialist"—hybrids which should be no less repulsive to a "purist" like Mr. Lang. Your educationist alone is capable of tackling the parent problem. It was an educationist (though the name was not then invented), no less an authority than Fénelon, who wrote just two centuries ago: "Children belong less to their parents than to the Commonwealth, and ought to be educated by the State. There should be established public schools, in which are taught the fear of God, love of country, and respect for the laws."

Here is a definite theory which reduces the responsibility and at the same time curtails the privileges of parents. In France it has come to be accepted for all classes of society; in England it has been applied since 1870 to the lowest classes, and to these only. Within the last few years the English Government has begun to acknowledge that it owes some duty to the children of the middle and upper classes beyond that of the policeman who sees that they are not robbed of their ancient bequests.

The theory may be right or wrong. I have no intention of here discussing first principles, and my reason for quoting Fénelon was merely to indicate how far the question of parents and schools will take us if we probe it to the bottom. My humbler task is to treat of parents as I have known them, and to draw one or two practical deductions from my personal experience.

First of all, a clear distinction must be drawn between boarding schools and day schools. It is obvious that the relation of the parent to either school is very dissimilar. I began schoolmastering some quarter of a century ago as an assistant in a North Country college, remote from any centre of population and five miles from the nearest railway station. With these surroundings parents in the flesh were almost as invisible as Boers; but they managed to make their existence felt, bombarding me with letters, when I was promoted to be a house master, and sniping me with telegrams. I remember one anxious widow who appeared on the scene to inquire after her only son, who had caught the mumps, and introduced herself to the boy's house master with the startling announcement: "I am the mother of 23." "Thank God," replied Uncle John (so he was familiarly known to his colleagues), "I am not the father." Boys at this school, I must explain, had a number assigned to them on entering for marking their clothes, &c., and the good lady had been informed that, like convicts, they were known by no other appellation.

At the time I used to grumble at the number of letters I had to write; but, as I calmly review the past, I must own that these parents were not, as a class, unreasonable. Not only did I make many life-long friendships, but I learned, by a side-wind, much of the inner life of the school and gained an insight into individual characters which often corrected hasty judgments and saved me from committing acts of gross injustice.

If I may exercise the privilege of age, and address a word of counsel both to my fellow-pedagogues and to parents, to the former I would say: "Deal gently with your parent, and do not snub him, though he may seem to you an ignoramus and a boor; used rightly he will give you many a useful wrinkle." I happened once to be present at a famous trial, in which a parent sought and recovered damages against the head master of a public school for expelling his son for stealing. The head master was compelled, shortly after, to resign, and the school suffered for a time in numbers and reputation. Now it is a fact that all this trouble might have been avoided, if only the school authorities would have allowed the parent to investigate the case for himself. He was told to mind his own business, and not meddle with a *chose jugée*; so, of course, he brought his action.

To parents I would say: "Do not trouble your heads so much about what school you send your boy to; there are at the present moment half a dozen great schools between which I should find it hard to make my election. But make every inquiry you can, and, if necessary, satisfy yourselves by personal inspection, before you fix on a house." In my own old school, which was then as much sought after by parents as Winchester is now, two houses were, the one a pirates' ship, and the other—let me say a second circle of the Inferno. So it is now; and yet

in a fashionable school a house must be scandalously bad not to be full.

From a country boarding school I passed to a London day school, and great was my disillusionment in regard to parents. I had imagined that for every letter I used to receive I should now have a visit from a parent, or at least a request for an interview. The City parent, so I discovered, is a mute, inglorious body, too much occupied in the daytime with his own business or profession to interview masters, and too tired at night to initiate a correspondence. "Characters" were sent home at the end of each term (not monthly as at the boarding school), and in these I might rate the hope of the flock as a lazy loafer or a gay deceiver without producing any ostensible effect. The City parent, like Matthew Arnold's Oriental, "bowed the head and let the storm sweep by." If provoked beyond measure, he addressed, not the accusing angel, the form master, but the head master, who, the chances were, did not know the boy by sight. The theory of this school was to take no cognizance of the parent, so long as he paid the fees. The pupil might lodge where he liked and change his lodging as often as he liked. In another London day school a boy was absent from school for the greater part of a term, and no inquiries were made, on the supposition that he was ill. When he presented himself again and accounted for his absence by a cock-and-bull story of a strange man who had waylaid him and daily robbed him of his luncheon shilling, it was discovered that he was lodging with a small tobacconist in the suburbs. This doubtless is an extreme case, and it may be argued that the system which wholly divorces the home and home-life from the school and school-work is universal in Germany. I can only answer that, from my experience, it is not suited for English boys, and I hope it will never be adopted in England. Better the opposite extreme, as at Harrow, where home-boarders were ruled by Dr. Butler with a rod of iron, and both parents were not allowed to be absent from home at the same time.

At University College School an excellent plan was initiated by Mr. Eve for establishing a *nexus* between the home and the school. Each pupil on entering was assigned to one of the senior masters, who acted as his "tutor" for the whole of his school course. The tutor stood *in loco parentis*, kept a general eye on the boy's conduct and progress, guided him in his choice of studies, heard complaints against him from other masters, and communicated when necessary with the parents. These functions are generally supposed to be the prerogative of the head master; but it is obvious that in a school of five or six hundred boys they cannot be effectively exercised without delegation of authority.

I once asked the head master of a famous day school whether he was not much pestered by parents. "At first," he replied, "I was; but I soon taught them to know their place. I remember, in early days, a parent coming to me to complain that his boy was not taught tots and double entry. I answered him: 'In this school, Mr. Jones, we profess to turn out scholars and gentlemen. If you wish your son taught how to sand your sugar and water your tobacco, you have come to the wrong shop. Good morning!'"

My friend is given to speaking in parables, and I feel sure that these were not his *ipsissima verba*, but he stoutly maintained that in framing or modifying the curriculum of a school the parent should have neither part nor lot. "Greek," he held, "is good for all boys, and all my boys shall learn Greek. If parents think otherwise, let them go elsewhere."

The opposite theory prevails at University College School, where, according to the prospectus, the parent pays his money and takes his choice of subjects; and, if we have to elect between the two extremes, there seems good reason for preferring the latter. Parents may know nothing of pedagogics—they know at least as much as public-school masters—and, if they prefer modern languages to classics, it is monstrous that classics should be thrust down their throats; that an ancient grammar school in the centre of a manufacturing district should carry on the *trivium* of the middle ages.

If modern sides are still in the cold shade, the fault, in the last instance, lies with parents. Mr. Lang gives us some delightful stories of meddlesome parents. My complaint, as a school-master, is that they have not meddled enough; that they have been too meek; that, in the case of modern studies, they have been given a stone for bread and have swallowed it like ostriches.

There is, I believe, still in existence a Parents' Society for the propaganda of Froebelian ideas. Will no one start a Parents' Society whose aim shall be to modernize our school curricula, to insist that all masters shall be trained, and that head master-ships shall no longer be monopolized by clerics and classics?

A PAGE FROM A TEACHER'S DIARY.

MARCH 4, 1901.—To-morrow is the day for the Nature lesson. What subject shall I take? What a worry to me is that resolution of mine, never to take any subject which I cannot illustrate by actual specimens! Is it stupid to be so perverse? The walls of the class-room are covered with diagrams illustrating both the plant and the animal world—is it great folly not to use them? My teaching conscience says "no"—why use pictures when you can get the actual thing? No, I will have no pictures, no illustrations. Well, then, there is the school museum—surely something can be found there. Again no; the school museum has its drawbacks; indeed, it is a snare and a delusion. A useful cupboard it may be in which to store collections and curiosities, but, after all, the things there are *dead*—surely a drawback when one wishes to interest children in *life*. But, at the beginning of March, what can we find? I gaze out of the window and wonder. There, on the lawn, I see a beech tree—it looks bare, dead, and uninteresting; but I know it is *not* uninteresting. I decide at once. The children shall spend thirty minutes examining a bare beech twig.

It is a relief to have decided upon a subject. I must just get up my lesson a little and consider how best to treat it. What do I need in order to prepare this lesson satisfactorily—a pile of books? No, thank heaven! only a couple of ordinary pins. So with these simple tools I set to work to dissect a bud. I am convinced it will be absolutely my own fault if this is not an interesting lesson. I shall simply provide the children with beech twigs and let them exercise their original right of research. When the lesson is over I shall be disappointed if each child has not got an idea of a winter bud, of the folding and protection of the leaves. I shall also be greatly disappointed if these boys and girls are not anxious to look for other buds on other trees. I wonder if I am too enthusiastic, too hopeful, when I think that perhaps they may be interested in buds for ever and ever. At any rate, I think, if we set to work in the right way they will get hold of something which they can never forget; and it is a great satisfaction to know that it is something worth remembering—

March 5.—The "beech bud" lesson is over. How did it work out? What was the success? There were some thirty to forty children present, boys and girls, ages varying from seven to ten. They looked amused and interested when I entered the room with an armful of twigs. A piece of foolscap had been placed on each child's desk, as I have found by experience that children work more neatly and see things more satisfactorily if they have their specimens on white paper rather than on dirty desks. The paper indicated possession, and they looked anxiously for the moment when they should each have a twig. Poor little eager things, they had not long to wait. I distributed the specimens at once.

Then we set to work. Naturally, the first question was: "What is it that I have brought you this morning?" We were not long in arriving at the fact that we were about to examine the twig of some tree. What tree did not matter for the moment, as I did not then wish to teach them the names of trees, but the structure of buds.

Having arrived at the fact that we each had before us the twig of some tree, the next point was to discover what was on that twig. The questions and answers were something like this:

Q. "Look carefully and tell me if you can find anything growing on the twig."—A. "Yes—things."

Q. "What kind of things?"—A. "Brown, pointed things."

Then I made a rough sketch of a beech twig on the board, to make sure that we were all looking at the same "brown, pointed things." "Now what are these things?" There was an absolute silence, no child venturing to give me an answer. The children had never consciously seen such objects before; the idea of buds in the middle of winter never occurred to them.

"You have each got something in your hands. You don't know what it is; I am not going to tell you. How will you set to work to find out?"

An adventurous youth gave me the answer I wanted: "Break it open and look inside." I advised that they should not exactly break it open, but carefully take it to pieces with the help of fingers, pins, and penknives. We spent a little time over this research work, the children exploring entirely for themselves. Knowing that the class had plenty of buds in reserve, I was not anxious that it should be done *in the right way*; only wishful that each child should discover something.

They were soon ready to answer my questions. "Well, what have you found in the brown, pointed thing?"—"Green leaves," said one; "Silky hairs," said another.

I must confess I was a little astonished at the number of questions I had to ask before we arrived at the fact that the brown, pointed things were buds. Of course we had to work from the known to the unknown. "What appeared on the trees in springtime?"—"Leaves." "Where did the leaves come from?"—"Buds." "How long had the buds, which unfold in spring, been on the trees?" This was rather a poser; naturally the children had no idea, and the material before us could not provide an answer. So they rested from their labours while I told them that when the leaves fell off the trees in autumn they left behind them the buds which unfold the following spring; that the tree was as full of bud in December as in May; that all the leaves which would make the tree so beautiful in the springtime were actually there rolled up within the bud all through the winter months.

The next point was: "How many green leaves were there packed up within each bud?" Research work was again resumed. Each child opened another bud: some counted three leaves, some five, some seven. We had arrived at the fact that we were examining buds which had been on the trees all through the winter, and that each bud contained several leaves. Now we were prepared to take a bud to pieces with greater care. This time I told the children exactly what was to be done, and we all set to work together. We removed the scales from the outside of the bud. What were they for? The idea of protection soon presented itself to the children. Then we came to what was an intense delight to them—the tiny green leaves covered with silky hairs. The next point was the folding of the leaves. Why should they be folded? As we removed the green leaves one by one we noted some narrow brownish leaves in among the green leaves. Some of the children who had fairly large buds, and who had taken them to pieces with great care, were able to tell me that there were two of these leaves to each green leaf—protection again.

Now we had got a clear idea of a beech-bud—a number of leaves exquisitely folded in order to take up as little space as possible; protection against winter's cold and damp—first, by a silken covering of hairs, then by delicate scale leaves, then by tough, strong leaves. I provided each of the children with a small piece of green paper, shaped like half a beech-leaf, and asked them to imitate the folding of the leaf. Naturally some were successful and some were not; but all were interested in trying.

Then the class helped me to build up an extremely simple model—a piece of stick served for the axis of the bud, folded green paper for the leaves, strips of brown paper for the stipules, and stronger paper for the outermost protecting scales—very primitive, but enough to impress and make clear the structure of the bud.

I am glad to note that I found this a most satisfactory lesson. It was almost entirely the work of the children; they found out almost every fact for themselves, and the whole beauty of the bud seemed to appeal to them.

Fortunately there was a beech tree growing in the playground; so when the morning school was over we went on a voyage of discovery. I was pleased to see how soon the children found the tree—then I gave them its name.

I think it would be well to take this subject again next week, explaining, or, rather, letting the children discover, the meaning of the scars on the twig; also to have other twigs for comparison. Then, too, when spring comes, we must have a lesson on unfolding buds. The children must see the leaves casting on one side their winter wraps, and straightening out their crumples.

M. S.

FROEBEL UNION CERTIFICATES.

WE understand that some little consternation has been caused amongst teachers in elementary infant schools by the discovery that the new wording of a paragraph in the "Code of Regulations" for 1901 seemed to exclude the Elementary Certificate of the National Froebel Union from recognition under Article 51 (b). As far as we can ascertain, no notice whatever had been given that any such change was contemplated. The Certificate has been recognized for many years, and is held by some hundreds of teachers in elementary infant schools, to meet whose needs is one of its special objects. Nearly one hundred such teachers sat for it in July last. The salaries of many infant-school teachers depend, in part, on their holding the Certificate. We are glad, therefore, to be able to state, on the best authority, that no change is intended; that the new wording was inadvertent, and that the Board of Education will continue to recognize the Certificate under Article 51 (b). Its proper place should be under Article 60 (b), which refers to Certificates in the Theory and Practice of Teaching. But that is another matter. The Certificate is a good one, and evidently fulfils its object of supplying the public and employers of teachers with a satisfactory test of knowledge and skill in dealing with little children; for the demand for it and for the Higher Certificate has grown rapidly and steadily for many years past. In 1887 the number of candidates for the two Certificates was 75. Last year the number was 850, of whom 466 sat for the Elementary Certificate. Of course, the great bulk of these 850 are not teachers in elementary infant schools; but the number of such candidates also has steadily grown, and has reached 100 for the two Certificates in the past year. All's well that ends well; and infant-school teachers may feel themselves secure for the present. But we cannot help wondering how the accident occurred. It is not a printer's error. Can the Consultative Committee know anything about it? There is no expert Froebelian on that Committee.

There is another matter which arises in this connexion. The two Certificates above mentioned are the only ones generally recognized in Great Britain as qualifying Froebelian teachers for their work. At least a year's training is usually required to gain the Elementary, and from two and a-half to three years to gain the Higher, Certificate. In both cases—but more particularly in the second—the Certificate is a severer and a wider professional test than the Certificate of Cambridge or the London Diploma—in the case of the Higher Certificate a much severer professional test. When the forthcoming register is established, on what status are Froebelian teachers to be admitted? The majority of them have a fair general education; but, like the majority of women teachers, the vast majority of them have nothing equivalent to a degree or a University diploma. The same is true of the vast majority of teachers in elementary schools. Is the general education diploma to rule the Register? And are training and a professional certificate to count for nothing? The Register must be a register of teachers if it is to have any real value—not a register of general education merely. A Teachers' Register which omits a large body of highly trained teachers will hardly carry much weight with the public; and Froebelian teachers are not likely to care to come in under the miscellaneous list of teachers of special subjects. They do not teach special subjects. When are we to hear how the Consultative Committee has attempted to solve the difficulty?

COLONIAL AND FOREIGN NOTES.

FRANCE.

France continues the earnest struggle to bring all her citizens under the influence of education. This democratic zeal has already produced good results. The percentage of illiterates in 1854 was, for men, 37.6; for women, 47.4. In 1870 it still amounted to 25 for men and 37.7 for women. But by 1898—the Compulsory Education Act dating from 1882—the figures had fallen to (men) 4.7 and (women) 7.2. A Ministerial circular issued lately urges those concerned to increased effort, so that this proportion may be further reduced. The scholastic commissions to whom the law has entrusted the duty of enforcing attendance at school are to be reorganized. They are required to meet regularly and to keep accurate records, open to the school authorities, of their proceedings. But M. Leygues adds to his in-

structions some home-thrusts at teachers. It is on them, he observes, that attendance mainly depends. The teacher who knows how to win the affection of his pupils and to make them love the school, who works on their parents and explains to these the necessity of education, will always have a good attendance. Recommendations by the *inspecteur d'académie* for advancement or reward must take into account the work done in this sense. Again, school hours and holidays are to be fixed with strict regard to local conditions and the occupations, agricultural or industrial, of the community.

In a perfect world, we grant it, children would flock into the school as gladly as to a puppet-show. But, on the other hand, in a perfect world, the teacher would not be expected to instruct for long hours classes of fifty or a hundred children, and to spend his leisure in expatiating to their parents on the benefits of education. The attendance question, for example, in the East-end of London presents difficulties which, if M. Leygues studied them, would make him very tender even to the teacher of small attractive power. But, perhaps, they manage these things better in France, and dullness never comes there from wretched surroundings or overwork.

If we turn from the French primary to the French secondary schools, we notice a satisfactory increase in the attendance, and, since these are not filled by constraint, we trust that the teachers are duly credited with making the schools lovable. Probably, however, they are only told that parents are now awakening to the value of education as a commercial investment. To whomsoever the growth is due, it is real. When the schools opened last October the new register showed a gain, as compared with the previous year, of 1,607 girls and 2,958 boys, progress being most marked in the district of Paris.

As in America and in England, so in France there is a movement in favour of spelling reform. The nature of the changes proposed will be illustrated if we set them out in the words of their supporters:—“(1) Supprimer toute lettre ne concourant ni à produire un son ni à former les dérivés du mot dans lequel elle est employée, à moins qu'elle ne serve à déterminer le genre et le nombre ou à éviter l'homographie; (2) Remplacer par des lettres vraiment étymologiques celles qui, à tort, sont considérées comme telles.” Hopefully the reformers point to “la circulaire de tolérances orthographiques et de syntaxe édictée par M. Leygues, avec l'approbation de l'Académie”; and, indeed, now that the spirit of indulgence has entered into the Academy, it is not improbable that further concessions to human weakness will receive its sanction. As a consequence, we assume, of the new-born sympathy between France and Russia, the Pedagogical Society of Moscow has been discussing a simplification of Russian orthography, prepared, for its part, to surrender three or four letters of the Russian alphabet and to abolish various diacritical signs. In this way are alliances cemented by pedagogues—to the profit, let us hope, of the world at large.

M. LEYGUES' LAST MINUTE.

The reform of modern language teaching in the *lycées* and *collèges* and State schools in France is now actively engaging the attention of the Minister of Education; and, impressed by poverty of results in relation to the “zeal and knowledge” of the masters, he has written at length to the rectors on the subject. His letter is a brief for what is described as *la méthode directe*. This includes “little syntax and still less philology”; it gives chief importance to oral exercises, conversation, stories, the explanation of modern authors and ordinary texts, and thus enables the pupil to acquire a large vocabulary while training him in pronunciation and the rapid construction of sentences. A paper of detailed instructions is added for the use of masters, and conversation, we learn, is to become a feature of the examination at the end of the present scholastic year. Only simple grammars—those unencumbered with long lists of rules and exceptions—are to be used as class-books; and it is suggested that for languages pupils should, when possible, be grouped, not according to age and form, but according to ability and knowledge. Again, in the interest of the future *commerçant*, as well as the future *savant*, modern languages should not be considered means of culture or mental gymnastics, nor should they be taught in the same way as the classics, for the programme of higher education is not to be encroached on by turning into literature classes lessons primarily meant to serve the practical needs of life. “At present,” says the Minister, “our good pupils do exercises and translations well, but few among them could undertake correspondence without effort, or hold a sustained conversation—a truism painfully realized by those who take to heart the struggles associated with office life in the great commercial centres of England no less than France.”

If there is nothing new in the circular, it is of some interest to know that the French Education Department sets the seal of authority to methods recognized as practically valuable by all, and made effective by some few modern language teachers on both sides of the Channel. The application of these methods to large classes is another matter, and the examinations at the end of the summer term will probably be fruitful in instructive information bearing on the reforms.

The Ecole Secondaire Libre de L'Ile de France at Liancourt, Oise, was opened on October 7, under the direction of M. Pluzanski, assisted by Mr. Arthur Scott and Mr. Hawkins. The building is a *château*

belonging to the Duc de Larochehoucauld, and the grounds cover 200 hectares (nearly 500 acres), over which the pupils have the run. The actual class hours will be the same as in the *lycées*, but time for games and physical exercise will be gained by cutting down the hours of preparation. All pupils will learn English and German colloquially; all masters will teach, and there will be no *pions*. The terms range from £80 to £100, according to age. In the time-table modern languages, including French, take the lion's share. Greek is taught only in three forms out of the ten, and has respectively three, two, and two lessons a week. History has only one hour a week.

UNITED STATES.

The formation of character is now properly recognized as the chief object of education. Our “new-style” pedagogues chant everywhere their version of the Northern Farmer's lay—

“What's a' learning?—the flower as blaws.

But character, character sticks, an' character, character graws.”

Whilst the importance attached to the ethical aspect of education is, as we have said, legitimate, the supposed antithesis between learning and character has led many teachers astray. The story is told—we do not guarantee it—of a famous school that developed character to such an extent that it could no longer fill even its close exhibitions. The error, if committed, was in failing to see that “good learning” is an instrument by which character may be shaped, and, to be quite blunt, it is the special (not the only) instrument that the schoolmaster is paid by the parent to employ. Again, of all branches of learning literature and history are the two most fit for the hand of the character-shaper. But hear this as wisely set forth by a writer in the *American School Review*:—“Character is the resultant of two forces—heredity, which is beyond our control, and environment, which may be modified by human forethought. In the latter lies the possibility of an ethical education. Environment consists of natural surroundings and human associations, both exerting a powerful pressure on character. Of human associations the family is the most influential; but its partial decay has thrown the proper function of the family upon the school; hence the demand for an education having primary reference to character. Such education may be obtained, in a measure, from all subjects, but most readily and effectively from literature and history. This explains their sudden and unprecedented prominence in the schools and in educational discussions. Literature is the most efficient in developing the consciousness and training the character of the individual as such; but, for this very reason, its tendency is subjective and cosmopolitan rather than objective and national. The tendency of history, on the other hand, is in precisely the opposite direction; so that literature and history constitute, in this respect, the educational complements of each other. The content of history, as of literature, is ethical: through it the individual enters into the experience, the ethical heritage, of his race. But, unlike literature, the ideals embodied are objective, and the inspiration is drawn from deeds, not words. History, moreover, is distinctively social—its function is the development of character with reference to life in organized society. It is the foundation of patriotism and good citizenship; it diffuses the ideals which unite the people into one nation; it leads to an understanding of the present organization of society; it gives a clear and sane outlook upon the future, combining conservatism and progress; it causes the individual to feel himself a part of a larger social whole, an instrument of a Higher Power.”

If we write and quote thus, no one will suspect us of disparaging such modern disciplines as manual training, that strong appeal to the practical sense of the Anglo-Saxon race, and Nature-study, with its new and exquisitely elaborated methods. But there is always a danger that what is old and good should be thrust aside by what is fresh. It is not inopportune just now to say that, for character, the story of Leonidas is as formative as a hand-saw or an adze; and that moral and religious lessons can be got from Aeschylus and Milton as well as from the contemplation of bees and flowers.

Columbia University has been distinguishing itself in several ways. First, it has offered to grant free tuition to five young Filipinos recommended by the Government. Secondly, it has given to New York an honest mayor in its esteemed President, Dr. Seth Low, who, in accepting nomination for the office, made education a plank in his platform. The paramount necessity of Greater New York, he said, was that the children of the people should have good schools, and that the teachers of these children should be held in honour. His probable successor in the University, we learn, is Dr. Nicholas Murray Butler, Professor of Philosophy and Education, whose elevation would gratify a host of friends in England.

INDIA.

Ever pleased to record progress in the work of raising the women of India, we extract from the report on the Maharani's Girls' College, Mysore, a paragraph on the education of widows:—“One of the special features of our college is the practical interest shown in helping the unhappy class of Hindu widows, whether children or adults. In

addition to twenty-four widowed girls and women now studying here (fifteen of whom receive scholarships from the Devaraj Bahadur Charity Fund), fourteen have been previously helped through the school, besides seven outsiders, making forty-five in all. The widows in the school are found throughout our classes—from the First Arts down to the infant department. There is no portion of our work which appeals more strongly to our compassion, and is at the same time more hopeful, than this education of widows. These widowed students are not so hampered by family cares or esurient relatives as the others; they have no temptations to discontinue their studies, and they will, we hope, be shining examples of what education and sympathy can do for the once neglected Hindu widow."

As the result of a recent tour through the schools and colleges of India, Dr. S. V. Ramaswamy Iyengar, Government oculist, obtained strong evidence that the eyesight of children deteriorates during the school period. We are not surprised to learn that the conditions under which they work are the cause of the evil. He writes: "Even in the capital of India and in Bangalore I found there were schools which are quite unfit for their purpose. The rooms were so dark, dingy, and cold that I had to conduct my examinations at or near the entrance on the verandah. When I entered some of the rooms they were so dark that it took me some seconds before I could recognize faces. Very few of the rooms in them had light falling on the desks and benches from the left side, and in many of them there were cross-shadows. From the standpoint of the ophthalmologist the ideal school-room is lighted only from the left side or the left and the rear of the pupils. In every properly constructed school-house lighting from opposite sides should be avoided under all ordinary circumstances, since it occasions cross-lights and perverse shadows. The uncouth and irregular postures of the pupils in the classes are occasioned in large part by the struggle to avoid the shadow of the hand, which falls directly at the point of observation. The uncouth postures assumed by boys should be discouraged, since constant stooping forward of the head, as is generally the case with tired-out boys, is the most effective factor in the increase of myopia. The extra hours occupied at home in preparation of school work should be dispensed with, at least in the case of children who are below ten. Parents should see that their children are provided with good lamps, that these are placed at a comfortable distance on the left side, and that they do not go on studying more than two or three hours at a stretch at the most; that the work, be it at books, needle, drawing, or the piano, is done in good sufficient light."

At the educational conference held at Simla in the early part of September, the Viceroy delivered a statesmanlike address, calculated to raise the question of Indian education to a higher plane than that on which it has lately moved. Our space will not allow us to analyze the speech; and we must be content to make a single extract:—"I am one who thinks [said his Excellency] that the Government has not fulfilled its pledges in respect of the elementary education of the people in their own tongues. This has been a mistake for two principal reasons. In the first place vernaculars are the living languages of this great continent. English is the vehicle of learning and of advancement to a small and minor degree; but for the vast bulk it is a foreign tongue, which they do not speak and rarely hear. The second reason is even wider in application. What is the greatest danger in India, and what is a source of suspicion and of superstitious outbreaks, and crime, yes, and also of much of the agrarian discontent and suffering among the masses, is ignorance, and the only antidote to ignorance is knowledge. In proportion as we teach the masses, so we shall make their lot happier; and, in proportion as they are happier, so they will become more useful members of the body politic."

SOUTH AFRICA.

The energetic Superintendent-General of Education for Cape Colony cherishes the kindergarten most assiduously. An exhibition of drawing, painting, needlework, and woodwork is held in Cape Town at the beginning of each year in connexion with the December examinations. Next year it is proposed, says the *Education Gazette*, to extend the scope of the exhibition by including kindergarten work done by children and by kindergarten students and teachers. The articles shown will illustrate toy-making, straw-plaiting, cane-weaving, ball-and-rug-making, and the more familiar branches of kindergarten work. A special feature of the exhibition will be a number of finished objects such as flower-pot stands, small screens and picture-frames, showing the uses to which kindergarten work may be put. The bulk of the work will be selected from that done in the Cape Division schools and by the students of the central classes at the Training Institute. The interest and value of the exhibition, however, would be increased if it included also specimens of work done in other parts of the colony, and, we may add, in the adjacent colonies.

The Pretoria correspondent of the *Times*, under date November 20, gives a full and able account of education in the new colonies, from which we extract the following:—"The number of children under instruction is little, if at all, short of what it was under the late Transvaal Government. In the Orange River Colony there are 8,000 pupils in Government schools. In the concentration camps there are 7,100 on

the registers, a little over 50 per cent. To this we must add five free schools and two fee-paying Government schools in Pretoria, with 853 and 320 pupils respectively, and schools at various other centres—Barberton, Middelburg, &c. The teachers hitherto have been mainly Dutch, and the first consignment of Mr. Sadler's hundred teachers was being eagerly expected. Mr. E. B. Sargent's scheme for the future is to divide the two colonies into provinces, each with a "provincial" school in the most important town. In these schools provision for secondary education and for training pupil-teachers will be made. At the head of these Mr. Sargent intends to put only men with good degrees, and the liberal salaries offered, £500 a year and a house, with £250 a year for an assistant, who may be the head master's wife, is certain to attract as large a field of applicants as presented themselves for the elementary posts. For the rural districts Mr. Sargent proposes to provide peripatetic teachers, who will make their weekly rounds from farm to farm, travelling in apostolic pairs, but conveyed in Cape carts. All secular teaching will be in English, but religious instruction may still be given in Dutch.

GREECE.

A learned society, desiring to render the Gospels intelligible to the uneducated part of the Athenian people, proposed to translate them into the Athenian dialect. The project was condemned by the students of the University of Athens as an offence against the traditions of the Greeks and as a blow at Panhellenism; the dialect, moreover, they thought was not worthy of the book, and would gain for it only a small accession of readers. Upon this grievance they fell to brawling, and several persons were killed or wounded, a shot being fired even at the President of the Ministry. But for these lamentable features the riot that sprang from the Gospels might have been dismissed with ridicule. It was not, we believe, in connexion with the incident that Prof. Zangojannis published in a German journal the sharp criticism of Greek Universities for which he has been dismissed by the Government.

JOTTINGS.

THE REV. A. W. UPCOTT, Head Master of the Clergy Orphan School, Canterbury, has been elected to the Head Mastership of Christ's Hospital School, vacant by the retirement of the Rev. J. Lee. There were thirty-two candidates for the post, among whom were the two ex-Head Masters of Lancing College, Dr. Mackenzie and Dr. Ambrose Wilson, the Head Masters of Leamington College and King's College School, London, and the Rev. C. Wood (Marlborough). The last of these withdrew, and the final choice lay between the Rev. A. W. Upcott and the Rev. C. Bourne. By a considerable majority youth carried the day. Mr. Upcott was educated at Sherborne School and Exeter College, Oxford. He took a First Class in Moderations and a Second in Greats. Before his appointment to Canterbury he was Head Master of St. Mark's School, Windsor. His brother is a master in Marlborough College, the editor of the "*Laocoon*," and well known as a student of Greek art.

THE strong deputation introduced by Sir F. S. Powell, M.P., which waited on the Chancellor of the Exchequer to plead the claims of University colleges to an increased Treasury grant, received but small encouragement from Sir M. Hicks-Beach. The Chancellor repudiated any obligation on the part of the State for University education in England, and pronounced the original grant of 1889-90 a purely temporary measure intended to stimulate local effort. All he could undertake was, if possible, to see that colleges now in receipt of grants should not suffer from the admission of new colleges (Reading and Exeter) to share the benefit.

THE Incorporated Association of Head Masters has addressed a letter to the Secretary of the Board of Education requesting him to receive a deputation on the subject of the tenure of masterships in endowed schools. The letter points out that the new conditions of many of their schools in relation to the Local Authorities call for modification in their schemes, and that there is a *prima facie* case for referring the question of tenure to the Consultative Committee.

AT the Oxford High School for Girls, Miss Haig-Brown, a daughter of the Master of the Charterhouse, has succeeded as Head Mistress Miss Leahy, who resigned on grounds of health. Miss Leahy has since been appointed to the Head Mistressship of the Croydon High School, in succession to Miss Neligan.

WE have received from the Hon. Secretary of Head Masters of Higher-Grade Schools a pamphlet in answer to a pamphlet of Dr. R. P. Scott, with which we have not been favoured. Passing by all personal matters of dispute, we may venture even on an *ex parte* state-

ment to pronounce that Mr. Dyche establishes one point. The Higher Elementary Minute does not agree with the Joint Memorandum of the I.A.H.M. and the A.H.M.H.G.S. The difference in age is a vital difference.

"THE law of gravity is that things with any weight never fall upwards, but always downwards towards the centre of the earth, where there is an imaginary magnet which attracts things."—This is the actual answer given by a schoolgirl of fifteen. The jumble is delightful.

THE South-Western Polytechnic, Manresa Road, Chelsea, will again be the home of the excellent Conferences of Science Teachers that the London County Council has now for some years conducted. The dates are January 9 and 10. Application for tickets should be made to Dr. Kimmins, Park Lodge, Harrow-on-the-Hill, or to Mr. C. A. Buckmaster, 16 Heathfield Road, Mill Hill Park, W.

FOR the seat on the Senate of the University of London, rendered vacant by the resignation of Dr. J. D. McClure, Mr. Easterbrook, of Owen's School, Islington, has consented to become a candidate. Mr. Easterbrook is a strong man, with a genius for organization, and should prove useful as a member of the Senate; for learned bodies, as a rule, are not over well supplied with practical business qualities. As an official member of the Head Masters' Association, and as sitting on the London Technical Education Board, Mr. Easterbrook has had experience in practical politics.

WE hear that great economy is being practised and preached by His Majesty's Stationery Department. It is to be hoped that this reform will not lead to the introduction of bad ink. The American Declaration of Independence is said to be quite unreadable owing to the fading of the ink.

It is stated that no change will be made in the dress of the Christ's Hospital boys. The Duke of Cambridge, President of the Hospital, is said to be in favour of retaining the distinctive costume. A *flavicusculatus* on the Sussex Downs will be as strange a sight as a Sussex yokel in Newgate Street.

THE HEAD MASTERSHIP of Leeds Grammar School is now vacant, as the Rev. J. H. Dudley Matthews has accepted the living of Purley, in Berkshire, together with a substantial pension from his governing body.

FOR some years past we have heard of the decline in the popularity of German as a school subject, and, so far as our experience goes, the lament is a true one; but a recent number of the *Publishers' Circular* states for our encouragement that there is a great and growing demand for German school-books.

THE SCHOOL BOARD of Christiania has adopted the far-sighted policy of sending four of its teachers to study educational methods in other countries.

THE Council of Owens College, Manchester, is to promote a private Bill for its relief from rates. At present the annual rates are about £1,200. It is stated that no opposition will be offered by the rating authorities.

THE DUKE OF DEVONSHIRE has written to set the minds of non-local schools at rest. No school, says the Duke, will be compelled to bow to the Local Authority unless it chooses.

MR. SMITH, the Head Master of Alleyn's School, Dulwich, has resigned. Our readers will remember the famous quarrel two or three years ago between the Head Master and the dismissed members of his staff.

AT a meeting of the Worcestershire Association of Managers and Teachers of Church Schools, an important rider to Resolution 3, "that the appointment and dismissal of teachers be left in the hands of the present committee of management," was moved and carried, "with the understanding that in case of dismissal teachers shall have the right of appeal to the Board of Education."

A SCHOOLGIRLS' TRIPLET.—A parable: "A heavenly story with no earthly meaning." "Teacher told us that Mr. Bocker said those who have lots of wives and little boys give hosts to fortune, but I don't know what this means."—(G.H., in *Spectator*.) Teacher: "Why did Moses take off his shoes?" Small girl (just back from the seaside): "To paddle."

At the Cambridge Local Examinations held last month, at 269 centres, there were 16,684 candidates, an excess of 440 over the entry in any previous year. The entries are distributed thus: Seniors, 2,346; Juniors, 8,642; Preliminary, 5,696. Of the candidates, 10,237 were boys and 6,447 girls.

THE most important alteration in the syllabus is the introduction of an oral examination in French and German for Senior candidates. At present this test is optional; and the marks obtained in the spoken examination will not be taken into account in determining the position of students in the general class list. The examination included (1) reading aloud; (2) dictation; (3) conversation on topics taken from portions of the set books. We heartily welcome as a first instalment this reform, which has for years been advocated by the Modern Language Association.

LORD SALISBURY's solid silver challenge shield, for the Shorthand Championship of all boys' schools in East Kent, has again been won by Dover College, with the Oxford Shorthand. The examination was purely practical, the dictation going up to a hundred and twenty words a minute, and the marking being wholly on the transcript. The winning boy—J. L. Eden, eldest son of the Vicar of Knighton, Leicester—is sixteen, and began the study in February, 1899. His father was at Eton with Lord Salisbury.

MR. L. H. LEADLEY, B.A., B.Sc., senior science master of the Congregational Schools, Caterham, has been appointed Head Master of the County Day School, Wolverton Institute. There were ninety-one applicants for the post.

THE Coronation being a subject which ought to inspire the mind of every British writer of verse, *Good Words* is endeavouring to tempt the poets of the Empire to show the quality at once of their genius and their loyalty by offering £75 in cash prizes (the first prize being £50) for the best Coronation Odes.

THE GUILD OF ST. EDMUND.—"To provide opportunities for social intercourse among those who are interested in the work of the London Board schools; to promote a better knowledge among clergy and others of the work done in Board schools," are the objects that the Guild of St. Edmund has set itself to further during nearly ten years of existence, and its report amply justifies the ideal of its founder, the Rev. G. R. Hogg—chairman of the Hugh Myddelton Group. The numerous lectures, *soirées*, and entertainments organized by the Guild in all parts of London bear testimony to the efficient way in which it has fulfilled its mission, and it has been fortunate in enlisting the services of many distinguished patrons, both clerical and lay—including several bishops—to forward its work, which has done much to cheer and enliven the monotonous lives of Board-school teachers. The report of the Guild shows an average increase of a hundred and fifty members per annum, and, besides the London divisions in connexion with the chief Board-school centres, a flourishing branch has been established at Reading, so that further provincial developments may be hoped for. All particulars of the Guild of St. Edmund and its work may be obtained from the Secretary, at the Office of the Guild, 3 Great James Street, Bedford Row, W.C.

THE *Glasgow Herald*, in a kindly notice of the *Journal*, corrects an obvious misprint—"Pathology" for "Patrology." By a strange irony our critic, in correcting one error, imports another, and changes "Migne's" to "Migue's."

AT Marburg, in Hesse, a course of lectures in German Language and Literature has been arranged, lasting from December 30 to January 18.

AT a meeting of the Governors of Victoria University, Miss Helen M. Stephen was appointed a representative Board Governor. She is the first and only lady upon the Governing Body.

MRS. STANFORD, the widow of the founder of Stanford University, has just transferred to the University property valued at £6,000,000. Half the amount is in money, and half in land—an estate of over a million acres.

A NEW monthly botanical journal, called the *New Phytologist*, will appear on January 15. It will be managed and edited by Mr. A. G. Tansley, the Assistant Professor of Botany at University College, London. Its chief aim is to provide a ready means of communication and discussion among British botanists both on theoretical and on practical topics connected with the science of botany.

THE yearly obituary of the *Observer* occupies four and a half closely
(Continued on page 30.)

NEW BOOKS AND NEW EDITIONS FROM MR. MURRAY'S EDUCATIONAL LIST.

MR. MURRAY'S HOME AND SCHOOL LIBRARY.

Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford.

ALGEBRA. PART I. By E. M. LANGLEY, M.A., Senior Mathematical Master, Modern School, Bedford, and S. N. R. BRADLY, M.A., Mathematical Master, Modern School, Bedford. Fcap. 8vo, 1s. 6d.

This volume is specially adapted to the requirements of the First Stage of the Directory of the Board of Education, South Kensington. Answers, for teachers only, can be obtained separately.

Professor JOHN PERRY, of the Royal College of Science, South Kensington, writes:—"I never do praise a book unless I believe it to be good. Your Algebra (regarded as a book for beginners) pleases me very much indeed. I cannot imagine an Algebra prepared for schools in general, and especially for use by teachers in general, which would come nearer to my notion of what an Algebra ought to be, than yours."

A FIRST COURSE OF PRACTICAL SCIENCE, with full directions for Experiments and numerous Exercises. By J. H. LEONARD, B.Sc. Lond. With a Preface by Dr. GLADSTONE, F.R.S. Fcap. 8vo, 1s. 6d.

These lessons are taught on the heuristic method, with a view to stimulating the learner's powers of observation and experiment.

"The exercises described are suitable for quite young beginners, and they will serve the double purpose of applying the pupil's knowledge of arithmetic and developing a scientific frame of mind. . . . The experiments are described concisely and are well arranged."—*Nature*.

FIRST MAKERS OF ENGLAND. Julius Cæsar, King Arthur, Alfred the Great. By Lady MAGNUS, Author of "Boys of the Bible," &c. With Illustrations. Fcap. 8vo, 1s. 6d.

This volume is based on the recommendations for history teaching made by Professor Withers at the invitation of the School Board for London.

IN THE PRESS.

A SHORT HISTORY OF COINAGE. By Lord AVEBURY, F.R.S., &c. With many Illustrations.

HEROES OF THE WEST. A Biographical Sketch of Modern History. By the Rev. A. J. and Mrs. CARLYLE and F. S. MARVIN, M.A. Two Vols.

TELEGRAPHS AND TELEPHONES. By Sir W. H. PREECE, K.C.B., &c., sometime President of the Institution of Civil Engineers.

ELECTRIC WIREMEN'S WORK. By W. C. CLINTON, B.Sc. (Lond.), Demonstrator in the Pender Laboratory, University College, London.

The above two volumes are written with particular reference to the requirements of the Examination of the City and Guilds of London Institute.

VILLAGE LECTURES ON POPULAR SCIENCE. By the Rev. C. T. OVENDEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Two Vols.

MR. MURRAY'S NEW SERIES OF SECONDARY EDUCATION TEXT-BOOKS.

Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford.

BRITAIN OVER THE SEA. A Reader for Schools. Compiled and Edited by ELIZABETH LEE, Author of "A School History of English Literature," &c. Editor of "Cowper's Task and Minor Poems," &c. With four Maps of the British Empire at different periods. Crown 8vo, 2s. 6d.

This School Reader is conceived on novel lines. The extracts are arranged in sections, comprising "The English Colonies up to 1900," "Australia," "India," "South Africa," &c.; and the selections range from the works of Sir Walter Raleigh to the speeches of Lord Beaconsfield. It contains a literary introduction, and the name of the author, who is a contributor to the *Dictionary of National Biography*, carries assurance that the editorial work is well done.

Mr. P. A. BARNETT (H.M. Inspector of Training Colleges) writes:—"I congratulate you on the production of a very excellent piece of work. I hope the schools will use it, but it is almost too good for them."

COMMERCIAL FRENCH. In Two Parts. By W. MANSFIELD POOLE, M.A., Magdalen College, Oxford, Assistant Master at Merchant Taylors' School, and MICHEL BECKER, Professor at the Ecole Alsacienne, Paris, Author of "L'Allemand Commercial," and "Lectures Pratiques d'Allemand Moderne." With a Map in each volume.

PART I.—Consisting of Simple Sentences and Passages in French, with occasional Business Letters, and containing in an Appendix a clear system of French Grammar, with special reference to the Verb. Crown 8vo, 2s. 6d.

"... most useful, the best thing of the kind that has come in our way."—*British Weekly*.

PART II.—An Advanced Commercial Reader. Crown 8vo, 2s. 6d. [Just out.]

COMMERCIAL KNOWLEDGE. A Manual of Business Methods and Transactions. By ALGERNON WARREN. Crown 8vo, 2s. 6d.

This text-book of *Handelswissenschaft* is designed for the use of students who intend to enter the higher branches of commercial life. It includes chapters on Supply and Demand; Free Trade and Protection; Partnership; Companies, Syndicates, and Trusts; Principal and Agent; Contracts; Banking; Transit; Insurance; Tariffs; Employers' Liability; Commercial Travellers; Consuls, &c.

"... contains concise and accurate descriptions of all kinds of commercial routine, from the functions of the Board of Trade to a facsimile of a bill of lading, and should be in the possession of every one who intends to embrace a commercial career."—*The Scotsman*.

A Complete List of the Volumes in the above Series will be sent post free on application.

A Complete Illustrated Catalogue of Standard Educational Works published by Mr. Murray may be had, post free, on application. This Catalogue includes Sir William Smith's Famous Series of Students' Manuals, Smaller Manuals, Dictionaries, Principias, &c.

LONDON: JOHN MURRAY, ALBEMARLE STREET, W.

NATIONAL EDUCATION. Essays towards a Constructive Policy. Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford. 8vo, 7s. 6d. net.

CHAP.

1.—**Aims and Methods.** By the EDITOR.

2.—**Church Schools and Religious Education.** By the Rev. BERNARD REYNOLDS, M.A., Prebendary of St. Paul's, Diocesan Inspector of Schools, London.

3.—**Registration and Training of Teachers.** By FRANCIS STORR, B.A., Editor of "The Journal of Education."

4.—**The Inspection of Secondary Schools.** By Sir JOSHUA G. FITCH LL.D., formerly H.M. Chief Inspector of Training Colleges.

5.—**Science in Education—The Need of Practical Studies.** By Prof. H. E. ARMSTRONG, LL.D., Ph.D., F.R.S., Professor of Chemistry at the Central Technical College.

6.—**Industrial Needs.** By A. D. PROVAND, formerly M.P. for Glasgow.

7.—**Commercial Education.**—(a) **Secondary.** By T. A. ORGAN, B.A., L.C.C., formerly Chairman of the Technical Education Board. (b) **University.** By Prof. W. A. S. HEWINS, Director of the London School of Economics and Political Science.

8.—**Agricultural Education.** By JOHN C. MEDD, M.A., Executive Member of the Agricultural Education Committee.

9.—**The Teaching of Modern Languages.** By H. W. EVES, formerly Head Master of University College School.

Bibliographical Note, &c.

STANLEY'S LIFE OF ARNOLD. Teachers' Edition. With a Preface by Sir JOSHUA FITCH, LL.D., formerly H.M. Chief Inspector of Training Colleges. Large type, 800 pages, in One Volume, with Photogravure Portrait and Sixteen Half-tone Illustrations. Crown 8vo, 6s.

This work is set by the Board of Education for the Elementary Teachers' Certificate, 1902.

HALLAM'S CONSTITUTIONAL HISTORY OF ENGLAND. Chapters I. to IX. Bound together in One Volume for the special use of candidates for the London University Examinations. Crown 8vo, 5s.

A GENERAL HISTORY OF EUROPE, 350-1900. By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each Section. With Maps and Genealogical Tables. Crown 8vo, 9s.

THE GREAT PERSIAN WAR AND ITS PRELIMINARIES. A Study of the Evidence, Literary and Topographical. By G. B. GRUNDY, M.A., Lecturer at Brasenose College, and University Lecturer in Classical Geography. With Maps and Illustrations. Demy 8vo, 21s. net.

This book deals in detail with the campaign of Marathon, and with that of the years 480-479 B.C. The author has personally examined the scenes of the great events recorded, and has made surveys of Thermopylae and Plataea for the purpose of the work. There are introductory chapters on the relation between the Greeks and the Oriental monarchies prior to the year 490 B.C. The book is fully illustrated by maps, photographs, and sketches of the main sites of interest.

THE DAWN OF MODERN GEOGRAPHY. A History of Exploration and Geographical Science, from the Opening of the Tenth to the Middle of the Thirteenth Century (A.D. 900-1250). By C. RAYMOND BEAZLEY, Fellow of Merton College, Oxford, Author of "The Dawn of Modern Geography from the Conversion of the Roman Empire to 900 A.D." With Maps and Illustrations. Demy 8vo, 18s.

This volume includes an account of the Scandinavian Explorers, and the Saga travel literature; of the Pilgrims and Religious Travellers, such as Swulf and Benjamin of Tudela; of the Merchant Travellers, such as the Elder Polos; of the Missionary and Diplomatic Travellers, such as William de Rubruquis and John de Plano Carpini; and of the Scientific Geographers and Map Makers, such as Matthew Paris, Henry of Mainz, Lambert of St. Omer, &c. With some notice of the Arab and Chinese Geographers and Travellers of this time, such as Edrisi, &c.

As in the former volume, the object of the present is to give a thoroughly representative and so complete account of geographical progress during a great part of the Middle Ages. Beginning with the changes wrought by the Northern, this second instalment brings down the narrative to the close of the Crusading era, and the highest point of the Empire of the Mongol Tartars.

THE PROGRESSIVE SCIENCE SERIES.

Large crown 8vo. 6s. each Volume.

NEW VOLUME.

THE STARS: A Study of the Universe. By Prof. SIMON NEWCOMB.

A List of the Volumes already published in the above Series will be sent post free on application.

printed columns, and descends to golfers and secretaries of cricket clubs. Education is not thought worthy of a separate heading, and the few teachers included must be looked for under "Clergy of all denominations." *Hazell* is more generous, and gives seven "schoolmen" under "Literary and Scholastic," besides those lumped under "Clergy and Ministers."

THE most attractive feature in *Hazell's Annual* for 1902 will, to some of our readers, be the offer of £55 in prizes for suggestions. We offer, with diffidence, one or two in our own department. Training of teachers is now a sufficiently prominent subject to deserve a short article. We find no mention of the Modern Language Association. A list of the chief newspapers and journals, with addresses, is very useful for reference. The list of educational books published during the past year is very defective. We miss, for instance, Murray's "National Education," Laurie's "Training of Teachers," Coulton's "Public Schools and Public Needs"; indeed, the pedagogic side is almost ignored.

THE RIGHT HON. JAMES BRYCE, M.P., has promised to give an address at the annual meeting of the Geographical Association, which will be held in London, on Wednesday, January 15, at 3.30 p.m. For further information, see daily papers. All who are interested in the teaching of geography are invited.

MR. T. E. PAGE, of Charterhouse, writes to the *Times*, accounting for the academic character of the Head Masters' Conference (he uses much stronger epithets) by the fact that it is mainly composed of clerics, and, consequently, as he demonstrates arithmetically, not of the best men. The published list shows that of the Head Masters who attended the Cambridge meeting fifty-two were clerics and only twelve laymen.

WE are glad to see that Mr. P. A. Barnett's "Common Sense in Education" has passed into a third edition. In the new preface there is a shrewd hit at Prof. Armstrong and his Kensingtonians, "for, although under the name 'heuristic,' equally barbarous in Greek, German, and English, it [the method of discovery] is sometimes proclaimed as a New Method, and, as such, is at last entering, not without noise, into the school teaching of the positive sciences, teachers have always used it, in different materials, from Orbilius to Prof. Mikall."

BOOKS OF THE MONTH.

Classics.

- Horae Latinae; Studies in Synonyms and Syntax. By Robert Ogilvie. Longmans, 12s. 6d.
 "Bell's Illustrated Classics."—(1) Virgil, *Aeneid* V. By J. T. Phillippson. (2) Cicero, *De Amicitia*. By H. J. L. J. Massé. 1s. 6d. each.
 Virgil's *Aeneid* II. By M. T. Tatham. E. Arnold, 1s. 6d.

CALENDAR FOR JANUARY.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 6.—University College, London. Slade School begins.
- 7-10.—College of Preceptors. Examination of Teachers for Diplomas.
- 9, 10.—London County Council Technical Education Board. Conference of Science Teachers at South-Western Polytechnic, Manresa Road, Chelsea. Admission free. Apply to C. A. Buckmaster, 16 Heathfield Road, Mill Hill Park, W.
- 9, 10.—Annual Meeting of Incorporated Association of Head Masters, Guildhall, 10 a.m.
- 10.—British Child-Study Association, London Branch. Lecture by Mr. Holman, H.M.I., in Ruskin Room, Sesame Club.
- 11.—General Meeting of Assistant Masters' Association, St Paul's School, at 11 a.m. (see page 32).

(Continued on page 32.)

GINN & COMPANY,

Educational Publishers,

9 ST. MARTIN'S STREET, LEICESTER SQUARE, LONDON, W.C.

TO meet the growing demand for their school and college books, Messrs. GINN & COMPANY, the leading educational publishers of America, heretofore represented in London by an agent, have opened a Branch Office at the above address, under the management of Mr. FRED J. MATHESON, through which all business for Great Britain and Ireland, the rest of Europe, and all British Colonies and possessions, with the exception of Canada, will now be conducted.

INVITATION TO TEACHERS.

All interested in teaching are cordially invited to call at No. 9 St. Martin's Street, where special facilities are given for the inspection of the books published by Messrs. GINN & COMPANY, representative of the most advanced methods in American education.

SOME SPECIAL FEATURES.

GINN & COMPANY desire to call special attention to their "College Series" of Greek and Latin Authors; "Latin and Greek School Classics"; their "International Modern Language Series"; and their books on Anglo-Saxon.

GINN & COMPANY publish a large assortment of English Classics edited respectively for children and for the students of Higher English.

Excellent stories of Plant and Animal Life, designed to encourage observation and Nature study by the young, are among the publications of this house which have proved most popular.

SOME RECENT BRITISH REVIEWS.

SECRETS OF THE WOODS. WILLIAM J. LONG. 12mo, cloth, 185 pp. ... Illustrated, 24; superior binding, 2 6
"Most dainty and delicate reading: a book that will be a joy to all lovers of Nature and animals. . . . The illustrations, in black and white, are exquisite; and the teaching is the best outcome of a real love of creatures."—*The Guardian*.

WIGWAM STORIES. MARY CATHERINE JUDD. Teacher in the Lincoln School, Minneapolis, Min., U.S.A. 12mo, cloth, 270 pp. ... Illustrated, 35; superior binding, 3 6
"These stories have been gathered from the writings of Schoolcraft, Horatio Hale, and others. They are interesting and full of poetic fancy and of gentle human nature; moreover, they are authentic and typical. . . . They are sure to be favourites with children, big and little, and with all who love a nation's legends—the traditions of a people, however savage and untutored. . . . We heartily recommend the book, especially to kindergarten teachers."—*The Journal of Education*.

THE STARS IN SONG AND LEGEND. JERMAIN G. PORTER, Professor of Astronomy, University of Cincinnati, Ohio, U.S.A. 12mo, cloth, 120 pp. ... Illustrated, 25; superior binding, 2 6
"It is really as hard as the Irishman thought it to say where the ancient stars got their names, or how and when the inhabitants of this inconsiderable planet had the audacity to set their creeds or their heroes among the sentinel stars. But some answer to the question can be made, as we are reminded in the interesting little work on 'The Stars in Song and Legend' which has been published by Professor Jermain G. Porter, Director of the Cincinnati Observatory. A study of the old star myths and names should indeed help to 'reveal to us the thoughts and feelings with which primitive man gazed into the sky, and the relations and influences which he there traced.'"—*The Spectator*.

THE WORKING PRINCIPLES OF RHETORIC. JOHN FRANKLIN GUNUNG, Professor of Rhetoric, Amherst College. 12mo, cloth, 676 pp. ... 6 6
"This is more than a revised edition of the author's 'Practical Elements of Rhetoric'; the older work has been not only revised, supplemented, and brought up to date, but remodelled, or, as the author phrases it, reportioned. There can be no doubt as to improvement. The new manual is riper, fuller, and more methodical than the old."—*The Journal of Education*.

CARLYLE'S HEROES AND HERO WORSHIP. ("Athenæum Press Series.") ARCHIBALD MACMECHAN, Professor of English, Dalhousie College, Halifax, U.S.A. 12mo, cloth, 396 pp. ... 5 0
"Professor Archibald MacMechan has edited Carlyle's Lectures on 'Heroes and Hero Worship' for the 'Athenæum Press Series.' . . . This is a very genuine piece of work. . . . A better Carlyle scholar will not soon arise."—*The Guardian*.

SELECTIONS FROM STEELE. ("Athenæum Press Series.") GEORGE R. CARPENTER, Professor of Rhetoric and English Composition, Columbia University, New York, U.S.A. 12mo, cloth, lxix.+203 pp. ... 4 0
"Teachers will find the introduction to Carpenter's 'Selections from Steele' very helpful."—H. MACAULAY FITZGIBBON, M.A., in "The English Course for the Irish Intermediate Examinations, 1902," in *The School World*.

POPE'S TRANSLATION OF THE ILLIAD. ("Standard English Classics.") WILLIAM TAPPAN, Head of Language Department, University School for Boys, Baltimore, Maryland, U.S.A. 12mo, cloth, 114 pp. ... 1 6
"In studying Pope's 'Iliad' the student should not confine himself merely to the text of the translation, but should learn as much as possible about Homer and his age. For this purpose . . . the introduction to Tappan's 'Pope's Iliad,' along with a good classical dictionary and atlas, will be found useful."—H. MACAULAY FITZGIBBON, M.A., in "The English Course for the Irish Intermediate Examinations, 1902," in *The School World*.

TENNYSON'S THE PRINCESS. ("Standard English Classics.") ALBERT S. COOK, Professor of English Language and Literature, Yale University. 12mo, cloth, 187 pp. ... 1 6
"For Teachers use Cook's edition is to be recommended."—H. MACAULAY FITZGIBBON, M.A., in "The English Course for the Irish Intermediate Examinations, 1902," in *The School World*.

SELECTIONS IN ENGLISH PROSE FROM ELIZABETH TO VICTORIA. JAMES M. GARNETT, Professor of English Language and Literature, University of Virginia. 12mo, cloth, 701 pp. ... 6 6

"Students should not confine themselves to mere text-books of facts and ready-made criticisms, but should form a personal acquaintance with at least some of the principal writings of each author. For this purpose, Garnett's 'Specimens of English Prose' . . . will be found of service."—H. MACAULAY FITZGIBBON, M.A., in "The English Course for the Irish Intermediate Examinations, 1902," in *The School World*.

SHAKESPEARE'S HENRY IV. Parts I. and II. HENRY N. HUDSON. Sq. 16mo, cloth, 205 pp. and 201 pp. ... each 2 0
"Hudson's edition contains an excellent and lengthy introduction. . . . The explanatory notes at the foot of the page are good. . . . The critical and textual notes are put separately at the end of the volume."—H. MACAULAY FITZGIBBON in "The English Course for the Irish Intermediate Examinations, 1902," in *The School World*.

DIX CONTES MODERNES. ("International Modern Language Series.") H. A. POTTER, Master in Modern Languages, Commercial High School, Brooklyn, New York, U.S.A. 12mo, cloth, 95 pp. ... 2 0
"We recommend this collection of stories to any one who wants really modern everyday French written by popular authors. Some useful notes follow the text as well as 'English Paraphrases' for retranslation. The book deserves success."—*The Journal of Education*.

GUZMAN EL BUENO. DON ANTONIO GIL Y ZARATE. ("International Modern Language Series.") Edited by SYLVESTER PRIMER, Ph.D., Associate Professor of Teutonic Languages, University of Texas. 12mo, cloth, 154 pp. ... 3 6
"This edition (1901) of Gil y Zarate's drama forms part of the 'International Modern Language Series.' The introduction contains an interesting biographical sketch of the author, some remarks upon the sources of the play, a well written description of the plot and characters, and some most useful information concerning Spanish versification."—*The Journal of Education*.

EDELSTEINE. ("International Modern Language Series.") RICHARD A. MINCKWITZ, Head of the Greek and Latin Departments, Central High School, Kansas City, Mo., U.S.A. 12mo, cloth, xiii.+132 pp. ... 2 6
These are nice little stories. . . . There are also adequate notes and a vocabulary."—*The School World*.

NIEBE'S BILDER UND SKIZZEN AUS DÄNISCHER ZEIT. ("International Modern Language Series.") LAWRENCE FOSSLER, Professor of Germanic Languages in the University of Nebraska. 12mo, cloth, x.+103 pp. ... 2 0
"Five capital short stories, suitable for reading with a fairly good class. There is much truthful and kindly observation of human nature, and the style is good."—*The School World*.

GERMAN EXERCISES. Book II. J. FREDERICK STEIN, Instructor in German, Boston High Schools. 12mo, cloth, 114 pp. ... 2 0
"We wish to draw attention to this carefully graduated collection of exercises. In the earlier sections a passage of German is followed by material for translation into German drawn from the original text; afterwards English extracts alone are offered. Throughout, all the help that can reasonably be asked is furnished by means of notes, there being no vocabulary; the learner must accordingly gather words as he proceeds."—*The Journal of Education*.

GENERAL HISTORY. P. V. N. MYERS, recently Professor of History and Political Economy, University of Cincinnati, U.S.A. 12mo, half-leather, 759 pp. Illustrated ... 6 6
"Is well spoken of."—C. S. FEARENSIDE, M.A. Oxon., in "Outlines of European History, 1095-1254," in *The School World*.

MEDIEVAL EUROPE. EPHRAIM EMERTON, Professor of Ecclesiastical History, Harvard University. 12mo, cloth, 607 pp. Illustrated ... 6 6
"This is the book I should feel most inclined to adopt. It is recent, scholarly, and suggestive, and gives advice as to further reading."—C. S. FEARENSIDE, M.A. Oxon., in "Outlines of European History, 1095-1254," in *The School World*.

The February issue of *The Journal of Education* will be published on Friday, January 31, 1902.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

It is the misfortune of the Association that it is ever in constant danger of losing the services of its most able and ardent workers through their promotion to posts compulsorily terminating their qualification for membership. The most serious loss possible at the present juncture, from an occurrence of this nature, has been sustained by Mr. W. H. D. Rouse's acceptance of the Head Mastership of the Perse Grammar School, Cambridge.

It would be impossible to speak too highly of the manner in which Mr. Rouse has discharged his manifold duties as Honorary Secretary since he succeeded Mr. Swinstead early in 1899. No doubt there will be very much to be said on this point at the January meetings of the A.M.A., and it will, therefore, be sufficient to here bear testimony to the debt of gratitude which all those truly interested in the future of secondary education must owe to the man who, by his conspicuous ability, surprising energy, and exceptional capacity for co-operating with fellow-workers, has done so much to brighten a prospect at one time far from promising.

The A.M.A. has, however, in the past been fortunate enough to find that the occasion always produces the man. The loss of Mr. Montgomery's services brought Mr. Swinstead to the front, and the latter's retirement brought Mr. Rouse, who now leaves us. The success of the Association may be largely attributed to the good fortune which has hitherto presided over its election to the secretarial office, and we see no room to suppose that the judgment of the Council has deteriorated, or that there are now less able or less ardent workers than formerly to carry on the high traditions which Mr. Rouse and his predecessors have so successfully established.

Turning to the General Meeting at St. Paul's School on the 11th ult., we find the morning programme devoted to matters trenching on the political work of the Association, while that of the afternoon is to deal with topics of purely educational interest. The official resolutions to be moved in the morning deal in the main with the forthcoming Education Bill, and have been entrusted to Messrs. Bridge, McKinlay, and Page, and Dr. Macaulay. For the afternoon Mr. Arthur Sidgwick has been kind enough to promise a paper on "Greek Educational Ideals," Mr. Atkinson will advocate the adoption of the Roman pronunciation of Latin, and Messrs. Longson and Humberstone will open a discussion on resident masterships.

The day will open with a short service and sermon, in accordance with last year's precedent, and we are hoping to beat all records with the success of our meeting. In the meantime advertisements are appearing for a paid Secretary, and it will be the earnest wish of all that the appointment may be a happy one.

In conclusion, we have to congratulate the I.A.A.M. on a year of unusually energetic work, and to look forward with every confidence to at least equal success in 1902.

CASSELL & COMPANY'S ANNOUNCEMENTS.

GEORGE GILL & SONS, Warwick Lane, London.

SELECT LIST OF BLACKIE'S BOOKS FOR CAMBRIDGE LOCALS

Midsummer Night's Dream. Edited by EDMUND K. CHAMBERS, M.A. [*The Warwick Shakespeare.*]

The Academy says:—"It is wonderfully rich in illustrative matter, and no aspect or interest of the play is neglected. In his treatment of chronological and historical questions Mr. Chambers is modestly convincing and delightfully sane; two rare praises for Shakespearian scholars. In brief, here is an edition to be unreservedly recommended."

Lady of the Lake. Edited by W. KEITH LEASK, M.A. CANTOS I.-VI. 1s. CANTOS I. and V. (separately). Cloth, 3d. each.

Lycidas. Edited by H. B. COTTERILL, M.A. [*In the Press.*]

Horatius, Lake Regillus, Armada. Edited, with Introduction, Notes, &c. HORATIUS and REGILLUS (One Vol.), 6d. ARMADA, 3d.

Caesar—Gallic War. BOOK I. Edited by Prof. BROWN, M.A. ILLUSTRATED. With or without Vocabulary. 1s. 6d. [*Blackie's Illustrated Latin Series.*]

Xenophon—Anabasis. BOOK I. Edited by C. E. BROWNRIGG, M.A. 1s. 6d.

The Oxford Manuals of English History.

With Maps, Genealogies, &c. Price 1s. each.

I. The Making of the English Nation (55 B.C.—1135 A.D.).

II. King and Baronage (A.D. 1135—1327).

III. England and the Hundred Years' War (A.D. 1327—1485).

IV. England and the Reformation (A.D. 1485—1603).

V. King and Parliament (A.D. 1603—1714).

VI. The Making of the British Empire (A.D. 1714—1832).

EUCLID.

Euclid's Elements of Geometry. Edited by A. E. LAYNG, M.A. With Exercises, Appendix, and Examination Papers. BOOKS I.—VI. and XI. 3s. 6d. Also the Books separately. KEY to BOOK I., 2s. 6d. To Complete EUCLID, 5s.

*. The system of arrangement allows enunciation, figure, and proof to be all in view together. Notes and Exercises are directly appended to the propositions to which they refer.

The Saturday Review says:—"From its excellent arrangement, and the beauty of the type and diagrams, we should think that Mr. Layng's Euclid will become a favourite with many teachers. . . . Mr. Layng's proof of the 35th [prop. of Book III] is the neatest we have seen recently."

The Civil Service Gazette says:—"This is one of the best Euclids, if not the very best, we have seen. There is conciseness in the proofs which we have not yet met with."

The Athenæum says:—"Carefully compiled and well arranged."

A New Sequel to Euclid. By Prof. W. J. DILWORTH, M.A. 2s. 6d. In parts: Part I., 1s. Part II., 2s.

WRITE FOR COMPLETE EDUCATIONAL LIST.

NEW PUBLICATIONS.

THE EVOLUTIONARY HISTORY OF ENGLAND, ITS PEOPLE AND INSTITUTIONS.

A Reading Book for Standards VI. and VII.

Edited by OSCAR BROWNING, M.A., Fellow of King's College, Cambridge, Lecturer in History and Principal of the Day Training College, Cambridge. Other contributors are the Rev. Prebendary REYNOLDS, M.A., Secretary to the Diocesan Board of Education and Diocesan Inspector; Dr. S. S. F. FLETCHER, Master of Method, Day Training College, Cambridge; W. F. REDDAWAY, M.A., Fellow of King's College, Cambridge; J. A. SLATER, LL.B., Barrister-at-Law and Lecturer under the School Board for London; J. R. V. MARCHANT, M.A., Barrister-at-Law and Examiner to the London Chamber of Commerce; Dr. HEATH, University College, London, &c.

This History, carried out on evolutionary lines, a plan entirely new in history books, must prove of the widest possible interest and utility. The work has been prepared with the greatest care by authors of the highest standing. Each writer is an authority on the subject of which he treats, and from his wealth of knowledge imparts the information in an easy, interesting, and highly attractive manner. The arbitrary method of cutting up English history into monarchical periods is dispensed with, and, beginning with the romantic origin of the English people, the story is allowed to evolve itself in natural sequence. Chapter headings following The People are The Church, The Law, Parliament, Trade, Language and Literature, Foreign Affairs, Expansion of the Empire, Scotland, Ireland, Wales, &c.

272 pages, fully illustrated. Maps, Charts, Diagrams in colour, Twelve Special Supplementary Plates of great historic pictures, Genealogical Tables, Glossary, and Summary. Strongly bound in an attractive cover. Price 1s. 10d. [Ready January 15th.]

Latest Additions to Pitman's Commercial Series.

COMMERCIAL HISTORY:

An Introductory Treatise for the use of Advanced Classes in Schools.

By J. R. V. MARCHANT, M.A., formerly Scholar of Wadham College, Oxford, and Examiner in Commercial History to the London Chamber of Commerce.

PART I. THE HISTORY OF COMMERCE DOWN TO THE END OF THE MIDDLE AGES. 112 pages. Plates, Maps, &c. Price 1s. 6d. [Now ready.]

PART II. THE HISTORY OF COMMERCE FROM THE END OF THE MIDDLE AGES TO THE PRESENT DAY. 160 pages. Fully illustrated. Price 2s. [Ready immediately.]

PARTS I. AND II. 272 pages. Complete. Cloth lettered. Price 3s. 6d.

THE COMMERCIAL LAW OF ENGLAND:

A Handbook for Business Men and Advanced Classes in Schools.

By J. A. SLATER, B.A., LL.B. Lond., Author of "Law" in "The Evolutionary History of England," Lecturer under the School Board for London, of the Middle Temple and North-Eastern Circuit, Barrister-at-Law. Cloth, 208 pages, with Plate Supplements of Commercial Instruments reproduced facsimile. Price 2s. 6d. [Ready immediately.]

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

NOTES ON EDUCATION IN 1901.

By "AN OLD FOGGY."

IN offering some observations on the educational topics of the year, I feel like the visitor from Mars introduced by Canon Lyttelton to the Teachers' Guild. I remark an immense amount of movement and very little order. The movement has been chiefly of the tongue; the tendencies towards order scarcely perceptible. Perhaps, if I did not inhabit one of the "backwaters of most extraordinary quiet," I might have more sympathy with contradictory conferences and reiterated resolutions. I might become a demagogue in educational politics; an agitator for higher wages and old-age pensions. I might even aspire to be co-opted as an "expert" on a Local Authority. But I may say, with the Emperor: "You would never undertake to persuade me to that had you but seen the goodly ranks of trees which myself have planted in mine orchard." And when I part with them, as periodically I must, it is with the knowledge that each will bear, according to its kind, the best of fruit. Therefore I read Canon Lyttelton's wise words to teachers with satisfaction. "Work for deep and practical movements rather than for noisy or showy ones; endeavour to hold, in the middle of great confusion and noise, the peaceful attitude of wisdom."

THE Teachers' Guild, to which these words were addressed, was only one of the many associations which met in the early part of the year to discuss the old, old questions in the old familiar way. The Incorporated Head Masters adopted a series of resolutions to ameliorate the distressful lot of the assistants, who, as one of them told his colleagues, are the "outlanders of the profession." Head masters, he said, retired to bishoprics, deaneries, or fat livings; but the assistants, "like post-boys and donkeys, merely disappeared." In this connexion, I observe, Dr. Gow, a prophet among the Incorporated, alluded to the supply of men teachers as rapidly diminishing both in quantity and quality. The demand would soon outstrip the supply. But salaries inadequate for men would be gladly accepted by women. He prophesied, therefore, the employment of women in grammar schools. We are surrounded by disintegrating forces. South Kensington, with a plausible passport known as Clause LXXIII., knocks at the door; County Councils, with scholarship ladders and unwholesome capitation grants, assail our walls, and now, if

Dr. Gow is a good prophet, our schools are to be reduced to asylums for the refuge of women who ought to have nurseries of their own.

THE warning uttered by one of the chairmen at a conference of science teachers against the growing tendency to "peptonize" education requires to be emphasized. Many of the ingenious contrivances to render the acquisition of information palatable, and strenuous effort unnecessary, are akin to the schemes of the "Projectors" of Laputa. Much the same may be said of the new methods and "short-circuit" systems. It is about as useful a project to endeavour to extract sunbeams out of cucumbers as to expect little boys and girls to do their science work in the spirit of great and original master-minds. "Children," it has been written, "must be rendered reasonable, but not reasoners. The first thing to teach them is that it is reasonable for them to obey and unreasonable for them to dispute." We don't want old heads on young shoulders. And, for the rest, our "projectors" may be reminded of Ben Jonson's words: "There is no doctrine will do good where Nature is wanting. Some wits are swelling and high, others low and still; some hot and fiery, others cold and dull. One must have a bridle, the other a spur."

To most associations applies Lord Beaconsfield's definition of a deputation—"noun, signifying many, but not much"—but there are exceptions. One of these, I am bound to think, is that which concerns itself with modern language. Dr. Macgowan said at the Conference: "There are many concurrent reasons for the present low level of modern languages in schools. They hold a subordinate position in school timetables, being bracketed with book-keeping and shorthand." As Mr. Gosse has recently pointed out, this neglect of modern foreign languages has a significance, and a result, apart altogether from considerations of utility. It fosters the spirit of Anglo-Saxon self-sufficiency, of objectionable swagger. "It is not necessary to ask an intelligent inhabitant of Norway or Portugal what is the value to him of being able to read German. It is not needful to ask a Russian or a German why he is careful to read French." The reason is mainly an intellectual one. But England is isolated, both as regards literature and contemporary thought. Mr. Gosse remarks: "Somebody said in the eighteenth century that when Europe looked through the intellectual telescope she invariably turned it upon England. At the beginning of the twentieth century that telescope is never—except by certain Frenchmen—turned upon England at all."

INVESTMENTS in the business of education during 1900-1, I observe, amounted to £9,504,429. This is a considerable speculative undertaking, the control of which is sufficient to engage the persistent efforts of a strong and united board of directors. But, if those who ought to know bear true witness, the Board is only another name for a number of gentlemen at loggerheads, whose differences are the only signs of life in an establishment afflicted with the disease of chronic inertia. There is one of the directors, like Mr. Jorkins, "a mild man of a heavy temperament, whose place in the business" appears to be "to keep himself in the background." Another, a voluble and irresponsible Spenslow, is animated by the liveliest of good intentions. But what can we do? Mr. Jorkins is obdurate. There is also an official who seems to be not quite as stimulating as Mr. Micawber might have been had that good-natured philosopher taken the momentous "Leap," and "a certainty," suited to a person of his peculiar temperament, had turned up. For the rest, "there are men who sit still, with the fly-blown phylacteries bound round their obsolete policy . . . mumbling their incantations." I am disposed to think a new Board is quite as important as a new Bill.

To those who, like myself, realize the danger of hasty legislation, there is reason for satisfaction in the determination of the Government not to proceed with Education Bill No. 1. Secondary schools may be, as experts assure us, in a deplorable condition—our commerce going to the dogs for the lack of elementary classes in office routine and a knowledge of the language of our rivals; our industries may be doomed owing to the neglect of scientific research—but I beg leave to doubt it. As Mr. Balfour said at New Cross the other day,

to hear some people talk you really would suppose that every successful and prosperous manufacture started by any other nation but our own was a kind of robbery committed on British trade. Supposing, however, the supremacy upon which we have prided ourselves is threatened. What then? The machinery of education may be quadrupled; schools inspected, delimited, co-ordinated; teachers registered after the "triple test," and seated on governing bodies and local Boards; the reluctant scholar placed in the attitude of a discoverer, and his mental digestion supplied with instruction adequately peptonized. All these things may be ours; but, unless there be a national quickening of intellectual life, a disposition to make sacrifices, and a revival of faith, all our mechanical and external devices will not prevail to save us.

As far as I have had the opportunity of observing it, the indiscriminate supply of primary education in this country has no intelligible impulse or ideal. We have sold our birthright for a mess of facts. The measure of success is the variegated character of the time-table and the superficial precocity of the infant. It does not apparently matter who is taught, or what, provided the schoolmaster gets what he wants, the prescribed forms be filled in, and the Duke of Devonshire is not bothered. As the late Lord Armstrong said some years ago, the system has the radical defect of aiming at instruction in knowledge rather than the training of faculties. "A man's success in life depends incomparably more upon his capacities for useful action than upon his acquirements in knowledge." You can take a boy from the primary school to the University, but you can't make him think.

A WRITER of some discernment in the early part of last century divided opinion concerning the "education of the poor" into four classes. There were those, he said, opposed to all and every description of education; those who thought the lower classes should be taught reading and writing and arithmetic; others who would push instruction without any discrimination to the utmost bound; others, again, who, although they would cultivate the intellect to a very considerable extent, would render the education applicable to the actual position of the individual in society. Looking backward through the century, these ideas, it seems, have successively held the field, and the last is just beginning to assert itself. During the past twenty years we have witnessed efforts to push primary instruction without any discrimination. I am far from believing with the Lilliputians that the education of those who till and cultivate the earth is of little consequence to the public; but you cannot transform a fool into a philosopher, nor does my neighbour train a draught horse for a steeplechase. Boys and girls are as different as plants in a garden. They all need food, fresh air, and sunshine; and all, perhaps, are better for pruning. But only a few pay for particular cultivation. You can improve the growth of a cabbage, but you cannot change a cabbage into a cauliflower.

I HAVE read in the *Fortnightly Review* an article discussing the Education Bill of next Session. With some of the writer's views and conclusions I find myself disposed to sympathize. I do not, however, agree that the condition of elementary schools is the most pressing of the educational problems of the hour. It is a pleasant fancy to regard the educational system of the country as analogous to a great building with one wide entrance; to imagine the children of the nation starting on the basement and gradually ascending floor by floor as high as their means or ability will take them; to imagine broad stairs and convenient lifts from the kindergarten to the University. But, alluring as the fancy is, the reality remains something different. Our educational system may, in time, represent one great structure. But it will be a building with more than one entrance and with the means of intercommunication in the upper stories. To say "you cannot have effective higher education until your primary schools are placed on a satisfactory footing" is equivalent to suggesting that, unless there is efficient machinery for training the Militia, you cannot supply effective training for officers.

To talk as though children of the class who usually attend elementary schools are the constituency which supplies the

brain power and directing capacity of the nation is a misconception of the facts. The Board of Education estimate the number of children under fifteen to be 9,524,943. Of this total, the estimated number of the class who usually frequent elementary schools is 8,164,237. This leaves 1,360,706 who do not resort to the primary school; who may be said to consist largely of the class from which the captains of industry and commerce are recruited, and for whom, therefore, it is of national importance for efficient educational opportunities to be afforded. The disease which, in the opinion of the writer in the *Fortnightly Review*, afflicts the primary-school system is lack of money. In Board schools, he says, the expenditure is £2. 17s. 8d. per scholar; in voluntary schools £2. 6s. 5d. "The Education Bill of 1902 will entirely fail, unless it tackles resolutely this starving of the so-called voluntary schools. These are largely staffed by juvenile and unqualified adult teachers. Their classes are often criminally unwieldy; their apparatus is usually stunted and obsolete; their premises are not infrequently ancient and unsuitable."

THE difference in cost per scholar, it is worth noticing, between voluntary and Board schools is almost entirely due to expenditure on salaries. But if the number of departments be taken in which separate head teachers are employed, it will be found that the average for voluntary schools is something over a hundred, while Board schools are two hundred. Put in another way, with approximately the same number of scholars, the estimated population under School Boards is over twenty million; that under voluntary management under nine million. I do not desire to be understood to disagree with any reasonable proposal for increasing efficiency in primary schools by additional expenditure; but I am of opinion that, if this branch of education is less effective than it ought to be, it is not for the reason favoured by Dr. Macnamara. If, as he avers, we "sacrifice upon the altar of parsimony much of the nation's most sorely needed resource—the brain-power of the people"—the victims are not drawn from the class who usually attend primary schools.

I HAVE materials before me relating to the financial resources of public education in England and Wales, excluding the Universities and professional schools. In round figures, twenty millions is expended in one year. Of this total—again in round figures—fourteen millions is absorbed by primary education, to which a quarter of a million may be added for training colleges; three and three quarter millions by secondary, and one and a-half by technical schools; while a quarter of a million only is expended in connexion with institutions of University rank. And of the six millions devoted to education other than primary at least half may be estimated as fees paid by students.

THE article by Sir Richard Jebb in your last number was a useful summary of the problems which are supposed to be clamouring for solution. The two magnetic poles around which controversy will gather are whether the Local Authority should exercise powers for elementary as well as for secondary education, and under what conditions, if at all, rate aid should be given to denominational schools. If we must keep going, let it be, as Lord Rosebery, quoting the President of the United States, said, "by steps, and not by bounds. We must keep our eyes on the stars, but we must also remember that our feet are on the ground." The Bill of 1896 was "a bound," and the lesson of its failure legislation by instalments. As Sir Richard Jebb says, a few years ago the idea of giving rate aid to denominational elementary schools was equally distasteful to the friends and foes of such schools. But a considerable change of feeling has occurred. National schools are no longer regarded as simple "nurseries of Church principles," and "institutions for rescuing souls from Dissent." It is coming to be recognized that, if clergymen do "move through the world of light and knowledge, of discovery and criticism and new truth, with bandaged eyes and muffled ears," they are frequently active supporters of efficient secular instruction. The scheme for rate aid adopted by a joint conference of the Convocations of Canterbury and York would seem to afford some basis for a satisfactory settlement of this question.

I HAVE received a curious document—made in Birmingham—suggesting general conditions for an effective Education Bill. You have permitted me on a previous occasion to explain why, if local education bodies are inevitable, it is the obvious course to make them part of, and directly subordinate to, the Authorities responsible for Local Government. In the chaos of conflicting opinion and the clamour of vested interests, it is the one certain thing to do. The machine stands ready for the labour. Less than twenty years ago, 27,069 authorities taxed the English ratepayer by means of eighteen different kinds of rates. The Local Government Acts have altered all this, and no measure creating new local obligations which does not fall in line with these Acts is worthy of serious consideration. The Birmingham proposals, while depending on County Councils for the constitution of an authority, read:—"That the Educational Authority, as constituted, be an authority subject only to the Board of Education; that it have independent rating powers, and be not regarded as a Committee of the County Councils, with proceedings subject to revision by those bodies." It is not my intention to discuss the details of a scheme which breaks down on the first test, but there is one clause which deserves notice. The fate of the teachers is in the hands of the Authority; but school managers may require the new Authority "to remove to some other school a teacher who has ceased to be competent to give religious instruction required in the school in which the teacher is employed." Was I wrong in alluding to a change of feeling, or is a teacher in a voluntary school still an "upper dependant of the rectory," and unable "to teach geography without Genesis"?

IN concluding these brief notes and reflections upon some of the educational topics of the year, I am conscious of having omitted many points to which attention should have been directed. I may, however, suggest an addition to the stock of catch-words which sapient reformers appear to find convenient and comforting. The days of Centralization and Codification have passed, and the advantages of Municipalization appear. The teaching profession is invited to rally to the standard of Registration; others cry aloud for the magic of Delimitation and Differentiation; while others demand Representation. Everybody, of course, finds satisfaction in the blessed possibilities of Correlation and Co-ordination. The addition I desire to suggest signifies a quality and an attitude of mind greatly needed at the present time. I refer to Discrimination. In central offices and on Local Boards, in the efforts of administrators and the schemes of educationists, in zeal for reform and expenditure of public money, the "one thing needful" is Discrimination.

UNDERSTUDY.

IT is a pity that this word is connected in most minds with the stage rather than the schoolroom, with plays rather than with work; for it really ought to act as the antithesis to overstudy, whereof the wise men who talk of education make frequent mention and much moan. If you were to listen to the remarks of education-mongers, you would suppose the ordinary boy to be a nervous, tired, anæmic creature, driven to the verge of suicide by the tongue and cane of a pedantic master "without" (if we may use the Biblical and vivid language of the late Harry Jones about another matter) "an inch of bowels." There are some nervous and anæmic boys, no doubt, but it may be said of such nervousness, as Mr. Arthur Balfour said once of dullness, "it is a natural gift." The quotation is fairly apposite, as it chances, for Mr. Balfour was then speaking about one of the imaginary results of overwork. The ordinary boy is far from being this neurotic creature; he is rather a healthy and full-blooded creature with a strong love of sport—a love so strong that it cannot be satisfied by the games that occupy no small portion of his time and thought, but finds some satisfaction also in "drawing" his form-master as though he were a "cover" and "taking shots" at the meaning of strange words just as his relatives take (more fatal) shots at all unusual birds or beasts. An usher is supposed to educate his pupils, but the best work in this sphere, as in others, is that of which the performer is unconscious. The usher tries to teach; the boy determines not

to learn his lessons, but by learning how to baffle and to circumvent his master, how to humour and utilize his master's especial weakness, the boy is, in spite of his own effort not to learn, acquiring an ingenuity and a knowledge of the weakness of mankind which may stand him in good stead in the great world. If any usher ever were to grow so rich and great as to need a motto (which Farrar's card might well describe as a "purely imaginary hypothesis"), he would do well to emblazon on his envelopes and paper "Fungar vice cotis," but *cotis* should be a grindstone rather than a whetstone, the usher being a grinder of gerunds and of self; he goes on grinding round and round while little sportful boys run up, sharpen their small wits on him, and run away. He is not quite like the organ-grinder who won praise from C. S. C., for it cannot truthfully be said that he "serenely" grinds—his temper is a trifle acid; nor can it be said that he "ultimately" finds pence within his palm—he is not, like the organ-grinder, paid to go away. That happy fate awaits head masters, who, generally speaking, stick to a school until a bishopric or deanery or pension serves as a solace to declining years. If any one suggests the wisdom of retirement on the part of a head master, the answer (from a head) invariably is: "To what can he retire?" but no such inquiry is made when the time draws near for the involuntary withdrawal of an usher, because it is felt that an appreciative country has provided a haven in the union workhouse. And yet so short-sighted is the action of the Ushers' League to-day that they direct most of their artillery against clerical head masterships; such promotion as there is among these humble men is due chiefly to the fact that at intervals a head becomes a bishop or a dean. Cut off this refuge and they will soon find England full of lay heads appointed at the age of twenty-five and holding office when past seventy.

But that is quite another question. The present subject for inquiry and remark is understudy. Overstudy is held responsible for many tragedies and failures; it is as convenient as a foreign climate to which are attributed the physical and moral breakdowns that occur in other lands; but no one seems to see the ruin wrought by understudy, which used to be called idleness. Idleness is not quite popular as a topic. Head masters will not hear of such a thing, and parents do not like the word. As to ushers, who can care for the opinion of a person whose pay is about £100 a year? Every one is weary of the discussion about hooligans; but, as a fact, the hooligan is the young person who never has been caught by the attendance officer, or the youth who, having been caught and sent to school, has been careful to learn nothing. One lady sees in him the result of overstudy, but she has not drawn many to her views. In another social plane the consequence of understudy is somewhat different. A considerable fraction of the boys who leave our public schools, so called, fails to pass any sort of examination, does nothing in particular until a *multis utile bellum* provides it with an opportunity for gratifying at once a love of sport and travel that exists in many minds. Many a man must now begin to wonder what on earth he is to do when this providential war is over.

How this tendency to understudy is to be checked and counteracted is another matter. One step will have been taken if the existence of the disease is recognized. Something has been said about the war. Army reform is not a simple matter. It is thought that people have at least learnt the lesson of its need; but any one who reads the letters of any thoughtful man written in the dark days of 1854 and 1855 will see that many minds realized the need of Army reform then, but nothing has been done. The soldier who takes his profession at all seriously is still regarded as a prig. There were days in 1899 and 1900 when men were angry and demanded that incompetence in high position should be punished; but, when in 1901 one or two notorious instances were selected for some sort of punishment, there arose such protests that any officer may feel assured that he may understudy the lives and comfort of his men with absolute impunity.

In the same way a mere usher in a school may be anxious to discourage understudy in his pupils, but what step is he to take? Corporal punishment is in many schools nearly as obsolete as the stocks or the pillory; if you give the idler "lines," you spoil his "hand"; if you keep him in, you spoil his health; and, if you state some portion of the truth on his "character," the head objects to such plain speaking, and suggests a euphemism. Understudy triumphs!

A SUNDAY AFTERNOON.

IN these days of scientific teaching, when so much is being done to engineer a royal road to learning, and when every teacher is expected to know the turns of the said road like the palm of his hand, it may be of interest to those in the profession to hear some short account of what is probably the worst educational establishment in the country. As the Headmaster of the school in question is now writing this article, the proprietors of the *Journal* need be under no apprehensions of an action for libel, and possibly these lines may serve, upon the drunken helot principle, as an awful warning of what to avoid. Let us go and have a look at the place; down a few dingy streets at the back of a Lancashire manufacturing town, wherein reside the parents of our scholars, and we find ourselves before a corner house, with fine plate-glass windows embellished with the words "Mission Room" in ragged white letters. It is Sunday afternoon, and this a Sunday school, typical, we fear, of its kind; though we will hope not. The "Mission Room" was originally a public-house; the removal of the bar and other appurtenances has left an irregular-shaped apartment capable of containing some sixty or seventy urchins at a pinch. When the magistrates declined to renew the licence, the Church swooped down upon the place, and, though it be now less secular, it is probably no less noisy than before.

Sunday school, in these parts, is upheld solely and entirely by two great facts. The first is the annual recurrence of a school treat and of a Christmas prize-giving, prizes being for the most part awarded on the well known principle—

Nemo ex hoc numero mihi non donatus abit.

Secondly, the local papas are accustomed to gorge themselves to repletion between one and two o'clock of a Sunday afternoon. About half-past two, when the drowsiness of after dinner supervenes, they are very glad to have their children out of the way for an hour while they snore in an armchair, if they have pretensions to social position, or, if they have none, lie on a bed in their shirt sleeves. Of these two stimuli to Sunday-school attendance, the latter is probably the more permanent; though the former has greater potency as the summer advances. At that period gangs of unwashed are hanging round the door of the Mission Room, the classes are swollen to repletion, and, only after the superintendent has repeatedly thundered in their ears that six months' regular attendance is a necessary preliminary to any form of school treat, do the invaders depart disappointed, but in no way ashamed.

However, here come the children—a good many girls, docile and tractable enough, though quite capable of keeping their end up in a row with any boy in the place; also, about an equal number of boys—they have probably eaten as much as their parents; but those who know anything of boys will be aware that, whereas hunger makes the adult merely irritable, it produces all the attributes of the angel in the boy, a full meal, on the contrary, making the boy terribly restless, and his parent entirely torpid. We begin with prayers; a squeaky harmonium grinds out the hymn under the hands of a lady teacher; the superintendent reads a few prayers to an *obligato* of whispering, interrupted by an occasional fight between a couple of kneeling worshippers, and a sound like the violent escape of steam from a safety valve, with which the teachers attempt in vain to impose silence upon their classes. Then the real business of the afternoon begins. Besides the superintendent, five lady teachers are engaged with their classes within the limits of this *quondam* gin-palace. What they do with their scholars, Goodness knows: the superintendent finds that his own class require all the attention he has to spare—when he can make his voice heard above the din, the boys are sufficiently interested. But too often it becomes necessary to descend upon some unruly spirits elsewhere, the lesson becomes fragmentary, and attention distraught. The office of chucker-out is no more a sinecure under the new régime than under the old.

Thanks to weekly instruction in the Church schools, the facts of the Bible are pretty well known. But the amount learned during a Sunday-school lesson is meagre in the extreme. Discipline is impossible, and the superintendent, who is engaged in secondary education during the week, finds the general laxity and insubordination utterly disgusting to his sense of the fitness of things. On week days the elements, figuratively speaking, will tremble at his nod; on Sundays he is reduced to

impotency. The proletariat *residuum*, as certain M.P.'s term their constituents, are without sense of honour or desire of knowledge: up to the age of sixteen, they may commit any crime short of murder, with a very tolerable chance of escaping scot free, and they are fully conscious of the advantages of their position. A female teacher is to these but an admirable opportunity for disorder and impertinence; a school treat is but a scramble, where the strongest will get the most, unless the arrangements should prevent all possibility of fighting.

The lesson ends; another hymn; more prayers; and a collection is made on behalf of a fund for prizes, which usually averages about fourpence. Then comes the hour for reflection—*à quoi bon?* The only mode of obtaining sound discipline in such a school is by means of a well administered bamboo. This is a duty which the superintendent would very gladly undertake; being perfectly willing to fight anybody under fourteen stone, he would also be ready to interview the angry parent. However, the authorities do not feel equal to face the inevitable music, and prefer that the present muddle should continue. Perhaps it is only to be expected in a country of anomalies that, while all secular teaching should be conducted under the best obtainable conveniences, the Bible should be taught five classes at a time, in a disused public-house, without order or system, by incompetents who cannot teach, to children who naturally show no desire to learn. From which remarks it should be tolerably plain that the institution of the eminent Robert Raikes stands in considerable need of repair.

TEACHERS' GUILD NOTES.

THE new year comes upon us "big with fate" for the British Empire. It is the year in which a real and strenuous attempt is to be made to pass a comprehensive and statesmanlike Education Bill into law. The position of our Empire half a century hence in the world of nations will be largely decided at St. Stephen's in 1902. The present Parliament is still young, and the Government majority is very large. The chance, if lost now, will not probably come again for some years; yet each year is very precious, for we have to make up for much lost time which has been well utilized by rival Powers. The experts in education have said nearly their last word. The responsibility lies now with Parliament and the nation. Foresight and enthusiasm will carry the matter through.

ONE is afraid to quote what the experts have said, because almost all of their recommendations have become truisms by this time. The Report of the Bryce Commission holds the field, and is supported in its main suggestions by the teachers' associations; but three main heads of educational reform stand out supereminent—Organization, or the supply and control of education; Curriculum, or the subjects of education; and Teaching, or the guidance and development of education. On the first and on the third of these main heads the Teachers' Guild and other associations of teachers have made many representations to Government, and the second is now under our consideration. Failing sufficient considered advice on it, the framers of the Bill can get much help from what has been done in Germany and in the United States, or they could appoint a small round table conference, composed of, say, Prof. Laurie, Sir Richard Jebb, Prof. Henry Armstrong, and a few others, carefully selected, to advise them; unless, indeed, they prefer to have recourse to the Consultative Committee.

WE look to Government, in dealing with Organization, to make the Local County Authorities, acting through Statutory Committees composed largely of experts in education, men and women, the Authorities for the supply and control of all education within their respective areas. We also ask that the Central Authority should be in organic connexion with the Local Authorities, harmonizing and controlling their activities. We want no class in the community to be favoured, and all the intellectual force of the nation to be advanced to its fullest development, with the national interests paramount over all social stratification. We look for schools of all types to receive

pupils destined for all careers; and, above all, we hope for such arrangements as shall be based on a firm belief that, whatever the career of the future citizen is to be, his or her general education should be carried on as far as is desirable in all cases.

AS we are so late in thinking out "educational values," would it not be well for once to imitate the Japanese, who, in their effort to put themselves quickly in line with the West, have copied closely the civilization of various Western nations? The German is not far off us in race qualities. Cannot we accept, with little variation, the latest decisions on Curriculum in Prussia? If this idea is abhorrent to many of us, at least let us quickly decide on the place of modern language teaching in the curricula of our schools. If we believe in its value, let us cease to starve it of time. Let us also settle whether we intend to advance the study of the inductive sciences to a more prominent place, and to teach them heuristically or not; as, if we do so teach them, they will need many hours a week to make them effective educational instruments. We have suggested above a round table conference on this subject, but the Universities should take the matter into their own hands. In the words of the Master of Trinity, they should quickly "redistribute their bribes"; for it is through their entrance examinations, and, in the case of Oxford and Cambridge, through their fellowships also, that they dictate the curricula of the schools.

AND then—the Teaching. Cannot the Bill provide for the proper training of all teachers from an early date? Can it not also lay down regulations for the tenure of their posts by heads of schools and assistant teachers? Organization and Curriculum are mere dry bones without the high general standard of teaching to make them live. We of the Guild want the training to make the teachers do their work as well as possible, and we want the better regulation of tenure mainly in order that the profession of teacher may attract to the task of education a large proportion of the best talent as it grows up ready for careers. If, by making the profession more attractive, this result can be attained, is there any so vitally important work from which that talent will be diverted? The Guild can give but one answer—that no other career is so responsible as that of a teacher.

"COMMONPLACES, platitudes!" the reader will say; but it is good sometimes to look at a question broadly and in mere outline, even at the risk of banality. If we stand well back from the trees, we shall see the forest as a whole, and realize the extent of our task in making the broad avenues where we have hitherto had only tracks, and in clearing away the lumber that hampers the pioneers.

CORRESPONDENCE.

STATISTICS OF HIGHER-GRADE SCHOOLS.

To the Editor of The Journal of Education.

DEAR SIR,—I shall be greatly obliged if you can afford me space to comment on one or two points in your article of October on the higher-grade school statistics recently published by the Board of Education. The writer of the article fails to see that all the elaborate percentages about ages in Tables I. and III. are rendered quite useless by the fact that the return does not state *when* the scholars had attained these ages. To be of any use, these ages ought to be stated either for the beginning or the end of the school year. Not only does your contributor fail to see the defect in the tables, but he himself bases some elaborate calculations upon the absurd assumption that, in a class whose average age is thirteen, each of the boys will be exactly thirteen years old or less, but none of them will be a day over thirteen. The curves he draws are very pretty, but they do not compensate for a want of knowledge of elementary arithmetic and of the facts of the case.

I do not wish, however, to make too much of so obvious a blunder; but I cannot agree with his main contention, namely, that all boys who cannot judiciously be promoted to the school of science directly they reach the age of thirteen are backward.

and that all who are made to pass through Standard VII. before promotion are being improperly kept back. The regulations of the Board of Education prescribe Standard VI. as the *minimum* standard of attainment permissible; but the nature of the school of science course is such, and Standard VI. is found in practice to be such a varying standard of attainment, that it is in many cases better for a boy to complete Standard VII. before entry. On this point I may quote Mr. F. Pullinger, one of His Majesty's Chief Inspectors:—

On the whole I am able to report that the work done in higher-grade Board schools is of a very satisfactory character. As a general rule scholars are not promoted to the school of science unless they are fit to profit by the instruction provided. The average age of the scholars at the commencement of their work very rarely falls below thirteen years by more than one or two months. In some of the better schools a proportion of the scholars are induced to pass through Standard VII. before joining the school of science. (Report, Board of Education, 1899-1900, Vol. II., page 32.)

It is somewhat unfortunate that the statistics referred to in your article only give the figures for schools of science attached to higher-grade Board schools, because comparisons cannot be made with schools of other types. Your contributor regards the proportion of scholars in the "advanced" course in our schools as being unsatisfactory, so much so that he would transfer these scholars—along with the grants paid on them—to the neighbouring secondary schools. Many of them are girls, while the available secondary schools provide, as a rule, only for boys; but that, of course, is a mere detail. The real question is: Are things so much better in this respect in the secondary schools as to justify the transference of these scholars, even admitting for the sake of argument that the fact that A. and B. leave early is a good reason for turning C. into a grammar school to which he does not want to go? On this point Mr. T. B. Shaw, one of H.M. Chief Inspectors, reports as follows, speaking of the London grammar schools:—

There is generally a large influx of students at the age of twelve or thirteen, many of whom only remain for a year or two. This influx can only be accommodated by the constant promotion of scholars to the upper forms from which the greater numbers leave. Students, therefore, frequently spend only half the time they should do in a form, or in many cases skip a form altogether; this arrangement has a particularly disastrous effect in a school of science, where the passing over of a form may mean entire loss of one branch of instruction in one branch of science. (Forty-sixth Report of the Science and Art Department, page 17.)

This criticism would lead one to infer that, if the London grammar schools do really possess a much larger advanced course than the higher-grade schools, they obtain it by promoting boys who are unfit for promotion, and this inference is strengthened by a further remark of Mr. Shaw, in which he says that, in a large school, if promotion were only made at the rate he suggests, there would be "at least sufficient in the first year advanced course for one teacher."

It is clear, too, that, even in grammar schools, the proportion of scholars who leave, not merely before entering the third year, but before entering the second year, is very high. On this point Mr. Wager, one of the Senior Inspectors, reports:—

It is unfortunately the case at the present time that not only in higher-grade Board schools, but also in grammar and technical schools, the percentage of students who remain for a second year is much too small. Of the number presented for inspection . . . in 1897 . . . in the grammar and technical schools 59 per cent. only are in attendance for a second year—a loss of 41 per cent. (Forty-fifth Report of the Science and Art Department, page 23.)

Your contributor says—on what authority I do not know—that the Board of Education has used these statistics as a test of efficiency, and he declares that "the conclusion that the school of science, as a sequel to the elementary school, is a failure is inevitable." You yourself appear to agree with him, for you remark that Sir John Gorst is hardly sufficiently accurate in using the term "shoddy" to describe the education given in our schools, and that he would have been better advised to describe it as "bogus." I do not suppose that Sir John has either time or inclination to read the reports of his own inspectors on these schools; and, besides, these reports are naturally open to suspicion as coming from people who have a personal acquaintance with the facts. Still, the reports are inter-

esting, and I may perhaps be allowed to quote one or two. Dr. Ball remarks, for instance:—

A school of science is eminently adapted for a student who has passed through the standards of an elementary school, and desires to continue his education. (Report, Board of Education, 1899-1900, Vol. II., page 23.)

Mr. Wager says, referring to the early age of leaving, both in grammar schools and higher-grade schools:—

Nevertheless, in my opinion one year in a school of science is far better, for a student who is well prepared for it, than none at all. (Forty-fifth Report, Science and Art Department, page 24.)

On this subject, also, Sir William Abney remarks:—

Students who have stayed but two, or even one year under training have been frequently induced to continue their science education in evening classes at technical institutes, many of which are well fitted to advance their science education. A student's severance from the school of science is scarcely to be regretted under such circumstances, since his own education is continued. (Forty-sixth Report, Science and Art Department, page 6.)

I think it is a little cruel on your part to call the education given in higher-grade Board schools "shoddy" and "bogus." It does not mind; but it should be remembered that it is precisely the same kind of education, given under precisely the same conditions, as to curriculum, size of classes, equipment, and attainments of teachers, as are exacted from those grammar schools which have practically converted themselves into a kind of higher-grade school by adopting the school of science course. It is rather hard on these institutions to apply such names to the ideal after which they are struggling so perseveringly and so disinterestedly. If these schools are prepared *s'encailler* for the good of education, they should not be discouraged by having their ideal spoilt.

I have already trespassed too much on your space, or I should have liked to refer to other matters. I will merely add that, so long as the curriculum for higher elementary schools inflicts four hours' science per week upon unfortunate children of ten years old, it is nonsense to say that it is a more suitable course for higher-grade schools than the present course, which permits them, in the words of Mr. Pullinger, to keep a boy out of the school of science until he is fit for it.—I am, Sir, yours faithfully,

W. DYCHE.
Higher Board School, Halifax.

A BARMECIDE SYMPOSIUM OF TRAINERS.

To the Editor of The Journal of Education.

SIR,—With many others I was present on Friday, December 13, at the College of Preceptors to hear what experts had to say on "The Present Position and Future Prospects of Training Institutions for Teachers in Secondary Schools." Our Chairman was a man who has faithfully served the cause of training for a quarter of a century. His name carries all the weight which that of diligent and unselfish devotion directed by high intellectual power must always give. The College received the meeting most hospitably, and endeavoured to revive physical energy by welcome tea and coffee. The speakers were men who are directly engaged in the work of training teachers; we had Mr. Adamson from King's College, Mr. Keatinge from Oxford, Mr. Welton from Leeds, Mr. Foster Watson from Aberystwyth to follow Mr. Barnett, H.M. Inspector of Training Colleges. We heard a good many interesting facts and a good many sturdy opinions as to whether training should be post-graduate or not, but I think I cannot be wrong in saying that the opener of the discussion stood alone in his optimism. He declined to prophesy. He gave few facts in support of his conclusions; but these were emphatically stated, and the announcement definitely made that "the battle of training was fought and won."

The sense of the meeting seems, on calm review, to suggest quite another conclusion. I ask leave to quote a few of the difficulties alleged as hindrances to fruitful work by the speakers whose names I have given above. Mr. Keatinge complains of the paucity of first-class books bearing on the subject—books suitable to give to his "clever young Oxford man," who wants to be initiated before definitely entering on his training.

This lack of first-class literature is one which many of us

deplorable; but I, for one, do not think it insuperable; for we have a handful of books which will serve to show even clever young Oxford that the work for which training is to prepare is work the scope of which is practically co-extensive with life itself. Further, the young man who is really clever will surely soon apprehend that teaching is not summed up by setting and hearing lessons, but that many even of its frequent and common problems are of a kind which flout the mere rough and ready solutions of a text-book, and demand subtle resource and alert intelligence for their mere apprehension. Mr. Keatinge alleged that the general doubt as to the bearings of psychology on education, and as to what is implied and involved in psychology itself, shut out that subject from serious and satisfactory treatment in a training course; and further said that want of funds definitely crippled the work of training. Sir, we are all so well used to being crippled for want of funds in every department of education that any other state of being would, very possibly, alter all the bearings of our work. If we had hit on the right sort of training, surely clever young Oxford would be clever enough to pay £7. 7s. a term to be trained for one, two, or three terms, as the case might be. But the general impression left by the meeting was that those who profess to train others are hopelessly divergent among themselves as to (a) what to do and (b) how to do it—as to, in other words, ideal and method.

It is, perhaps, worth while to ask whether a heartier and simpler attitude towards training in those who train would not commend the work to those who are alleged to be reluctant to pay for it. A good deal of the speaking at the meeting obviously pointed to the fact that a mere bowing acquaintance with Pestalozzi was all that had as yet been won by many of those present. The head master quoted who frankly said he had never heard of that great teacher, and doubted whether, had he done so, he would have been any better for it, was, of course, a lamentable and very common example of the English secondary teacher. But, had Pestalozzi been with us on that gloomy, chilly evening, could we have separated without any mention of the really interesting, attractive, and vital part of the subject? Experts are possibly in danger of forgetting that what “pays” in education is, after all, the right sort of power over children. Hear the wise words of Bishop Creighton uttered in 1897:—

The education question which has been before us for so many years has concerned itself with the best modes of providing schools, and the best way of getting the money for providing those schools. It has even gone into details about hat-pegs, and it has concerned itself with everything that has to do with the outside of education, and with nothing that has to do with the inside of it. . . . Now the settlement of our educational difficulties will come just in proportion as we set the children before ourselves as the class who are really concerned, and as we wave the other classes to one side.

Some of us were longing to hear that “the present position and future prospects of training” were not always considered apart from the child. Of him we heard no word. And yet even clever young Oxford, or the still cleverer London B.A. of whom we were told, has a vulnerable side. What if that side were found to be a yielding to the charm of the child, to his need of help, to his freshness, his inevitable dependence on the grown-ups who teach him? Of course, I know all that could be said against this; all about the dull, stolid, unideal child of the actual schoolroom. But he, Sir, is the justification for the teacher's existence and trade. He exists, it is true; but he need not increase and multiply by reason of the teacher's methods and manners. Possibly, if we knew something more of Pestalozzi than his name and date, we should be less afraid of letting the child teach the teacher. And as for the teacher himself—is it quite clear that, if his attention were more definitely directed to children, and less to what pecuniary gains his teaching career would bring him, he would be merely insensitive, or critical, or indifferent? I hear a good deal of the pecuniary gain teachers may be supposed to secure by training; I hear more of the deplorable apathy of heads of schools; still more of the financial pressure as to ways and means. While those responsible for training keep questions such as these in the forefront of the discussion, I hardly wonder that they can command so few recruits. The power of ideas—generous, lofty, simple—is seldom acknowledged by your reticent Englishman; and yet, quite recently, even in so eminently “practical” a question as peace or war, how clearly we have seen that money and Government and organization and serene national self-con-

fidence failed to command aught but something perilously near defeat! Then came the idea of the solidarity of the Anglo-Saxon world over; the splendid, pulsating idea translated itself into actuality. Instead of a nation hampered by party government and all sorts of limitations, we got a race—world-wide in habitation, one in speech and tradition—and the scene was changed. Well, why not try a bigger and nobler idea for training than those which seem to have been tried and found wanting? Why not try from the first, and set the whole work of teaching before teachers as *service*—service of the helpless, the pliant, the living child? I believe that that would answer in the future, as it has answered in the past, and that the big breath of a big idea might even prevail where “the best books” fail, the most learned stumble, and the most poverty-stricken starve not only themselves, but the young and living minds they set out to educate, or train, or whatever they call the work they are doing, and at the alleged failure of which they express a somewhat naïve amazement.—I am, Sir, yours obediently,

ONE WHO WENT EMPTY AWAY.

THE TEACHERS' GUILD AND HIGHER-GRADE SCHOOLS.

To the Editor of The Journal of Education.

SIR,—The dear lady of Gower Street has been dangerously ill, and is now, as Byron once wrote of his mother-in-law, dangerously well again. The Guild has been indulging in statistics, and is the worse for figures. The absurdly small numbers in Leaflet No. 6 have deceived no one, except, perhaps, the compilers, as to their intended effect. As the Leaflet truly remarks, facts speak for themselves. Here is a hard one. The London School Board has now in full working order eighty-one higher-grade departments. Giving each an average of 200, there are 16,200 children in London alone receiving secondary education. One-third—i.e., 5,400—being in the two upper classes, are doing secondary work of a high type. The Leaflet gives 1,100 as the total for all England. Sir John Gorst's plan is to create a desert and call it peace. Whether nineteen-twentieths of this good work is superfluous is a point for him to settle with the ratepayers. Here it is, and has come to stay.

What, then, does the Leaflet prove? That the Guild is stagnating in some backwater of individualism. Setting aside for a moment as mere symptoms the colossal selfishness which would stop the schooling of young Demos at fourteen, and the detestable snobbishness which would debar him from the professions and the Universities, it is clear that the Guild argues either in complete ignorance or wilful disregard of the fundamental fact of the economics of national education. Has not the contrast between the victorious march of State-paid primary education and the halting inefficiency of privately managed secondary teaching shown the Guild that education from top to toe must be financed from the public purse? The Guild must take up this impregnable position at once, for nowadays the wages of economic sin is administrative death, and the sins of this Leaflet are many. There is the fatal assumption that the artisan has only a lower-grade mind. The Guild has yet to learn that “the education of the great mass of the people must not be isolated from the general intellectual movement either locally or at the centre” (Fabian Tract, No. 106).

Then there is the vicious definition of secondary education which gives it a social connotation, and would fence off all but primary work as the private preserve of the moneyed classes. Engineers use the expressive work “scrapping” to denote the breaking up into scrap iron of obsolete machinery. Every one knows that extensive scrapping is necessary both in the methods and antiquated institutions of secondary education. Yet the Guild innocently proposes to spend public money in bolstering up the old bad system which exploits public education for private profit, which has brought a noble profession into disrepute, and grinds its workers between the upper and nether millstones of the amateur hotel keeper and the scholastic agent. In vain one looks for any proposal tending ultimately to substitute a brain and efficiency qualification for entrance to the Services and the Universities instead of the present monetary one, which has made the Army a byword, and causes men to ask if any good thing can again come from a University.

Finally, why does the Guild dance to the piping from Whitehall? Other bodies, which only profess to represent the interests of so-called secondary education, have taken alarm already, and will have none of the blandishments of his Grace and Sir John. For how shall one liken the Board of Education? Harken to a parable. An elephant, having strayed from his keeper, roamed in the forest afar. In an untoward moment he stepped upon a hen pheasant scratching for food hard by her nest of fledglings. Seeing the sad plight of the orphaned brood, and being a creature of large heart, the elephant was moved with compassion. Said he to the chicks, "Fear not, little brood; I will be your father and your mother." With these words he sat down on the nest. Just then the driver came up and led away the Duke—I mean the elephant. That same night, as the fowl was stewing, the driver was moved to merriment, and his household mistook his laughter for the crackling of thorns under the pot. JOHN H. GARSIDE.

Higher Elementary School, Medburn Street, St. Pancras.

CO-EDUCATION.

To the Editor of The Journal of Education.

SIR,—I am glad to say some of your readers have enlarged my list of co-educational schools.—Yours faithfully,

(MRS.) MARGARET CLOSE SHIPHAM.

- 16 St. John's Park Mansions, Pemberton Gardens, N.
9. Leek High School for Boys and Girls.
Municipal secondary second-grade school. Head Master—T. C. Warrington, M.A. Head Mistress—Miss M. Burn, B.A.
10. Lymm Grammar School, Cheshire.
Second-grade school. "New scheme for co-education has been sanctioned by the Charity Commissioners, and the necessary new buildings are now in process of erection." Head Master—Rev. J. Edwardes-Evans, M.A.
11. Sidcot School, Winscombe, Somerset.
(Society of Friends.)
12. Ulster Provincial School, Lisburn.
Head Master—W. D. Braithwaite, B.A. (Society of Friends.)
"Conducted on co-educational lines for twenty years."
13. Chippenham District County School.
Secondary and technical. "New buildings erected in 1900, and specially arranged for co-education." Head Master—Mr. E. N. Tuck.
14. Lady Barn House School, Withington, Manchester.
Preparatory school for boys and girls up to fourteen years of age. Founded in 1873 by W. H. Herford, B.A. Head Mistress—Miss C. Herford.
15. Ruskin School Home, Hunstanton, Norfolk.
Principal—H. Lowerison.
16. West Heath School, Ferncroft Avenue, Hampstead, N.W.
Preparatory school for boys and girls up to fourteen years of age. Principals—C. E. Rice, M.A., and Mrs. E. Garrett Rice.
17. Friends' School, Penketh, near Warrington, Cheshire.
Head Master—W. E. Brown, B.A.
18. Friends' Boarding and Day School for Boys and Girls, Rawdon, near Leeds.
"Co-educational for the last twenty years." Head Master—J. A. Barringer, F.R.A.S.
19. Friends' School, Saffron Walden, Essex.
Boarding school to accommodate ninety boys and sixty girls; ages 9–16. Head Master—J. E. Walker.
20. Friends' School, Wigton, Cumberland.
Head Master—J. J. Jopling, B.A.

A WARNING.

To the Editor of The Journal of Education.

SIR,—If you can find room for the following warning, it may save some busy schoolmasters from being caught off their guard, as I have been.

A representative of Collingwood Brothers, Publishers of the "International Mercantile Directory," called on me at a busy moment, furnished with an advertisement of my school, purporting to be cut from the Directory, and a printed form of receipt, requesting instructions and payment for the *renewal* of the advertisement. Assuming that all was correct, I paid the money asked for, to discover, when it was too late, that no such advertisement had ever been inserted by my instructions. My request for the return of the money so extracted from me on the strength of a false representation has not, at the moment of writing, been complied with, though made about a month ago.—I am, Sir, your obedient servant,

W. S. GIBSON.

Harlington, Bedford Hill, Balham, S.W.
December 28, 1901.

REFORM METHOD TEACHERS.

To the Editor of The Journal of Education.

DEAR SIR,—It was repeatedly suggested in the course of the Annual Meeting of the Modern Language Association that it would be valuable to "reform method" teachers to have opportunities (say once a term) of discussing, in an informal way, experiences and fresh developments. I shall be glad to receive the names of any teachers who would come to such meetings; and it would be useful to know which day in the week would be most convenient.—I am, yours faithfully,

72 Ladbroke Grove, London, W.

WALTER RIPPMAHN.

REVIEWS AND MINOR NOTICES.

Sunday Mornings at Winchester. Some Addresses on Church History. By the Rev. W. A. FEARON, D.D., formerly Head Master of Winchester College. (Price 5s. Winchester: P. & G. Wells and Warren & Son; London: Simpkin & Co.)

These interesting lectures, dealing with the history of the Jewish Church between the period of the Old and of the New Testament, with Christian life in the first three centuries, the foundation and settlement of the English Church, and the saints in the Reredos of the Chapel at Winchester, who are representative of early Church history, present themselves under two aspects: as an attempt to give some information on certain subjects of which boys should know something, but with which many of them are even now almost wholly unfamiliar, and as a model for other lectures of the kind. In this last connexion Dr. Fearon, in his preface, definitely raises the question how the school Sunday can be best arranged; but this is not the occasion for discussing whether, in its regulation, the better, or the average, or the worst sort of boys should be most considered. No doubt, the freer the Sunday is from other occupations, the more scope will there be for instruction of this kind; but, in any case, if a lecturer or lecturers can be found capable of giving such thoughtful, lively, and sensible addresses as these delivered at Winchester, it will be well worth while to find the time for them either on the Sunday—most of these lectures are, from a purely religious point of view, greatly superior in value to the average school sermon—or on the week-day.

Doubtless it is because the book is thus intended to give examples of such lectures, "even in its very defects and obvious shortcomings," as the author modestly observes, that it has been left "with no attempt at verification or improvement," a statement which, in a published book, one would otherwise have been disposed to resent. But these lectures, though they are not beyond criticism in certain details, must have been very interesting—to the older boys, at least—to hear at the time, and now form good and useful reading for such boys, and for many others. Dr. Fearon has constantly borne in mind the advantage of making these addresses short. For instance, six lectures on the four hundred and fifty years before the Christian Era—including the rise of the Scribes and Pharisees, the origin of the now apparently innate turn for trade and finance among the Jews, and the Maccabean insurrection—extend to little more than forty pages. Occasionally this brevity prevents a picture from being quite clear without a previous knowledge of the facts, which cannot be expected. This is the case with the siege of Jerusalem spoken of on page 39, and with the story of "Domine, quo vadis?" which cannot be completely reconstructed from what is said of it. There are some few places too where an unfortunate word is likely to leave an incorrect impression on boys' minds. "This new-world power," as a description of the Maccabees' dominion, is ambiguous; and "English Christianity in the fourth century," "the English fellow-sufferers of St. Alban," are, of course, misleading expressions.

Further, it is hardly consistent with the extreme caution which the author sometimes shows in accepting traditions and statements to connect Constantine's conversion with the courage of these British martyrs, since it is extremely doubtful whether the Diocletian persecution extended to this island, though the martyrdom of St. Alban and others may, of course, have really taken place earlier. It is a pity, too, that such prominence should be given to the story of St. Columba's "penance."

There was another cause to justify or excuse the war which he certainly did stir up—that the king had put to death a young refugee clansman of his—besides the affair of the Psalter and its copy. As to the “perpetual exile,” he returned to Ireland more than once; and, in general, it is not certain that the war was a cause of his expatriation at all—he had, without this, quite enough good motives for going to Iona.

It would be possible to criticize other statements and views in the book, but, unless its strong points were dwelt on equally in detail, to multiply criticisms would give an incorrect idea of its general value. Dr. Fearon manages to make his short biographies interesting and alive—those of Origen, St. Aidan, and St. Hilda are as charming as any—and he often gives sound and excellent sketches of some subjects in an extremely short compass; as of the evidence for dating the Gospels, of the martyrs, the Catacombs, and the general character of the Church of England. The summing-up, moral, or “application” given at the end of many of the lectures in a few lines, sometimes in a few words, is nearly always clear and excellent, and in some cases quite delightful. It would be unjust not to notice Mr. Bramston’s charming sketch of the great St. Augustine’s life down to his conversion. The lecture on Alfred the Great, by the Rev. W. P. Smith, though there is much that is good in it, is not so interesting as most of these accounts of great Christians. Incidentally it should be said that in his quotation from the king’s own words on page 201 it is very unlikely that “gewrit” means “Scripture,” and not merely “writing.”

In general we may congratulate those who heard these lectures delivered, and recommend them to readers as giving in the main an excellent sketch of the men and subjects with which they deal, thus forming a capital introduction to these parts of Church history.

“Periods of European Literature.”—V. *The Earlier Renaissance*. By Prof. SAINTSBURY. (Blackwood.)

Prof. Saintsbury, in his preface, resents the idea of his work on the “Periods of European Literature”—of which this is chronologically the fifth, though actually, we believe, the third, instalment—being regarded as a text-book or manual. His objection, however, surely arises from a notion that a “manual” is not a repository for such competent and thorough work as he has here put into it. The nature of the subject itself, apart from any other consideration, would preclude his book from being used by school pupils, except by the few who remain long enough *in statu pupillari* to have almost outgrown the status. For those few, and more especially for their teachers, these histories must certainly come to be reckoned an indispensable equipment, and, in no disparaging sense, as *the*, not *a*, manual of the subject. The volumes are hardly intended to be read through, though, in the case of the one before us, much pleasure and profit may be gained by even a hasty perusal. Its most useful purpose, however, as must be the case with all histories of literature, will be to serve as supplement and reference-book for students who are at the same time obtaining a first-hand knowledge of any small portion of the vast mass of literature herein treated. It would be absurd to impugn the learning of Edinburgh’s Professor of Literature; he is, indeed, if anything, too learned—a more common fault at the present time than the opposite, which was sometimes the characteristic of the writers of whom he treats. Prof. Saintsbury has plenty of enthusiasm (the most necessary quality of all), and he forms his own critical opinions, as one who has gone so deep has every right to do. Yet he seems to be continually haunted by an uneasy conscience, as if some one were looking over his shoulder whom he had reason to think more capable of forming a correct judgment than himself. Such expressions as the following occur with irritating frequency:—“admittedly,” “rather famous,” “pretty generally conceded by critics,” and so on. The intention is, of course, to give a true, unbiassed view. But a truth which is too true may be almost as bad as a lie. A critic in Prof. Saintsbury’s position need not trouble to refer to other critics. His pupils are quite ready to trust him, though he displayed the *hauteur* of a Matthew Arnold, or even the pleasant assurance of a James Russell Lowell. This scrupulousness, however, is a minor blemish, and, in a certain sense, even an endearing quality. It is a more gracious task to dwell on the author’s many merits. To give, within the compass of about four hundred pages, a vivid notion of the work of Erasmus, Rabelais, Ariosto, Machiavelli, Luther, Calvin, not to omit any of the lesser stars that clustered

round these great ones, and to retain an impression of unity and coherence while moving among all the varied threads of that intricate woof of thought, is no small achievement. When Prof. Saintsbury lets himself go—as, e.g., in speaking of Erasmus or of Rabelais—he is at his best, and very good his best is. He eschews the style of the stylist, and, if this makes his pages at times a little heavy, it does not prevent him from saying some things excellently. For instance, speaking of the Italians of the *cinque cento*, he says:—

Of the three great elements of that great thing [Romance]—Variety, Mystery, Passion—the Italians, indeed, possessed the first in amplest measure; and, if they were a little deficient in the third, they made by no means a bad substitute for it out of that sublimated sensuality which is really a sort of naughty twin-sister of Passion herself—an Anteros not wholly opposed to the better Cupid. But of Mystery they knew nothing, though they were quite aware, and very fond, of its caricature, Marvel. The Romans themselves had had very little sense of the mysterious . . . and the whole course of Italian civilization, especially the fatal familiarity of the Italians with a debased official Christianity, had served as a preventive to the importation of the most precious of gifts from the North. Even in Dante . . . the very Beatific Vision is hardly vague; the descent on the wings of Geryon has the precision of a lift. . . . The Italian poet of all times . . . can sing exquisitely, say consummately, see unerringly; but he cannot *dream*.

There are parts of the above criticism that we should like to dispute, did space permit. We must, however, be content to offer it as a specimen, sufficiently characteristic, of Prof. Saintsbury’s style and method, to which, indeed, it is difficult to do justice by a single extract.

Public Schools and the Public Needs. By G. G. COULTON. (Price 5s. net. Simpkin, Marshall.)

An eminent head master, as reported on another page, gloried in his ignorance of Pestalozzi and all his works as of no more concern to him than Joe Smith and his “Book of Mormon.” It will not be possible for him and his congeners, however pachydermatous, to treat Mr. Coulton’s book with the same Olympian indifference—

*Tua res agitur cum proximus ardet
Ucalegon.*

Mr. Coulton is, it is true, at the present moment a crammer, and, consequently, liable to be denounced by a trade-unionist conference as a blackleg; but Mr. Coulton has been for many years a public-school master, and he writes as a friend, not an enemy, of public schools; he has no personal grievance to ventilate; he believes that public schools are sound at the core; he is no revolutionary, but a genuine reformer.

Dr. Abbott once suggested at a Head Masters’ Conference the formation of a missionary society or reading circle to persuade his colleagues to peruse the scriptures most necessary for their salvation—blue-books, reports, *Lehrplane*, &c. Mr. Coulton needs no such factitious aid to command a hearing. He comes home to men’s business and bosoms; he has a racy style and abounds in apt quotations and pat instances drawn from personal experience, and his main thesis is the question of the hour—how to provide our Army with competent officers.

His views are, in the main, those that have for the last quarter of a century been set forth in this journal, and there is no need for us to summarize them and virtually repeat ourselves. We prefer, therefore, to illustrate Mr. Coulton’s line of argument and style by culling a few sentences from his first chapters.

“A Jove principium”—the ground and head of the offending is the head master.

Our head masters, though personally first-rate men, are, as a rule, quite devoid of strict professional training, and are, in fact, distinguished amateurs.

Not one head master in twenty is other than a classical man.

On any point involving a comprehension of the technicalities of class-teaching the head master would be a less safe guide than at least one-third of his own assistant masters.

The average classical man, like the orthodox of the middle ages, enjoys the double pleasure of condemning all heretics and then of holding them up to scorn for that very degradation to which he himself has condemned them.

There is no contemptible number of cases in which a head master has come straight from the University without any experience of boys. . . . Many such men go down to their graves with little in their minds beyond a mass of petrified puerilities. For they have often, it must be

remembered, not even been real schoolboys. By our present scholarship system a clever boy is marked out almost in his cradle, and crammed from scholarship to scholarship like a Strassburg goose. This is the extreme type of that class of men from whose ranks so many of our head masterships are filled.

The body of the book is addressed to laymen, and technicalities have been wisely relegated to the appendix. The documentary and corroborative evidence therein set forth is an invaluable storehouse of facts for the educational reformer, and we hope that it will be studied and weighed by the Commission on Army Education which is now sitting. It is to be regretted that the profession should be represented on that Commission by two head masters who are nothing if not classical, and can know nothing of the working of an Army class except at second-hand through their assistant masters.

Canon Lyttelton (it is unfortunate that his name should be throughout the book misspelt) as a *chevalier sans peur et sans reproche*, no less than his brother the general, can hardly decline Mr. Coulton's cartel. "French Prose Compositions by Fifty Head Masters" would make a delightful pendant to "Are we to go on with Latin Verses?"

Anticipations. By H. G. WELLS. (Price 7s. 6d. Chapman & Hall.)

Forecasts of the future in the form of fiction have been given us at divers times and in divers manners by Lucian, Bacon, Swift, Bulwer Lytton, and Samuel Butler—"Erewhon Revisited," of the last-named writer, is among the best. Serious speculations on the trend of things and the ultimate form of human society are few in number, and Mr. Wells is almost the first to draw a horoscope that takes account of all the elements of the problem, psychology and science, language and literature, morality and religion.

The book reveals an extraordinary grasp of thought, a vivid, and at the same time regulated, imagination, and a power of penetrating to the springs of individual and social action. It is not written *virginibus puerisque*, but we commend it as a useful present to a youth or maiden who is bitten with Fabianism or Christian science or psychical research. There is not a page but provokes controversy, and the annotated edition of "Anticipations" which Mr. Wells anticipates, to include the criticisms of reviewers and the author's rejoinders, will, when published by the State (that is another anticipation), form a small library.

We can only deal, and that very briefly, with our own special subject. For the education of to-day Mr. Wells has nothing but scorn and contempt. He has eaten with tears the bread of an assistant master before he came to know the heavenly powers, the publishers, who, by the way, are pronounced bitter, merciless gods.

The shabby-genteel middle-class schoolmaster of the England of to-day, in—or a little way out of—orders, with his smattering of Greek, his Latin that leads nowhere, his fatuous mathematics, and his incomparable snobbishness, certainly does not represent the schoolmaster of this coming class.

And the Head Masters' Conference fare no better than their humbler brethren. They are "conspicuously second-rate men, forced and etiolated creatures, scholarship boys manured with annotated editions, and brought up under, and protected from, all current illumination by the kale-pot of the Thirty-nine Articles. Many of them are even less intelligent men than many Board-school teachers." We hold no brief for public schools or public-school masters, and we welcome so powerful an advocate of professional training; but, when he passes from railing at the present to his "larger synthesis," his beryl stone, we confess, presents to us a dim and clouded image. To organize and control public education is, he tells us, evidently beyond the power of a democratic government; and, on the other hand, it cannot be left to commercial enterprise, working on parental ignorance and social prejudice. We need "a universally accessible, spacious, and varied educational system, working in an atmosphere of efficient criticism and general intellectual activity." This Utopia, we gather, is to be realized by unofficial organization, of which the Navy League is taken as a type, and Mr. Carnegie as John the Baptist. That such organizations have done much in the past, and may do much in the future, we should be the last to dispute; but where would England now be if she had left her primary education to be developed by the British and the National Society? The

function of bodies like the Girls' Public Day School Company is to initiate and to supplement, not to organize, a national system. If we had to choose between the two ideals of education, we should prefer that of Plato's "Republic," a work of which Mr. Wells seems strangely ignorant. To mumble over the past and to live on the classics is doubtless, as Mr. Wells tells us, senility; but Plato and Aristotle were no fools, though they wrote in Greek.

Arithmetic. By R. HARGREAVES, M.A., formerly Fellow of St. John's College, Cambridge. (Clarendon Press.)

The most striking feature of the treatise before us is the prominence given to "The Choice of Methods with a view to Economy of Labour." As the book is not intended for the use of beginners, the author is able to offer this choice even when discussing the simplest rules. Thus, on page 8, the reader is shown in quick succession three methods of conducting the mental work involved in subtraction. The three ways are suggested by the terms "borrowing," "paying back," and "interrogative addition." The last of these methods is probably the most useful, and it is to be regretted that more stress is not laid on that fact, as the conservative teacher is likely to continue to use one of the older methods, unless the advantages of the new are emphasized. A child who has formed the habit of doing subtraction by the "interrogative addition" or "shop" method will be ready to profit by the use of this book far more than one who learns the method as a novelty when the use of one of the older methods has become automatic.

The discussion of multiplication provides the student with a choice: the product may be regarded as the sum of the partial products of the multiplicand and the successive figures of the multiplier. The usual order of taking these products is that with the smallest first. The other order, in which the product of the multiplicand and the leading figure of the multiplier is written down first, seems far more natural; and, as this is the order used in approximate work, nothing is gained by allowing the pupil to form the habit of using the other way.

In considering compound multiplication, the author introduces a new method, which he entitles "The D.U., or Denominational Unit, Method." In finding the cost of n articles at £12. 8s. 11½d., his first step is to form a table showing the cost of n articles at 1s. and at 1d. The method does not lead to more figures than "practice," and certainly requires less thought on the part of the calculator.

The fact that it is still worth while to devise such a method is a curious commentary on the slow progress of the movements in favour of the metric system and a decimal coinage. The simplicity of these systems is responsible for the inconspicuous position which they occupy in English arithmetics, the writers of which have in many cases given special chapters to the subject and then dismissed it entirely. Mr. Hargreaves gives, in his later chapters, many opportunities to the student who wishes to become familiar with the system. As regards the financial subjects which claim so large a share of the attention of the arithmetician, we find that the explanations of such difficult branches as bills of exchange are remarkably lucid. The examples provided are ample in number for all purposes, and render the work complete as a useful text-book for the private student and for the schoolmaster.

The Two First Centuries of Florentine History: the Republic and Parties at the time of Dante. By Prof. PASQUALE VILLARI. Translated by LINDA VILLARI. Illustrated. (Price 7s. 6d. Fisher Unwin.)

It would be unfortunate if the form of the present volume should stand in the way of its acceptance, in spite of the value of its contents. It is indeed a history, but a history constantly interrupted and bewildered with argument. In fact it consists of a series of essays, which were first lectures and then magazine articles, and are now pieced together in the historical order of their subjects. They are essays of investigation, too, and thus involve the author in much discussion that should be preliminary or collateral to a history. Besides, the exigencies of the lecture-room account for supplementary digressions by no means demanded by a history: for example, a great deal of the exposition of the classical Roman law in order to an understanding of the Florentine law of the period. By the way, how can Prof. Villari say that, "in the age of

Cæsar," "the *fideicommissum* has almost the force of a testament in solemn form, and has become part, as it were, of the *jus civile*?" Surely the *fideicommissum* had no legal standing whatever "in the age of Cæsar." One might suppose that "in the age of Cæsar" is a mistranslation for "in the time of the Empire." So "the woman is no longer subject to the *patria potestas*" seems a rather adventurous statement, without some very particular qualification, in face of Justinian's law books. However, Prof. Villari's aim has been "to investigate in what manner the Republic was formed, the nature of its constitution, the why and wherefore of its continual transmutations, the first causes and genuine motives of the factions by which the city was torn, and likewise to ascertain how it came about that—despite all this turbulence and strife—commerce and industry, the fine arts and letters, should have been able to achieve such marvellous results." And this aim he carries out with remarkable ability and industry; so that, although the various chapters were published in various periodicals from 1867 downwards, they will be still found most instructive, as well as interesting, to English students of the period. Some useful additions are appended by way of notes, but the substance of the book has not, to our knowledge, been superseded by any other work in our language.

An Elementary Old English Reader (Early West Saxon).
Edited by ALFRED J. WYATT, M.A. Cantab. and Lond.
(Price 4s. 6d. Cambridge University Press.)

The extracts are taken from the Parker manuscript of the "Chronicle" and Alfred's translations of "Orosius," and of the "Cura Pastoralis." The graduation of them in point of difficulty is in a manner natural; place the three works in this order and they graduate themselves. But nowhere is the difficulty at all formidable. The notes are useful so far as they go; they are mainly references to Mr. Wyatt's "Grammar" of early West Saxon, and geographical or historical explanations. The glossary, which is substantially the work of Miss Amy L. Lake, B.A., seems adequate in essentials; but it is not quite complete, and students may easily waste time over it without finding what they want. It may be that "there is no way of dealing with it that is not open to serious objections"; but we should think the simplest way is to place the words of the text in alphabetical order. We are by no means satisfied that it is a "vicious" practice "to print together all words beginning with *ge*," inasmuch as it separates all such words from those with which they are etymologically connected." The etymological consideration is not the paramount one. If, for instance, a student wants to look up "feng," and has not made proficiency in his grammar, either he does not find it or he scurries about through the glossary words commencing with *f* till he lights on a verb that appears likely to yield it. The first business of a glossary is to give the student at once the word he seeks. It is a complete educational mistake to hammer into his head the whole of the grammar before he starts reading; and he ought not to be discouraged by the unpractical, however "scientific," arrangement of the glossary. There are difficulties enough without mechanical contrivance of fresh ones. Apart from this weakness, the "Reader" is an excellent book for private use as well as for schools.

A Short History of English Commerce and Industry. By L. L. PRICE. (Price 3s. 6d. Edward Arnold.)

Mr. Price gives a brief account of the commercial and industrial development of England from the earliest times to the reign of Victoria. He stops at the introduction of free trade on the somewhat high plea that "the features and incidents of the last period, which is now running its course, are as yet too close to allow of calm observation from a distance." It does not imply any under-estimate of the value of the preceding periods to suggest that this last period is of especial importance to advanced students, and that it is capable of adequate treatment that shall not offend the historic sense. On this point, we venture to think, Mr. Price has fallen into a grave error of judgment. So far as he goes, however, he presents the most important events and characteristics of each period with his accustomed ability, and his praise need not be any the less because he disclaims originality. While he follows the best authorities, he moulds the facts in his own forms of presentation. How difficult it is to make a satisfactory book of this class may be seen by comparing Mr. Price's work with two or

three others that we have recently noticed. With all their elements of agreement, each contains so much that the others omit or curtail. Again, it occurs to one to contrast the position of the pupil in front of the condensed summaries of any of these books with the position of the writer in front of the details whence he draws his summaries. Would not a larger book be a vastly easier one, simply because more intelligible? However, Mr. Price is as lucid as his limits permit, and an excellent guide as far as he goes.

(1) *English History illustrated from Original Sources, 1307-1399 A.D.* By N. L. FRAZER, B.A. (7×4¼ in.; Part I., pp. xvi., 111; Part II., pp. iii., 128; with Illustrations; price 2s. 6d. A. & C. Black.) (2) *Commercial History. Part I.: The History of Commerce down to the end of the Middle Ages.* By J. R. V. MARCHANT, M.A. (7¼×4¼ in., pp. iv., 112, with Illustrations; price 1s. Pitman & Sons.) (3) *A Class-Book of English History.* By ARTHUR HASSALL, M.A. (7½×5 in., pp. xx., 303, with Maps; price 3s. 6d. Rivingtons.)

(1) This interesting little book is one of a series, and itself consists of two parts, bound in one, covering respectively the periods 1307-1360 and 1361-1399. The contents have been selected in a careful and catholic spirit, and will be found, as an adjunct to an ordinary school history, both interesting to the pupil and very helpful to the painstaking teacher. We do not, however, agree with the editor-in-chief—Mr. G. T. Warner, of Harrow—that the volumes should also be used as text-books, except by classes advanced beyond the ordinary range of school. The story is not complete or continuous enough for the young; children cannot construct their own history from original sources. In such a construction, questions of authenticity of documents, and of the degree of credence to be given to them, are of prime importance. Until these are settled we cannot even begin; and these are matters beyond the young. The quantity of fairly trustworthy matter is often very great; there must, therefore, be a selection; and this implies a selector; and the selector speaks his views through the mouths of his original authorities instead of with his own lips—very fresh and interesting, but not the same as the study of history from original sources. Nothing could be worse than to allow the young to fall into such an error. They must take the story as the historian gives it—whether he speaks in his own person or not—with his warnings on doubtful points and his picturesque quotations from originals. Later on they may, and should, do original research; and when that time comes—which will not often be till they have left school—they will find the books in this series very useful as text-books. We have no reason to believe that either of the editors of this little book differs from us in this matter to any marked extent; the only question between us is when the volumes should be used as text-books. But there is so much make-believe of original research and sham scientific investigation about just now that we have felt that we ought to give a word of warning. The unhealthy pretence that children can do work which, as a matter of fact, can be done by none but experienced adults is a danger against which it behoves us more than ever to be on our guard. The advice given in the earlier half of the preface is good, and we recommend teachers to follow it. The reviews of authorities, the lists of books, and the date summaries are excellent, and the volume deserves to be a success.

(2) Mr. Marchant starts his history of the commerce of Europe and Western Asia with Assyria and Babylonia, and brings it down to the celebrated voyage of Columbus and the close of the middle ages. The rest will follow in the second part. He writes interestingly, and with care and discrimination. We have, however, noticed two curious misprints: on page 24, the south-east corner of Britain is spoken of when evidently the south-west is intended; while, on page 36, the Greek colonies are said to stretch "from Spain on the east to the Euxine on the west." On page 57, also, *Caffa* is spelt with a *K* after having been first spelt with a *C*. But a word to the printer will set these right. The illustrations of ships, bridges, coins, maps, &c., are good and helpful, and the book as a whole is well put together and well fitted to serve as an introductory treatise to its subject. We have read it with decided interest. Mr. Marchant, we may mention, is examiner in commercial history to the London Chamber of Commerce, and evidently knows what points in his subject require most emphasis. We hope Part II. will give us an index.

(3) Mr. Hassall pleads that the progress of historical research renders it necessary that, from time to time, certain portions of English histories should be rewritten or greatly modified; and he tells us that he has endeavoured to provide a class-book sound so far and up to date. As far as we have tested his book, it seems to us successful in both respects; and, in addition, he tells his story in a clear and interesting manner. We should advise him, however, to remove from his title-page the prodigious list of examinations for which he thinks his book suitable; it spoils the look of the page, and is likely to be misleading as to the general character of the book. At the end of each chapter we are given a list of important dates, another of subjects for class treatment, subjects for blackboard illustrations, chief names, and, lastly, notes

a history of our early literature, but an introduction to the history of our later literature. It selects striking representatives of a few great facts in the history of the early period, and deals with them—keeping an eye all the while on what is to come hereafter, and adding typical extracts (mostly modernized) by way of illustration. The little book is well informed, and is written with taste and good judgment. It takes us down to the year 1590, when the first three books of "The Faery Queene" were published.

"Blackie's English Classics."—*Wordsworth's Ode on Intimations of Immortality and Laodamia; Gray's Ode on the Spring; Johnson's London and Vanity of Human Wishes.*

Three booklets (price 2d. each), neatly printed, and satisfactorily annotated, with brief introductions. In the same series, *Marmion* (price 1s.)—no editor and no date—on the same lines as the above.

Milton's Paradise Lost, Book III. Edited by ARTHUR T. FLUX. (Price 1s. Nelson.)

This little book is interleaved, and is evidently intended for pupil-teachers. Both the introduction and the notes seem to us to be written with care and to be satisfactory. The same may be said of Cowper's *Expostulation* (same price and publisher).

Cowper's *Expostulation* is also published by Messrs. Macmillan (price 1s.)—but no editor is mentioned. It looks like an excerpt from Mr. W. T. Webb's edition, and seems carefully compiled.

"Dinglewood Shakespeare Manuals."—By STANLEY WOOD, M.A. *King Henry the Fifth* (price 1s.). *Supplement to the same* (price 6d.).

This edition does not supply us with the text of the play, but with notes and questions, which can be used with any editions of the text. The idea seems to have been successful, as the former booklet is already in its third edition.

Alfred the Great: a Sketch and Seven Studies. By WARWICK H. DRAPER, M.A. (7½ × 5 in., pp. xv., 143, with nineteen Illustrations and a Map. Elliot Stock.)

Mr. Draper's sketch of the life and reign of Alfred is brief, but readable. It does not, however, add anything to the knowledge in general possession. The "Seven Studies" are much more serviceable. They deal with Asser's life of Alfred, Alfred's legislation, his local government, his work as a man of letters, the Oxford myth, the Vale of the White Horse, and Alfred's burial place. Of these the longest and best is the fourth, which gives an interesting account of the thirteen various works associated with Alfred's name, treating four of them at some length. We are then provided with some notes on Alfred's Jewel, his ships, his rebuilding of London, and the places mentioned in his will. The book closes with a consideration of the materials for the history of Alfred, a bibliography, and an index. The illustrations which are copies of various pictures we do not admire; but the others are interesting and helpful. The book will undoubtedly be found useful by those who are intending to study the subject, and makes its appearance at the right time.

Analysis of English History. By W. C. PEARCE and S. HAGUE, LL.D. (6½ × 4½ in., pp. 220, 40; price 1s. 6d. Murby.)

This is an improved and enlarged edition—the ninety-seventh—of Mr. Murby's well known "Analysis." The subject-matter has been brought down to the accession of King Edward VII., and certain minor changes (chiefly of phraseology) have been introduced. The book is evidently suited for its purpose, and has met, and will continue to meet, the wants of many—as long as there are examinations in history. It is not merely a cram book, but a useful analysis and summary.

"Phillips' County Readers."—*Kent, Past and Present.* By GEORGE F. BOSWORTH. (7¼ × 5 in., pp. xi., 268, with six Maps and eighty Illustrations; price 2s. Philip & Son.)

This is a well written and very interesting reading book, and should be welcomed by Kentish children everywhere. Almost everything of importance in connexion with the past and present of Kent is dealt with or referred to in its chapters. Very useful will it prove if read with the *Heimatskunde* which is at last making its way into our schools. But it can also be read by itself. The illustrations—mainly photographs—and the maps are very satisfactory; and so is the glossary at the end of the volume, while the notes on books and maps relating to the history and antiquities of Kent will be a decided aid to the teacher.

(1) *Experimental Hygiene.* By A. T. SIMMONS, B.Sc., and E. STENHOUSE, B.Sc. (6¾ × 4¾ in., pp. viii., 322, with Illustrations; price 2s. 6d. Macmillan.) (2) *Elementary Practical Hygiene.* Section I. By WILLIAM S. FURNEAUX. (7¼ × 5 in., pp. viii., 239, with Illustrations; price 2s. 6d. Longmans.)

Both of these books follow, more or less closely, the lines of the *Elementary Hygiene Syllabus* (Section I.) of the Board of Education. They are meant to serve as practical guides to elementary physics and chemistry as far as these are necessary for domestic hygiene, and also as introductions to that subject. In each case we have a series of simple exercises and experiments such as can be performed with the simplest

possible apparatus, careful descriptions and pictures of which are given. In this way the matters dealt with and explained are made more real and more readily intelligible for students, who are to handle and observe what otherwise they might only imagine. In work of this kind, however, there is a danger for both students and teachers against which more warning is necessary than is given by either book, a danger lest confusion should arise between what is merely a concrete explanation or illustration and what is really a proof. The popular demand for science for those who are untrained, ill-informed, and in a hurry has led to a great deal of superficiality and make-believe in what is supposed to be scientific work, and we must be constantly on the alert against it.

(1) Mr. Simmons's book is very full, and is written with great care and discrimination. The experiments are well chosen and well described, and the pictures given and the apparatus recommended are both very satisfactory. The spirit of the Syllabus is followed, but its details are not slavishly adhered to when a change in order or a change in experiment seems likely to be an advantage. The book is a good one.

(2) Very much the same may be said of Mr. Furneaux's book. It is, perhaps, here and there more interesting than the book just dealt with, and is not quite so closely packed. Its manner frequently reminds us of that other excellent little book of his, "The Outdoor World." At the head of each chapter a list of apparatus and materials is given; and just a sufficient number of experiments are introduced to make things clear. Now and then it has seemed to us that a little more detail in the descriptions of these would have done no harm. But the author is rightly scrupulous about over-weighting his pages, and wants his students' attention to be turned to the wood rather than the trees. He relies on the students working for themselves and having the help of an intelligent teacher. His little book will be found interesting and useful.

Havelok. Edited by F. HOLTHAUSEN. (Price 3 marks. Sampson Low.)

Prof. Holthausen has given us a work which is scholarly and, at the same time, adapted to the practical needs of the student. We are glad to see that it is to be followed by a series of some of the most important Old and Middle English texts. The difficulties of "Havelok" are twofold. They arise, first, from the very unsettled orthography of the copyist, notably in his use of the letter *h*; and, secondly, from the fact that only one MS. exists, and that one very imperfect. In the first case Prof. Holthausen has cleared the way for the student by adopting the normal orthography of the author's time and dialect, while, by indicating his additions or alterations by brackets or other means, he has preserved for the more advanced or more scientific scholar the linguistic interest of those very variants. The difficulties of the second class—those arising from the corrupt state of the text—are not so easily disposed of, but here also Prof. Holthausen will have gained the gratitude of the student by his discriminating selection from the many readings already suggested, as well as by his own contributions towards the elucidation of the text. We only regret that he has not been able to throw any further light upon some of the most obscure passages, and that he has not added a fuller glossary. The few columns of words which are given will certainly not meet the needs of the average reader.

A Text-Book of Psychology for Secondary Schools. By DANIEL PUTNAM, LL.D., Professor of Psychology and Pedagogy in the Michigan State Normal College. (New York: American Book Company.)

Opinions differ as to the advisability of the study of psychology in the secondary school. It would seem that the introspective nature of the subject certainly is adapted to a later stage of intellectual development than the school age. The problems connected with sleep, dreaming, somnambulism, and hypnotism are abnormal, and a youth's time could be given to more pressing studies. Still, given that psychology is to be a school subject, Dr. Putnam's text-book is excellently simple and clear. There is much value in his suggestions as to experiments and apparatus contained in the appendix. There is much that is stimulative to thought in the simple experiments suggested in connexion with sensation, reaction time, image-meaning or visualization, and, with a careful teacher, valuable elementary work might be done on the lines laid down, without any danger of ill-advised introspection. On the other hand, the brevity of treatment gives to many important sections such general presentation as may be misleading. But such an effect is almost certain in the short text-book of psychology. We are of opinion that within its limits Dr. Putnam's book will be found both interesting and valuable as giving a bird's-eye view. It is very suitable for the general reader who has not yet read psychology. For the teacher, too, there are many practical suggestions.

Human Nature and Morals according to Auguste Comte, with Notes Illustrative of the Principles of Positivism. By JOHN K. INGRAM, LL.D. (8¾ × 5¾ in., pp. x., 115; price 3s. 6d. net. A. & C. Black.)

The subject of this book is somewhat outside our usual limits; so our notice of it must be short. Dr. Ingram tells us that his aim is to give

English readers a brief account of Comte's theory of the moral and intellectual constitution of man, and the practical consequences deducible therefrom. He has accomplished his task with care and skill. His book is both well informed and well written. The first chapter is introductory, and indicates clearly the main points to be considered. The second chapter presents an interesting, but not wholly convincing, analysis of the intellectual and moral powers of man, accompanied by Comte's table of the classification of the eighteen internal functions of the brain—to each of which, it is asserted, a special cerebral organ corresponds. This is somewhat disconcerting, as being entirely out of keeping with the results which modern psychologists and physiologists have so far reached. The *faculty* theory of mind is dead. The mind nowadays is seen to be one whole; and such special cerebral organs as are recognized are those connected with special sense organs and certain physical functions. Of course Dr. Ingram knows this; but he shows no disinclination to accept Comte's statement of the matter. Chapter iii. deals with the relative positions of the internal cerebral organs. The argument is logical enough in its way, but is too fanciful and too little supported by evidence to be convincing. The next chapter brings us to an exposition of Positivist morals. To our mind it is the best and most interesting in the book, as those who are acquainted with the subject will readily understand that it was likely to be. The last chapter gives us a comparison of the Positivist moral system with Bishop Butler's. It is, we think, very much handicapped by the *faculty* theory already alluded to, and sometimes the argument seems to us too much like mere hair-splitting; but here and there Dr. Ingram does undoubtedly convict the Bishop of inconsistency. The rest of the book consists of "notes," explaining the Positivist use of certain terms, e.g., absolute and relative, abstract and concrete, objective and subjective, and the like, and dealing with such matters as final causes, materialism, laws and causes, and psychological introspection. These are well written and very helpful. Altogether the book seems to us well fitted to do what it intends to do.

The Romance of the Heavens. By A. W. BICKERTON.
(Price 5s. Swan Sonnenschein.)

This volume is of an entirely speculative character, and is not in any way a text-book or description of the fundamental and well ascertained facts of astronomy. Prof. Bickerton has here condensed the substance of his numerous papers on "Constructive Collision," by which he seeks to explain the origin of the visible universe. The fundamental idea of the theory is that a collision between stars must, in general, be of the nature of a graze, each shearing off from the other a portion of its mass, and that these portions coalesce to form a third and intermediate body, while the two wounded stars either continue on their respective independent journeys or become orbitally connected. Further, the heat generated by the collision is mostly confined to the intermediate body, which may become hot enough to be the origin of a nebula. The author believes that the phenomena of double stars and variables are to be explained on these lines. Prof. Bickerton has such confidence in his theory that he does not shrink from applying it to the impact of star clusters, nebulae, and even of universes; and he further believes that the doctrine of the dissipation of energy must be abandoned. We need hardly say that the author is at variance with the greatest physical authorities.

The Romance of the Earth. By A. W. BICKERTON.
(Price 2s. 6d. Swan Sonnenschein.)

The author gives, in the first place, a comprehensive popular sketch of the possible origin of the earth and of the various agencies which have been concerned in moulding its surface and in causing the present distribution of land and sea; but the greater part of the book relates to life past and present, particularly from the point of view taken by the evolutionist. It is profusely illustrated throughout. The author calls it a reading-book; but, if by this he means a reading-book for schools, we think that it is scarcely simple enough in character or expression. It would be more suitable for that purpose if less were attempted, and that in greater detail. There is neither index nor table of contents.

Advanced Exercises in Practical Physics. By A. SCHUSTER and C. H. LEES. (Price 8s. Clay & Sons.)

This is a careful selection of typical exercises in practical physics, intended for the use of students who are working for the Final Examination for a Degree in Science. It does not profess to be a complete manual of physical practice, but aims at inculcating thoroughness and accuracy in work, and system in recording results. Each branch of physical science is represented among the seventy-five experiments described, and in each case very full and detailed instructions are given. The best method of recording the results obtained is always illustrated by an actual example. The book is excellently printed and well illustrated with outline diagrams. It can be thoroughly recommended.

An Elementary Treatise on Hydrodynamics and Sound. By A. B. BASSET. Second Edition. (Price 8s. Deighton Bell & Co.)

No account of this well known work is needed. It is sufficient to mention that the first edition has been revised and enlarged, and that it is intended for the use of candidates in the Mathematical Tripos.

Elementary Studies in Chemistry. By JOSEPH TORREY.
(Price 6s. net. Constable.)

The course of instruction here mapped out is excellent in every way, and provides the student with plenty of material for thought. The subject-matter is presented in the form of lectures, each of which is followed by instructions for carrying out, in the laboratory, practical exercises based on the lesson. This practical work is carefully chosen, and includes not only preparations of important substances, but also many simple quantitative measurements of theoretical importance. The beginner is skilfully brought to understand the foundations of chemical theory by the thorough investigation of a very limited number of substances. We think that portion of the book dealing with the non-metallic elements is distinctly the more valuable. The illustrations throughout are excellent, but the subscript numbers in the formulae are in such small type that it is very difficult to distinguish them. Since the termination *ic* has a perfectly definite meaning, we think that the author should not have used it indiscriminately with all positive radicals. A few errors need rectification. On page 98 it is implied that when manganese di-oxide reacts with hydrochloric acid gas the whole of the chlorine is liberated as such. The author appears to have overlooked the fact that only half of the chlorine is set free. On page 169, § 4, for "substance" read "solution." Again, on page 331, certain limestones are stated to make hydraulic cement when mixed with water. It is, of course, meant that the limestone has been previously burnt. On page 397 the melting point of gold is stated as 1,200° C., which is more than 100° too high. The volume can be recommended to the attention of both teachers and students.

"The Ideophonic Texts for acquiring Languages."—Vol. I., *Schiller's Wilhelm Tell, Act I.* (Price 1 dol. The American Text-book Agency.)

In noticing this book, which is the first of a promised series, we prefer to act as reporters rather than as critics. Just as the recipes of the cookery books require to be tested with a stew-pan before their merits are apparent, so does a new system of acquiring languages wait for experience to determine its value and its fate. It will be enough then if we tell our readers what are the chief features of the Ideophonic texts as revealed to a provisional inspection. "They are designed," says the preface of the volume before us, "to furnish abundant material for forming those myriad associations of mental and organic processes which constitute the acquisition of languages." The mental processes, we gather, are, or culminate in, *ideas*; the organic processes appear as *sounds*. The object of the system is to present a multitude of thoughts or ideas in connexion with the combinations of sounds that express them in the foreign language. The ideas are conveyed through the written form of the student's native tongue; the sounds of the language that he is studying are represented by means of the universal alphabet of the International Phonetic Association. But, for the purpose of comparison, the customary representation of a sound must be shown beside the artificial; and the literal English of a translation must be further rendered into that of life and literature. Thus, to confine ourselves to the German-English series, the double page offers us four parallel texts: phonic German, ordinary German, verbal English, and free English. The application of the new method, however, is not restricted to German; it has a much more ambitious scope. The prospectus of the scheme informs us that "it is proposed to publish numerous texts and combinations of texts other than those already prepared, as, for example, an edition of *Wilhelm Tell* with ordinary Fraktur, Schulfaktur, or Schwabach type in place of the Roman type, or a literal prose translation in place of the poetic English translation; and Anglo-Saxon, French, Spanish, Russian, Hebrew, Latin, Sanskrit, and other modern and ancient language texts for English readers. In due time, also, the plan is to publish series of texts for the use of other than English-speaking persons: thus, there may be French texts for German readers, English texts for Japanese readers, and so on. The same system of phonic notation will be used for all languages." The "editorial critic" of three experimental volumes is Prof. George Hempl, of the University of Michigan; and, for the price stated above, the publishers will send the first of them, this edition of Schiller's noble play, post paid to any part of the world. We can only hope that their enterprise will serve the cause of education and be rewarded in proportion to its utility.

The "Design" Freehand Drawing Sheets and Cards.
(Davis & Moughton, Birmingham.)

These sheets seem to form a very excellent course of instruction in freehand drawing and design. The sheets are large and suitable for class teaching. They are arranged in five sets, each set containing twenty-four coloured sheets. The sets are well gradated, starting with elementary geometrical forms, and leading on to the more advanced sets, in which designs are adapted from some well known leaf or flower shown on the sheet. The designs are drawn for borders, or to fill in various geometrical figures, such as a triangle, circle, trefoil, &c. Some are adapted for outline, others for brush-work. The price of each portfolio is 12s. The cards are small reproductions of these sheets, suited for individual work. Each set of cards costs 2s. The

whole series is very well got up, and the designs are good and suggestive, the different stages in the formation of the design being clearly shown. The designs of the cards are reproduced in cheaper form on paper in five books, price 4d. each.

Progressive Design for Students. By JAMES WARD. (Price 5s. Chapman & Hall.)

This book contains a very clear and instructive course for would-be designers, and also gives much of the history of the art. Mr. Ward is specially helpful in the numerous examples of natural forms of flowers, birds, and animals, towards which he turns the student's attention as containing most useful material for his work.

Ambidextrous and Free-arm Blackboard Drawing and Design. By F. F. LYDON. (Price 5s. Sampson Low.)

An interesting book on two of the more recent developments in the teaching of drawing, which should form a splendid physical training for a child, even if he should never touch a pencil after he left school.

The Manipulation of the Brush as applied to Design. By STANLEY THOROGOOD, A.R.C.A. (Price 4s. G. Philip & Son.)

A very good text-book of brush-work for the purposes of design. The book contains many artistic and original designs, and also gives examples of Greek, Etruscan, Hispano-Moresque, Italian, Persian, and Japanese art.

Brush-Work and Design. By FRANK STEELY. (In 3 parts, price 1s. 6d. each. G. W. Bacon & Co.)

This graduated course of brush-work will be helpful to teachers. Some of the pages are rather spoiled by over-crowding, and might be improved by judicious selection and enlargement of the designs that are kept.

The "Knowledge" Diary and Scientific Handbook for 1902 (price 3s. net) is in many ways an improvement on the first issue of 1901. In addition to the monthly star maps there are maps for all the principal planets, and descriptive articles have been contributed on Botany, the Microscope, and Meteorology.

"Tales of the Heroic Ages."—(1) *Beowulf.* By ZENAÏDE A. RAGOOZIN. (7½ x 5¼ in., pp. 123, illustrated; price 2s. 9d. American School and College Text-book Agency.) (2) *Friithiof.* By the same. (Same size, pp. 144, illustrated; same price and publisher.)

Mme. Ragoozin gives us on the title-page a prodigious list of societies which she belongs to, and little books which she has written. This seems to us a pity, as it is likely to impress the public unfavourably. The "Tales of the Heroic Ages" are both well and interestingly told, though they do not follow the originals too closely. Still, the gist and general character of the stories are given, and with some narrative skill. The books are well printed and well illustrated. Children are sure to like them. But the price seems to us much too high and likely to impede the circulation they deserve.

We have from Messrs. Macmillan a set of four *Brush-Work Copy Books* suitable for small children, price 4d. each.

GIFT BOOKS.

The Works of William Shakespeare. 20 vols. (Price £2. 10s. net. Constable.)—This very handsome library edition of Shakespeare, as far as print, paper, and binding are concerned, is all that heart could desire. Each play is accompanied by a glossary and brief notes on the variant readings. The editor, whose name does not appear, though he writes in the first person, shows sound critical judgment. He follows closely the folio of 1623, and the rare emendations he proposes are well worth consideration. An index of Shakespeare's characters, in Vol. I., is a new and useful feature. As a matter of personal taste, we could forgo the coloured illustrations, not that these are inferior in quality to the rest of the work (some are really beautiful), but we feel as Charles Lamb felt when he saw King Lear on the stage. Shakespeare is best without either comment or illustrations.

Kim. By RUDYARD KIPLING. (Macmillan.)—Mr. Kipling has gone back to his happy hunting ground, where he is at the best. One "Jungle Book" is worth a wilderness of "Stalky & Co." Kim has, indeed, a strong family likeness to Stalky—a young Ulysses, longing to drink life to the lees, and not overtroubled with scruples; but we can tolerate, and even admire, in a Eurasian much that we should pronounce "bad form" in an English public-school boy. The Lama is a beautiful character, one whom St. Augustine would have pronounced *naturaliter Christianum*.

Bad Little Hannah. By L. T. MEADE. (Warne.)—If it were not for her sex, we should say that Hannah was "what nurses call 'a limb,'" and under her mother's treatment she might well have become something much worse. This amiable lady, enraged at a very irritating piece of mischief on the part of this child of eight years old, takes her up to a haunted room in a disused tower away from the rest of the house and locks her in, remarking before leaving her alone for

the night that, if she listens at the window, she will probably hear the pistol shot which puts an end to her pet dog. Happily for Hannah, a new governess, whose bright face and manner had already attracted the child, takes pity on her, and the influence she gains is so great that we are led to hope that in time the child will become good little Hannah. The illustrations, one or two of which are excellent, are by Gordon Browne.

Ethel Hardman. By W. EDWARD CHADWICK. (S.P.C.K.)—This is "a story of self-discipline," and relates how the heroine, Ethel Hardman, who is possessed of a marvellous voice and other attractions, gives up her ambitious desires for wealth and power, and turns her mind to better things. She is not exactly a lovable person, and one gets a little tired of her choosing songs with Italian words, which she thinks people will not understand, in order to give herself the fullest scope of expression without betraying her feelings to the outside world. The story is rather spun out, and would gain by compression.

Elsa's Little Boys. By MRS. HERBERT MARTIN. (Warne.)—Elsa is the nominal, and old Hannah the real, heroine of the story. She is an old-time servant, devoted to her nurselings of more than one generation, indefatigable in their service, spending herself entirely for them, and wanting no reward but their affection. With all this she is very obstinate and will go her own way, but that makes her all the more natural, and she wins the reader's liking at once, and makes the little story interesting.

Robin. By RAYMOND JACBERNS. (S.P.C.K.)—Probably, in all ages there have been young people who are so self-centred that they were incapable of seeing anything except from their own point of view. Robin was a modern specimen, possessed by a desire to set everybody to rights and a vast sense of injury because her ill-judged efforts were not appreciated. She began by being so disagreeable that the wonder was that her relations could put up with her at all, but the lapse of some months and a few painful lessons led her to realize that she was hopelessly weak where she thought herself strongest, and paved the way for a happier future.

Roses, Sweet Roses. By the Rev. W. J. BETTISON, M.A. (S.P.C.K.)—A story of a little flower girl whose wistful face attracts the notice of a kindly lady through whose influence the child's father, who has got into bad ways, is reclaimed, and he and his family "live happy ever after."

Wonders in Monsterland. By E. D. CUMING. (Price 6s. George Allen.)—A children's story book, with a scientific flavouring which is not obtrusive, and gives the variety now so much sought after, wisely or unwisely, in children's books. The book is well got up, and some of the illustrations are clever. Hipparrion, for example, announcing his name, is a most expressive figure.

The Lighter Side of Cricket. By Captain PHILIP TREVOR. (Methuen.)—We have had so much of the heavier side of cricket that the *seria* of professionals' statistics and averages have been in danger of killing, or at least enervating, the *ludum*. Captain Trevor's chatty volume will help to redress the balance. He has played the game in every quarter of the globe, and is himself a true sportsman. The book has withal a literary flavour.

Two Great Poets. By EVAN CUTHBERTSON. (Price 2s. Chambers.)—These are two of a new series of "popular biographies." In the life of Shakespeare, though the chapters are headed "Childhood," "Boyhood and Schooldays," &c., we naturally hear more of the general customs of the times than of Shakespeare himself, whereas there is no lack of material in the form of detailed facts concerning Tennyson. We can scarcely agree with the whole of the literary criticism given us "by the way." We should not say, for example, that "The Princess" is "the most original of all our poet's pieces, as it is certainly the most delightful." The book is well printed, and has some illustrations.

(1) *The Queen's Shilling.* By GERALDINE GLASGOW. (2) *A Lad of Devon.* By MRS. HENRY CLARKE. (3) *Professor Archie.* By LEILA PERCIVAL. (Nelson.)—These are small books suitable for school prizes, price 1s. each. The first story, which is the longest, is in some ways the best, though the Aunt's behaviour is rather melodramatic. "A Lad of Devon" is nicely told. Each volume has one or two illustrations.

Leo, a Muff. By JULIA HACK. (Price 1s. 6d. Wells Gardner, Darton, & Co.)—Leo has been brought up by an affectionate but over-anxious maiden aunt, and consequently has rather a bad time of it on first going to school; but, having some stuff in him, he proves, to his father's intense satisfaction, that he is to the full as plucky as his fellows, though his girlish complexion has won him the nickname of "Miss Fanny." The book is well illustrated by Gordon Browne.

Into Stormy Waters. By MRS. HENRY CLARKE. (Price 1s. 6d. Sunday School Union.)—Marjorie Rivers is the little girl who gets into stormy waters, so to describe the luxurious house where "Miss Arabella" reigns supreme. Marjorie is a good little soul, and draws out the best side of her cousin May, whose faults are the natural result of her upbringing. But "Miss Arabella" is overdrawn. She is so selfish and disagreeable that her stepfather, who does not care for grandeur, would never have gone on living with her or wished her to have the care of his children.

John Topp, Pirate. By WEATHERLY CHESNEY. (Price 6s. Methuen.)

—The scene opens in Whitby in the days of good Queen Bess. The hero, John Topp, is in the midst of a fight with a newcomer named Ireland, with whom he afterwards swears an eternal friendship. The lads refuse to settle down to books, but are wild for adventures, of which they afterwards get enough and to spare. Fired with thoughts of the golden city of Manoa, they set sail on a voyage of discovery. Fortune is against them—sickness, slavery, the tender mercies of the Inquisition, shipwreck, and other hardships are their portion, and one of their chief foes, Don Miguel de Cassamoro, has an unpleasant way of turning up when least expected. Trehalion, with his favourite ditty, "Sail away, Hark away, Plunder!" and his ventriloquism, suggest "Treasure Island," and there seems no reason why Captain Ireland should not have made himself known to his son, seeing the influence he had gained over the crew; but those who like fighting and adventure will enjoy the story.

The Little Colonel's House Party. By ANNIE FELLOWS JOHNSTON. (Price 3s. 6d. Jarrold.)—Lloyd Sherman, the "Little Colonel," is a girl of eleven whose mother invites three other girls to spend a month with Lloyd in her beautiful home in Kentucky. The children come from very different homes, but fall into the new ways very readily. The account of their escapades—for they do pretty much as they like—and their American slang will amuse young readers. A bit of disobedience on the part of one spoilt girl leads to something of a tragedy, in which Betty, the nicest of the children, is the sufferer. She has been fired with enthusiasm by an account of R. L. Stevenson's life in Samoa, and kindles in the others a desire so to live that they might leave a like memory behind.

Cosey Corner. By L. T. MEADE. (Price 3s. 6d. Chambers.)—It is to be hoped that no children will set up farming on the strength of this story. If you have all the plant given you and frequent presents, such as a cow, a pony and cart, &c., it is, no doubt, possible to make a few shillings a week by the produce of farm and garden for a short time. But perhaps it is intended for a kind of fairy story, with "Mr. Inquisitive" for the good genius.

On Honour. By E. DAVENPORT ADAMS. (Price 2s. 6d. Nelson.)—The principal characters in this story are a girl and a boy, "Jimmy" and Will, full of high spirits and mischief, who play some amazing pranks at various times. They are kindly little souls, and the chief interest of the book is their championship of some very unattractive children who are sent to "Jimmy's" school and boycotted by the other girls. Mrs. Forester is an impossible sort of person, but some of the others are well drawn.

Old King Cole's Book of Nursery Rhymes. (Price 6s. Macmillan.)—These old friends appear in a new and gorgeous dress. The large coloured illustrations to each rhyme are by Byam Shaw, and many of the figures are excellently drawn, and there are some rich effects of colour. "Come to bed, says Sleepy Head," "The Carrion Crow," "The Three Blind Mice," "Queen Anne," and "Rock-a-by, Baby," are among the best. We cannot, however, reconcile ourselves to the wording of this last, having been brought up to say *Hush-a-by, Baby*, and *When the bough breaks the cradle will fall*. There does not seem any point in "When the wind lulls the cradle will fall."

The Olde Irishe Rimes of Brian O'Linn. Illustrated by S. ROSAMOND PRÆGER. (Price 2s. 6d. Macmillan.)—A delightful book for children. The rime is just a slender thread connecting Miss Præger's admirable black-and-white drawings. They are full of spirit and fun, and the expression of the old grey mare and the geese and other creatures is most comic. Each touch is effective, and the girls to whom Brian is taking off his saucy hat are a charming little pair.

Grimm's Fairy Tales. Translated by BEATRICE MARSHALL. (Price 3s. 6d. Ward, Lock.)—This is a complete edition, and makes a handsome volume of 637 pages. It is printed in good, clear type, and has some illustrations by Gustave Doré and Henry Austin.

Grimm's Fairy Tales. Edited and partly translated anew by MARIAN EDWARDES. (Dent.)—A selection from the tales by the Brothers Grimm. We have here forty-nine out of some two hundred stories, and notice a number of old favourites among them. The book has a large number of illustrations by R. Anning Bell, whose quaint style is well suited to the tales. The print is very clear and good, the type harmonizing well with the pictures, and the cloth binding is coloured with pretty, delicate tints.

We have received from Messrs. Griffith, Farran, Brown, & Co. a new edition of *Our Sailors*, by W. H. G. KINGSTON (price 2s. 6d.)—the book has been revised and carried on to the relief of Pekin in August, 1900; from Messrs. Macmillan a new edition of Thackeray's *Vanity Fair* (price 3s. 6d.), with illustrations by the author, and a *fac-simile* of the wrapper of the first number—the print is clear, and the book nicely bound in cloth; from Messrs. Seeley & Co. a new edition of *Forest Outlaws*, by the Rev. E. GILLIAT, M.A. (price 5s.)—very nicely got up, with sixteen illustrations, in black, white, and red.

Boys of Our Empire for 1901. (Price 7s. 6d. Andrew Melrose.)—The first yearly volume of a new illustrated magazine for boys, which seems to contain the many and various necessities for a successful publication of the kind. Serial stories by R. Leighton, K. M. and R. Eady, E. Mitchell, &c., short tales, puzzles, problems and prizes, sport, and papers on a long list of champion players promise food for

all tastes. There are a number of illustrations, large and small, and two large plates in good colours.

Majeking Day. By PHEBE ALLEN. (S.P.C.K.)—This is a story "with a purpose"; and it would have been better, we think, to let people find it out for themselves than to tell them in so many words what lessons they are to learn. It is nicely written, and many of the village characters are very true to life; though we doubt if, in that class of life, either Mrs. Summerbell or Mary Luttrell would have been capable of expressing herself in quite such continuous narrative fashion. But there is much nice feeling and true insight in the story.

A Very Naughty Girl. By L. T. MEADE. (Price 5s. Chambers.)—Evelyn is not only a very naughty, but an extremely disagreeable, child, with so little to recommend her that her conversion in the end fails to give us any satisfaction; while Lady Frances and Audrey are rather of the prunes and prism order. Half-starved Sylvia is more attractive, even amidst her impossible surroundings, which we can hardly be expected to take seriously.

The Argonauts of the Amazon. By C. R. KENYON. (Price 3s. 6d. Chambers.)—An exciting story of the adventures of three old school-fellows, who start off together for South America in search of the lost ransom of Atahualpa. Many and thrilling are the perils through which they pass; and they come on the treasure finally under conditions which seem to make their labour vain, but fortune again befriends them.

Jerry Dadds, Millionaire. By H. BARROW-NORTH. (Price 3s. 6d. Chambers.)—Jerry is a very good sort of boy, with no nonsense about him, and unspoilt by the possession of unlimited pocket money. He and his schoolfellows are up to all sorts of pranks and mischief, and their school life is amusingly described. The wicked uncle in the background, who is always trying to kidnap the boy, and Jerry's imprisonment and rescue are a bit melodramatic. The book is well illustrated.

Two of a Trade. By the Author of "Val." (Price 1s. 6d. Nelson.)—In this case it turns out that two of a trade *can* agree, for, though Rachel and Florrie begin as rivals, they end as partners and friends. The tale is one of village life and loves and hates, with no sensational incident, beyond a fire at the mill. But it is nicely told, and shows how fair dealing and straightforwardness work for good.

Sketches of Christchurch, Oxford. By JOHN ASTON. (Price 3s. Methuen.)—This is a most attractive book. Mr. Aston has been particularly happy in choosing his points of view. Most of the drawings are admirable, and he has put in just enough detail. Now and again, as in the Chapter House and the monument of Butler, the drawing seems not quite true, but in most cases Mr. Aston has triumphantly surmounted the difficulties of his task.

Old Blackfriars. By BEATRICE MARSHALL. (Price 5s. Seeley.)—This story of the days of Van Dyck is told with a good deal of vivacity and skill, and has historical interest besides. The interchange of the boy and girl babies seems unnatural, and can, of course, bring happy results only in the event of their marrying; but, since they themselves see this necessity, we need not be too critical of an otherwise excellent story. The book has several good photogravure reproductions of portraits by Van Dyck.

Mooswa. By W. A. FRASER. (Price 6s. Pearson.)—"Mooswa" recalls "The Jungle Book" too strongly to avoid comparison with it, but to say that it has considerably less charm than the latter is not, by any means, to condemn it. The adventures of Mooswa, of Carcajou, the devil of the woods, and their companions in their struggles with the trappers are sure to interest children. The print is good, and there are some first-rate illustrations by Arthur Heming.

The Leisure Hour, 1900-1901. (Religious Tract Society.)—This volume, which is well printed and nicely bound in cloth, supplies a wide range of pleasant reading. Fiction has its full share: a serial by Silas K. Hocking, with admirable illustrations by H. Copping, runs through the year, and there are besides a number of short stories. Among a variety of articles and paragraphs on subjects of the day—discoveries, manufactures, art, and science—we notice some interesting papers on people and places of bygone times—"The High Crosses of Ireland," "The Less Known Land of Burns" (though this appears in a somewhat curious form), "A Visit to Halle," &c. A "gossip" about Charlotte Brontë and Haworth gives some portraits of the old servants and village friends. A noticeable feature of the volume is the number of excellent photographs of country scenes, the points of view being specially well chosen.

The Sunday at Home Annual, 1900-1901. (Price 7s. 6d. Religious Tract Society.)—As the name implies, this is a volume intended for Sunday reading, and is largely devoted to religious subjects. The stories have their own lesson to teach, as well as the more serious articles. A good deal of space is given to mission and charitable work. "Thoughts for the Day of Days" are contributed by the Rev. Prof. Moule, D.D., and the Rev. R. C. Watson, D.D., and well known names are signed to a series of articles on "The Spiritual Needs of the New Century." The volume contains a number of portraits and other illustrations.

My Pretty and her Little Brother Too. By Mrs. MOLESWORTH. (Price 3s. 6d. Chambers.)—A collection of the little half-fanciful stories containing an unobtrusive moral in which Mrs. Molesworth excels.

The Essays of Elia. Illustrated by A. GARTH JONES, with an Introduction by E. V. LUCAS. (Price 10s. 6d. Methuen).—This *édition de luxe* leaves nothing to be desired as far as paper, print, and binding are concerned, and Mr. Lucas's introduction, though only a paradoxist like Mr. Chesterton could say anything new about the Essays, puts briefly what Canon Ainger and other Lambists have said at length. The illustrations are clever and well drawn, but somewhat wanting in spontaneity.

UNIVERSITIES AND SCHOOLS.

CAMBRIDGE.

The memorial to the late Prof. Sidgwick, for which a sum of £2,450 has been subscribed, is to take the form of a University Lectureship in Moral Science. The Sidgwick Lecturer will receive the income of the Memorial Fund. It is expected that further donations will hereafter be made to the capital of the fund.

The question of providing a reading-room and book-store for the University Library, by roofing in the ancient "Schools quadrangle," stirred up a pretty quarrel among the residents last month. The antiquaries, led with reckless courage by Prof. Ridgeway, hurled the usual charge of vandalism against the utilitarians. Replies and rejoinders of more temper than wit flew back and forward, and fly-sheets darkened counsel and the air. In the end the antiquaries won by 177 to 158. The Librarian and the Registry, who supported the proposal, and whom no one supposed to be other than most reverent archaeologists, smarting under defeat at the hands of their *quondam* friends, have published a poll-book to show that all the learning and common sense were on the side of the utilitarian *placets*. This is naturally non-pleasing to the *non-placets*, and the resulting soreness is not yet allayed. *Tantane ira!*

The Senate has taken an unwonted step in addressing letters of condolence to the German Emperor upon the decease of the Empress Frederick, and to President Roosevelt upon the assassination of his predecessor. The terms of the addresses, and the replies thereto, will doubtless be made public in due course.

The Squire Trustees, who have already given some £15,000 for the new Law Library, have offered a fund of some £7,500 for the foundation of law scholarships in the University. The like offer was made to Oxford and rejected, on the ground probably of the somewhat medieval conditions attached to the benefaction. Preferences for founders' kin, for natives of the parish of St. Mary, Newington, and for persons of inadequate means, are ill-matched with prizes that are expected to rank as University honours. But with a gentle protest the gift has been accepted, and it may well be that the undesirable limitations will rarely come into operation.

Downing College, which has already sold to the University two acres of its park in the middle of the town, finds it expedient to lay out the remainder in streets of dwelling-houses. The Financial Board, alarmed at the disappearance of the last space adjoining the Museums over which expansion is possible, have resolved to rescue the site for future generations. They propose to buy the 6¼ acres for £25,000, and, as the University has not enough ready money, to raise the sum on loan. It is recognized that the annual charges thereby incurred will stop building and other improvements for years; but the opportunity once lost can never recur, and the feeling is general that it should be seized. The big benefactor is still wistfully looked for, but so far vainly.

The Schools Examination Syndicate (Oxford and Cambridge Board) report that they have inspected or examined 103 boys' schools and 88 girls' schools in the past year. For Higher Certificates 2,150 candidates were examined, of whom 1,040 were successful in passing and 289 in winning distinction. For Lower Certificates there were 1,000 applicants, and 498 were successful. The numbers grow slowly from year to year.

A memorial signed by a goodly number of tutors and others has been presented, praying that the question of allowing "poll" men to take two "specials" instead of one "general" may be considered. The memorial will be discussed next term, but meanwhile it is gravely surmised that the "anti-Greeks" are behind the movement.

The report of the Syndicate on the work of the Appointments Association has been issued to the Senate. It speaks highly of the usefulness of the agency, and of the success it has already attained in bringing together employers and employed. The Syndicate think the duties hitherto performed by the Association should now be taken over by a University Board having a representative character, and receiving an annual grant of £100 from the Chest. It is not proposed to interfere with the functions of the existing scholastic agency, which deals mainly with schoolmasterships, and charges commission in the usual way.

The new buildings of Caius College, which are to occupy one side of Rose Crescent, are rising apace. They are designed by Mr. Aston Webb and Mr. Ingress Bell, and are in the "Later Native Gothic"

style which is traditionally associated with collegiate buildings. They will provide about fifty additional sets of undergraduates' rooms.

The Cambridge Theological Society, for the promotion of research in connexion with theological studies, starts with forty-five resident graduates on its roll. Its transactions will appear in the recently founded *Journal of Theological Studies*, under the direction of Prof. Swete.

The terminal elections at the Union Society were unusually exciting. The number of aspirants for office, the vigour of the whipping, the size of the polls, and the occurrence of a tie between two of the candidates for the secretaryship were without recent precedent. The result is claimed as a great Conservative victory; though the President and the Secretary are redoubtable members of the University Liberal Club.

The Head Masters' Conference on December 20 and 21 will be dealt with elsewhere. Here it is only necessary to say that the active Reception Committee are receiving congratulations for the excellent arrangements they devised; that private and collegiate hospitality was freely offered and accepted; and that the festal dinner at Trinity and the *conversazione* in the hall, combination-room, and library of St. John's were well attended.

The results of the examinations for entrance scholarships and exhibitions at twelve of the colleges have been published. Out of a hundred and forty-six awards of various kinds St. Paul's School is credited with nine, Harrow with seven, Oundle, Aldenham, and Bradford Grammar School with five each, and Charterhouse, Dulwich, Rugby, Eton, and St. Olave's with four each.

The following elections and appointments are announced:—Mr. T. K. Johnston, Trinity, to be Bhaunagar (Indian Civil Service) Medallist; Dr. R. D. Roberts to be a Governor of the Royal Holloway College; Mr. R. P. Paranjpye, Senior Wrangler, 1899, to be a Fellow of St. John's College; Dr. L. E. Shore, St. John's, to be University Lecturer in Advanced Physiology; Mr. F. F. Blackman, St. John's, to be University Lecturer in Botany; Mr. H. O. Jones, Clare, to be Jacksonian Demonstrator of Chemistry; the Rev. F. H. Chase, D.D., President of Queens', to be Norrisian Professor of Divinity; the Rt. Rev. H. C. G. Moule, Bishop of Durham, to be an Honorary Fellow of St. Catharine's; Lord Stalbridge, Trinity, to be a Governor of Shaftesbury Grammar School; Mr. W. L. Mollison, Clare, to be a Governor of the Perse Schools, Cambridge; Dr. J. N. Keynes, Pembroke, to be member of the Joint Scholarships Board; Dr. L. Humphry, Trinity, to be University Lecturer in Medicine; Mr. C. West-Watson, Emmanuel, and Mr. R. J. Morrice, Trinity, to be Carus (Greek Testament) Prizemen; Mr. H. W. Richmond, King's, to be University Lecturer in Mathematics; Mr. H. W. V. Temperley, King's, to be Member's English Essay Prizeman; Mr. H. F. Baker, F.R.S., St. John's, to be Doctor of Science; Mr. H. B. Roderick, Emmanuel, to be Demonstrator of Surgery; Mr. G. C. Rankin, Trinity, Mr. R. A. Chadwick, St. John's, and Mr. H. R. D. May, St. John's, to be Whewell Scholars in International Law; Mr. C. West-Watson, Emmanuel, to be Crosse Theological Scholar; Mr. B. T. B. Barker, Caius, to be Walsingham Medallist in Botany; Mr. P. J. Loseby, Emmanuel, to be Seatonian Prizeman (Sacred Verse); the Right Rev. E. Hoskyns, Jesus, Bishop of Burnley, to be D.D. *honoris causa*; Mr. C. Bendall, Caius, to be University Lecturer in Sanskrit; Mr. G. Norwood, St. John's, to be Member's Latin Essay Prizeman; Mr. A. C. Pigou, King's, to be Cobden Prizeman in Economics; Mr. R. M. Woolley, St. John's, to be Jeremie (Septuagint) Prizeman; Dr. H. M. Birdwood, C.S.I., to be an Honorary Fellow of Peterhouse; Mr. J. H. Marshall, King's, to be head of the Archaeological Survey of India; Mr. R. C. Punnett to be Fellow of Gonville and Caius; Mr. E. H. Griffiths, F.R.S., Sidney Sussex, to be Principal of Cardiff University College.

SCOTLAND.

The General Council of Edinburgh and Glasgow Universities have already had under consideration the position of modern languages in the Bursary Competition, and the St. Andrews General Council has now received a report from its Committee on the same subject. Each of the Councils suggests an arrangement of the subjects of examination in alternative groups. The Edinburgh Council proposes that in each group there should be six subjects, the Glasgow Council recommends that the number be five, and the St. Andrews Committee thinks that four are enough, provided that the leading subject of each group be "of the standard and scope of the honours grade in the Leaving Certificate Examination." The other three subjects should be on the higher-grade standard, and the leading subject in each group should receive double the marks assigned to each of the other subjects. As one of the groups has a modern language as its leading subject, the inequality between classics and modern languages would thus be removed. It is further proposed by the Committee (1) that to each group a minimum number of bursaries should be allotted, and (2) that there should be held in reserve a number of bursaries "which might be apportioned to the various groups, in accordance with the attainments or the number of candidates in the several groups for any one year." There is no doubt that the restriction of the number of subjects would be an educational

gain. The competition for bursaries under the present conditions has certainly led to overpressure, if not cramming, in schools, and the evil results of this become apparent, especially in the later part of a student's course, when he begins the study of subjects like philosophy.

The Scotch Education Department has announced an important change in connexion with the Leaving Certificate Examinations. In future, certificates will be given, not for single subjects, but only for groups of subjects. This will have the effect of bringing the University Preliminary and the Leaving Certificate Examinations into closer correspondence. The Preliminary must be taken in not more than two groups, while the Leaving Certificate candidates at present take their subjects independently. Certain Leaving Certificates, however, are accepted as exempting from the Preliminary, and, consequently, it is easier to enter the University by way of the Leaving Certificate Examinations than by way of the Preliminary. The new arrangement will tend to put both examinations on the same footing.

Prof. Shield Nicholson, of Edinburgh University, in course of an article on "The Universities and Commercial Education," points out that much of the discontent with the present state of things is not very well founded. "What is being done by the Universities in other countries is vastly overrated, and what is already provided in Scotland is underrated." It is only for the higher and more responsible commercial positions that the Universities can hope to provide an education, and already there are open for this purpose courses leading to degrees in arts and science, including agriculture and engineering. These, of course, are not purely technical, but include a certain amount of general education. "A purely special education would defeat its own object. . . . A general education must precede and also must accompany any special education afforded by any University," and "the nation cannot run the risk of upsetting the whole University system by changing its methods and lowering its standards on the remote chance of attracting future men of business." Prof. Nicholson accordingly thinks that the Carnegie Trustees will best promote higher commercial education by establishing chairs or lectureships in subjects indicated by the deed of endowment, and more especially in economic history, mercantile law, and geography. Prof. Nicholson's argument is valuable as an aid to clearness of thinking on the whole subject. There can be no progress in the way of wise reform until we know clearly what we want, and what it is possible for the Universities to give; and to this end the first step is the recognition that "commercial education" includes three quite distinct things, (1) such a business education as might be given in higher-grade or secondary schools, (2) technical education, and (3) the higher commercial education which is alone appropriate to the Universities.

In this connexion we may notice an interesting memorandum by Mr. Stewart, Head Master of Gordon's College, Aberdeen, on the relations between higher-grade and secondary schools in Scotland. These two kinds of schools often compete with one another to the injury of both, and Mr. Stewart holds that the remedy is the uniting of the higher-grade with the secondary school under one managing body and one organizing director, so that the work of the secondary school may be limited to the training of pupils for the Universities, or for "highly specialized institutions of University rank," while the higher-grade school confines itself to a shorter course of modern and business education, which may be continued by the pupils after leaving school through attendance at continuation classes and those of a technical college. Mr. Stewart's proposal is an excellent one, and, if he can get it successfully carried out at Aberdeen, we shall have a useful example of the lines on which secondary education in general may be better organized. Under present conditions, however, it would be impossible to realize his idea except in a few places.

The Ferguson Trustees have, it is understood, agreed to appoint two examiners for the scholarship in philosophy (which is open to graduates of the four Universities) instead of one examiner as at present. There has in the past been an inevitable tendency for the scholarship to go to a candidate from the examiner's University. This was not due to any partiality on the part of the examiner, who did not know the names of the candidates, but to the fact that his own pupils could hardly help knowing the kind of questions he was likely to set, and thus had an advantage over others. The new arrangement is therefore much better than the old.

Prof. Purdie has offered to the University of St. Andrews a gift of £5,000 for the purpose of building and equipping a Chemical Research Department in the University, on condition that the Carnegie Trustees are willing to aid in the establishment of post-graduate scholarships for research, and in providing an annual grant for laboratory expenses. In a letter to Principal Donaldson, Prof. Purdie says: "It was my intention to bequeath a sum of money to the University for the promotion of the higher study of chemistry at St. Andrews. I feel, however, that Mr. Carnegie's munificent generosity should stimulate friends of the Scottish Universities to do what they can at once to help in the work which he has so nobly undertaken."

The subscriptions to the Aberdeen extension scheme now amount to within a few hundreds of the £25,000 which was aimed at. Lord Strathcona's gift of £25,000 is thus secured, and the buildings at Marischal College will in a few years be satisfactorily completed.

IRELAND.

The Royal Commission on University Education in Ireland sat for a week in St. Stephen's House, Westminster, London, from December 16. Some authorities on technical education were examined, amongst whom were Mr. Sidney Webb, Chairman of the Technical Education Board of the London County Council, Mr. Garnett, Secretary to the same Board, Mr. Somerville, Professor of Agriculture, Cambridge University, and Prof. Wertheimer, Principal of the Merchant Venturers' Technical College, Bristol. Other witnesses on the general subject-matter of the inquiry were—Dr. Oliver Lodge, Principal, Birmingham University, Dr. Nerinx, University of Louvain, Mr. Lecky, M.P., Chief Baron Palles, N. Synott, Esq., and Dr. Mahaffy, F.T.C.D. It is announced that the Commission at the beginning of April will visit Belfast, Cork, and Galway, and that the evidence taken in November and December will shortly be published. From the postponement of the sittings that were to have taken place in January, it may be expected that the inquiry will occupy some time to come. There is a difficulty in getting the members of the Commission, who are all busy men, together at a given time.

Dr. Mahaffy, before he left Dublin to give his evidence, made known his views on the question which have created much interest as coming from a Fellow of Trinity College, an institution which has always dreaded and opposed to the utmost any alteration in its present position. Dr. Mahaffy advocates the establishment of a great Catholic college, and also other colleges that may be required, under Dublin University, such colleges to be given the largest degree of autonomy. Each would have its own governing body, arrange its curriculum, and hold its own examinations. It is possible that the different curricula might be made largely to coincide, but no pressure or outer direction would be imposed on any of them. Certain prizes might be competed for among the colleges. Dublin University would possess a Senate which would confer the degrees. Safeguards, such as extern examiners, or inspectors, or assessors, would be established to maintain the standard of efficiency in the colleges. By the large freedom given under the scheme, Dr. Mahaffy maintains that Trinity College would in no way be interfered with, and therefore would give consent; that the Catholic party—which he has consulted—would be perfectly satisfied, as also the Northern Presbyterians; in fact, that it gives a solution acceptable to all.

It was doubtful if Lord Robertson would hear of the scheme; but, since Dublin University is not excluded from the scope of the inquiry, though Trinity College is, and the latter is practically not touched by the scheme, it is probable that such views might be received. The Chief Baron (a Catholic), it is understood, also advocated the scheme. If the details can be arranged, it certainly seems to afford the ideal solution of the Irish University question.

The Central Association of Irish Schoolmistresses are endeavouring to obtain the views of University women as to the provision for the teaching of women under any new University system that they would regard as satisfactory, in order to lay them before the Commission. They appointed a sub-committee of women graduates of the Royal University, which in December drew up a series of queries on the most important points affecting the position of women in Irish University education. These queries have been sent to all the women graduates whose addresses it was possible to obtain. There are between five hundred and fifty and six hundred of them. In 1884 the first degrees ever conferred on women in Ireland were taken by nine women. In 1900 sixty-five women took degrees. Their record of distinctions is very brilliant, in proportion to their numbers—more so than that of the men students. In 1900, for example, 8 per cent. of the men students passed with honours, and 15 per cent. of the women students. The end which women in Ireland are now seeking is that the same benefits as are established for the men students shall be fully open to women. This has never yet been done, although by its Charter the Royal University was founded equally for both sexes. When the answers to the queries have been received they will be embodied in a statement to be laid before the Commission.

In Trinity College, Dublin, the Professorship of Moral Philosophy, vacant through the appointment of Mr. Swift Payne Johnston to the Assistant-Commissionership of Intermediate Education, has been given to Mr. F. McCran, F.T.C.D. Mr. McCran, who is one of the ablest of the Classical Junior Fellows, commenced the study of metaphysics when reading for Fellowship.

The drawbacks found in the new scheme of the Intermediate Board during the term September-January have led to a series of remonstrances and suggestions from the educational associations. The Dublin Branch of the Teachers' Guild have drawn up a number of recommendations which they are sending for their approval to the heads of the principal schools. They complain that the Preparatory Grade leads up to the modern, but not to the grammar-school course, either of which must be selected in all the higher grades, and recommend that music should be included in it. They object to its being necessary to take drawing and experimental science together, stipulating that only so much drawing as is required by a science student should be obligatory with experimental science. They object to 30 per cent. (Honours) and 40 per cent. (Pass) being now required in six subjects to obtain a Pass; also to

(Continued on page 54.)

MACMILLAN & CO'S LIST.

CAMBRIDGE LOCAL EXAMINATIONS, 1902.

RELIGIOUS KNOWLEDGE.

- The Acts of the Apostles. Authorized Version.** With Notes. By T. E. PAGE, M.A., and Rev. A. S. WALPOLE, M.A. 2s. 6d.
— **The Greek Text.** With Notes. By T. E. PAGE, M.A. 3s. 6d.

ENGLISH.

- Outline of English Grammar.** By J. C. NESFIELD, M.A. 1s. 6d. KEY, 2s. 6d. net. (*Preliminary and Junior.*)
Oral Exercises in English Composition. By J. C. NESFIELD, M.A. 1s. 6d. (*Preliminary.*)
Junior Course of English Composition. By J. C. NESFIELD, M.A. 1s. 6d. (*Preliminary and Junior.*)
Senior Course of English Composition. By J. C. NESFIELD, M.A. (*In prep.*)
Manual of English Grammar and Composition. By J. C. NESFIELD, M.A. 2s. 6d. KEY, 2s. 6d. net. (*Junior and Senior.*)
English Grammar, Past and Present. By J. C. NESFIELD, M.A. 4s. 6d. KEY, 2s. 6d. net. (*Senior.*)
Scott.—The Lady of the Lake. With Introduction and Notes. By G. H. STUART, M.A. 2s. 6d.; sewed, 2s. (*Preliminary and Junior.*)
Macaulay.—Lays of Ancient Rome. Containing Horatius, Lake Regillus, and the Armada. With Introduction and Notes. By W. T. WEBB, M.A. 1s. 9d. (*Preliminary.*)
Shakespeare.—A Midsummer Night's Dream. With Introduction and Notes. By K. DEIGHTON. 1s. 9d. (*Junior and Senior.*)
Milton.—Lycidas and Comus. In one volume. With Introduction and Notes. By W. BELL, M.A. 1s. 6d. (*Senior.*)
— **Comus.** With Introduction and Notes. By W. BELL, M.A. 1s. 3d. (*Senior.*)
L'Allegro, Il Penseroso, Lycidas, Arcades, Sonnets, &c. With Introduction and Notes by W. BELL, M.A. 1s. 9d. (*Senior.*)

FRENCH AND GERMAN.

- Molière.—Le Misanthrope.** Edited by G. E. FASNAUGHT. 1s. (*Senior.*)
Hauff.—Die Karavane. (Containing Die Geschichte von Kalif Storch and Die Geschichte von dem kleinen Muck.) Edited by H. HAGER, Ph.D. 3s. (*Preliminary and Junior.*)
Schiller.—Maria Stuart. Edited by C. SHELDON, Litt.D. 2s. 6d. (*Junior and Senior.*)
— **Maria Stuart.** Edited by H. SCHÖNFELD. 3s. 6d. (*Junior and Senior.*)

LATIN.

- Cæsar.—Gallic War.** Book I. With Notes and Vocabulary. By Rev. A. S. WALPOLE, M.A. 1s. 6d. (*Preliminary and Junior.*)
Phædrus.—Fables. With Notes and Vocabulary. By Rev. G. H. NALL, M.A. 1s. 6d. (*Preliminary.*)
Ovid.—Metamorphoses. Book VIII. Edited by Prof. C. H. KEENE, M.A. 2s. (*Junior and Senior.*)
Virgil.—Æneid. Book V. With Notes and Vocabulary. By Rev. A. CALVERT, M.A. 1s. 6d. (*Junior.*)
Terence.—Hauton Timorumenos. Edited by E. S. SHUCKBURGH, M.A. 2s. 6d. With Translation. 3s. 6d. (*Senior.*)
Livy.—Books II. and III. Edited by Rev. H. M. STEPHENSON, M.A. 3s. 6d. (*Senior.*)
Cicero.—Pro Milone. Edited by F. H. COLSON, M.A. 2s. 6d. (*Senior.*)

GREEK.

- Xenophon.—Anabasis.** Book I. With Notes and Vocabulary. By Rev. A. S. WALPOLE, M.A. 1s. 6d. With Exercises by E. A. WELLS, M.A. 1s. 6d. (*Junior.*)
Xenophon.—Memorabilia Socratis. By A. R. CLUER, B.A. 5s. (*Senior.*)
Homer.—Iliad. Book IX. Edited by the late J. H. PRATT, M.A., and WALTER LEAF, Litt.D. 2s. (*Junior.*)
— **Iliad.** Books I. to XII. Edited by W. LEAF, Litt.D., and Rev. A. BAYFIELD, M.A. 6s. (*Junior and Senior.*)
Huripides.—Alcestis. With Notes and Vocabulary. By Rev. M. A. BAYFIELD, M.A. 1s. 6d. (*Junior and Senior.*)
— **Alcestis.** Edited by M. L. EARLE, Ph.D. 3s. 6d. (*Junior and Senior.*)
Thucydides.—Book VII. Edited by E. C. MARCHANT, M.A. 3s. 6d. (*Senior.*)
— **Books VI. and VII.** Edited by Rev. PERCIVAL FROST, M.A. With Map. 3s. 6d. (*Senior.*)

ELEMENTARY EXPERIMENTAL SCIENCE.

- Experimental Science.** (Section I. PHYSIOGRAPHY.) By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. 2s. 6d.
Elementary Physics and Chemistry. By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. In Three Stages. 1s. 6d. each.
Elementary General Science. By A. T. SIMMONS, B.Sc., and LIONEL M. JONES, B.Sc. 3s. 6d.
Exercises in Practical Physics. By Prof. R. A. GREGORY and A. T. SIMMONS, B.Sc. In Two Parts. 2s. each.
Experimental Course of Practical Science. Part I. By HUGH GORDON, M.A. 1s.
Elementary Practical Physics. By R. A. GREGORY, F.R.A.S. 2s. 6d.

NEW EDUCATIONAL BOOKS.

MACMILLAN'S MANUALS FOR TEACHERS. NEW VOLUME.

- Principles of Class Teaching.** By J. J. FINDLAY, M.A., Head Master of the Cardiff Intermediate School for Boys. Globe 8vo. [Ready shortly.]

- The King's Weigh-House Lectures to Business Men.** By the Right Hon. Lord AVEBURY, F.R.S., C. A. MONTAGUE BARLOW, LL.D., M.A., Sir COURTENAY BOYLE, K.C.B., HERBERT E. CRABB, W. EVANS, Colonel H. M. HOZIER, C.B., A. J. WILSON, and T. M'KINNON WOOD, LL.D., D.L., J.P. With an Introduction by M. E. SADLER, Christ Church. Crown 8vo, 2s. 6d.

BRITISH ASSOCIATION MEETING AT GLASGOW, 1901.

- Discussion on the Teaching of Mathematics,** which took place on September 14th at a Joint Meeting of two Sections. Section A—Mathematics and Physics. Section L—Education. Chairman of the Joint Meeting, the Right Hon. Sir JOHN E. GORST, K.C., M.P. Edited by JOHN PERRY. Crown 8vo, stiff boards, 2s. net.

- Modern Book-keeping and Accounts.** In three Parts. By WILLIAM ADGIE, F.C.A. Part I. Elementary. Globe 8vo, stiff boards, 1s. 6d. (*Hooper and Graham's Series.*)

- A Geography of Wales intended chiefly for use in Welsh Schools.** By A. E. L. HUDSON, B.A. Oxon. Illustrated. Globe 8vo, 1s. 6d.

- Algebraical Examples Supplementary to Hall and Knight's Algebra for Beginners and Elementary Algebra** (Chaps. i.—xxvii.). By H. S. HALL, M.A. With or without Answers. Globe 8vo, 2s.

- Primer of Geometry.** Comprising the Subject Matter of Euclid I.—IV., treated by the Methods of Pure Geometry. By H. W. CROOME SMITH, B.A. Crown 8vo, 2s.
Royal College of Science Magazine.—"Will speedily find favour, especially with teachers and students who have already found a want of common sense in the ordinary method of treating geometry."

- An Elementary Treatise on the Calculus,** with Illustrations from Geometry, Mechanics, and Physics. By GEORGE A. GIBSON, M.A., F.R.S.E., Professor of Mathematics in the Glasgow and West of Scotland Technical College. Crown 8vo, 7s. 6d.

- Educational News.*—"Teachers of higher Mathematics would do well to make a careful examination of this book. Many members of our profession have, through disuse, allowed their knowledge of the Calculus to rust: to those we can recommend no better book than this, for the Author is most up to date in his facts and nomenclature."

- Introductory Physics for Irish Intermediate Schools.** Being a First Year's Course of Exercises in Practical Physics. By R. A. GREGORY, Professor of Astronomy, Queen's College, London; and A. T. SIMMONS, B.Sc. (Lond.), Associate of the Royal College of Science, London. Globe 8vo, 2s.

- Practical Chemistry.** An Experimental Introduction to Laboratory Practice and Qualitative Analysis from a Physicochemical Standpoint. By R. ABEGG and Professor W. HERZ. With 3 Tables. Crown 8vo, 6s.

- Experimental Hygiene.** An Introductory Course of Work in the Principles of Domestic Science. By A. T. SIMMONS, B.Sc. Lond., Associate of Royal College of Science, London, and E. STENHOUSE, B.Sc. (Lond.), Associate of Royal College of Science, London. Globe 8vo, 2s. 6d.

- Educational Times.*—"The style is clear, and the whole book bears the impress of the practical teacher who knows the value of short and simple experiments which the learner can carry out for himself. . . . The illustrations and diagrams generally are distinctly above the average of those found in English school-books."

- Hygiene for Students.** By EDWARD F. WILLOUGHBY, M.D. (Lond.), Diploma in State Medicine of the London University, and in Public Health of Cambridge University. Globe 8vo, 4s. 6d.

MACMILLAN & CO., LIMITED, ST. MARTIN'S STREET, LONDON, W.C.

the lower position in which French is placed in comparison with German; to the giving of the exhibitions, not to the pupils, as heretofore, but to the schools; very strongly to the non-publication of the results; and, in general, to the absence of definite information as to the amount of the capitation fee and of the exhibitions, and the method on which the latter are given. They complain of the English books set for home-reading being quite unattractive, of the absence of all book-work in the Junior Grade Geometry, and the requirement of "arithmetical scales" in this grade, also to the difficulty of the mathematics of the Senior Grade.

While the heads of schools are not agreed on all these points, there seems to be a consensus as to the great overwork imposed by the new rules. Every boy within the ages is expected to enter for examination; and, in order to pass, must win 40 per cent. in six subjects, much of the work being unseens in composition, translation, and mathematical problems. In some schools, to meet the pressure, the Saturday half-holiday has been abolished; and, in many, English (for which a large number of books are prescribed), including history and geography, is being completely squeezed out. Alarm is also caused by the fact that the Board are contemplating placing the examinations in the middle or at the end of July, which will necessitate the pupils working under the pressure of examinations through the hottest season of the year. The Schoolmasters' Association meet on December 31, and doubtless some resolutions on the chief points will be drawn up which will be in unison with the views of the Catholic Head Masters' and the Schoolmistresses' Associations, so that a united, unanimous appeal may be made to the Board.

The inspection of Irish intermediate schools by the six English inspectors appointed by the Intermediate Board is proceeding, and exciting various views from heads and teachers. Some of the inspectors are very much liked, and their suggestions valued; in other cases it is pointed out that the inspection fails to give a just estimate of the school. On the whole, it has not proved at all as objectionable as those who disapproved of it feared.

BEDFORD COLLEGE FOR WOMEN.

Five students have obtained the University of London B.A. Honours and seven the B.A. Pass; two the B.Sc. Honours and three the B.Sc. Pass. J. Raven gained the highest distinction obtained in French, and A. Somers the only First Class in Mental and Moral Science.

SCHOOLS.

CANTERBURY, KING'S SCHOOL.—The following elections to scholarships have just been made:—To Entrance Scholarships: R. T. Jenkin (Mr. Goodchild, Cambridge), B. B. Horsburgh (Mr. Pearce, Ealing), E. C. Linton (Mr. Hake, Bournemouth), G. M. Webster (Mr. Rudd, Leicester). To a House Scholarship: K. B. Dickson (Mr. Hussey, Folkestone). To a Minor Entrance Scholarship: C. J. N. Adams (Junior King's School). To Junior Foundation Scholarships: A. D. D. Spafford, G. F. Olive, R. A. Hamlyn (for mathematics) (all from King's School). To Probationer Scholarships: K. B. Dickson (Mr. Hussey, Folkestone), G. M. Webster (Mr. Rudd, Leicester), C. J. N. Adams (Junior King's School), E. C. Linton (Mr. Hake, Bournemouth).

DENBIGH, HOWELL'S SCHOOL.—A brilliant lecture was given on December 18 by Miss Warren, Lecturer in English Literature, University of London, on "Alfred the Great, as Educator of his People." Over a hundred visitors were present.

DEVONPORT HIGH SCHOOL FOR GIRLS.—The annual distribution of prizes was held in the Public Hall on the King's Birthday. The afternoon's proceedings began with a short concert. The singing class gave Behrend's cantata, "The Singers of the Sea," and the orchestra played Hann's "Sérénade Angélique" and Handel's "Largo." The Head Mistress (Miss Rayment) then read the report of the July examiners, which was very satisfactory. The average marks gained—taking all the examinations and all the forms together—was 53 per cent. In public examinations during the year 34 girls were successful in gaining 48 certificates and distinctions, including a scholarship of £30 for three years at Holloway College gained by Eleanor Mayston.

EDINBURGH, ST. GEORGE'S TRAINING COLLEGE.—At the recent examinations for the Cambridge Teacher's Certificate, the following students gained Certificates for Theoretical Knowledge:—Class II.: Lilian K. Barrie (Newnham College), Margaret A. Herford, M.A., Alda M. M. Matheson, M.A.; Class III.: Margaret S. Leitch, L.L.A. In the Examination for Practical Efficiency, Miss Barrie and Miss Leitch passed in Class I., Miss Matheson in Class II., and Miss Herford in Class III. Miss Barrie, who holds the Cambridge University Certificate for Honours Degree in Mathematics, has been appointed mathematical mistress on the staff of the Leeds High School for Girls.

HAILEYBURY COLLEGE.—On November 30 the following members of the school were elected to Senior scholarships:—A. E. O. Lucas, H. G. Stokes, I. R. B. Bond. To the Junior (under 14): R. Whitehorn, £50, from H. Frampton Stallard, Esq., Heddon Hall, Ilampstead; T. H. E. Baillie, £40; G. H. Sugden (Modern Side), £40, from Rev. F. J. Hall, Northaw Place, Potter's Bar; C. H. Gidney, £30. To the Junior (under 13): F. H. Brown (Modern Side), £40,

from W. R. Morton Clarke, Esq., Blatchington Place, Seaford; C. E. Strickland, £30, from C. F. Sylvester, Esq., Branksome, Godalming.

HARROW SCHOOL.—The memorial to Old Harrovians who have fallen in the South African War is to take the form of an enlargement of the Chapel by prolonging the north and south aisles. The estimated cost of carrying out the plans proposed by Messrs. Aston Webb is £6,000, and, towards this, over £2,000 has already been received. One historic memory from Dr. Butler's speech at the Westminster Palace Hotel is worth recording: "My dear father used often to speak to us, his sons, of one memory of the Peninsular War before the time of Wellington. He used to tell us that Sir John Moore of Corunna, who was always spoken of as 'Surgen Moore,' declared he had no better officers in the Army than Harrow men; they were all, he said, thorough gentlemen, but not too much gentlemen to attend to every detail of their profession, even to the grooming of their horses, and, still more, to the health and comfort of their men."

KESWICK SCHOOL.—Speech day took place on December 14, Mrs. Bagot, of Levens Hall, giving away the prizes. The Lynn-Linton and Ruskin Memorial Prizes were awarded for the first time. The Bishop's Prize for Lake Literature is given this year by the Bishop of Barrow. Subsequently the Dean of Durham formally opened the new block of buildings containing gymnasium, workshop, kitchen, and science rooms. J. W. Lowther, Esq., M.P., also spoke. The inspection of the school took place under the auspices of the Durham University, on December 6 and 7, Dr. Walpole, Principal of Bede College, Durham, being their representative. His report was exceedingly encouraging. Dean Kitchin gave the address at "The Carol Service" on the last Sunday of term. The school orchestra rendered the Pastoral Symphony very successfully. During the term the Dean of Ely also gave an address.

LONDON, VICTORIA HIGH SCHOOL.—An important meeting of women graduates was held on December 13, to urge the claims of women to equal rights and privileges with men in any reconstruction of University education in Ireland. The chair was taken by Miss McKillip, who read an interesting letter from Miss Julia Kennedy, telling how women students had gradually gained admission, first to University and then to college lectures. Miss Jane Harrison, it was stated, is at present giving a course on classical archaeology, which was attended by all the men taking that section in Part II. of the Classical Tripos.

MARLBOROUGH COLLEGE.—The Foundation Scholarships have been awarded as follows:—W. J. T. P. Adams (Marlborough College, late from Mr. Bryant, Winchester House School), H. E. Guillebaud (Marlborough College, late from Mr. Tucker, Trent College, Derbyshire), G. N. Simeon (Mr. Lynam, Oxford), C. O. Harvey (Marlborough College, late from Mr. Murray, Walmer), C. G. Dowding (Mr. Ogle, Guildford), O. H. Thompson (Marlborough College, late from Mr. Alcock, Salisbury), G. R. Day (Mr. Douglas, Malvern Link), R. H. Mylne (Mr. Radcliffe, East Grinstead), A. Cooke (home tuition), J. Bell (Mr. Blissard, Clifton), A. D. M. Woodhouse (Mr. Douglas, Malvern Link), E. F. Marshall (Marlborough College, late from Mr. Chater, Westerham), H. S. Scott (Mr. Hollins, Eastbourne), R. F. St. J. Reade (Mr. Thomas, Brighton), A. E. H. Tucker (Mr. Lea, Nuneaton). Honourable mention:—E. M. Besly (Mr. Chater, Westerham), H. F. Kirkpatrick (Mr. Mason, Rottingdean).

NEWCASTLE (STAFFS.) HIGH SCHOOL.—R. A. Chadwick, Scholar of St. John's College, Cambridge, has won a Whewell (University) Scholarship in International Law; C. W. Gwynne has been elected to an Open Classical Exhibition at St. John's College, Oxford; and T. E. Hulme to an open Mathematical Exhibition at St. John's College, Cambridge—also to an open Mathematical Scholarship at Queens' College, Cambridge.

PADDINGTON AND MAIDA VALE HIGH SCHOOL.—The annual distribution of prizes, by Lady Laura Ridding, took place in November in the assembly hall at this school. William Bousfield, Esq., Chairman of the Council of the Girls' Public Day School Company, presided. The Chairman said that the results of the annual examination had been extremely satisfactory, and the Council were greatly indebted to the Head Mistress (Miss Skeel) and the staff. The study of modern languages took a prominent part in this school. The Council's scholarship had been awarded to L. Klingenstein, who gained Honours in eight subjects in the Oxford and Cambridge Joint Board Examination. A bursary from the Dunville Bequest is granted to Mabel Bailey, who gained Honours in Literature, Latin, French, Mathematics, and Science in the July Examinations. Amongst the recent successes of Old Girls E. Edwards (Girton College) gained a Second Class in the Mathematical Tripos, and S. Frood (Newnham College) a Third Class in the Natural Sciences Tripos; E. Abrahams passed direct from the Sixth Form in the First Division of the Intermediate Arts Examination of the London University, and is now reading for B.A. with Honours in Classics at Bedford College. Twelve Council certificates have been gained on the results of the Oxford and Cambridge Joint Board Examination; Joanna Wilson passed in the Higher Certificate Examination, gaining Honours in English; Elsie Wright passed in the First Division of the London Matriculation Examination. An excellent programme, consisting of part songs and recitations in Latin, French, German, and English, was gone through, as well as drill and gymnastics by the Senior Division under Miss Beatrice Bear. The school Kyrle Society

WILLIAM BLACKWOOD & SONS, 45 George Street, Edinburgh; and 37 Paternoster Row, London, E.C.

have presented some plaster casts of the Parthenon frieze for the decoration of the school hall. Miss Stawell, formerly classical lecturer at Newnham College, gave a lecture to the girls on the Elgin marbles, with lantern illustrations, on Thursday, November 28. An orchestral society has been formed this term, and will meet for weekly practice under Miss Mary Thynne next term. On Thursday, December 12, an open kindergarten morning was held, at which specimen lessons were given. A class demonstration of drill and gymnastics took place at the end of the term under Miss Beatrice Bear, and was largely attended by parents and friends of pupils.

PORTSMOUTH HIGH SCHOOL.—Among the successful candidates in the recent B.A. Examination appear the names of three of our Old Girls:—Ellen Andrews, Ethel Eldred, Ethel J. Woodward.

ROSSALL.—College scholarships and other distinctions outside the school include: R. G. L. Batley, Open Classical Scholarship, Brasenose College, Oxford; J. N. Taylor, Somerset (open *pro hac vice*) Exhibition, St. John's, Cambridge; S. F. Peshall, Open Classical Exhibition, Caius College, Cambridge; Sir A. J. Bigge, Private Secretary to H.R.H. the Prince of Wales and K.C.M.G. Mr. Gorst has accepted the post as Head of the Science Department at the High School, Durban. His place is to be filled by Mr. Izard, of St. John's, Leatherhead. We had school readings on November 19, and a splendid musical entertainment by the Liedertafel Glee Singers on December 2. In the House matches Wilson's came out victorious. The Debating Society gave us a "Parliamentary Evening" on November 30, which drew an attendance of 154. The afternoon before Captain Pain was presented with a "surprise table" of oak by the cadet corps on the occasion of his retirement after eleven years' service.

SEDBERGH, BALIOL SCHOOL FOR GIRLS.—The second annual entertainment and prize distribution was held at Baliol School for Girls, Sedburgh, on November 23. The play, entitled "Persephone; or the Daffodil," was written for the pupils by the Principal, Miss Skeat, Ph.D., who also composed the music for most of the songs. More than a hundred visitors were present, including many from a distance. The play contained four chief characters, choruses of lilac maidens and daffodil maidens, also a band of ghosts, representing old-fashioned lesson-books, such as "Mary's Grammar," "Little Arthur's History," &c. The scene in which Demeter invoked the Four Winds to tell her of her daughter called forth special comment, as did also the final tableau—the parting of Demeter and Persephone. The landscape in the background represented the Fields of Enna, strewn with daffodils, with Mount Etna looming darkly against the sunrise.

STREATHAM HIGH SCHOOL.—Prize day was on December 3, and the prizes were distributed by Miss Aldrich Blake, M.D., M.S. (the first woman to take the degree of Master of Surgery). The Hon. F. Thesiger was in the chair. The Company's Senior Scholarship was gained by Gladys Quilter, the Junior Scholarship by Yolande de Fernant. In the Oxford Locals thirteen out of fourteen candidates passed; three classes and a distinction in French were gained. In the Royal Drawing Society's Examination twenty-six Honours Certificates have been won, and Jessie McConnell had won H.R.H. Princess Louise's Gold Medal, the Art for Schools Prize, Sir John Tenniel's Prize—a silver medal, a bronze medal, and two commendations. In the Cambridge Higher Local Examination three candidates have gained full certificates, one with distinction in History.

TONBRIDGE SCHOOL.—The honours gained during the Michaelmas Term include:—J. R. Dain, Open Classical Scholarship, Hertford College, Oxford; B. H. Bourdillon, Open Classical Exhibition, Exeter College, Oxford; J. H. Ledebore, Open Modern Language Scholarship, Caius College, Cambridge; K. Hamilton, Open Classical Exhibition, St. John's College, Cambridge; G. Nottidge and H. M. Holland, Woolwich Entrance Examination; F. H. James and F. M. Hills, Sandhurst Entrance Examination; Captain E. W. Moss, Worcester Regiment, D.S.O.

UNIVERSITY COLLEGE SCHOOL, LONDON.—The dramatic and musical entertainment given on December 19 included scenes from "The Wasps," of Aristophanes, and "A Midsummer Night's Dream." D. Cohen won applause in both pieces, first as Philocleon and then as Bottom the Weaver. The proceeds go to the U.C.S. Club for Working Boys. Mr. A. E. Rost, late Head of the Art School, Colombo, has been appointed master of the special drawing class for Army pupils. Mr. F. Storr, late of Merchant Taylors' School, is taking temporary work with us next term.

WELLINGTON COLLEGE.—Elected to open scholarships of £50 per annum:—C. J. G. Coward (from Mr. Tabors, Cheam), C. W. Trevelyan (from Mr. H. A. Bull, Westgate-on-Sea), N. M. de la P. Beresford Peirse (Wellington College, late from Mr. Brooksbank, Aysgarth School), C. J. Fowler (from Mr. Pridden, Guildford), O. E. Wynne (Wellington College, late from Mr. Eden, Hill Brow, Rugby). Elected to scholarships of £30 per annum:—H. C. H. Highton (from Mr. Duckworth, Weston-super-Mare), E. W. Mead (from Henley-on-Thames Grammar School), E. J. B. H. Sadler (Wellington College, late from Mr. Waller, Broxbourne), R. A. Allen (Wellington College, late from Mr. Hollins, Eastbourne), H. M. N. Robertson (from Mr. Rogers, Bournemouth).

(Continued on page 58.)

PRICE EIGHTEENPENCE.

The London School Atlas.

EDITED BY

H. O. ARNOLD-FORSTER, M.P.,

AUTHOR OF "THIS WORLD OF OURS," "THE CITIZEN READER," &c.

With Forty-Eight Pages of Beautifully Executed and Coloured Maps and Eight Pages of Explanatory Text, forming the Cheapest and Best School Atlas in the World.

PRICES.

Stout Paper Wrapper, with cloth strip at back ...	1s. 6d.
Paper boards	2s. 0d.
Cloth, cut flush	2s. 6d.
Limp cloth	3s. 0d.
Cloth, bevelled edges	3s. 6d.

THE LONDON SCHOOL ATLAS.

Twelve Special Features.

1. Plates showing the meaning of Maps, the use of Contour Lines, the importance of Scales, the relations of Landscape, Section, and Maps.
2. Examples of the methods used in the Ordnance Survey Maps for showing Elevation by Contours, Hill-shading, and Colour; Explanations of the Ordnance Abbreviations.
3. A reduced Admiralty Chart, showing the use and method of Soundings.
4. A fine series of Astronomical Diagrams.
5. Splendid double-page Maps (guarded-out in binding) of Northern Europe, Southern Europe (including the coasts of the Mediterranean), England and Wales, and a Physical Map of the United Kingdom and adjacent Coasts.
6. A beautiful Map of Palestine, for Scripture teaching.
7. A series of Maps showing the Building of the British Empire, beginning with Roman Britain, down to the Present Day.
8. Two pages of Maps showing the countries of the world on a uniform scale.
9. The introduction of small Maps of England and Wales on the same scale in nearly all the maps of Continental and other large areas.
10. The Height of the Land shown in the five Physical Maps by really distinct tones of colour, not running into each other or blurred.
11. Careful and judicious selection of names, to avoid over-crowding.
12. General accuracy and beauty of appearance.

THE LONDON SCHOOL ATLAS.

For many years past the inadequacy of the majority of the Atlases available for the teaching of Elementary Geography in Schools has been a reproach to this country. The very great expense involved in preparing a work of the highest class has hitherto prevented the production of the desired volume. At length, however, the problem has been faced and solved.

THE LONDON SCHOOL ATLAS

has been prepared under the advice of thoroughly competent specialists with the object of furnishing at a low price a volume which shall combine scientific accuracy, perfect clearness, the best execution, and a well-considered arrangement with the primary essential of remarkable cheapness.

NOTE.—The Cheapest Edition of THE LONDON SCHOOL ATLAS is published at the marvellously low price of EIGHTEENPENCE.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

LONDON: EDWARD ARNOLD, 37 BEDFORD STREET, STRAND.

PRIZE COMPETITIONS.

The Winner of the Translation Prize for November is Mrs. Hugh Latter, St. Mary's Lawn, Leckhampton Road, Cheltenham.

The winner of the Extra Prize for November is E. D. A. Morshead, Esq., 22 Kingsgate Street, Winchester.

The Prize for December is awarded to G. E. D.

Und dräut der Winter noch so sehr
Mit trotzigem Geberden,
Und streut er Eis und Schnee umher,
Es muss doch Frühling werden.

Und drängen die Nebel noch so dicht
Sich vor dem Blick der Sonne,
Sie wecket doch mit ihrem Licht
Einmal die Welt zur Wonne.

Blas't nur, ihr Stürme, blas't mit Macht !
Mir soll darob nicht bangen ;
Auf leisen Sohlen über Nacht
Kommt doch der Lenz gegangen.

Da wacht die Erde grünend auf,
Weiss nicht wie ihr geschehen,
Und lacht in den sonnigen Himmel hinauf,
Und möchte vor Lust vergehen.

Sie flicht sich blühende Kränze ins Haar,
Und schmückt sich mit Rosen und Aehren ;
Und lässt die Brunnlein rieseln klar,
Als wären es Freudenähren.

Drum still ! und wie es frieren mag,
O Herz, gieb dich zufrieden ;
Es ist ein grosser Maientag
Der ganzen Welt beschieden.

Und wenn dir oft auch bangt und graut,
Als sei die Hölle auf Erden—
Nur unverzagt auf Gott vertraut !
Es muss doch Frühling werden.

By "G.E.D."

And what if still with surly shout
Shakes Winter roof and rafter,
As ice and snow he hurls about ?—
The Spring must follow after !

And what if still, the storm-clouds thro',
There's ne'er a sunbeam breaking ?—
In sunshine sweet to bliss anew
The world shall soon be waking.

Then roar, ye tempests, rave your spite !
Ye are not worth my heeding :
On light swift feet across the night
The Spring is hither speeding.

Ah, then wakes Earth, all greenery—
She scarce knows how or wherefore—
And laughing up at the sunlit sky
Forgets she'd aught to care for !

With tender blade and flower and ear
Herself she decks full fealty,
And sets her rivulets running clear
As if 't were Joy wept sweetly.

Then patience ! 'Spite of frost and cold,
Heart, merry still be making :
For all that is shall yet behold
One world-wide May-day breaking !

And tho' this earth seem full of woe,
Bemocked by demon laughter,
Still trust in God, and fear no foe,
For Spring must follow after !

By the PRIZE EDITOR.

Let Winter and his savage rout
Assail with all their burly,
And scatter ice and snow about :
Yet Spring will follow surely.

Let mist and haze and fog combine
To dim the sun's gay glances :
Anon he shows his light divine
And all the world entrances.

(Continued on page 60.)

BLACK'S SCHOOL TEXT-BOOKS.

A New Series of Educational Works on Modern Lines.

HARBUTT'S PLASTICINE.

This beautiful material infuses a new meaning and a fresh delight into school methods. It can be used in a score of ways other than purely Art Modelling.

Free Samples and all particulars from

WM. HARBUTT, A.R.C.A., Bath.

PLASTIC METHODS FOR PLASTIC MINDS. 1s. A useful
Book on Modelling for Young Teachers. From all Booksellers.

Then blow, ye tempests, vent your spite ;
I scorn your angry nipping :
With fairy footfall through the night
Spring comes a-tiptoe tripping.

The greening Earth in glad surprise
Shakes off her winter sadness,
Laughs up into the sunny skies,
And well-nigh faints for gladness.

She decks her hair with garlands gay,
Green blades and roses blushing,
And speeds the runnels on their way
With tears of joy o'erflushing.

Dear heart ! should winter thee dismay ?
O rest thee uncomplaining :
O'er all the world a great May-day
Shall dawn by God's ordaining.

Quail not beneath the tyrant's rod,
Fail not, though demons harry
As Hell were loose ; trust still in God :
Spring comes and will not tarry.

We classify the 106 versions received as follows :—

First Class.—An Earrach, M. E. Parsons, Corbar, 100,000, G.E.D.,
Deor, Airbain, Snowdrop, E.H.O., Hanswurst.

Second Class.—Toroté, Pom-pom, Bildad the Shuhite, Philo-Deutsch,
Updown, P.L.T., Calliope, H. Seebee, Pitt, G.E.M., Jabberwok,
Musca, Nostradamus, A.L.L.E., Marigold, E.A.M., Interpreter,
Altnacaille, A Speckled Bird, Hanover, Caller Herrin, R.F.F.,
Matouska, Fortes et Fideles, C.B., Norimus, Cypher, Agricola, Noth,
Gwen, M.D.S.N., Eilrah, G.A.M., Primrose, Meliora latent, R.C.,
Anchor, Je suis prest.

Third Class.—Bookworm, L'Esprit, Ivy Leaves, R. K. Winter,
Pimpinel, Gertrude Saunders, Nessko, Neith, Immer zu, Peti vallum,
Whituarrer, A.Z., E.M.M., Schwesterchen, Engländerin, Sakà, H.A.F.,
Nellie Grey, Francesca, K.C.E., Englefield, Juan, V.E.B., Xela, D.A.R.

Fourth Class.—Hope, La pierre noire, Sacharissa, Backfisch, Isa,
Vectis, O.M.I., Snowflake, Holofernes, E. Edgell, Freya, G.B.,
M.G.F., F.M.C., E.A.R., Altötting.

Fifth Class.—Despond, Cam, Syncope, Frau, A Microbe, Robin,
Constable, U.U., Fiat, C.R., Huish, Willie, Pard, O.P., Fil, S.L.O.,
Apsé.

A competitor asks whether it would not be possible to print more than one version of the prize translation. In the present instance she wishes to see how the difficulty of double rimes, especially in the penultimate stanza, can be tackled in more ways than one. The request is reasonable, and I have gratified it as far as space allows. To start with, I give a published version which will serve as a whipping-boy, without hurting any competitor's feelings. Note in it, first, the loss by sacrificing the double rimes ; next, the bad rimes—"loud, about ; up, above ; hair, clear"—(I again must protest against the Cockney rime of "morning, dawning") ; thirdly, the stress of rime "I ween," a stopgap at the end of the first stanza ; fourthly, the repeated rimes in stanzas 2 and 3. Further, "For you I will not fear" is ambiguous, and, if "for" is a conjunction, most prosaic ; and "Nor knows how came thereby" is not English. *Aehren* are not "golden ears," for it is spring time. "As it may," riming with "May-day," is a slovenliness of which many were guilty. The last stanza is beneath criticism ; but one flaw is common to it and my version—the last line should be identical with the last line of the first stanza, as in the German. In the prize version the third and last stanzas are excellent. "Forgets she'd ought to care for" is very wide of the original. I mislike the rime "thro', anew," and do not see why the roses are sacrificed. "Corbar" and "Snowdrop" come next in order.

By AN EMINENT HAND.

Though winter bluster ne'er so loud,
With sullen, threatening mien,
And scatter ice and snow about,
Yet spring must come, I ween.

And though the mists close ne'er so tight
Before the sun's bright glance,
He yet shall waken with his light,
And still the world entrance.

(Continued on page 62.)

Relfe Brothers' Books FOR CAMBRIDGE LOCAL, 1902.

SCRIPTURE MANUALS. Samuel I., St. Mark. Acts of the Apostles. With Introduction, Notes, and Comments on the Authorized and Revised Versions. By G. CARTER, M.A. Crown 8vo, 1s. 6d. each.

"It is the clearest we have yet seen."—*Journal of Education.*

GEOGRAPHICAL QUESTIONS. By J. WULFSON. Specially adapted for Examinations in Commercial Geography. Crown 8vo, 6d. KEY TO SAME, net 1s.

GEOGRAPHICAL TERMS, THEIR DERIVATIONS AND MEANINGS. With Notes of Tides, Currents, &c. A List of the Chief Productions of the Earth, &c. By A. W. PLATT, B.A. 4d.

OUTLINES OF ENGLISH HISTORY. B.O. 55—A.D. 1901. Containing Genealogical Tables, Short Biographical Sketches, and Index. Compiled and Arranged by G. CARTER, M.A. Twelfth Edition. 227 pp., crown 8vo, cloth, 1s. 6d.

RELFE BROTHERS' SCHOOL GEOGRAPHY AND ATLAS. By G. CARTER, M.A. The main features of this book are : (1) The Maps are on one side and the Notes on the other ; (2) The Maps are so drawn that they can be easily reproduced ; (3) The maps are not over-crowded. (This Book is a complete Geography and Atlas). Cr. 4to, 2s. 6d.

A FIRST ARITHMETIC. By Dr. W. T. KNIGHT (Author of Algebraic Factors, &c.) Contains copious and carefully Graded Examples on the different Rules. The Exercises in each Rule are followed by Questions and Problems for Examination Papers. Crown 8vo, cloth, 8d. Answers, separately, 6d.

MACAULAY'S HORATIUS, IVRY, AND THE ARMADA. By F. GORSE, M.A. 8d.

SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French.

Price 2s. 6d., cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly.*
"The English idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent.*

"The exercises in the use of idioms are specially good."—*Bookman.*
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints and one or two slips that we have noticed."—*Journal of Education.*

"We are great advocates of abundant exercises ; hence our immediate approval of this book."—*School Guardian.*

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review.*

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

THE PUBLIC SCHOOL SPELLING CARD.

Fortieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than fifteen years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

French Essentials and French Conversation Sentences.

Second Edition. Price 2s. cloth ; 1s. 6d. boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education.*

"Students preparing for examination in French grammar and composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman.*

[An appendix embodying the final official changes in the simplification of French Grammar rules will be presented with each copy.]

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

(Late of 39 Holywell Street, Strand.)

Then blow, ye storms, with all your might !
For you I will not fear :
With silent footsteps through the night
The spring is drawing near.

Then wakes the earth to verdure up,
Nor knows how came thereby ;
And laughs in the sunny Heaven above,
And is ready for joy to die.

With flowery garlands she binds her hair,
With roses, and golden ears ;
And makes the fountains to ripple clear,
As it were with joyful tears.

Then wait ! and freeze it as it may,
O heart, repine no more !
There is a glorious bright May-day
For all the world in store.

And though oft racked with fear and dread,
As it were hell on earth,
Still undismayed, in God confide :
The spring must yet shine forth.

A Prize of Two Guineas is offered for the best translation of the following extract from Cicero's "De Senectute" :—

Quattuor robustos filios, quinque filias, tantam domum, tantas clientelas Appius regebat et caecus et senex. Intentum enim animum, tamquam arcum, habebat, nec languescens succumbebat senectuti. Tenebat non modo auctoritatem, sed etiam imperium, in suos ; metuebant servi, verebantur liberi, carum omnes habebant : vigeat in illa domo mos patrius et disciplina. Ita enim senectus honesta est, si se ipsa defendit, si ius suum retinet, si nemini mancipata est, si usque ad extremum spiritum dominatur in suos. Ut enim adolescentem, in quo senile aliquid, sic senem, in quo est aliquid adolescentis, probo ; quod qui sequitur, corpore senex esse poterit, animo numquam erit. Septimus mihi Originum liber est in manibus ; omnia antiquitatis monumenta colligo : causarum illustrium, quascumque defendi, nunc cum maxime conficio orationes ; ius augurum, pontificum, civile tracto ; multum etiam Graecis literis utor ; Pythagoreorumque more exercendae memoriae gratia, quid quoque die dixerim, audierim, egerim, com-

memoro vesperi. Hae sunt exercitationes ingenii, haec curricula mentis ; in his desudans atque elaborans, corporis vires non magno opere desidero. Adsum amicis ; venio in senatum frequens ultroque affero res multum et diu cogitatas, easque tueor animi, non corporis viribus. Quae si exsequi nequirem, tamen me lectulus oblectaret meus, ea ipsa cogitantem, quae iam agere non possem : sed ut possim, facit acta vita. Semper enim in his studiis laboribusque viventi non intelligitur, quando obrepat senectus. Ita sensim sine sensu aetas senescit ; nec subito frangitur, sed diuturnitate exstinguitur.

EXTRA PRIZES.

"Z.Y.X.'s" Extra Prize of Two Guineas will be awarded for the best annotation of Victor Hugo's "Hernani," Act IV., Scene ii. (the soliloquy of Don Carlos.)

As competitors may find some difficulty in procuring a text in holiday time, we will fix February 15 as the latest date for receiving MS.

An Extra Prize of One Guinea is offered for the best paper to test common sense.

The problem is suggested by a paper set by Mr. Holman to test the intelligence of technical school students, some of the questions in which seem to us good and some bad. *E.g.*, "Give a definition of a chair which will not apply to a stool, a sofa, or a form." "A man had an octagonal piece of cloth ; he cut off three-fourths of the corners. How many corners had it then ?" "Is there any practical good in making a pie-crust ornamental instead of plain."

Our paper is supposed to be set to a class of boys or girls, or mixed (state which), average age fifteen. Time half an hour. Number of questions from six to twelve.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by January 16, addressed "Prize Editor," JOURNAL OF EDUCATION, 3 Broad-way, Ludgate Hill, E.C.

FROM HORACE MARSHALL & SON'S LIST.

A Reading Book in History for Younger Children, to supplement the Lessons given Orally.

A FIRST HISTORY OF ENGLAND.

By CLARA L. THOMSON,

Late of Somerville College; Examiner in Literature to the Central Welsh Board.
Cloth. Fully Illustrated. 1s. 6d. net.

Part I. (To 1066 A.D.) [Now ready.] Part II. (1066-1272.) [Early in January.]
Other Parts in preparation.

PRESS NOTICES OF PART I.

Literature says:—"This is the most rational attempt to improve the teaching of history we have met with. It is an admirable little book."
The Educational Review says:—"We are delighted with the pleasant, easy style of the narrative. The pictures, too, lend quite a charm to the book."
The School World says:—"It is a very good bit of work."

"A most useful book; we only wish it were five times as large."—
LITERATURE.

CARMINA BRITANNIAE.

A SELECTION OF POEMS AND BALLADS ILLUSTRATIVE OF ENGLISH HISTORY.

Arranged by CLARA L. THOMSON,
Examiner in English Literature to the Central Welsh Board.
Crown 8vo. 250 pages. 2s. net.

This book forms the completest collection of historical English poems which has been published in cheap form. It contains over one hundred selections, many of which are of contemporary date with the events described.

The School World says:—"A comprehensive and excellent compilation. . . . Admirable and thoughtful."

THE TEMPLE RECITER.

A NEW COLLECTION OF SERIOUS AND HUMOROUS VERSE
SUITABLE FOR PUBLIC RECITATION.

Edited by E. E. SPEIGHT, B.A., Editor of the "Temple Reader," &c.
Crown 8vo. In Illustrated Cover. 1s. net.

Dundee Advertiser.—"Excellent, and will meet most tastes and capacities."

Four Popular Readers.

"Interest in the children, and the necessity of giving them an attractive training in English literature, should induce school managers to examine the excellent 'Readers' prepared by Mr. E. E. SPEIGHT, B.A., and published by Horace Marshall & Son."—*Yorkshire Daily Post*.

I. **THE JUNIOR TEMPLE READER.** Edited by CLARA L. THOMSON and E. E. SPEIGHT, B.A. Cloth, 8vo. 400 pages, with over 50 full-page illustrations. 1s. 6d. net.
The School World says:—"It deserves a great and wide success."

II. **THE MIDDLE TEMPLE READER.** Edited by E. E. SPEIGHT, B.A. Cloth, 8vo. With many illustrations. 1s. 6d. net.
The Educational Review says:—"Teachers should see this book before replenishing stock for the coming year."
The Bookman says:—"The book is an unqualified success."

III. **THE TEMPLE READER.** A Reading Book in Literature. Edited by E. E. SPEIGHT, B.A. With an Introduction by Prof. EDWARD DOWDEN, Litt. D., LL.D. Fully Illustrated. 1s. 6d. net.
Prof. F. YORK POWELL, M.A., says:—"It is excellent, and the best that I have ever seen."

IV. **THE VILLAGE SCHOOL READER.** Edited by CHARLES SAVILE ROUNDLELL. Fully Illustrated. Cloth, 8vo. 1s. 6d. net.
Suitable for Town School and Village School alike.
The Journal of Education says:—"We congratulate Mr. Roundlell on his new essay. He has provided for small scholars a feast of good things, and we hope their pastors and masters will take advantage of it."

THE NEW ENGLISH SERIES. Edited by E. E. SPEIGHT, B.A. Includes the following useful school books.

Selections from Wordsworth. 6d. net.	Stories from the Northern Sagas. 1s. net.
Charles Lamb's Adventures of Ulysses. 1s. net.	Selections from Tennyson. 1s. net.
The Adventures of Beowulf. 6d. net.	The New English Poetry Book. 1s. net.

London: HORACE MARSHALL & SON, Temple House, E.C.

THE CONFERENCE OF HEAD MASTERS.

THE Conference met at Cambridge, by invitation of the Cambridge University, on Friday, December 20, and Saturday, December 21. It was attended by some eighty head masters and some sixty assistant masters. The Chair was taken at 2 p.m. by the President of Committee, the Rev. H. W. MOSS (Shrewsbury).

The CHAIRMAN congratulated the Conference on holding its first meeting of the new century at one of the two great Universities. With regard to the coming year, all must be deeply anxious that the Government should take in hand seriously the question of secondary education; but they were a party of delays. Full allowance must be made for the difficulties with which the Government had had to deal during recent Sessions, but the fact remained that every year's delay made vested interests more deeply rooted and complicated problems which were before simple. They therefore hoped to see this Session a comprehensive and satisfactory measure, and that a question which belonged to a higher sphere would not be allowed to fall into the vortex of party politics.

The New Education Bill.

The first resolution was moved by Mr. KEELING (Bradford):—

"That the new Local Authority for Secondary Education should be so constituted as to secure for each locality the advantages of higher education, and that, with this view (i.) it should not be constituted by an election *ad hoc*; (ii.) a majority of its members should be members of the County Council; (iii.) it should include an adequate proportion of persons having a practical knowledge of secondary education."

It was clearly the intention of the Government, as far as possible, to decentralize education, and to throw on the Local Authorities the responsibility of establishing and supervising the new secondary schools. As recommended by the Bryce Commission, the interference of the State would be limited to the aiding and the advising of the Local Authorities. The result would be that in the future the influence of the Local Authorities would be paramount, and eventually determine the action of the Central Authority itself. This was what made the constitution of the Local Authorities of such vital importance. Their first duty would be to aid existing schools, and to supplement them when necessary. The grammar schools of England had done, and were doing, a noble work. They kept alive in every neighbourhood a belief in liberal culture; they had maintained an open door for poor boys with brains, and, by associating in one school boys of all classes, they had done much to break down class distinctions and social prejudices. But they had been let and hindered in maintaining their ideal by lack of funds, and it would be the first duty of the new Local Authority to see that grammar schools were properly equipped and financed. It would also be necessary in many cases to modernize the curricula, and so provide a liberal education by means of science. The Government were well advised in taking the County and County Borough Councils as the nucleus of the new Education Authority. These had a good record of educational work behind them, and they were willing to undertake the work. Above all they would be untrammelled by hard-and-fast traditions and cut-and-dried methods. The third point of his resolution needed no labouring before the Conference. All there desired educational experts to be placed on the County Council Committees, and the only question was what proportion they should form. Taking thirty as the full number of the Committee, he would suggest that the County Council should appoint sixteen; of the remaining fourteen, seven should be nominated by the Board of Education, on the understanding that their nominees should have a practical acquaintance with secondary education; the Committee of twenty-three thus formed should then co-opt seven representatives of School Boards, School Associations, &c. The resolution did not commit the Conference to any expression of opinion on the single Local Authority question. It only indicated a constitution of the Local Authority under which the interests of secondary education would be safe.

The Rev. J. BROWN, S.J. (Stonyhurst), seconded the resolution, which was carried unanimously.

The Rev. R. D. SWALLOW (Chigwell) moved:

"That secondary schools should have the right of appeal from the Local to the Central Authority."

It had actually been proposed by certain County Councils to pool the grants earned by schools, and then distribute them at their own discretion, without regard to the merits of the schools. Other County Councils had essayed to enforce their own views as to curricula in opposition to the governing body and the head master. From his own experience of governing bodies he was sure that, if they were put under the iron heel of a Local Authority without the right of appeal, the best men would refuse to sit as governors.

The Rev. A. F. RUTTY (Leatherhead) seconded. The resolution was carried unanimously.

Set Books.

The Rev. Dr. RENDALL (Charterhouse) moved :

"That in all language examinations, ancient or modern, imposed by external bodies, prescribed books should be abolished, and the use of dictionaries, where it seems necessary, allowed."

It was nearly twenty years ago that a similar resolution had been brought before the Conference, and only last year the Conference had affirmed the principle with regard to modern languages. The system of set books was at the present moment disastrous, disintegrating, as it did, all the school work of boys proceeding to the University in their last year.

After some discussion the motion was carried in the amended form :

"That in all language examinations, ancient or modern, imposed by external bodies for entrance to the Universities or professions, prescribed books should be abolished."

Commercial Training in Public Schools.

The Rev. the Hon. Canon LYTTTELTON moved :

"That the Committee be requested to confer with representatives of the London Chamber of Commerce on the subject of commercial training in public schools."

There was a vast amount of ignorance and temporary panic on the question of commercial education. He doubted how far the recent advance of Germany in connexion with England had anything to do with our educational methods. He held rather that Germans had gained in commerce because they could command a far greater number of young men who were willing to take trouble over their commercial work. Again, if there were anything wrong in our education, the fault lay at the door of the Universities rather than of the public schools. The great leaders and employers of industry in Germany were men thoroughly trained in science, not in their school-days, but at the polytechnic and the University. It was not the function of head masters to investigate the recent effect of their curricula upon the commerce of the country, but it was their business to ascertain, from those qualified to speak, the exact state of things. Could the London Chamber of Commerce point to any definite defect in public-school boys who were destined for commerce? If they could, they (the Head Masters) would be willing and eager, if possible, to remedy it. Another object the Committee should have in view was to institute an examination for the commercial boys on their modern sides which would take the same place as the Joint Board Examination did with regard to the classical side. He felt that it was a duty both of schoolmasters and of University dons to place themselves in touch with the commercial world, instead of regarding the interests of culture and of commerce as divergent.

The Rev. M. G. GLAZEBROOK (Clifton) seconded. The ideals of public schools, as a whole, were no longer quite in touch with modern needs. The public demanded a new type of boy, who should combine the moral and the social efficiency of the old public-school boy with a new training founded on recent literature and science. If the Chambers of Commerce believed in their new ideal, let them prove their faith by their works. Let them put their hands in their pockets, subscribe some £200,000 or £300,000, and found a new public school on the model of the German schools. This school should take up the new humanism—not the rival, but the sister, of the old—and he believed that, in five or six years' time, the results would be so satisfactory that they would largely influence the modern sides of all public schools.

Mr. KEELING proposed to add "and the Associated Chambers of Commerce," and, with this addition, the resolution was carried unanimously.

Modern Language Teaching.

The second meeting of the Conference, on Saturday morning, was opened by a paper read by the Rev. G. C. BELL (Marlborough) on "The relative Advantages of different Systems of Modern Language Teaching."

Mr. BELL said that, after years of discussion of the subject on the Continent and America, England had at last begun to show a serious interest in it, mainly in reference to its bearing on commerce. Signs of this growing interest were the proposal to include French and German in Oxford Responsions, and the motion set down for the coming meeting of the Incorporated Association of Head Masters. As a basis of discussion Mr. Bell sketched the five principal methods of modern language teaching recognized by experts : (1) The fine old crusted grammar method.—This had been scotched by Mr. E. E. Bowen in a paper communicated to the Conference some years back. How far it had been killed in public schools he could not tell ; but it ought to be extirpated. For that, however, a better supply of fully qualified teachers was needed. (2) The conversational method.—This was much in vogue in German commercial cities, such as Hamburg and Frankfurt, and had its ardent supporters in England. In the hands of an able teacher it gave the pupils a sense of rapid progress and mastery, but it had the fatal defect of providing little discipline or *pabulum* for the intelligence, and it did not rise above a low intellectual standard.

Dr. Russell in his book on German schools had noted that in the highest classes of the *Gymnasium* Mrs. Ewing's "Jackanapes" and "Tom Brown's Schooldays" were preferred to Shakespeare and Macaulay. (3) The Gouin or psychological method.—This method made good use of the association of ideas, but, like the natural method, furnished little discipline or training for the judgment and higher faculties. (4) The phonetic or reform method.—This was of great use in the elementary stage, when the child's vocal organs were plastic ; but it must be sparingly used in public schools, unless a more liberal allowance of hours were granted to modern languages ; otherwise the more solid elements of linguistic training would be eliminated. The last three methods all set too high a value on conversational fluency. (5) The reading and translation system.—This had till lately prevailed exclusively in English public schools. It might help to discipline judgment, form style, and impart some appreciation of French and German literature, but it lacked vivacity and stimulus. All these five methods contained elements which might be utilized during a school course which lasted till the age of eighteen or nineteen. No scheme could suit all cases, and he would not attempt to draw one up. Preparatory masters might be encouraged to adopt oral methods if the entrance examinations at public schools included a *viva voce* test. The teaching being in an imperfect and chaotic state, there was urgent need of a consensus of expert opinion on such questions as the following :—What should be the aim or aims in teaching modern languages in classical form, modern form, Army classes, science schools, &c. ? What system or combination of systems would be best suited for the several aims of those schools and departments ? What proportion of time should be allotted respectively to classical and modern languages at different stages of education and in different curricula ? And, above all, how was it possible to satisfy the first and most essential condition of improvement, viz., a vast increase in the number of English-speaking men and women adequately trained to teach modern languages ? No system could be considered permanently satisfactory which relied largely on the help of foreigners. Such questions had long ago been discussed and settled in several Continental countries by Central Authorities appointed by Government. Ought we in England to look for help and guidance from a Central Authority ? It would be ungrateful not to acknowledge the stimulus which had been given to reform by the admirable report issued by the Intelligence Department of the Board of Education ; but to publish information was not enough ; they needed leadership to turn it to the best account for English schools. In America such questions were in process of solution by a committee of twelve appointed by the Modern Language Association in 1896. Their procedure, conclusions, and recommendations were set forth in their Report of 1898, from which he had largely borrowed. The speaker concluded by asking if it were possible to organize in England a similar body for similar purposes by the co-operation of the Universities with various associations of secondary-school teachers. It was for the Conference to say whether they considered the proposal likely to be feasible and fruitful. If so, an effort to carry it into effect might be initiated on the spot by an instruction to the Committee to consider and report upon it.

A cordial vote of thanks was passed, and, on the motion of Dr. FRY (Berkhamstead), it was agreed that the paper should be printed at the expense of the Conference, and circulated among head and assistant masters.

Age of Entrance Scholars at Oxford and Cambridge.

The Rev. M. G. GLAZEBROOK (Clifton) moved :

"To call attention to the report of the Sub-Committee on Public Examinations."

He pointed out that the recent practice of Oxford and Cambridge colleges to push back their scholarship examinations into the early autumn had, to a great extent, frustrated the intention of the University Commissioners, who fixed the limit of age at nineteen. Now, it might happen that a boy who won a scholarship last autumn would be nineteen and three-quarters before he went up to the University next October. This state of things was bad for the boys if they were destined for a profession like the Indian Civil Service, and bad for the schools which did not wish to retain boys after nineteen.

The Rev. C. EPPSTEIN (Reading) seconded.

The Rev. the Hon. E. LYTTTELTON opposed. From the professional point of view there was, as far as he could gather, no grievance. The one thing in the English educational system which foreigners admired and envied was the fact that boys of a tolerable age were at the head of the school. Robbed of this, the schools would lose the power of self-government, which was the best feature of the educational system of this country.

The Rev. Dr. JAMES (Rugby) agreed with Mr. Lyttelton. Boys who went up early to the University were the most likely to go to the bad, or at least waste their first two years.

The Rev. H. M. BURGE (Winchester) likewise opposed the motion, on the ground that it would make scholarship examinations even less elastic than they were.

The resolution was then put, and lost by a large majority.

English in Secondary Schools.

Mr. J. S. PHILLPOTTS (Bedford) submitted the following resolution :

"That a higher standard of English should be required on entrance into secondary schools ; and that the study of English ought to receive more encouragement at the schools themselves."

He said a great part of the difficulties with the boys arose from their ignorance of English. Boys who began to learn Latin and Greek and modern languages later in their school life made much more rapid progress than those who had only a slight acquaintance with their mother tongue ; and this latter should be acquired in the preparatory school. Their aim should be to create an interest in English literature, and to encourage the young boys to write letters and essays on various subjects.

The Rev. A. J. GALPIN (King's School, Canterbury) seconded the motion.

The Rev. G. RENDALL (Charterhouse) thought it would be dangerous to say that "a higher standard of English should be required on entrance into secondary schools" without a thorough discussion on the question, which was impossible with the time at their disposal. He therefore moved an amendment to substitute for the words quoted, "that the study of English ought to receive great encouragement at the schools themselves."

The Rev. Dr. ARMOUR (Great Crosby) seconded the amendment.

The Rev. G. C. BELL (Marlborough) thought they might lighten the labour at preparatory schools if they said that no examination in Greek for entrance scholarships should be given to boys under thirteen.

The amendment was lost by a large majority, and the original motion was carried.

Entrance Examinations.

The Rev. Dr. SELWYN (Uppingham) proposed :

"That in examinations for admission into the schools represented at the Conference more weight ought to be given to the attainment of a satisfactory knowledge of Latin than to an acquaintance with the elements of Greek."

He said they ought to lighten the burden of preparatory schools by leaving out Greek in the examination for admission to the public schools, where it could be taken up with more advantage to the boys. The assistant masters in the lower school could then devote more time to English, and perhaps get a holiday abroad and learn French, which could be then much better imparted to their pupils. The elements of Greek might very well be left to boys after the age of fourteen or fifteen in the public school.

Mr. PHILLPOTTS seconded the resolution.

The Rev. Dr. RENDALL (Charterhouse) thought the result of the motion, if carried, would be to kill Greek altogether ; and personally he thought Greek more valuable than Latin.

The Rev. Dr. JAMES (Rugby) said that most schools carried out the principle that more weight ought to be given to a satisfactory knowledge of Latin than to the attainment of Greek on admission to their schools ; but he could not agree to the elements of Greek being left out altogether, for in that case they would not be learnt satisfactorily afterwards. He must, therefore, vote against the motion.

The resolution was lost by eighteen to ten.

"Schools of Science."

Mr. F. J. R. HENDY (Bromsgrove) moved :

"That the new regulations for 'Schools of Science' are deserving of the serious consideration of members of the Conference."

He said that the new regulations for "science courses in day schools" required their very careful consideration. It was provided that "the time-table of the whole curriculum of the school must be submitted to the Board of Education, showing that it makes provision for not less than nine hours per week of science instruction, including not more than five hours' mathematics" ; and that "the instruction in science must be both theoretical and practical." Grants were made for the first hundred students for the first and second years' attendance of 50s., and for the second and third years' attendance of 70s. per head to all schools that came under that regulation. That was very like the curriculum of a modern school, and therefore it was practically a grant to every boy on the modern side of the school. Science teaching had become more and more expensive, and it required a large amount of money to provide the necessary apparatus for it, and this grant would go a long way to pay the expenses where modern science teaching was already fairly well done. As an offer of money it would be acceptable ; but there were conditions attached to the grant which would have to be carefully considered. All these schools would have to be inspected by the Board of Education, and, so far as the present inspectors were concerned, there would be no objection to that. But then came Clause 7, which provided that no grant would be made to the schools unless they were acting in unison with the Local Authority. He did not know whether they looked upon the Local Authority in this connexion as a matter to be dreaded or resisted, but it was evidently a question which required consideration, and especially with regard to the curriculum of the schools.

The Rev. Dr. FRY (Berkhampstead) said they might accept the proposal as it stood, but they must not be taken thereby to have endorsed the future action of the Education Board with respect to any future regulations for inspection.

The resolution was carried, *mem. con.*

The CHAIRMAN moved a vote of thanks to their University hosts for their splendid hospitality, and, this having been seconded by the Rev. G. C. BELL, it was carried enthusiastically.

The CHAIRMAN announced that Dr. Gow (Westminster), Dr. James (Rugby), and the Rev. and Hon. Canon Lyttelton (Haileybury) had been elected on the General Committee of the Conference.

On Friday evening a dinner was given to the members of the Conference and other guests by the Vice-Chancellor of the University and the Reception Committee in the Hall of Trinity College ; and a *conversazione* followed at St. John's College.

MODERN LANGUAGE ASSOCIATION.

THE Annual General Meeting of the Modern Language Association was held at the College of Preceptors on the afternoon of Thursday, December 19, and the morning of December 20. In the absence of the President, Mr. F. STORR, Chairman of Council, was called to the Chair.

The report was read by Mr. A. E. Twentyman, Acting Hon. Secretary. The Association is steadily growing in numbers, sixty-five new members having been elected during the last year. Prof. Napier, of Oxford, has accepted the Presidency for the ensuing year. The Chairman characterized the past year as one of inception. Several important committees were sitting, and steps were being taken to compile a complete list of modern language teachers in secondary schools. The financial statement showed a balance of £10 in hand, but the Hon. Treasurer explained that there were outstanding liabilities on account of the *Modern Language Quarterly*. The report of the Editorial Committee, read by Mr. W. W. Gregg, assistant editor, led to an interesting discussion. Prof. Moore Smith thought that, if the ship must be lightened, the bibliographical section should go by the board, and that, of the other two sections, the scholarly was more important than the pedagogic. Schoolmasters had *The Journal of Education* and other papers wherein to discuss professional questions, but the *Modern Language Quarterly* was the one organ in England representing English, French, and German scholarship.—Mr. Siepmann (Clifton), on the other hand, held that the chief interest of the publication lay in the bibliography, and that, as the schoolmasters vastly outnumbered the professors, their section should predominate.—Mr. Milner Barry said that the editors tried to keep the balance true between the scholarly and the pedagogic sections, but the contributions received from schoolmasters far outnumbered those received from scholars. He wholly disagreed with Mr. Siepmann in thinking that the *Modern Language Quarterly* should be run as the organ of teachers, and he appealed to professors—who, he believed, formed one-fourth of the Association—to send contributions.—The Chairman congratulated Prof. Rippmann on having survived his Herculean labours as bibliographical editor (he had read 2,600 reviews in the past year), and undertook that the question of curtailing this section, the cost of which overtaxed the resources of the Association, should receive the attention of the Committee.

Presentation to Mr. Lipscomb.

The Chairman then presented the late Secretary with a testimonial, accompanied by an address, signed by the eighty-five members who had subscribed. Such testimonials, he said, were too often an onerous *liturgy*, but in the case of Mr. Lipscomb so many members had spontaneously expressed their desire to mark their grateful appreciation of his devotion to the cause that the Committee, even had it willed, could not have opposed the unanimous wish of the members. They all heartily congratulated Mr. Lipscomb on his preferment, though his gain was their irreparable loss.—Mr. Lipscomb expressed his gratitude in a few well chosen words. The testimonial had come to him as a complete surprise.

NEW METHOD OF TEACHING.

Prof. W. RIPPMAAN opened a discussion on "The New Method of Teaching Modern Languages." He said that the title of the subject on the programme, though it expressed what he spoke about four years ago in that hall, was no longer sufficiently elastic. The question was really one of linguistic training. During the last four years he had learned something from books and something from men and women, but he had learned most of all from the children themselves. There were two great considerations which modern language teachers had to bear in mind, and these were that they were teaching living languages to living children. They, therefore, required clear ideas about language, and, above all, about the mother tongue. They also required the earnest study of the child. Great progress had been made of late years not only in Germany, but strikingly in America and in England,

and, though they might be as humanists in opposition to scientists, they must ever be ready to acknowledge the debt which they owed to the scientific work of Darwin and the impulse which the doctrine of evolution had given to all branches of scientific research. The most important consideration was the child itself, and in this respect there had been a great change in their attitude during the last century, due, he supposed, more, in the first place, to Rousseau than to any other man, but it was due also in a very large measure to Pestalozzi. It was he who by his teaching inaugurated the modern spirit as opposed to that of the Renaissance.

Pestalozzi.

It was one hundred years since Pestalozzi published his most important book entitled: "How Gertrude teaches her Children." The leading principles that animated that book were that intuition or knowledge attained directly through the senses was the groundwork of all knowledge; that language ought to be closely united with intuition (*Anschauung*), and taught in connexion with objects by means of exercises in expressing what had been intuitively learned; that the time of learning details was not the time for reasoning and criticizing. In every branch of education they should begin with the simple elements and then continue step by step following the development of the child by a psychologically connected series of lessons. They should dwell long enough on each step for the child to complete the mastery of it. The individuality of the child should be sacred in the eyes of the master. The principle under all elementary and primary instruction was not to make the child acquire information and accomplishments, but to develop and increase the powers of the intellect. To knowledge must be added power, and to acquaintance with facts must be added the ability to make use of them. The relation between master and pupil, especially in matters of discipline, ought to be counted on and ruled by love. Instruction ought to subserv the higher aim of education.

The Mother Tongue.

Froebel's teaching, especially in language, was based on Pestalozzi's, and differed only in details. Both dwelt on the great importance of good training in the mother tongue. There was a growing conviction that no good was done by tinkering. In language teaching the basis must be sound, and therefore the teacher of French and German would never really be successful unless he did his very utmost to help on the reform in the teaching of English. It would be useful to the teacher to consider very carefully how the mother tongue was acquired in the first place. This was important because it was the basis, and gave very valuable hints as to method. The first thing which a child did was to see an object. At a later stage the child connected words with the object. Parents were sometimes careless with regard to the speech of their children. They were careless about such very important matters as the breathing of the child, and the teaching of it to make full use of its lungs in pure air. Parents were careless also in such matters as lisping, and sometimes even encouraged lisping as being pretty. They were also careless about stuttering and other defects. It was never too early to attend to a child's speech. The next step in acquiring the mother tongue was that words themselves came to be regarded as objects, and at the same time came the first rudiments of grammar. All this took place before the appearance of the written language. Upon the appearance of the written language teachers were confronted with a very serious problem, the problem of how to teach English reading and writing. That problem was complicated in the English language by the fact that the spelling was very slightly phonetic and very largely historical, and that the written form tended to obscure the spoken form. Therefore here it was necessary that there should be ear training. Sounds should be regarded as objects. Could English reading and writing be taught on a scientific basis, and yet without phonetic symbols? At one time he regarded such a method of teaching as absolutely hopeless, but now he felt quite confident that there was a method, and he hardly needed to mention what that method was. It was a method due to one of their own members—Miss Dale—who showed an exquisite understanding of the child, an understanding so exquisite that it amounted to genius, and at the same time recognized the claims of the spoken language and the importance of sound ear-training. If a child had been taught on sound lines, it might be expected that it would have attained, among other results, the ability to see and to express in clear terms, both in speech and in writing, what it had seen. It would have also learned to hear sounds and to know their mode of production. Further, the child would have learned to act independently, and would have gained various moral habits of permanent value. Now, as to the teaching of foreign languages. He had recently had the pleasure of reading a chapter which Mr. Eve contributed to a book called "National Education," and nothing in recent years had given him more genuine pleasure than the whole-hearted way in which Mr. Eve had thrown the weight of his authority into the scale on the side of the Association. He was convinced that the work which they were doing was work which should be welcomed by the classical teachers. Signs were not wanting that the activity of modern language teachers was being copied by classical teachers, and that the classical teachers were no longer satisfied with going on in the path of the Renaissance scholars, who regarded the child as non-existent until

it could learn Latin grammar. It would be well for the classical teachers to seek an alliance with the modern language teachers while there was time, and to consider their own methods of instruction before they suggested that modern language teachers should teach their pupils French and German versification.

French First or German?

There was yet another question besides classics to be confronted. If they commenced with the only rational method—that of making a modern language the first one—ought that language to be French, or ought it to be German? The question was a difficult one. French had become respectable through age, and it was an ungrateful task in England to displace anything of that character; but he believed that the displacement of French by German as a first language would come. German was much more suitable than French for early teaching, and there was more kinship between German and English than between French and English. The problem of pronouncing German was far more simple, and the sounds of German were more closely akin to those of English. The mode of representation of German, if not truly phonetic, yet approached the phonetic far more closely than did French. He regarded the reading matter suitable for young learners as much more abundant in German than in French. Mr. Eve, in the article to which he had referred, called attention to the extraordinary survival which gave German an inferior position to French in secondary schools. But a change was already beginning to take place. It took place in America long ago.

Method.

He now came to the question of method. How were they to teach? It was clear that in all their teaching they must interest the child. That meant that they must pass from the known to the unknown, and they must cultivate the intellect. They must also arouse sympathy. In order to arouse sympathy between the foreign language and the child it was important that they should dwell on similarities. They must cultivate the emotions of the child, and bear in mind that first impressions were very lasting. Any method for the early teaching of modern languages which would not stand that test was doomed. The older methods were based on the teaching of the dead languages. It seemed to be accepted that there must be drudgery at the outset. Grammar was all-powerful, and there was no thought of the people who used the dead languages. The grammatical method utterly failed to interest the child, because it left the child practically nothing to do. The translation method was a compromise, and a weak compromise too. The Gouin method, in spite of the steady teaching which had been going on, was more philological than psychological, and was not based on the soundest philosophy. Somewhat nearer to what was wanted was the natural method which had spread in America.

The Reformed Method.

He now came to the reformed method. This was due, above all things, to a better understanding of the child and a more loving sympathy with him. First came the question of the pronunciation of the foreign tongue, and here energy was essential from the beginning. He would give a word of warning at once against that abominable institution, the foreign nurse. From a foreign nurse the children would get neither good pronunciation, nor good grammar, nor a good vocabulary, nor a good moral influence. There were considerable difficulties in connexion with pronunciation. The organs of the English child had been for some years accustomed to produce English sounds, but the organs were still flexible, and, if there had been good ear training in the mother tongue, very great help would be derived from that fact. Great difficulty arose in consequence of the historical spelling of the English language, and in this matter very great help might be got from the use of phonetic transcripts; but he thought that the use of phonetics was by no means essential. Let the foreign language be used as much as possible. A great deal of help might be obtained in pronunciation from the use of the foreign language in the class-room. This use of the language would tend to prevent that false shame which a good many English persons found in later life when they went on the Continent. The vocabulary required to be chosen very carefully, and it must above all things appeal to the child's interest. They must not try to exhaust one department of life before speaking about another. They must not speak about the garden exclusively and give every tree a name before they passed to the kitchen. The child must not be receptive only, but it must be productive. The required result was best obtained by connecting words with objects, and placing objects before the child. How long it took before the child connected the object and the foreign word without translating the word depended on various causes. It depended partly on the receptivity of the child and the number of expressions. What object should be used with the purpose in view? Some recommended the use of chalk and dusters and blackboards, but these were rather mean objects with which to start, and they had no inherent interest. It was, he thought, better to put before the child at once a connective theme relating to simple life. This could be done by means of pictures. The pictures of which he was thinking were a series of the seasons. It might be said that they were not very artistic and that they

were too agricultural. He confessed that they were not artistic in the classical sense, and he hoped that before long they would have something better. But it was good for the town-bred children to have the subject of the country brought before them, even if it was only by means of pictures.

There were three points which he should like to throw out as suggestions or hints, which he could not now develop. Let a point be made of putting sounds before signs, and the spoken word before the written word. Secondly, let it be remembered that no two words were equivalents—not no two words in English and French, or in English and German, but no two words in English. Thirdly, the best starting-point for the study of the various languages was the everyday speech of the people, and not the literary language. He now came to speak of grammar. Grammar dealt with the relation of words. Grammatical exercises were essential and could not be dispensed with, but they would be less irksome if the basis had been good; and here also the pictures would be of considerable service. Children might be asked to consider the picture in different tenses. Exercises in word formation were also very valuable as a help in increasing the vocabulary; but the irregular verbs and inflexions could only be learned by drill. Of this there must not be too much at a time. The use of the foreign language in the class-room would at first resolve itself into a matter of question and answer, and the reading of short narratives and conversation about them, and then writing about them; but here, as everywhere, common sense must be used. They would lose a great deal if they made themselves the slaves of a rule. It was very well to say, "Banish the mother tongue from the teaching of French and German"; but there were cases in which the best teaching would come through the mother tongue. There might be no harm in giving the English word for a thing in some cases. If the teacher came to anything like a complicated problem of grammar, or something in which it would be very useful to compare a phenomenon in English, it would be quite in place to utilize the mother tongue. The use of a bilingual dictionary or vocabulary was to be avoided, as being extremely harmful. The work of translation should not be begun until considerable progress had been made in the foreign language. Translation presupposed a good number of words well known, and a grasp of important grammatical rules. It must never be forgotten that modern languages were an essential part of liberal education. One of the difficulties which stood in the way of the new method of working was that it made it harder to give marks; but the sooner that teachers recognized that marking was a confession of weakness the better; and, as for examinations, the sooner they substituted inspection for examinations the better. It was said that pupils had not enough time for the new method; but the shortness of time was due largely to the desire to teach the beginnings of too many languages at once. But the shortness of time did not affect this subject only. There was no doubt that the teachers for this work must be English, and, above all things, it must be so because the education should be a national education, and a foreigner could hardly be expected to have the proper spirit to inspire the teaching. They must have an ideal set before them. It was more stimulating to have an ideal for which to strive than to devote themselves to tinkering. It was the universal dilettantism which had harmed much of our educational work. This was shown most clearly in the indifference of parents. But there were signs of change, due especially to woman's education. It was early education to which they must give their main energies. In spite of the century which had elapsed, in much teaching what Pestalozzi said still held good: "The education of to-day by its means and methods rather takes us on excursions into what is strange and unknown than develops that which is in us, and which we need as independent beings." What was needed was an education which "renders the child active from the very beginning, makes him produce by his own powers results really his own, preserves his originality, and gives us a man less likely to be a servile follower of the crowd." It was not so much a new method that claimed a hearing. It was the desire to infuse the modern spirit into the teaching. This demanded knowledge of the subjects taught, study of the child, and a sympathetic personality. Of these the greatest was personality, thanks to which much good work had been done, even though the methods were faulty, as a mother might rear her child, making up by using instincts where she lacked in knowledge. There might be objections to this and that detail in the many works which had appeared in connexion with the reform movement, but, taken as a whole, it seemed to be in full agreement with the principles of Pestalozzi and Froebel and more recent friends of the child. The work of Viator and Walter, of Schweitzer, Passy, and Elfstrand, of Alge and, last but not least, of Miss Dale, showed that there were infinite possibilities in the teaching of the living language. It convinced them profoundly of the gravity and the grandeur of the education of the young, and, for bearing their share in the great national work of reconstruction, might it inspire them with courage and hope and energy untiring.

MR. ATHERTON AND MR. VON GLEHN.

After an interval for tea, two papers on "How Far is the New Method Adaptable to English Schools?" were read by Mr. R. P.

Atherton (Haileybury) and Mr. L. von Glehn (Merchant Taylors'). These most valuable contributions, by practical teachers, will appear in full in the *Modern Language Quarterly*. Space prevents us from giving here more than a few of the most telling points.

Mr. ATHERTON dwelt on the initial difficulty of a transition from the old to the new system. The majority of modern language teachers in public schools had not the conversational command of the language essential for a professor of the New Method, and it would be monstrous to dismiss such men, who played many parts besides teaching French or German, as incompetent. The solution lay in starting from the bottom, and extending the method as opportunity occurred. From personal inspection he bore testimony to the linguistic results at the Frankfurt schools and at the Lycée Janson de Sailly in Paris; but we must seek to emulate, not adopt, foreign methods wholesale.

As a reply by anticipation to Mr. Bell's depreciation of the conversational method, the following sentence is apposite:—"To produce a spoken sentence readily, a boy is spurred to make a mental effort much greater and much more rapid than is the case when he has to write it down: he is, for example, forced to train himself to adjust correct person endings to his verbs until this becomes a second nature to him." The one point on which Mr. Atherton disagrees with the reformers is that he finds for the British boy constant practice in translating on paper English sentences into French a *sine qua non*.

Mr. VON GLEHN bore strong testimony to the good results obtained at Merchant Taylors' School by the adoption, less than two years ago, of the New Method in the Lower School. After three terms' work the pupils can understand ordinary French sentences concerning school and school-work, and they can answer questions on such topics in respectable French, though with very varying fluency. They can understand when they read a simple story in French, and they know the essentials of French accidence and syntax. Mr. von Glehn was also strong on the advantages of the phonetic script. It was easily acquired, helped the pronunciation in the first stage, and did no harm to the spelling at a later stage. In conclusion, he moved the following resolution, which was carried:—"That it be an instruction to the Committee to obtain a return of all modern language teachers in the United Kingdom actually teaching classes on the lines of the New Method."

Mr. SIEPMANN professed himself a strong opponent of the New Method in so far as it made colloquial fluency the end and aim of modern language teaching. Speak by all means, but do not neglect grammar and scholarship.

Mr. KIRKMAN congratulated Mr. von Glehn on the results he had obtained under what he knew from experience to be unfavourable conditions. He suggested that, instead of the dull and inartistic Hölzel pictures, pupils should be encouraged to make their own pictures.

Prof. MOORE SMITH denounced Mr. Siepmann as a reactionary. The evidence in favour of the New Method from those who had tried the old and the new, Dr. Klinghart, for instance, was overwhelming. He disagreed with Prof. Rippmann on the claims of German to priority. The English race had been so thoroughly inoculated with the French spirit that French was the easier and more natural language to an English child.

Prof. RIPPMAAN shortly replied, and the meeting was adjourned at 6.30. The members dined at the Café Monico. In the absence of Dr. Mahaffy, the Chair was taken by Dr. HEATH, of the University of London.

DR. MAHAFFY'S ADDRESS.

The PRESIDENT expressed his sense of the honour the Association had done him in electing a stranger to almost all the members. If he knew anything of modern languages, it was owing to his good fortune in having received a practical education, and so escaping the ordinary ignorance of an English public school. He proposed to talk to them concerning the problems which arose from the world's being polyglot, and the best way of solving those problems. He could not help looking back with longing to the golden age pictured by the author of Genesis when all the world was of one speech. Nor was this wholly a poet's fancy. Philology pointed to an age when, among the ancestors of the Aryans, and possibly of Aryans and Semites alike, there was unity of speech. But when they left the cradle of the world's civilization in the plains of Mesopotamia they found a babel of tongues, but with one noteworthy distinction between primitive or savage and civilized races—the savage never seeks to be understood beyond his village; the civilized man is always fusing local dialects so as to form a national language. Thus in Tasmania, which was only two-thirds the size of Ireland, there were at least five distinct languages. In Europe three great nations insisted on speaking three distinct tongues, and these nations were surrounded by a circle of at least five more—Norse, Russian, Greek, Italian, and Spanish, not to speak of half-a-dozen lesser tongues, and, as if that were not enough, they were threatened with the revival of two which they had thought dying or dead—Czech in the East and Celtic in the West. This diversity of tongues formed one of the greatest bars to intercourse, and therefore to civilization; for, though there were undoubtedly compensations in the existence of diverse languages, these only affected the quality, while they vastly diminished the quantity, of civilization. Many attempts had been made to overcome this obstacle to progress and invent a *lingua franca*. Both the Chinese and the Red Indians had succeeded to some extent

by a system of ideographic or pictorial signs. But the first historical solution of which they knew took place in the second century A.D.—say in the time of Hadrian—when Greek held throughout the Roman Empire the same place that French held in the eighteenth century. It was the common language of courts, of diplomatists, of all men of culture. But Greek, by reason of its difficulties and the complexities of its grammar, was foredoomed to give place to Latin, which, as the official language of the Roman Empire, spread over civilized Europe, and long survived in its literary form after it had degenerated or developed into distinct dialects. Now it was giving way to a new, and perhaps a worse, solution. For centuries a man had only to learn one language—Latin—to be understood in any educated society from the Atlantic to the Adriatic. Had the English been a practical people, which they were not, they would long ago have made English the *Handelssprache* of the world. The one thing needed was to conform the spelling to the pronunciation. And, in spite of all our follies in the past, English could not be ousted from its position as the most universal language. Volapük had failed from refusing to recognize this fact. But, though English might seem to us the language of the world's commerce, it would not serve by itself in Europe. Two other great nations—France and Germany—had not only highly developed tongues and great literatures, but they were countries that Englishmen must constantly visit both for business and pleasure, and there was not the smallest chance that both or either would adopt English as a common tongue.

What, then, must be the solution to aim at? For these three nations there must obviously be a trilingual ideal. Each nation must aim at knowing the languages of the other two up to the point of practical use. And what of the outer circle? Well, if the Welshman and the Hungarian showed such silly self-assertion as to refuse to put up public notices in an intelligible tongue, they would simply be boycotted. Assuming, then, this trilingual ideal as a postulate, he passed to the second part of his subject—the principles that should guide teachers in imparting French and German. Hitherto the classical method had prevailed, wherein theory lorded it over practice, abstract grammar over living use. Hence the vast majority of boys and girls who gained certificates and prizes in French and German were absolutely incapable of conversing in these tongues. When he was in Egypt, at the time of the Soudan war, he had found in the whole British army only two men who could speak French or German decently, one a general of seventy, who got his commission before our stupid competitive examinations had been invented, and the other an officer who had been ten years a Prussian dragoon.

For this ignorance the English public schools were largely responsible. His own boys, who had learnt at home to speak German and French fluently, when he sent them to a public school had been put down to the bottom of their class for their ignorance of formal grammar, and reproved by masters whose pronunciation was hardly intelligible. The system of set books was still rampant—editions with vocabularies at the end, to save the cost of a dictionary. In one case with which he was connected, in order to correct this flagrant abuse he had prescribed that every candidate should bring with him a small Littré (Beaujean's abridgement), and, in consequence, for the last three years not a candidate had presented himself in French. In all modern language examinations there should be three tests, and only three—conversation, dictation, and composition. In Ireland they were trying to carry these reforms, but he knew not whether they should overcome the stolid opposition of the old-fashioned gentlemen who were nominated on boards because of their creed, and of the schoolmasters who were wedded, by force of circumstances, to the old vicious system, like the image makers of Ephesus. But there was hope of better things, and the very disturbance of traditional blunders was a sign that their mischief was beginning to be felt.

He could not pass on without saying a word upon the larger and more intellectual uses of trilingualism which would only be attained by this practical reform. Quite apart from examinations and from the practical use of the languages in travel and in commerce, there was the æsthetic gain of reading their great literatures and attaining through them that greater wealth of ideas which distinguished the really cultivated from the provincial intellect. He need hardly tell those present that this æsthetic appreciation of literature was not possible till a person thought in the language, and that a mere dictionary knowledge was no better than an English translation, for, as they all knew, no dictionary could give the flavour of the words, or the associations that clustered about the use and context of the words; and to make out a French or German lyric poem by the dictionary was a very different thing. It was only by the early and habitual use of any language not our own that we could ever even approximate to the meaning of a poet writing for those who felt with him all the delicate shades, all the myriad associations evoked by the mere sounds of his native tongue. Therefore, from this, perhaps the highest, point of view of the uses of learning foreign languages, a great reform in the teaching of French and German was more than ever necessary.

He now turned to a very important consideration which might have already arisen in the minds of the members during this address, and that was the strong contrast which his remarks suggested between the

teaching of Greek and Latin and the teaching of modern languages. Why not as far as possible teach them all on the recognized basis of grammar and set books which any boy could learn and every modern teacher could teach? To this he replied that he did not think that there should be such a contrast, and that he should abolish it by assimilating the teaching of the classical languages to the system which he had shadowed forth. He thought that even in Greek and Latin they missed a great aid to their proper appreciation by not learning them with their ears as well as with their eyes. They should be able to follow the spoken sounds as well as the written symbols. Children should be taught to recite as well as to read the great masterpieces, and he knew of no better test in the knowledge of Greek and Latin than a good and accurate copy of a passage taken down by dictation. He felt that most of them already had the objection on their lips: "What about pronunciation? What about varying theories of speaking Greek and Latin?" So far as individual classes were concerned there was no difficulty. Let the teacher make up his mind as to the pronunciation, and let the scholars be tested by knowledge of that. It was only when teachers had to speak the languages that they would take pains to learn various views set forth by various learned men. But it mattered comparatively little. He had known Byron's "Marino Faliero" acted with emotion and with tears in the brogue of County Donegal before an audience of poor people in the village of Ballybofey. The actors, a local company of amateurs, were fully as much moved as the audience. But he had little doubt that, had Byron been present, even he could not have followed his own dialogue. Yet these poor people got the real benefit out of that fine piece of literature with their rustic pronunciation. So it had to be with French and German. No foreigner could be expected to speak like a native. Now he came to a larger question. If Greek and Latin were to be spoken, it was obviously practical to teach that pronunciation which would be most serviceable hereafter. Let them teach what would make those languages useful to men and women as far as possible, for intercourse as well as for intellectual profit. And here again there could be little hesitation what to do. Greek was still a spoken language, and of those who would still learn Greek when it ceased to be compulsory there were many who might want to use it practically. As a trade language, it was spreading over the Eastern Levant. As a land for tourists, Greece could not but become, in time, another Italy. There were even cases where to learn the colloquial use of Greek might save a man from having to learn several additional languages. As regarded Latin, the case was, if possible, plainer still. There was a general agreement in Europe, outside of England, how Latin should be pronounced. The German, the French, and the Italian all understood one another's Latin. He supposed that the Mass was said by the priests of the Church of Rome with very nearly the same pronunciation all over Europe. Of course, that was the pronunciation to be adopted. It did not matter whether it was exactly what Cicero spoke. For practical purposes it was good enough. He recommended the dictation of Greek and Latin to boys, and, what was more, translation of English read out to them *viva voce* into Greek and Latin. And so with French and German. Let there be far less of pen and paper, and more of the living voice. Thus the education given to the child would correspond with that given to the growing boy, and, whatever imperfections might remain, whatever shortcomings might be felt in the boy's knowledge, it would all serve, so far as it went. This was a great revolution for the pedants. It deposed grammar as an end in itself, and made it only the means of helping one to speak and write more efficiently. No one had a higher respect for scientific grammar and grammar than he had. Madvig, Cobet, Goodwin, and Hermann were great names; but let them read the controversy of G. Hermann and Boeckh, and see the criticisms of Shilleto on Grote, and reflect on the absurdity. Throughout all these various questions which he had been obliged to touch but very briefly, there was one great idea—great because it was not his, but one which all sound thinkers on these matters had always entertained. There was no use in giving to children only enough training in languages to torment them, and not enough to bring them both profit and pleasure; and if, therefore, more attention must be given to them, and a higher standard attained, it was not so much in the quantity of teaching, though that was often deplorably insufficient, but in the quality and in the method. They wanted more practical methods; and they wanted not only the teachers to propose, but the public to accept, the principle that all languages, even the classical, should be learned for use, and not merely to pass examinations. The tyranny of examinations, which had tormented and enslaved youth for the last thirty years, was, he trusted, coming to the end of its vile despotism. Let them hope that, with their liberation from its fetters, not only would the youth of this country have more liberty, more leisure, and therefore more happiness, but that they would receive the just recompense of gratitude from generations yet unborn, and the profound satisfaction of having exploded an unpractical and useless method of instruction.

Mr. DE SELINCOURT read a paper on "The Teaching of English Composition," which will appear in full in the *Modern Language Quarterly*.

Mr. F. STORR wished to thank Mr. de Selincourt for his extremely practical paper. It was one which went to the root of things. It set

the keynote in telling them that English was a modern language, and that even the classics might take an example from the Association as to the way in which Latin and Greek should be taught. He was in hearty agreement with nearly all that Mr. de Selincourt had told them. In teaching English essay-writing, the difficulty which he had found was that there was no foundation to build upon. That was especially so on the classical side. The boys who came to him knew no English literature, and they had never had an essay to write. He was sure that an ordinary Board-school boy in the sixth standard would have produced a better essay than some of the boys who came to him during the last term, and who averaged about seventeen years of age. The curse of essay-writing was the Juggernaut of examinations. A distinguished colleague of his, Mr. Gibson, used to coach boys for scholarships, and, having analyzed the subjects which were set in scholarship examinations at Oxford and Cambridge, he professed to have reduced the possible subjects to twenty—*Esprit de Corps*, Patriotism, Imperialism, and so on. Having composed skeleton essays on the twenty subjects, Mr. Gibson would warrant that any pupil who mastered his notes would be able to write an essay which would help him in getting an Oxford scholarship. What were examiners to do? They must set some general subject, and he did not see how they were to defeat the crammers. He (Mr. Storr) had tried to set essays directly connected with the author or the subject-matter which his pupils were reading, but he had gone beyond that range and had proposed simple moral problems. Such questions interested boys, and some of the best essays which he had received were on such subjects as: "Is it ever right to tell a lie?" Again, school life suggested various themes. One of the last essays which he set was: "Day Schools *versus* Boarding Schools," and another was: "Modern Side *versus* Classical Side." He did not altogether go with Mr. de Selincourt in what was to be expected in an essay. He thought that they ought to expect something more than sublimated conversation. A great deal could be done in the higher classes by imitation as an occasional exercise, not of course as an end and aim, as on the classical side. The highest ideal there was to get a boy to write prose which remotely resembled Cicero or Tacitus. But he did not see why they should not sometimes set a boy definitely to copy Macaulay or even Burke. That seemed to him a very useful form of composition. Why should not a boy, as Dr. Abbott had suggested, turn a page of Clarendon into a page of Macaulay's English? He found a very useful exercise, especially for training the logical faculties, to be the much abused paraphrase. It was said that paraphrase was a doing of good poetry into bad prose. So it might be. But he thought that an art master would have no objection to set a pupil to copy, in black and white, a Raphael or a Titian. Of course, nearly all the beauty of the picture would be gone, but, at all events, it would be seen whether the pupil could reproduce the outline. Nothing would show so well whether there was an absolute misunderstanding of the poetry. As a concrete instance he mentioned that once he set for paraphrase the canto of "In Memoriam" beginning: "So careful of the type." One able boy, who very soon after got an Oxford scholarship, began his paraphrase: "Nature is like a careful compositor in a printing office." Paraphrase was most useful for revealing weak points. Then came the question of time. He had had to teach English literature and English composition in one period a week. The task was absolutely impossible, and he let English literature slide, making the boys read to themselves, and examining them by paper work. It was of no use to set essays unless they were looked over individually, and to look over the essays of twenty boys must take the greater part of an hour. He remembered being asked by Mr. Barnett, of Toynbee Hall, to talk to a large class of Board-school teachers about English composition, and he tried to impress the point that the essays must be looked over and returned with a word of comment on each. He remarked that the work of correction need not take more than two or three hours, and a smile went round the audience. He asked the Chairman afterwards what he had said to provoke a smile, and was told that the Board-school teachers were laughing at the idea that they should have to look over anything out of school hours. He agreed heartily with the view of Mr. de Selincourt that composition must form a part and parcel of the other subjects. Women teachers paid more attention to essay writing than men did, but, if he should not be thought impolite, he would address a word of caution to the ladies. He had noted a tendency towards primness and pedantry. He remembered that, when his own daughters were at a high school, worthless essays written in copperplate got nearly full marks, and good essays sometimes failed to get more than a very few marks, because here or there they were written beyond the line, or had a blunder in spelling or a blot. He was once asked to speak on English composition at a mistresses' meeting, and a list of essay subjects set during the term was put into his hands. He said: "The subjects seem to me unsuitable—for instance, 'Colorization.' How can you expect girls to write anything about that?" The head mistress explained: "Oh! but they had just been having a lecture on spectrum analysis. That is why the subject was set." He was about to apologize, when a small voice from the audience saved him the necessity—"I beg your pardon, but you have misread it. It was 'Colonization.'" Essay writing ought to be begun from the very bottom of the school, and it ought to be linked

with other subjects. That was his general conclusion, and he thought that it was one with which the reader of the paper would thoroughly agree.

Mr. H. W. ATKINSON said that he thoroughly supported what Mr. Storr had said. He did not altogether agree with the reader of the paper that they should limit their subjects to something drawn out of English literature. He had the advantage in his school-days of sitting at the feet of Mr. Storr, and Mr. Storr was constantly drawing subjects for essays from all sorts of sources. By that means he was constantly drawing the attention of the boys to subjects which otherwise might have escaped their notice. That was an advantage which he (Mr. Atkinson) had appreciated more since his school-days than he did at the time. It gave the boys an opportunity of widening their field of general knowledge. He should like to insist on the importance of a more careful teaching of English at the preparatory schools. At the preparatory schools English was almost entirely neglected, and in consequence the public schools were handicapped. Some of the boys who came to the public schools were unable to read English intelligently, and they had not acquired the ability to keep their eyes a line ahead to see what was coming so that they might arrive at the proper intonation of the sentence. English must be tackled at the preparatory schools. A certain amount could be done with regard to what one might call rather difficult reading even with quite young boys. He had tried Shakespeare in the lowest classical form, and the interest which the boys had displayed was perfectly astounding. Some of the keener boys seemed quite annoyed when a boy failed to read respectably. But teachers were handicapped in this matter, as in other matters, by their head masters. He knew of a case in which a teacher asked the head master to allow some time to be given to English composition and essay-writing. "Whatever is the good of that," said the head master; "the boys are not going to compete for scholarships?" Teachers must impress on their masters that English should be at the bottom of their education. Everything was handicapped by the fact that the junior boys were absolutely unable to understand their mother tongue.

Prof. POSTGATE moved: "That the reformed pronunciation of Latin be recommended by the Modern Language Association for adoption by all teachers who desire to teach modern languages to the best advantage." The resolution was seconded by Mr. MOORE SMITH, and supported by Prof. RIFFMANN, Mr. MILNER BARRY, and Mr. STORR, and carried unanimously.

The proceedings concluded with a vote of thanks to the President, moved by Mr. EVE, and to the College for the use of their buildings, moved by Mr. MILNER BARRY.

TRAINING OF SECONDARY TEACHERS.

A CONFERENCE on the present position and prospects of training institutions for secondary teachers was held on Friday, November 12, at the College of Preceptors. Mr. STORR, who was in the Chair, congratulated the College on having brought together so picked a body of experts. The battle of training had been fought and won. There was no longer any need to plead for training. The principle was accepted by all save a few irreconcilables of the older generation. The question to be discussed that evening was the *modus operandi*, and even on this he believed there would be found among professors of the art and science of education a virtual consensus of opinion.

Mr. P. A. BARNETT, H.M.I., opened the discussion. The training of secondary teachers in England bore all the marks of being a native product. It had not been thought out on first principles. Even the leaders of opinion were still so ignorant as to mistake positive science for scientific method, and maintain that physical science was the sole material and the sole gymnastic in education. Secondary training was an offshoot and appanage of primary training. Some sixty or seventy years ago it was discovered that there were not enough men and women sufficiently trained to cope with the growing demand for popular education. Hence the two rival societies which stepped in to provide a supply of teachers; the founders of neither possessed any adequate conception of either aims or means. Secondary training had grown up round the primary, and had been heavily handicapped by the initial mistakes and shortcomings of the latter. People imagined that it necessitated some particular routine, a course prescribed by Government and controlled by a bureau. The extension of primary training to local University colleges had led these colleges to adapt their courses so as to include the secondary teachers. Oxford was the one instance of a separate and independent course provided for secondary teachers. This was the day of small things; but they must not think because the numbers, as shown by the latest return issued by the Assistant Masters' Association, were still few, no progress had been made. An American friend of his had lately visited the greatest of our public schools and been shocked at a frank avowal of its head master: "I know nothing about Pestalozzi, and do not see how I should be the better for knowing anything." But he had assured his friend that such head masters

were now the exception. Should training be post-graduate? That was now the burning question. They could not at present approach the great body of teachers and say to them: "You shall not have a teaching diploma if you have not got your degree." It was not to be expected that men and women who had to earn their daily bread should devote a whole extra year to a severe course of training with nothing in prospect but the starvation wages now offered to them. Prof. Withers, who regretted his inability to attend, had written to him: "Teachers still look on teaching as unskilled labour, for which no special preparation is needed." They would, he feared, continue to do so till they were better paid. If and when registration regulations were made more stringent, there would be hope of progress.

Mr. G. W. ADAMSON (King's College, London) pointed out a seeming inconsistency in the opener's argument. He wished to make teaching a learned profession, and at the same time he urged the lowering of the qualifications for entering that profession, on the ground that many people can do things well while knowing nothing of the rationale. The danger of the close connexion between primary and secondary training to which Mr. Barnett had referred lay in the fact that hitherto elementary teachers had carried on their general and their technical education simultaneously, to the great detriment of both. Training included the art as well as the theory of education, and, if the art was pursued, so much time was necessarily subtracted from general culture.

Mr. M. W. KEATINGE (Oxford) said that, as far as numbers were concerned, the Oxford experiment was encouraging. In the four years since the school had been started it had been taken by 180 students, of whom 120 had been men—several First Classes, and the majority Second Classes. At Oxford students were allowed to take the training course after passing Moderations. The combination of training with reading, even for a pass degree, had not worked satisfactorily, and he had been obliged to advise such students in most cases to come up for another term after taking their degree. The first thing he had to do was to persuade men that the work was worth doing, to set them tasks which would take them eight good hours a day to perform. His chief obstacles had been the absence of any first-rate literature on the subject, especially if the students were ignorant of German. He dared not venture to put into the hands of men who had taken Firsts in Greats the slip-slop compilations which were imported mainly from America, or the English manuals on psychology applied to education. The other difficulty was "the eternal want of pence." Though their numbers at Oxford were as large as, if not larger than, the staff could properly deal with, the school was not, and never could be, self-supporting.

Mr. H. W. EVE gave a brief account of the two efforts made in London to establish a men's training college—that of Mr. H. C. Bowen, in connexion with the Cowper Street Schools; and that of Mr. Findlay, at the College of Preceptors. At bottom the problem was an economic one, and there was a risk of things getting worse by the starting of numerous day schools at low fees, which necessarily implied low salaries. He urged the advantage of learning a subject with a view to teaching it—as, for instance, was now done by many young men who went abroad to qualify themselves for teaching modern languages. It would, he held, be a distinct advantage for a certain class of masters to read for a pass Degree instead of Honours, and study pass subjects from this point of view.

Prof. WELTON (Yorkshire College) said that on the moot point of making training a post-graduate study he had not been able to make up his mind. At the Victoria University terms were kept by attending lectures, and a man who had twenty-five lectures a week could have little time for another subject. Their teaching diplomas were open only to graduates, but the training required for obtaining them might be taken concurrently with the degree course. Against this practice might be set the difficulties of the time-table; the difficulty of putting in any amount of practical work, and the dissipation of interest which a variety of subjects entailed. At Leeds their great difficulty was to get schools to admit their students. Of the three principal boys' schools only one consented, and of the three girls' schools only one admitted them—and that under protest. It was only in rare cases that Victoria students could afford an extra year of study. He thought that the Victoria University should set itself to provide masters for middle-class schools, and leave it to Oxford to supply more highly trained masters for the public schools. He saw no reason why education should be put in a ringed fence; why psychology, ethics, and logic should not form part of the regular degree course.

Prof. FOSTER WATSON (Aberystwyth) gave some account of what was happening in Wales. They had in the Principality ninety-four intermediate schools, with a staff of some four hundred masters and mistresses. An inquiry was now being conducted to find out how many of these four hundred were trained. He believed it would be found that a considerable proportion of the staff consisted of primary teachers. Elementary teachers were now getting trained on the academic side to an extent that few of his audience suspected. Unless secondary teachers looked ahead, they would find themselves ousted by the primary teacher, who was little, if at all, inferior in general culture, and had also received a professional training. He considered the training of elementary and secondary teachers together an excellent

thing for both; only it must be on the highest level. Every secondary teacher should have graduated, and the training should follow the degree. As to the absence of good books in reference to psychology he agreed with Mr. Keatinge, but not in regard to the history of education. They had always Quintilian and Plato to fall back on.

Miss WALKER (Roan Girls' School, Greenwich) enforced the economic aspect. If mistresses were assured that a teaching diploma would add £10 a year to their salaries, they would soon flock to be trained. She would insist that every head master and head mistress of an endowed school should possess a diploma.

Miss WOODS (Maria Grey Training College) diagnosed the causes of the present "slump" in training. People were waiting to see what the Government intended to do, and waiting in the hope of a cheaper State-aided training. Again, the training colleges, like all other businesses, had felt the strain of the war. Constantly applicants complained that the fees were too high. Training was still regarded as a substitute for a degree. A London B.A. to whom a £25 scholarship had been offered had actually proposed to enter the Maria Grey College and be excused the training, which would be of no possible use to her. She (Miss Woods) was strongly in favour of post-graduate training. The ignorance of the students on entering the college was lamentable. She had lately asked the Head of one of the women's University colleges whether any of her students would be entering the Maria Grey next year, and was answered: "No, I have no material at present bad enough for you."

Mr. BARNETT, in a brief reply, referred to the great stimulus that had been given to training by a recent circular of the Board of Education announcing that in the future appointment of inspectors weight would be given to the possession of a teaching diploma.

The CHAIRMAN pronounced the discussion one of the most interesting and practical he had ever attended. His hopes of the future of training were built mainly on a Teachers' Register. It was an open secret that the Consultative Committee had recommended that after a certain date evidence of training should be an essential condition for admission to the Register. The best part of a year had elapsed since that Committee sent in its Report; why was it still stowed away in some pigeon-hole of the Board of Education?

RUSKIN HALL.

IT matters very little at Ruskin Hall whether the visitor wants to view it in the Long or any other vacation. The institution exists for the benefit of working men, aims at bringing them into a real living connexion with England's most ancient University, and for this reason is open all the year round. A new student can arrive or depart at any time that suits his convenience; although, at the same time, it is true that new men usually arrive in batches and on a date concerted with the Warden, Mr. Dennis Hird.

Founded in February, 1899, Ruskin Hall is now in its third year, and may be said to have come off victorious through the perils of early infancy. It lives and flourishes; more than two thousand men and women have enjoyed its benefits and desire its continued existence. There are even hopes that it may one day become self-supporting, although most people who have had anything to do with University education are well aware that proud independence of this kind is seldom aimed at, and still more seldom achieved. Like many another original idea, Ruskin Hall owes its inception to America. There is, indeed, something audacious and startling in the notion of planting a Hall for working men a few doors off St. John's and Balliol, on the noble causeway of St. Giles. There are twenty-two incorporated colleges in Oxford; there are at least half-a-dozen halls, such as Grindle's and Marcon's, not incorporated, and whose relation to the University needs some explanation; there are theological nonconforming colleges, such as Mansfield and Manchester, which are extra-University institutions, a sort of relative-in-law of the *alma mater*; there is a University Extension movement whose usefulness is not confined to any one class. But in all these colleges, these growths *extra* and *intra*, there was nothing for working men until Mr. and Mrs. Vrooman, of St. Louis, founded Ruskin Hall.

And the sorrowful truth of the matter is that these two-and-twenty colleges were never intended for one class. Many of their charters and deeds of incorporation—possibly all of them—show that often the most ample provision was made for the poor man's son: wherever talent appeared, it was to be fostered and cultured. Some of the ancient chronicles of the colleges, such as Brasenose, show us that students were not pampered

with fires in wintry weather, they being directed to run up and down at certain hours to warm themselves. A pennyworth of beef among five of them was thought a very decent allowance. A few revolutions of the wheel of time, and we see the poor man swept right out of Cambridge and Oxford. Indeed, it required a Royal Commission to re-establish a truth patent to the founders of colleges: if the net be not thrown wide enough and far enough, the aim of a University will be minimized and stultified, for the very word implies that it exists not for a class, but for all. The admirable point in old England's character and procedure is that she can go wrong for hundreds of years, grow hoary in evil-doing, but in the end she submits to correction, partially amends her ways, and in the future strives to do better. But for this excellent trait our ancient Oxford would be as dead as Salamanca or Bologna. But since 1850 she has thrown the net wider by her system of scholarships; since 1875 she has shown anxiety to extend her University to populous places, and gather Extension students together in Summer Meetings. And, as a climax to democratic effort, though she has not founded Ruskin Hall, still it is there, and has not gone forward without a word of welcome.

Ruskin Hall is the house of a former professor, Mr. T. R. Green, in which board and lodging is found for some twenty-five working men. They either obtain scholarships or pay the modest sum of 12s. 6d. weekly. The course extends to three, six, or twelve months. The Council hold out no hope to intending students that they will be assisted to "get on," to rise out of their station, to change manual labour for headwork. On the contrary, its founders say quite openly that Ruskin Hall accepts as its motto "Knowledge for the sake of our fellow-men," and declares that the future of our country depends upon the civic education of its citizens.

The work undertaken falls readily into three sections. The first section is the work in Oxford at Ruskin Hall itself. Here from eighteen to twenty-five working men are in residence for the period mentioned, studying such subjects as logic, history, literature, sociology, political economy, psychology, principles of politics, industrial history, &c. Life is on the "plain living and high thinking" plane; not only so, but the house service is performed by the students themselves. Every man, of course, makes his own bed, and then for about two hours the house-work is performed by them. Theoretically, the plan, framed by themselves, is most ingenious. A circle has been drawn and divided into twenty-five segments each filled with a duty, such as sweep, cook breakfast, assist cook breakfast, wash up, and so forth. Very properly, dishes are not washed after every meal; there is one great wash-up daily, on which as many as nine "hands" are engaged at once. To the mere feminine mind this arrangement would seem to breed endless confusion; but the lady who explained these matters to me declared it worked well. She accompanied me to the kitchen, pointed out that the place of every article was labelled, and stated that everybody is intent on seeing things in their right place. Business-like aprons were hanging up ready to be donned. The cooking is done by gas, and the meals are served in the kitchen. At first one of the students did the cooking, but it was found that this duty required more than two hours, and recently a woman has been engaged to undertake the evening dinner—not breakfast or lunch. In the early days the student who was cook was excused all house-work for the following week. I ought to have explained earlier that all duties are changed weekly, so that there is no work of which a man does not enjoy a sample. Of course senior students have some authority in keeping up the standard of work; one of them is always senior delegate, and he has two assistants. It is not given to every man, or woman either, to be neat and deft at house-work, and there is much good-humoured effort on the part of adepts to keep new-comers up to the mark. The breakfast cook attends to the service during breakfast, and takes his own meal after his fellow-students. When twelve new-comers arrive at once, as was the case last August, there is somewhat of an upheaval on board the ship, but a little energy and watchfulness on the part of seniors, aided by the good will of juniors, soon makes things work more smoothly and orderly. Some of the students realize for the first time how unceasing is house-work, and how great the demand on many excellent qualities. A house-meeting is held every Monday, when the work is arranged for the week; this is necessary because there are not always twenty-five students in residence, so that posts require to be combined.

Penalties are rarely imposed for negligence, but when this is the case they take the form of extra work.

During a fortnight's stay in Oxford I made a point of being twice present at the lectures given to the students. Grammar and spelling present considerable difficulties to men educated in the imperfect manner permitted by our elementary system. And it is a safe thing to say that ninety-nine out of every hundred people do not really know the meanings of words they use daily. These considerations are always present to the minds of the lecturers and teachers of Ruskin Hall. Every difficult word is explained; lucidity, the presentation of ideas and not words, is the great aim. The result is so admirable that the method might well be tried with ordinary undergraduates, though possibly the difficulty of the task is such as to deter many word-jugglers from attempting it. It is the custom of the lecturer to exact a certain quantity of written work weekly, and then to spend a short time alone with each student explaining difficulties and giving advice. Up to the present time a hundred and twenty-five students have been in residence at the Hall. They occupy various stations in life, such as masons, engineers, miners, dockers, soldiers, sailors, gardeners, plumbers, and so forth. A Norwegian gentleman, having stayed at the Hall, wrote an article on the movement in a Norwegian paper, and every summer since has brought a number of Norwegians to Oxford. The acquaintance with other nationalities is regarded as highly desirable.

It is a great claim of teachers, and a just one, that they must have time to obtain good results in education. Being persuaded of this necessity, I asked the able Warden and lecturer at Ruskin Hall, Mr. Dennis Hird, whether a three months course really could give any result worth the labour and self-denial entailed.

"Yes," was the reply, "I think the result worth the sacrifice. You may not perhaps help a man to the acquisition of a great sum of knowledge in so short a time. What we may claim to do, and what we are peculiarly successful in doing, is to alter the point of view. One of my chief duties is expounding the theory of evolution. When it is comprehended, it alters entirely a man's relation to life, and it is applicable to every natural science, to history, theology, art, sociology—to what indeed does it not apply? Every day I live, the more do I think this piece of work needs doing." And after listening to two of Mr. Hird's lectures on Spencer's "Sociology" I heartily agreed with him.

The second division of work at Ruskin Hall is the correspondence classes. These are conducted on fourteen subjects, such as English history, sociology, trade unionism, the industrial revolution, co-operative movement, and so forth. The fees are 2s. the first month, and 1s. per month after. The Council firmly believe and act on the wise principle that what people pay for, that they appreciate. Each time an essay is written a shilling must be enclosed for the next one—a system whose excellence can be understood by those who know best our working classes. Already 2,400 persons have benefited by the correspondence classes. The classes are not confined to work in a given subject only; a kindly interest is shown in the students, and friendly letters are written them from time to time. Two educated and thoughtful ladies have been interested in the work by Mr. and Mrs. Vrooman. They have recently come to live in Oxford, and show that devotion to the work which money can rarely command.

The third section of the work is the Ruskin Hall University Extension lectures, by which the Council hope to reach the Great Unconscious, those who at present are scarcely interested in any problems save those connected with the daily routine of their lives. The Extension classes are largely used by officials of trade unions, of temperance, co-operative, and friendly societies—men who require that wider outlook which enables them to see the relation of their necessarily limited institutions to the larger interests of the country. It is no exaggeration to say that the Council have set themselves to realize the great saying of Epictetus: "You will do the greatest service to the State if you shall raise, not the roofs of the houses, but the souls of the citizens."

This important work is made known not so much by advertising as by the agency of trade unions and co-operative societies. An intending student in the correspondence class, being asked the reason why he wished to work at a certain subject, made answer that the institutions just named now

demand of their leaders a higher education and greater knowledge of the world than has hitherto been the case. His idea was that Ruskin Hall could assist him to serve their interests better.

At the present moment Mr. and Mrs. Vrooman subsidize the work to the extent of £500 annually. It is worth noting that the Hall has recently been incorporated and placed under the supervision of a Council of fourteen members; of this number five are prominent officials of trade unionism.

C. S. B.

THE OLD SCHOOL: A FAIRY STORY.

ONCE upon a time there lived a good young King who saw much suffering among his subjects, and wished to do them good; but, being very young, he was not quite sure how to set about the task, and in those days (you must remember that all this happened very long ago) it was not thought wrong that young people should sometimes ask advice from those who were their elders.

So the young King called to him some elders, and asked them what steps he had better take towards leaving the world a little better than he found it. It seemed to them a proper thing that he should do something for the welfare of the young, partly because the King himself was young, and partly because it is more easy to influence the young than those of middle age. After a time people have made up their minds what sort of folk they mean to be; and, though they may not satisfy all other people, they are quite satisfied themselves, and have no wish and little power to change. The young King listened to his elders, and founded a new school in an old city on a site where friars had lived before. Though the school was in a city, there was no crowd as yet; at least trees and grass and country air were not far off. The boys had to live a simple life, for they were very poor; some of them were foundlings, and even those that had parents who acknowledged them had no friends to help them much; and in early days the school was very poor itself, and found it hard to provide the boys with lodging, clothing, food, and education.

The lodging was a little rough; for, after the friars had been driven out, the site had been a sort of "no man's land," and squatters, so to say, had seized the land and made their homes there. The clothing was not intended to be quaint, for it was usual then, and was not meant to make the boys remarkable, and to call forth, as after proved the case, from gutter humourists allusions to a "mustard pot." The food cannot have been luxurious in early days, for men still living—men who were boys there in the first quarter of the nineteenth century—breakfasted, not as a matter of punishment, but always, on plain bread and water; yet they have lived beyond the age of ninety.

It is possible that the education in those early days was of a simple kind. More than three hundred years ago the title of chief teacher was "petty schoolmaster," and his name was (perhaps with reason) Thomas Cutts. It is quite likely that his way of teaching had something in common with that of Gideon when he "taught the men of Succoth." Whatever else was taught, the boys must have learned to take care of themselves, to make their own beds, to clean their own shoes, to wait upon themselves, and so forth. If they had not started in those early days, they could hardly have had ingrained in them as a tradition of the school the habits of neatness and helpfulness and courtesy which had ever distinguished the boys. It was pleasant to mark how at the school sports, a yearly festival, after the sack race, each competitor, as a matter of course, without a special order, neatly folded up his sack in a particular way, and put it with the others. Such habits may be of use in after life, even if the value of an irregular Greek verb (why called irregular?) is not at once apparent. As time went on the green fields were farther and farther off, the school grew richer, the education better, and the site more valuable. So some wise men came forward and said it was folly to lodge the scholars where land was of such value; the site ought to be sold for a mart, and the school moved into the country, where pure air and water might be had for the asking, where might be acquired a chapel to pray in and a field to play in. These wise men added that the old men who looked after the school were all wrong—extravagant and stupid, if not something worse. So the old men were told

to go, new men came in, who bought broad acres in the country, and built a lordly palace for the boys, with many goodly mansions.

But just when the bill was coming in for the new buildings, and the wise men thought to pay it by the sale of the old site, they were sore let and hindered. Some, men of law, said that holy men lay buried there, and to move their bones were a crime. Some, who called themselves philanthropists, said that land was wanted for a hospital, and the needs of boys must be as nothing when compared with those of the sick and needy; others thought that schools might come or schools might go, but ancient buildings ought to be immortal; while yet some more wise men thought, as is quite true, that a city is a crowded, noisy place, and is all the better for a quiet garden here and there, with seats and grass, and goldfish in a pool.

All this is pure fiction, a mere play of the fancy; but, if it so chanced that these inventions were realized in very deed, any one can see it would be rather awkward for the quaint old school founded by the good young King Edward several hundreds of years ago, a school which many boys and men have learned to love.

THE TEACHING OF EUROPEAN HISTORY.

THE importance of the teaching of foreign history, especially that of Europe, in our schools is still far from being recognized. For many years past the teacher has patiently endeavoured to instil the details of English history into the minds of pupils without feeling more than an occasional prick of conscience at the sense of slurring over such events as the Norman Conquest of England, or the Tudor wars upon the Continent, from an uneasy consciousness that the class know nothing of Rollo the Northman, and have but the vaguest notions concerning the struggle for supremacy between Francis I. and Charles V. Possibly, too, he has been beset at times by an uncomfortable qualm that he is, all unwittingly perhaps, allowing his pupils to imbibe the magnificent theory that England alone possesses a history worth recording, and that other nations hold a precarious existence in order that they may be fought with, and triumphed over by her victorious arms.

That such a state of things has so long existed probably accounts for the astonishing lack of interest shown by the majority of young people in a study which, if intelligently worked at, is full of delight and romance. Children, as a rule, have an instinctive dislike for anything that is vague and ill-defined in its impression upon their minds. In the course of reading both English history and many of the historical novels which their elders are often keen to recommend to them, they come across allusions to Charlemagne, the "Christian Princes of Spain," or the "Balance of Power," and they feel uneasily that they are expected to know all about these mysterious matters. But there is nothing about them in their history text-book, and no time to ask for explanations in class. Besides, every one is "supposed to know," and there is a certain sense of shame in inquiry, which infallibly ends in ignorance and confusion of mind. For English children, above all others, need to read their own history, if it is to be read intelligently, in the light of that of other lands. The very isolation of England during her early days, and her ambition and aggressive desire of extension later on, brought into prominence her close touch with Europe at all the turning points of her development. So close, indeed, has been this connexion that the greater part of her history can only be fully understood when we place it against the background of European life and progress. Who, for example, can pretend to grasp the foreign policy of Elizabeth if he knows not the history of France and Holland during the sixteenth century? Who, knowing nothing of the conquest of the Moors and the triumph of the Christian princes, can account for Spain's peculiar position at the same epoch? Instances might be multiplied a hundredfold, and will readily occur to the mind of the teacher of history.

Now, if a firm foundation be laid by a knowledge in outline of the main features of European history, the knotty points of England's story at once are disentangled, and the pupil is able to regard them in a new light. The mind trained to note the growth of the Empire of Charlemagne, or the influence of Greek

and Roman civilization upon the rest of Europe, will never again have a vague idea that the Saxons and Angles only came into existence in order to invade England, or that the progress of their own country was evolved, as it were, from its inner consciousness, without reference to the affairs of Europe. No longer will the Crusades inevitably call up the shade of Cœur de Lion and his alone, nor the Hundred Years' War be regarded merely as a good opportunity afforded to English soldiers of cracking the skulls of their French neighbours.

The syllabus of the Oxford Local Examination this year will give an *impetus*, no doubt, by its inclusion of "Outlines of General European History," to the study of the subject. But, unfortunately, as some of us think, a period of a few hundred years has been set for study, instead of the whole subject in very general outline. I do not propose to enter here at length into the disadvantage of the study of a "period" without having first realized a "bird's-eye view" of the whole course of progress; but I believe it to be very evident that what is wanted for children of middle school age is that they should see events, and groups of events, in the right perspective as regards their development, rather than the knowledge of details, more or less isolated from their previous and subsequent relations. This can be best obtained by a brief survey of the whole subject, from the beginnings of Greece down to the Franco-Prussian War. Only the most striking characters and features of each century would be noted, and the correlation of cause and effect kept broad and clear. As the countries of Europe come to be considered separately, those would naturally be treated of most fully which take a prominent place in the history of each century. Great movements would be described, and the figures of the "makers" of each section made the focus of the picture. Each country would be closely connected with the rest, geography would be taught as an inseparable adjunct, and, while a profusion of names and dates would be carefully avoided, strict chronological order would be observed. I need scarcely say that such points as touched the history of England would be specially considered.

A practical experiment in the teaching of history in a girls' high school took the following shape:—In the first form stories from Greek and Roman history, and in the second form from English history, were taught, without much attempt at connexion or correlation, but mainly to rouse interest in the subject. In the two middle forms, where the pupils' ages ranged from ten to fourteen, a course of European history was studied in outline for a period of two years, each child thus getting a complete bird's-eye view of the making of Europe, so as to be able to trace a continuous line of progress from the beginning of the Greek Empire to the year 1870. In the three fourth forms a return was made to the outlines of English history, much of which now possessed an entirely new significance in the light of European affairs, and could be more intelligently and easily studied. The outlines having been completed within three years, a period of English history was begun, or, if special examinations did not press, another course of foreign history was taken for a year, consisting either of one country in detail, or of several centuries of general European history, from a point of view which enabled them to be regarded in a deeper and more searching manner, in preparation for the wider studies of later years.

By these means it was hoped that history, so often found dull and wearisome when the progress of our own nation is again and again worked through,* might be more interestingly, as well as more scientifically, taught. Dull, indeed, must be the child who, in after years, will not feel a thrill of interest at the mention of Thermopylæ, or Archimedes, or Charlemagne, or Louis XI., so often, alas! mere names or isolated memories, wrongly fitted, or fitted not at all, into the perspective of history.

E. M. WILMOT-BUXTON.

* An ex-high-school girl once explained to me her hatred of the subject by saying: "I never learnt anything but the Plantagenets; in every new form I hoped to get away from them, but we always began them again."

OCCASIONAL NOTES.

MR. BALFOUR’S promise of “a very early and a very honourable place” for education has been redeemed in the letter by the King’s Speech, wherein “Proposals for the co-ordination and improvement of Primary and Secondary Education” has the place of honour. How far it will be fulfilled in the spirit is another matter.

“Proposals” is a word of wide connotation; but we read between the lines not a big Bill, but two Bills which may prove big or small. Secondary education will certainly come first as the less contentious measure, and we show elsewhere how the rock which wrecked the Bill of 1896 may be safely avoided. The Duke of Devonshire can no longer plead that he has no mandate. If he reads nothing but the *Times*, he must have noted that the recent resolutions of teachers’ conferences all point to one conclusion—a single County Authority with control over all schools in its area save the privileged non-local. On this head our only fear is that the Bill will not go far enough, that it will limit the educational rate, that it will allow to schools an option of standing out, that it will not enforce on the Local Authority an adequate provision of secondary education. The problem of how to deal with primary schools is much more intricate, but in this case too the teachers are virtually at one. The resolution passed only the other day by the Council of the Teachers’ Guild is a working compromise that should satisfy all but fanatic clerics and the more fanatical anticlerics: “Voluntary schools shall be entitled to rate aid on equal terms, provided always that the Local Authority is represented on the managing committee, and that in the case of the dismissal of teachers an appeal lies to the County Education Committee.” We greatly fear that, even if a Bill on these lines is introduced, time will not be allowed for passing it, and we shall be again put off with a miserable continuation Cockerton Bill.

THE Order of the Privy Council for the establishment of a Register of Teachers was laid (in dummy) on the table of the House on Monday, January 20; on the following Thursday a short *précis* of its contents was given in the *Daily Mail*, and a fuller one in the *Times* of Friday, but at the date when this Note was written even members of the Consultative Committee had not all been able to procure a copy. This leakage or *laches* should give rise to a question in Parliament. It is satisfactory to find that our prognostications of last year have come true almost to the letter. The Register is inclusive, and it will ultimately insist on systematic training as one qualification. These are the two essential points. The list will be alphabetical, but in column A will appear all teachers who hold the Government certificate under the Code. These will go on the register automatically and without fee. In column B will be entered teachers otherwise qualified according to the schedule (of which more anon)—*i.e.*, by a University degree, a teaching diploma, &c. These will pay a registration fee of one guinea and half-a-crown for each subsequent record entered against their names. Lastly there is a supplementary list of special teachers in subjects ranging from music and drawing to cookery and needlework.

AFTER the precedent of the Medical Act, admission for the first three years from June next, when the Register comes into operation, is made very easy. The London Intermediate in Arts or Science, *Qualifications.* Oxford Pass Moderations, the Cambridge “General,” the Licentiatehip of the College of Preceptors, or three years of teaching in any recognized school—all these admit to the Register. But after the three years of grace the qualifications are higher and more exacting. The candidate must possess a full University degree or its equivalent; he must have resided and undergone a year’s course of training at a University or a recognized training college, or have obtained a diploma in theory and passed a year as a student teacher; and he must have taught as a probationer for one year in a recognized school. It is needless to point out what an impetus this regulation must give to the cause of training. Miss Woods and Miss Punnett will no longer have cause to complain of empty benches, nor will Dr. Findlay, should he return to his old occupation, be reduced to one man and a boy.

THE framing and keeping of the Register is entrusted to a Council of twelve. Of these, six will be nominated by the Crown, and the other six elected by the following educational bodies:—National Union of Teachers, Head Masters’ Conference, Incorporated Association of Head Masters, Head Mistresses’ Conference, College of Preceptors, and Teachers’ Guild. The Council holds office for three years; then there is to be a fresh constitution by Order in Council. The Council may have offices of its own, and appoint a Registrar and other officers. It must report yearly to the Board of Education. On this point only the Board has departed from the recommendations of the Consultative Committee, and, in our opinion, altered them for the worse. It seems to us essential that the Consultative Committee, which acts, or should act, as an intermediary between the Board of Education and the teachers, should be represented on the Registration Council, and we hope that the Duke, in his choice of Crown nominees, will make good this defect. Secondly, it is only reasonable that registered teachers should, as soon as the Register is in full operation, elect their own representatives. Doubtless this is the

intention of the Board, but we should like to have seen it in black and white. Assistant masters and mistresses are still "mutum et turpe pecus"; but that was to be expected.

ANYTHING more depressing and disappointing than the presidential address of Dr. Gow to the Incorporated Association of Head Masters it is difficult to conceive. More pessimistic than even the Duke of Devonshire, his tone was also, if possible, more superior. The English don't love learning, and "won't learn or teach themselves." The demand for a Bill was "not really a demand for education." Hence the new Bill "must not be a drastic affair." A series of little Bills every year was what was wanted. In short, a policy of tinkering and peddling was all that the people of this country desire or deserve. Meanwhile, to please Dr. Gow, educational chaos is to reign, constant squabbles between schools and authorities are to be kept going, and no administrator or teacher is to feel that we have at last a sound and stable system comparable with that of Continental nations. For we must "alarm nobody and maintain the public interest in education." This leads us to ask what does Dr. Gow know from experience of the state of affairs for which an Education Bill is required? Nottingham High School (endowment £3,000) wanted neither South Kensington nor County Council grants. Westminster School is still more independent of such mundane considerations. Freedom, variety, &c., with no inspectors to intrude, has been Dr. Gow's (no doubt well deserved) happy lot. But it is not for the great, wealthy, and successful schools that Education Bills are passed; it is for the poor and needy, for the lower middle classes, for the places without schools at all.

THE Association of Assistant Masters in Secondary Schools has completed the somewhat troublesome task of incorporation, and met at St. Paul's School last month for the first time under its new constitution.

The A.M.A. The resultant collocation of letters offers some difficulty to the tongue. We have mastered the I.A.H.M.; but the I.A.A.M. does not go trippingly. We venture, then, to keep the familiar initials A.M.A. The example of some kindred associations—the Teachers' Guild and the College of Preceptors—goes to show that the word "incorporated" need not always be asserted. As a preliminary to incorporation, and, in view of the anticipated expenses of secretarial staff and permanent offices, the Council had already doubled the subscription for 1901. Some anxiety was felt lest this action might seriously reduce the membership, but the annual report is reassuring. The membership is upwards of twelve hundred; and the financial position is sound. The report affords evidence of the hard work of the officers and of the Committees during the past year; while, at the same time, it gives sufficient encouragement to the newly elected officers to press forward with zeal and energy.

THE first resolution on tenure was moved by Mr. T. E. Page. The orator, as Macaulay would have said, was worthy of such a subject. We hope next month to give an authorized edition of his speech. The meeting then settled down to the discussion of a number of resolutions that may be called political in character. These were passed without opposition, and show that the Association is in line with other educational bodies on points of administration. Mr. Arthur Sidgwick followed with a delightful address on "Greek Educational Ideals." It is well

that the Association should remember that its members are not only concerned with educational politics. Mr. Sidgwick described his visit to the meeting as an oasis in the midst of a desert of examination papers. The members present felt that the address was an oasis in the midst of the arid, if necessary, discussions on the constitution and politics of the Association. We have no space to do more than mention that resolutions were passed in favour of a reformed pronunciation in Latin, and of a pension scheme similar to that of the Central Welsh Board. In the evening Mr. Cripps addressed some weighty words of advice to the members present at the annual dinner. Speaking as a member of the House of Commons, he pointed out the need of providing a practical solution of any difficulty before Parliament could be asked to vote on the subject. He mentioned one case in particular. Before the right of appeal to the Central Authority was granted it must be shown what would happen if the appeal was won. Mr. Cripps, and we agree with him, saw difficulties in the way of reinstatement.

AS we feared last month, the resolution of the Head Masters' Conference in reference to appeals from the Local to the Central Authority was intended to cover finance. Dr. Ruttly moved the same resolution in detail at the Head Masters' Association meeting, and made his meaning quite clear. Now the letter from Dr. Gow, embodying the Association's resolution, which was sent to Mr. Balfour, demands this appeal under a complete misapprehension. It quotes 1 (1) of the Technical Instruction Act, 1889, which provides, *inter alia*, "if any question arises . . . as to the amount to be allotted to each school or institution, . . . the question shall be determined by the Department of Science and Art." Now, on reading the debates on the passing of this Act, it is plainly set out that this is a religious controversy, or Church v. School Board section, and was deliberately put in (for it was not in the original draft) to prevent a preference being given to the schools of one denomination over those of another. Further, the "amount to be allotted" was defined by a part of the same section as dependable (only) on the "nature and amount of efficient technical or manual instruction" in the rival schools. Hence the appeal to South Kensington could only be argued and decided on this question of efficiency. But by the Act of 1891—Section 1 (2)—this direction is repealed; hence the whole ground of appeal has been cut away. As a matter of fact, 1 (1) has never been put in force. One or two very small Authorities have been frightened by the threat of it into submission, but the one case, where the Gloucestershire County Council was brought to book by a school of art, simply resulted in a defiance from the County Council, and nothing happened. It is obvious that, unless the new rate is to be compulsory, which it is not, it will not be raised if its allocation is to depend on the outcry of aggrieved schoolmasters and the decision of South Kensington.

MR. A. G. BOSCAWEN'S article in last month's *National Review* should be read side by side with Sir Joshua Fitch's in the *Nineteenth Century*. They will show the dangers that environ a Government that deals with education—not a united Government, as in 1870; but a Unionist Government, which includes Lord Salisbury and the Duke of Devonshire. Mr. Boscawen's article is based on the assumption that parents have an absolute right to demand that their children shall be taught in the State schools they are obliged to attend that religion which they themselves believe, and that anything

which hinders that right is an act of tyranny. Sir J. Fitch shows that no such right is recognized in any other country, and that it is not claimed in the intermediate and higher schools of England. He shows, further, that it is not claimed *by* the parents of elementary scholars, but *for* them, which is a very different thing. Mr. Boscawen cannot away with the Cowper-Temple Clause, which has "crimped and cabined" our national education (whatever that may mean). Sir Joshua shows how smoothly it has worked for over thirty years, and pictures the wild confusion that would follow the substitution of Section 3 in the Education Bill of last year. Mr. Boscawen holds that there can be no real religious education which is not distinctive of a particular creed. Sir Joshua holds that such differences as divide the Wesleyan and the Churchman are unmeaning to the child, and should be banished from a national school.

WHEN, however, we come to compare the rival schemes we confess that the practical politician is nearer the mark than the idealist. Sir Joshua would have glorified School Boards with enlarged rural areas and extended functions. He objects to County Councils on the score that voters will be inclined to regard education as a matter of no more importance than tramways or gas or sewage. The danger is real and serious, but, we fear, inevitable. *Ad hoc* is past praying for. Mr. Boscawen's scheme is opportune as indicating how much the clerical party—or, at least, its left centre—is prepared to concede in return for rate aid, and, therefore, the minimum that must be demanded. One-third of the managers must be appointed by the Local Authority. The appointment of teachers must be approved by it, and, in case of dismissal, there must be a right of appeal. Voluntary schools, equally with Board schools, must admit denominational teachers *ab extra*, the cost of such teaching to be borne by the denomination, which must likewise bear the total cost of the up-keep of premises. This, assuredly, is not our ideal; but it gives us the basis of a possible and passable compromise.

THE County Council of the West Riding of Yorkshire has, in respect of the coming Education Bill, endeavoured to perform the operation attempted by Northamptonshire on the Cockerton Act, and known as "queering the pitch." Seizing the opportunity of having a Council meeting just before the Bill comes on, they passed a resolution urging the Government to limit their Bill to secondary education. This request, be it noted, is not to allow elementary powers to be optional for the West Riding, or any other county which feels itself unwilling or incompetent to exercise them; but that, because the West Riding "won't play," no other county, whatever its needs, is to be permitted to. The reasons given are not convincing. The first is that of the "paramount importance" of an "effective organization of secondary (including technical) education." What is the main obstacle at present to *effective* organization of that part called "technical" over the area of any other county, at any rate? Why, surely, the want of preliminary, sound, general (chiefly elementary) education. The voluntary school managers and the smaller School Boards starve the day schools, and won't start continuation schools. The Technical Committees have no power to aid the former or force into existence the latter. Until the technical and secondary body has, at least, a supervision over these elementary bodies nothing can be done to bring about a better state of affairs. The next argument is our old friend, "controversial issues will be raised." Of course, they would, if anybody

tried to make the County Authority *manage* schools, denominational or otherwise. But no such proposal ever has been made; and how a general supervision over elementary schools, and grants in aid of secular instruction only, just as are now given to grammar schools (many of them denominational), can raise any controversy passes our comprehension.

WE regret that the *Daily News* should have lent its columns to a virulent attack on the Welsh Central Board and all its works, an attack which contains some of those half truths that are even worse than a lie, and defeats its own object by gross exaggeration and misrepresentation. It is true that there is some friction between the governors of certain schools and the County Authorities, and between one County Authority and the Central Board. Were it not so, the inference, in Wales at least, would be that the scheme was defunct. It is true that the Welsh schools, though to a less degree than the English grammar schools, are suffering from the "eternal want of pence," but the "great authority on educational finance" who "declared every county school in Wales to be bankrupt," was either bad or mad. The other charges of rigid uniformity imposed by the Central Board, of establishing an educational hierarchy, of discouraging technical instruction, are fully rebutted in letters addressed by Welsh teachers to the *Border Counties Advertiser*. There remains the apparently just complaint that the system of marking in examinations for county exhibitions is defective. "Parturient mountains have ere now produced muscicular abortions." The gravest defect, as it seems to us—the multiplication of schools beyond necessity—is not touched on.

MR. RUDYARD KIPLING has intensity; but his range of vision is limited, and to nicer distinction he is colour blind. With his ode on conscription, which is boomed in the *Times* of January 4, we are here concerned only as it reflects on national education. Games and game-preserving are, according to him, the two principal causes of England's decline, and the helots of our Sparta are "the flannelled fools at the wickets and the muddled oafs at the goals." A modern Juvenal who will brand no less the battues and deer forests of the classes than the professional football and suburban races of the masses has our sympathy and admiration; but we must distinguish. It is not true that our aristocracy have fought by proxy; the lists of killed and wounded prove that they have hazarded their lives unto the death, and there are few noble families whom the war has not thrown into mourning. Again, cricket and football may be overdone or prostituted till they become an element of demoralization, like the Roman circus—"corruptio optimi fit pessima"—but it will be an evil day for England if ever drill takes the place of school games. Militarism is, after all, a tendency more to be dreaded than athleticism. Far truer and more effective than Mr. Kipling's *flamboyant* rhetoric was the playful satire of Matthew Arnold when he described our upper classes as barbarians. Their defect, as he pointed out, is not in *virtus*, or patriotism; but in *Geist*, or intelligence.

AN enthusiast at one of the recent educational meetings spoke of a paltry couple of millions as being necessary to put the administration of secondary education upon a satisfactory footing; but that the Treasury did not venture to ask Parliament for this trifling sum. It does, indeed, seem a trifling sum for a wealthy nation, provided the need for ex-

The Rival Schemes.

The West Riding Demurrer.

Welsh Intermediate Schools.

Mr. Kipling on Patriotism.

Private Generosity.

penditure be proved. And that need, we regret to say, is not yet entirely accepted by the man in the street. For instance, the correspondence columns of the *Times* contain a proposal to spend half a million on an opera house, urging, as worthy of imitation, the example of foreign countries. The letter contains an implied sneer at the waste of public money on education, and also calls upon the wealthy individual who spends vast sums annually on racing and hunting. With the demand for a national opera house we entirely concur, as also with the appeal to individual generosity. If the example of foreign countries is to be followed in the one case, it may well stimulate both the Treasury and private individuals in the other. During the past year upwards of fifteen million pounds have been given by wealthy Americans for educational purposes. This implies not only riches and generosity, but also the conviction that money spent on education is well spent. Could we get the same general conviction in England, many difficulties would disappear.

ANOTHER attempt to clip the wings of the London School Board is being made. Three—presumably inoffensive—ratepayers have entered a claim for an injunction to prevent the School Board from spending the rates upon the teaching or training of pupil-teachers. We have not

Cockerton again.

much liking for these round-about methods of attack. Indeed, we sympathize with the School Board under the circumstances. So long as pupil-teachedom remains—we would like to see the system abolished—great care must be taken that the pupil-teachers have opportunity of continuing their education and do not spend all their time in helping the teachers. It is to the credit of the larger Boards that good pupil-teacher centres have been established. In our opinion it would be well if the would-be pupil-teacher were to spend in a secondary school the years previous to admission to a training college; but secondary schools, as a whole, have not welcomed or made arrangements for such a course. Yet the boys and girls must be trained, and the public purse must bear the cost. We have a timid Government, and perhaps the Cabinet is not unwilling to see how far the law or public opinion will support the “Cockerton” point of view before proceeding to introduce proposals for the partial absorption of School Boards.

THE proceedings of a conference on the training of teachers, “as reported in the last number of *The Journal of Education*,” show that, as regards professional equipment, the secondary teachers of this country are, at least, half a century behind the elementary teachers; . . . their methods are as unscientific in principle as they are unsatisfactory in results. . . . The methods are irrational; the practice is, in some cases, absolutely brutal.” So writes the editor of the *School Guardian*. It is good for us to hear the view taken in some quarters of our work. The editor dots his *i*’s by a story of an incompetent master in an expensive preparatory school. We venture to cap his story with one relating to an incompetent teacher in a primary school, and we deduce from the two stories the simple moral that neither residence at a University nor at a training college necessarily makes a man a good teacher. This is our story, given us on sworn evidence:—“What do you know about the Russians?” says the teacher to his class. “Nothing? Well, listen, and I will teach you. The Russians are a cruel people. Now say after me, ‘The Russians are a cruel people.’” The class repeats this in chorus till it is known, and the master then proceeds to deal with the other European nations in the same illuminating way.

A CASUAL comment of the *Outlook* on Mr. Upcott’s appointment to Christ’s Hospital (a personal matter which we see no cause for discussing) has given an opening to Mr. A. J. Spilsbury, of the City of London School, to express his opinion of his colleagues who are known as school authors or as leading members of the I.A.I.S. His experience is that “the talkers and writers on education not infrequently make but indifferent and slovenly teachers, and school-books are often matured, if not actually written, in school-hours. In a word, teaching is a hard mistress, exacting no less than all a man’s time and energy.” That teachers, no less than plumbers, sometimes scamp their work, that a master may preach to others and himself be a castaway, are obvious truths; but Mr. Spilsbury’s generalization is wholly unwarranted and typifies a form of philistinism which we had hoped was almost extinct. The converse proposition, that a master who attends to nothing but his lesson-books and his class, who eschews all politics, and never takes counsel with his professional brethren, is presumably a narrow-minded pedant, would be nearer the truth. Was Arnold a worse head master because he wrote his “*Roman History*” and contributed to the *Edinburgh Review*? Is Mr. Pollard a worse head master because he is on the Council of the Teachers’ Guild and writes essays on education? Were Dean Bradley’s “*Arnold*” or Mr. Arthur Sidgwick’s numerous school-books written in school-hours? Mr. Spilsbury is presumably a young man, and will bear with us if we address to him Coleridge’s reproof: “For shame, dear friend! Renounce this canting strain!”

THAT dispassionate and unbiassed writer, as he professes himself, the Rev. Bernard Reynolds, in *National Education*, figures the Board schools as a Tower of Babel and their architects as godless Titans, who would scale the heavens to make themselves a name, and all at the expense of their neighbours. The Voluntaryists, in contrast, are self-devoted missionaries, who spend, and are spent, for the commonwealth, and, in return, are being bled to death to support the enemies’ cause. To another observer, who is neither a diocesan inspector nor a member of any School Board, the facts wear a different complexion. In the times of ignorance the Church was the only educator, and we are not unmindful of our debt when we contest its claim to a prerogative. As State aid has increased voluntarily subscriptions have declined, and half of these are now given grudgingly and of necessity—witness what is happening in Cheltenham at the present moment—to escape the greater evil of a School Board rate. The religion taught in Board schools perfectly contents ninety-nine parents out of a hundred—there are but fifteen “godless” School Boards in all England—and the parent who clamours for distinctive doctrinal teaching is, if not a fiction of the platform, one of the Peculiar People or some other obscure sect who, under any scheme, would be left out in the cold. If this is a true presentment of the case—and we challenge Mr. Reynolds to traverse it—is it reasonable that the clerical party should arrogate to itself the administration and control of half the schools in England, and that one-third of the country should escape scot free, contributing nothing to national education but a kind of peppercorn rent?

BUT the clergy give what is more precious than gold—their personal service. That we freely allow, and grant, moreover, that there is no better education in the

*Give
the Parson
his due.*

land than that given in a village school where the parson is a man of broad culture who looks upon the rising generation as the most important part of his congregation and knows every child in the parish. Is there the remotest danger that we should, under any scheme, lose the services of such men, or that, whether on a School Board, or elected Board of Managers, or Parish Council, they would not carry weight? It is the divorce of secular and religious teaching that we deprecate. What would Eton or Harrow masters say if their Bible lessons were made over to the Dean of Windsor or the Rector of Harrow and his canons or curates? Again, religious teaching in secondary schools—we have it on the authority of Mr. Reynolds—averages one hour twenty minutes a week. Why in primary schools should it be allotted an hour a day?

A JOINT deputation of the Incorporated Head Masters and the Assistant Masters' Association was received by Sir G. Kekewich on the 15th ult. The object of the deputation was to urge that the question of tenure. tenure of masterships should be referred to the Consultative Committee; and it was suggested that it in turn should appoint a Sub-Committee, with power to add to its numbers. The Head Masters urged the imminent jeopardy if Local Authorities upset the prevailing practice. The Assistant Masters urged the numerous hard cases which had arisen under the "one man" system of the Charity Commissioners. Sir George Kekewich promised to lay the matter before Sir John Gorst and the Duke of Devonshire. Such a reasonable request can hardly be refused. The Consultative Committee, after eight months of vacation, have reassembled to complete their report on inspection. Three or four sittings will suffice for this, and, though busy men and women, they neither need nor desire a second hibernation.

TECHNICAL EDUCATION.

At a meeting of the West Riding of Yorkshire County Council, on the 8th ult., Alderman Sheepshanks pointed out that one of three courses might be adopted in regard to the future relation of County Councils to education—(1) County Councils might have nothing to do with education; (2) they might endeavour to obtain power over education of all kinds; (3) they could ask for the control of secondary education and decline to take over elementary education. The County Council, on the recommendation of its Technical Instruction Committee, expressed the opinion that, if it is proposed to entrust the supervision and management of elementary education in the administrative county to the county authority under existing conditions, controversial issues will be raised, which would be very undesirable. Therefore it would become extremely difficult to effectively supply and organize secondary education, which is by far the most important educational problem before the country at the present time. This resolution has been forwarded to other Councils with the earnest hope that the views expressed will meet with approval and support.

As Mr. E. J. Halsey, the chairman of the Surrey Technical Education Committee, has pointed out, the action of the West Riding has been taken without consultation with any other Council, without the essential preliminary of a full debate at the County Councils Association, and in view of the contrary opinions expressed by the chairman of that body. Mr. Halsey says: "Whatever our views on the nature of the Bill, and no doubt they differ widely in different parts, we must have our eyes open to the fact that other bodies and other persons of great influence and ability, not connected with higher education, are pressing their views on the Government, and that, as statesmen, members of the Government must take all these interests into consideration. I believe also, from conversation with my colleagues in other counties, that it is generally recognized that in education, as in the administration of

sanitary matters or the control of main roads, for instance, what suits our county does not suit another, and that each county should, as far as possible, be allowed to work out its own salvation."

Mr. MACAN suggests, in a vigorous discussion of the subject, that the case of the West Riding of Yorkshire is, in many respects, exceptional. "Dotted over the county, and supplying the wants of suburban districts, are five large county boroughs, with important School Boards. Of the total population of the Riding, 868,324 (practically two-thirds) are under School Boards, leaving 425,329 with voluntary schools. Hence a large majority of the Council have their constituencies covered with School Boards, many of them most powerful bodies." And these bodies have been doing for the county what, in other parts of England, County Councils have been obliged to do. There are counties where the School Boards are small and unimportant; they seldom help in any higher work, and often hinder it. When they carry on continuation schools it is under county regulations, largely by the aid of county grants, and at little or no cost to their own rates. Their absolute disappearance, with their expensive elections and machinery, would be a gain to the ratepayers, and no hindrance to higher education.

THERE is, of course, a wide difference in the circumstances of different counties, and any Bill which neglects to allow for administrative "freedom, variety, and elasticity" is hardly likely to be satisfactory. At the same time, it is difficult to see how the Government can frame a measure which is not uniform in principle. At the meeting of the Association of Directors and Organizing Secretaries for Secondary and Technical Education, held on the 24th ult., the following resolution was unanimously adopted:—"That this Association considers it imperative that the Councils of counties and county boroughs should at once be constituted the supreme supervisory and rating authorities in their areas for both elementary and secondary (including technical) education, and should be furnished with adequate rating powers." In proposing this resolution, Mr. H. Macan made a vigorous and convincing speech. He showed that those who stated that County Councils had, in 1896, displayed a disinclination to undertake further educational responsibilities misrepresented facts. Several County Councils had passed resolutions in favour of the measure of 1896, and the County Councils Association expressed the opinion that County Councils (acting through a Committee) as the Education Authorities, are well qualified to undertake the powers and duties imposed upon them by the Bill.

AFTER suggesting the attitude of the West Riding Council to be like that of the three tailors of Tooley Street, who speak in the name of the British Empire, he pointed out how in many counties a Bill confined to secondary education would be, practically speaking, a dead letter. During the past ten years many County Councils had organized secondary education. But in many rural districts the condition of primary education was deplorable, and County Councils should be in a position to influence it, and to make it lead up to something. Referring to the fear of controversial issues, Mr. Macan convincingly showed that, while elections *ad hoc* for educational purposes invariably involved political and religious differences, the election of Authorities for the administration of various local purposes, among which education had a place, would not raise these issues. The resolution was seconded by Mr. Austin Keen, supported by Mr. Reynolds and other representatives from various parts of the country.

DURING the morning session of the Association's meeting, Mr. C. Courtenay Hodgson (Cumberland) was elected Vice-Chairman for the year, and other officers were appointed. Mr. J. H. Reynolds directed attention to the useful returns obtained by the Association of Technical Institutions respecting the number of day students in technical institutions in this country and abroad. Laboratory equipment and manual training in schools of science were discussed by Mr. C. H. Bothamley (Somerset) and the present system of science and art grants by Mr. Godfrey-Day (Bath).

THE resolutions of the West Riding Council are to be considered, at an early date, by the County Councils Association. The probabilities are in favour of a fairly unanimous vote against the conclusions of that body. As Sir John Dorington well pointed out recently, the tendency was towards a reasonable compromise—the compromise indicated in the Bill of 1896, in the Bill of last year, and in the Technical Instruction Acts. "If they were to do anything practical, they must find an Education Authority which would be capable of administering public funds—by which he meant money raised by the rates or otherwise—fairly and equitably among all parties. Where were they to look for that Authority? He thought it might be found in the County Councils—not in the County Councils in their bare and naked significance, but in the County Councils enriched by specialists added to them by some means or other for this particular purpose."

THREE THEORIES OF THE CURRICULUM— CLASSICAL, MODERN, HERBARTIAN.

By J. J. FINDLAY.

In seeking a form master for the modern side, I hope to find a man who will impart to modern boys something of the culture and the enthusiasm for study which, I am glad to say, is frequently manifested in classical forms, but which, somehow, the course of modern-side studies has been unable to produce.—Letter from head master of a public school to a candidate for a mastership.

Die Geschichte ist die Lehrerin der Menschheit, und wenn sie es nicht wird, so tragen die Jugendlehrer der Geschichte die Schuld.—JEAN PAUL.

The first part of the following argument is offered in dialogue form. C. holds a brief for the classical side; M. is a modern-side master (who, I fear, is somewhat unfairly represented in the dialogue); and H. is a Herbartian. The aim of the paper is to exhibit the Herbartian views in relation to current ideas in our English schools.]

PART I.

M.—I am glad to have the chance of continuing our talk about your German pedagogy, especially as C. is present to take up the cudgels for his dear old dead languages.

C.—Not quite dead, my good fellow!

M.—More's the pity, for they are certainly old enough! But I do not mean to be disrespectful. I was delighted, H., to find you so thoroughly in agreement with Prof. Ward* in denouncing the "faculty" theory. This is the argument which the classical men are so fond of using, especially with regard to Latin grammar and composition, as being such "unrivalled discipline for the mind." I agree with you that the argument is mainly humbug; these people simply plead that Latin and Greek give such an excellent mental training, because they know that they are of no other use whatever!

H.—I do not recollect saying precisely that.

C.—No, of course you didn't, and M. would not say it either if he took the trouble to inquire what classical teachers really do seek to achieve. So far from holding by the "faculty" theory, I am quite prepared, at any rate for the sake of our present argument, to let it go. I confess that I know very little about psychology, and I sometimes fancy that the psychologists themselves know very little more. At any rate discussion is bound to be unfruitful. M. does not seem to care whether the mind is trained or not, and you, H., say that it is sure to get its training whatever sort of a curriculum you provide. I am bound to limit my reply to my own experience, and to assert as a matter of fact that the boys who have had a sound, strict drill in Latin and Greek do often become capable thinkers and scholars.

M.—Have you got statistics on the point?

C.—Please do not worry me. I am retiring from my position; have the grace to let me choose my own line of retreat. I was going to add that I might also plead an argument from the immense number of public men of all kinds who have been reared on the classical *pabulum*, but I know that there is a weak spot in that argument, and I don't want to have John Bright thrown at my head. So I propose to leave the mental faculties alone.

M. (satirically).—Then you abandon the "schoolboy's briar-patch"?

H.—Please let us leave Thring out of our discussion. I have admiration for his loftiness of aim and for his vigour, and I should be the last to depreciate his many services to public-school education; but, if he was as illogical and dogmatic in his form room as he appears to be in his books, I pity his boys' mental faculties. I am glad we all agree to drop the argument from faculty psychology. There is no part of educational theory which is so unsatisfactory, and so barren of results. All the same, I hope that what I said on the subject, as reporting the Herbartian doctrine, did not suggest that Herbartians regard mental development as of small account. On the contrary we must admit that it is of the first importance. For it is the one department in which the schoolmaster reigns supreme. Religious, moral, physical culture—these may be looked after by others as well; but, if the intellect be neglected by the teacher, it will certainly starve. All I urge is that the choice of a cur-

riculum has little or no concern with problems of mental faculty. But we interrupted you, C.

C.—Well, I was simply going to point out, before we leave this topic, that it is a little difficult to know how to define your terms when you speak of these faculties. For example, I regard one of the most valuable results of a classical training to be what I should call the historic imagination—the faculty (if you will let us use the term) of realizing the life and environment of a nation so widely different from ourselves as were the Greeks and Romans. Apart from the classical curriculum I do not see how this "historic sense" can be developed. I am talking here not as a psychologist, but as a classical teacher and scholar, giving my own experience of the value of the classics for this particular purpose.

H.—I see what you mean, and I trust that the theory which I shall presently explain will to some extent satisfy your demand. I question, however, whether our knowledge of this faculty of imagination is sufficiently accurate to enable us to decide that the child must be transplanted into a "classical" atmosphere in order to secure its proper development. We should have to consider, before approving the classical curriculum, whether our mind could not be developed in this direction by being transported to other scenes of history; we should also have to consider whether this faculty might not be too much developed, at the expense of others, by adopting this or that curriculum; and even then we should only have considered a possible "education value"* (based withal upon a problematic psychology) for a curriculum which has not only to meet the demand for mental training, but also the other claims which are pressing upon us, of character-training and of equipment for life. But we are going over old ground. As I said yesterday, the Herbartian holds that every conceivable curriculum will give a fair attention to the various departments of the intellect. And, in reference to the historic imagination, he would say that *any* curriculum which contains a fair share of history and literature, *properly taught*, will exercise this faculty.

C.—I don't know; but, apparently, nobody else does. All I am anxious about is to bring to the fore what I believe to be the distinctive virtues of the classical course; whether you can reproduce these in any other curriculum is not for me to say, but my business is to bring them prominently before our notice. However, let us drop the subject, for I am anxious to hear further. You have given us Herbart's ethical aim as the ideal purpose of school instruction. What sort of a curriculum are you going to choose in order to meet this high demand?

M.—Certainly; that is the point on which everything turns. How are you going to select subjects of instruction which will directly affect moral character?

H.—We will go into Herbart's views presently; let us first of all look at things as they are. How far does your modern side time-table, with its bevy of subjects, meet the case? You give your boy every week a taste of two or three languages, two or three sciences, a little carpentry, in addition to English history, literature and geography, arithmetic, Euclid and algebra. Is there any attempt, in the organization of your time-table, to provide "instruction that makes for character"?

M.—No, certainly not. So far as I know, a modern-side master does not believe in your theory. What Herbart may have to say you will tell us presently; but, apart from Herbart, I do not know any one who has proposed a *workable* plan of instruction that can seriously be said to affect a boy's moral development. Omitting Scripture-lessons, which are a matter entirely apart, I do not see where the morality comes in. No doubt in history and literature lessons something can be done by pointing the moral from events and biographies, but it is really no use attempting to preach in the class-room. I am, of course, open to conviction; but I hold that the moral training of the schoolboy does not come out of the instruction, but out of the personal relationship between man and boy; so far as results in character are concerned, we might be teaching straw-plaiting or Chinese as usefully as arithmetic or German. No, the only sensible reason that I can see for teaching a subject is the *practical* one. I teach my boys in order to give them weapons for life—call them bread-and-butter studies if you like—but these are the things that the boys want, and, if they do not get them at school, they will not be fit to do their work in life afterwards.

* "Education Values" (*The Journal of Education*, November, 1890)—a most valuable contribution to the subject of these chapters.

† Thring, "Theory and Practice of Teaching," chapter viii.

* Compare Ward as above.

C.—I am glad that M. has had the first fling, because he not only exposes the weakness of his own case and the imperfection of the modern-side theory, but he shows complete ignorance of his enemy's position. When M. said just now that the classical man teaches Latin and Greek *simply for the sake of* so-called mental discipline, he was utterly beside the mark. There are, of course, many types of classical master, and M. may have had the misfortune to meet with men who have no better conception of their work; but I can assure him that classical instruction has a far higher aim. The language with us, although in itself it contains valuable elements (*e.g.*, training in taste in the fine art of literature), is mainly a means to something beyond, to something which may certainly be described as moral. We hold that true moral culture can be attained in the course of school instruction by associating the boy's thoughts and feelings with those of the greatest men of the two greatest nations; * Greek art, Greek life, Greek and Roman history and literature should be to the classical schoolboy not merely a whetstone for (his "faculties," but food for his deepest thoughts and his sympathies, raising him out of himself to something nobler.

M.—But, my dear fellow —

C.—Excuse me, I know precisely what you are going to say, and I will plead guilty beforehand. I will admit, sorrowfully, that this *is* an ideal which is far too seldom realized. I admit that the case of the boy who gets nothing out of the classics beyond the nouns and the particles is simply pitiable—almost as pitiable as that of the modern boy—whether or not his faculties are trained by the process. But I think H. will agree with me that the classical idea is a distinctly ethical one, and does meet the Herbartian demand for an "instruction that makes for character." Any one who knows the tradition of the public schools, of Arnold† or Thring, will know what I mean. I do not know what Herbart's scheme may have been, but unquestionably, in England, the ablest public-school men have always had this defence for their strict adherence to the classics, that these contribute directly to the formation of character by bringing the pupil into personal contact with what is greatest and best in the civilization of the Western world.

H.—I entirely agree with you that the classical side has an ideal, while the modern side scarcely professes one at all. But I quarrel with your last sentence: surely "the civilization of the Western world" is not a synonym for Greek and Latin culture! We may seek the origin of our civilization—the foundation, if you will—in Athens and Rome; but seed-time is not harvest.

M.—Yes, these advocates for ancient classics always ignore the few years that have elapsed since the fall of Rome. But that is a trifle. What I object to is the absurdity of professing an ideal which can never be realized. The modern side is more honest; it does not promise much, but it *does* fulfil its engagements.

H.—I wish it did! On the contrary, I assert that the modern side has failed to fulfil its so-called practical aim; and this failure to keep its engagement is one reason for its undoubted unpopularity. It has, as yet, offered too little proof that the modern-side boy is better fitted for "the world" than the classical boy.

C.—Hear, hear!

H.—But let us avoid controversy if we can. C. claims that the aim of classical instruction is an ethical one, but admits that it is very rarely attained. You will also admit (I think) that your classical curriculum is not of much practical value as providing useful knowledge for professions and callings in life.

C. (*shrugging his shoulders*).—Yes, I suppose you have me there. I might perhaps say something of the value of Latin and Greek to a doctor or a lawyer, and of the general social advantage to a gentleman of knowing the learned languages; but we are fallen upon evil days, and I will keep silence; for, even if this plea is valid to-day, it is losing its force year by year.

H.—Very good; that relieves the situation considerably. Now, my dear M., you must concede a little. Suppose that we could discover a curriculum that would confer all the practical benefits which, as you allege, the modern side confers, but at the same time offered an ethical element as well: would you not be disposed to accept it?

M.—Undoubtedly; we modern-side masters have no pre-

judices for any precise table of studies; we came into existence simply as a protest against conservatives like C., who will hold on to Latin and Greek though the heavens fall. The modern side is certainly open to reform; *only* do not suggest to us ethical elements which remain in the clouds! If I *have* to cram for Sandhurst and Woolwich, I prefer to do so without professing an ethical ideal; I leave that to the man who crams for scholarships.

H.—Gently, if you please. A closer acquaintance with good classical instruction would qualify your sneer at its comparative failure. But now, C., I wonder whether you are prepared to concede somewhat more; if so, I really am hopeful of a reconciliation.

C.—I'll do my best; for, if M. and I differ on every other subject, we and all our colleagues have unanimously resolved that bifurcation is a nuisance and a disaster; if we could only abolish the mod—I mean, of course, if we could only settle on a satisfactory compromise—we should weep for joy. So I will certainly concede where I can.

H.—Better and better. I already feel the glow of satisfaction at the prospect of concluding a treaty. The concession I ask is that you will admit the ethical ideal *to have the first place* in your argument on behalf of classical instruction. Setting aside your other pleas as secondary, I take it that you have pleaded for the retention of Latin and Greek mainly because they afford a medium for moral culture.

C.—Undoubtedly; I concede your point. The classics must stand or fall by that argument.

H.—Very good. If, then, I can find you a curriculum that offers the same ideal of culture, with a better chance of realizing it—a curriculum which at the same time meets the (shall we say baser?) demand of M. by fitting our boy for the practical business of life—if I offer you this, will you not prefer it to the classical scheme?

M.—No; it is the last thing he will do.

C.—On the contrary I shall be delighted if you can discover such an Eldorado. But permit me to emphasize the conditional particle.

M.—Of course, much virtue in an *if*.

H.—It is evident that neither of you has much faith in my power as an arbitrator; but you must be cautious, for I have a threat in reserve which may make you more willing to reconcile your differences. I have heard some radicals propose to sink the whole ship, and to wipe out classical and modern sides together; there is plenty of room in the Board schools for the whole crew of you.

M.—We might do worse.

C.—Heaven forbid!

H.—Meanwhile, let me refer you to Herbart, who has been kept waiting so long.

C.—Yes, I am quite curious to see what he makes of the situation. I am a little hopeful that he will not damage me much, because I remember reading that he started boys of nine or ten with Homer.

H.—Yes, you are right. Herbart himself was undoubtedly on your side. I am, however, thinking not so much of his practice, but of his theory, which has been greatly developed since his time, and which, I cannot help thinking, offers an excellent road to reconciliation. We must remember that Herbart himself was teaching and writing ninety years ago, long before the controversy in its present form was heard of in England. The Herbartians, then, hold the same principle as Arnold and Sidgwick* in England, that the historical and literary contents of the classics form their chief value. But they follow the same principle further. As M. reminded us, human interests did not cease when Latin ceased to be spoken. They hold, with Pope, that

The proper study of mankind is man;

but modern man as well as classical man. They set out by taking a general survey of all the subjects that come properly within the circle of school life, and they give the place of honour to those that contain the most of *human* interest; they hold that instruction should help to make boys into men, by showing them how men lived and do live. History and literature, then, if you will be careful to use the words in their widest and highest sense, hold the chief place in the Herbartian system. But the question at once arises: What history and what literature? Hereupon

* See "The Future of Classical Education," by Arthur Sidgwick *The Journal of Education*, June, 1887).

† See Stanley's "Arnold," Vol. I., page 120.

* See above.

follows the next stage of the Herbartian theory—that of the *kulturhistorische Stufen*,* the stages of historic culture. It is held that the child from the cradle to manhood passes through the same steps of culture and spiritual development that the human race has experienced. The child of six or seven is anthropomorphist; his toys are living creatures; the fire is a wicked serpent; the dark wood behind the house is the abode of wicked fairies. Exactly so felt and thought our forefathers at the dawn of history.† If we attempt to instruct the child in these early years, we must come down to his circle of ideas (his *Gedankenkreis*, as Herbart calls it), and give him *all that is best* and that is accessible to our child in the world in which he lives, the world of “animated nature.” Herbart’s own pupils were boys of ten and twelve: here he found the boy nature revelling in adventure and travel; so he chose for their study the richest picture that literature presents from the early days when men were rovers—he gave them the wanderings of Ulysses.

C.—Did he make them read the Greek?

H.—Yes. They had previously been at work on Eutropius, but he made them give up the Latin and plunge straight into the “Odyssey.” But, observe, he laid no stress upon the language as such.‡ If the “Odyssey” had been written in Spanish, it would be just as suitable for the present purpose. The content is everything; the form is nothing. Language-learning in itself is a mere tool, a useful art, a mental and linguistic exercise which should only be imposed upon the pupil for the sake of educational “content.”

M.—Then why not use a translation, or tell the story of Ulysses in English?

H.—Precisely, that is the question that I ask as I read Herbart, and neither he nor his followers give a satisfactory answer. They say, with some truth, that no one can enter *thoroughly* into the spirit of a foreign author and a foreign people without reading him in the original. But this is only partially true—witness the influence of our Authorized Version of the Bible—and, at this stage of boyhood, it is beside the mark. For our primary object here is *not* to enter into the spirit of ancient life, but to enter thoroughly into the best story of adventure that literature affords.

C.—What, then, are the next stages in the child’s development?

H.—The historian of early civilization can trace them for us. After the period of vague adventure and wandering come settlement and national life. In the child this represents the period when he begins to be conscious of social sentiments, of his place in the home, the town, the fatherland. Between the ages of ten and thirteen our schoolboy should be taught to live over again, in crude and simple fashion, the life of his forefathers—necessarily in simple fashion; but in later years, if his culture is continued, he will go over the same ground, reflectively and scientifically, with modern eyes. After thirteen, if he remains at school, he must begin to take a wider view, and look beyond the cliffs of Dover.

C.—This is really most interesting. I begin to see where you are leading us. You are *now* going to introduce our boy to a foreign language, because he is now ready to imbibe foreign culture. As a boy of ten he might read the “Odyssey” in an English dress, because he only wanted the story; but now, if he is to leave the environment of his native land, he must enter not only into foreign history, but into foreign speech, for language is the most distinctive and interpretative possession of every nation.

H.—You have anticipated my course of argument most accurately. As you observe, the boy of fourteen is on quite a different plane from the boy of nine or ten. Ulysses was to us merely a wonderful man on a wonderful ship; Greece was merely a name—Norway would have served just as well.§ If we had attempted, by means of the language, to give the little fellow any real feeling for Greek life and Greek ways, we should

have failed—the child’s *Gedankenkreis* was much too narrow. But now, at thirteen, our task is different. The circle of ideas has widened until it has reached the shores of England, and is ready to cross the water: France lies nearest, then Germany, then Italy and Rome, and last, best and greatest, reserved for the years that are to come, Greece and the Holy Land.

C.—Your theory is beautiful, and whether it is really Herbartian or of pseudo-Herbartian origin does not matter to me. But these analogies are dangerous. Some other system may take its simile from a building, and, erecting the structure of knowledge on the historic foundation, might begin with Greece, and might follow from this point the development of European civilization from age to age,* until we reach the complete structure in the England of to-day.

H.—I can only answer you by appealing to experience. If the theory of the historic stages of culture does not recall any of your own observations on child nature, or any recollections of your own boyhood, you are not likely to be convinced by the harmony of my geometrical figure. Herbart tells you that you must work by *apperception* (the doctrine is, indeed, the most valuable part of psychology for the teacher’s use). You must take your child, at each period of his life, where you find him, and carry on his experience and knowledge to his next stage of development. It is true that you have a certain power over the child and can increase the speed at which the circle enlarges, to some extent, but, after all, you are the servant of Dame Nature and not her master. Now, between the English boy in English dress with English home (add thereto English school and schoolmaster)—between this and old Greek life there is an insuperable gulf, a gulf which can only be bridged over by the proper series of intervening steps. You say that in order to bridge over the gulf the boy must begin Greek early and keep at it for years. The Herbartian (if only the Herbartians would apply their theory consistently) says “No”; the boy can only reach this widest circle by passing in the course of years through the smaller ones; he must gradually learn to see with larger eyes, first the home environment (*Heimatskunde*), town and neighbourhood, then his own people, then his neighbours across the water, then modern Europe, afterwards the world-Empire of Rome, and, lastly, of Greece, the mother of poetry and philosophy. The Greeks are fit companions for men of thought and feeling, *but not for boys*. True, the child may have glimpses here and there of this far-off beautiful land, but he *cannot* enter into possession until he is of age.

M.—So what your theory amounts to is this: History to have the most important place in the curriculum; modern languages to begin about twelve or thirteen with French, to be followed by German, and then, perhaps, the ancient languages.

H.—You are putting the scheme rather too crudely. I do not desire to see the classics driven out of the curriculum, but I hope to see them more and more reserved for the elect—for those select spirits who are not satisfied with the common things of to-day, but desire to drink deep, to seek the spring at its source. To such the ancient form of speech will present no difficulty; having learned already the art of mastering foreign speech by the easier task of learning modern tongues, they will quickly learn the speech of Greece and Rome—all the more because they and their teacher *will feel the need of them*; their mind will be standing waiting, impatient to use this key which is to unlock the richest treasures of the intellectual world. And it may be misleading simply to speak of history as the principal subject. What I have in my mind is rather what we used to call “the humanities,” defining this term in the most generous sense. Out of the enormous mass of events, biographies, narratives, songs, which each stage of culture places at your disposal, you must select the worthiest, and you must add thereto only so much of common “skeleton” history as will

* A scheme of this kind has been sketched in “*Naturforschung und Schule*,” by Dr. Vaihinger, of Halle. He holds that the development of the individual must follow that of the three great epochs of civilization—Græco-Roman, Christo-Teutonic, modern and scientific. Hence, an order of studies: classics, modern languages, natural science. But the conclusion does not follow from the hypothesis. He who first acquires the elements of Latin and Greek, followed by those of French and German and then by chemistry and physics, will not, by this process, have passed through historic stages of culture. To pass through stages in the acquirement of a speech is not identical with the process of entering into the civilization of the people.

* Rein’s “*Pädagogik*,” page 86.

† This theory is, of course, not the peculiar property of Herbartians. It is held more or less distinctly by many modern thinkers. But the Herbartians—and the Froebeliens—have *applied* it to their scheme of instruction.

‡ Read his own account in Felkin’s “*Translation*,” page 90. See also page 150, “*Alte oder neuere Sprachen, das ist einerlei!*”

§ Indeed I am not sure whether our own Teutonic legends may not ultimately be found to be better adapted for this purpose.

serve to keep the thread, and to develop the historic sense. Political history, acquired as facts of knowledge, has no ethical value, no more than the contents of a test-tube. But the story of the world, of humanity at its best, of the best deeds and noblest heroes, told in the best forms of utterance in speech and picture, have the highest value, until they reach their culminating point in the founder of the Christian religion. Define history in such terms, and I claim for it the foremost place in your time-table.

C.—So, then, you hope to settle the controversy between classical and modern by telling both our languages to take a subordinate position. These are to wait until they are wanted to assist in the boy's culturhistorical development.

H.—Exactly; and I trust you are both satisfied. For M. has no doubt observed that my programme does what the teacher must always do nowadays—it has killed at least two birds with the same stone. I have covered the claim of the technical or modern or commercial school by giving a sufficiently prominent place to the two "useful" languages. If the modern side wants to teach one or both a little earlier, it must try and adapt the *kulturhistorische Stufen*; but the boy's circle of ideas will not stretch beyond a certain distance. And I hope both of you will note that, although I seem to be putting the acquirement of languages on a lower level, I mean them to be *properly* acquired when they are once undertaken. But to enter on methods of language instruction would mean an all-night sitting. I only want you not to run away with the idea that I disparage thoroughness and scholarship. My lecture to-day has given me a little courage, and perhaps another time I may venture to take up the parable again, and run a tilt against you both as to your methods of language teaching.

M.—Just one more question, my dear Herbartian. You have not quite satisfied the demands of the Chamber of Commerce or the Technical Instruction Act. What have you done with my bevy of subjects, as you called them—science, mathematics, and the rest? Have you thrown them all overboard? Or are you going to make them join the languages, and bow down before your new Joseph, following humbly the steps of *Kulturgeschichte*?

C.—You sordid creature! One would have thought that the splendid programme of culture from the cradle to the University would raise you above the demands of bread and butter.

M.—Yes; I had almost forgotten both that and my dinner! And, as the latter claim, like the former, is somewhat pressing, I hope Herbartian will be able to satisfy me in the next three minutes.

H.—I will try. Please remember that I have simply been giving you this theory of the historical stages of culture as a possible mode of reconciling two old foes. Now, in my opinion, it is a very plausible theory, but it would be dangerous to take it, as the strictest sect of the Herbartians seem to do, for our only guide to a workable curriculum. We follow it in order to get our instruction on to the high level of culture. History, as we have defined it, stands first, and round it all the other branches of instruction are grouped; they are brought into as many associations with it as possible by another Herbartian principle—that of *concentration*. Every branch is so introduced and developed in the child's mind as to have all possible points of connexion with the drama of history, which forms the central study for each year. So far as I can judge, Herbart himself neglected the *practical* claim of the boy to be equipped for life. It is not surprising that he did so—he lived before the days of the steam engine and democracy. Our task is therefore the harder; for we have to introduce into our curriculum all the bevy of which M. keeps reminding us; and yet our Herbartian principles insist that they must only be introduced at such stages as the child's *Gedankenkreis* is able to bear them, and must be conditioned also by laws of concentration and subordination to the central topic of instruction. By this subordination, so Herbart says, a *unity of purpose* will be imparted to your whole instruction, which will have a most healthy influence on the character, by promoting singleness of aim in the pursuits of later life. Thus one main fault of the modern side will be avoided—the medley and chaos produced on a young mind by a complexity of pursuits. But my three minutes are up, and I fear that the introduction of these new ideas in such a cursory fashion has itself been somewhat chaotic.

C.—Why not put them on paper? I should like to have the chance of thinking the subject over at leisure before we meet again, and, if you can write something which will explain your Herbart a little further, we shall be better prepared to thresh the matter out in discussion.

H.—Well, I will try and put my thoughts into an essay.

(To be concluded.)

CORRESPONDENCE.

"A BARMECIDE SYMPOSIUM OF TRAINERS."

To the Editor of The Journal of Education.

SIR,—As one of the "trainers" present on December 13 at the College of Preceptors, may I—though I did not take part in the discussion at the meeting—be allowed to say a few words in reply to the criticism of "One who went Empty away"?

Your correspondent accuses the speakers of losing sight of the highest ideals in education, of directing the attention of teachers rather to pecuniary gains than to the children they have to teach, and, finally, of being "hopelessly divergent among themselves as to (a) what to do and (b) how to do it." The writer has, I think, either misunderstood the purpose of the meeting, or has failed to grasp the nature of the difficulties which it was summoned to consider. We were, I gather, met together, not to discuss "what to do or how to do it," but to consider how the cause of training may be furthered, and how the difficulties in the way of extending it more widely may be overcome.

Your correspondent suggests that these difficulties would vanish if we would "try a bigger and nobler idea for training"; if we would put pecuniary questions in the background, and try the "power of ideas—generous, lofty, and simple." And we must all cordially agree with him in recognizing the value of an ideal and the ennobling power of a great idea. All those who are doing any training worthy of the name must place before themselves as their first aim to arouse and deepen the enthusiasm of their students—and it is, happily, not a difficult task—and to give them some glimpse at least of the beauty of the child-nature with which they have to deal, and of the height and width and depth of the problems which, as teachers, they have to solve. But, while fully realizing that this great idea is the essential thing, and that matters such as salary, *status* of teachers, and so on form the mere husk or shell of education, we surely cannot afford (either in the schoolroom or in our relations with the world outside) to neglect practical details, and we must still ask how the majority of students are to meet the expense of their training.

It is not quite, I think, as your correspondent seems to imply, a question of seeking and discovering some kind of training which will be attractive enough to induce students to spend their money upon it. As Mr. Barnett says, the battle of training is, to a large extent, fought and won, and the question rather is how students who are eager to be trained can afford to pay for it. I have known many students who—by borrowing money, and in other ways—have strained every nerve to secure training for themselves, and have succeeded in doing so; but I have known many others who have also done their utmost and have *not* succeeded—and it is to these last that the prospect of a larger salary after their course of training would make the expense of that training possible. Would-be teachers have seldom much money at their disposal. Training authorities cannot afford to charge them merely nominal fees; and until most, instead of only a few, governing bodies and heads of schools can be induced to give larger salaries to trained than to untrained teachers I am afraid that a great part of the difficulty will continue to exist.

All who really care for education must be entirely at one with your correspondent in his desire to set up a high ideal of training; but, at the same time, we must spare no effort to clear away the material barriers which prevent the realization of that ideal.

those, too, in the middle school who have not passed through the lower forms, and these should be provided with a suitable book on general history. It is here that I find our English school library deficient. I do not plead for stories on given periods—we have plenty of those—but for a readable story of the world's history given consecutively. Admirable as are such books as Freeman's "General Sketch," Sanderson's "Outlines of the World's History," and the late Miss Yonge's "Landmarks," they do not commend themselves to the youthful mind, and can only serve as a text-book to emphasize much fuller oral teaching, for which our time-tables do not usually allow.

If Miss Wilmot-Buxton or any of your readers can give me the help of their experience, and tell me where I can find the book that I seek, I shall be greatly indebted to them. Perhaps it has yet to be written; if so, the sooner it is done the better.

E. L.

A SUNDAY AFTERNOON.

To the Editor of The Journal of Education.

SIR,—I have been somewhat amused by the article on "A Sunday Afternoon," which appears in your issue for this month. The writer, no doubt unconsciously, reveals his own incompetence, both as an organizer and as a superintendent of a Sunday school; and then, because he fails, he arrives at the conclusion that the Sunday school is "probably the worst educational establishment in the country," and that "the institution of the eminent Robert Raikes stands in considerable need of repair." Such a conspicuous example of the *non-sequitur* method of argument one was hardly prepared to find on the part of "one engaged in secondary education during the week." But perhaps logic is not one of the items in his curriculum! You might as well conclude that the elementary-school system of the country is a lamentable failure because an individual school has an inefficient head master, and lacks discipline.

But the article in question has its sadder side. It exhibits an *animus* against Sunday schools which has been arrived at upon insufficient data. Your writer has failed, and forthwith he condemns the whole system as a failure.

I dare venture to assert that, while, no doubt, there may be individual schools as inefficient as his own, the article is a libel on the majority of Sunday schools, and a libel also on the great body of Sunday-school teachers (who can point to four Lord Chancellors as having been of their number) to describe them as "incompetents, who cannot teach."

Before your secondary-school teacher again ventures to write in condemnation of Sunday schools, I should advise him to widen his experiences, and not again to argue from the particular to the universal.

January 26, 1902.—Yours faithfully,

R. R. R.

THE NEW METHOD.

To the Editor of The Journal of Education.

SIR,—There are three periods into which the life of a boy or girl at school may be divided—(1) When he or she is a *child* and does not object to be called so; (2) when a "boy" or a "girl"; (3) a young man or young woman, with a transition stage between each. Prof. Rippmann assumes that modern languages are begun only in the first stage, whereas, at any rate in the case of boys, it is usually Latin, and no modern language at all. French may be said to come between (1) and (2), and German in (2) or possibly (3). Hence an appeal to the "emotions of the *child*" hardly holds good in the case of both languages. Though heartily in favour of an earlier as well as more general study of German, I would certainly, assuming the new method is adopted, advocate French as the first to be taught. It is a language that appeals much more to the ear than German, and the grammar is easier.

Though theoretically the new method is excellent in these days of examinations, when a sound knowledge of grammar and ability to translate an easy passage from English are essential, this method will not fulfil what is required of it. If it is to be universal, the whole system of modern language examinations must be changed. I greatly doubt if a young person, taught by this method, when abroad would be able to hold much of a conversation with the natives, or attain much of the confidence and freedom from "insularity" that are expected of him; or even whether, judging from the pronunciation he is often taught, he would be able to understand a native or be understood by him. Moreover, if he is not well grounded in grammar at home, if he takes lessons in a foreign town, from, say, a professor at a *Gymnasium*, he will never be at all. He would be taught the correct word, phrase, or pronunciation; but what training have most foreigners, unless they have taught at an English school, for appreciating the grammatical difficulties of their pupils? I speak from personal knowledge.—I am, Sir, yours faithfully,

H. S. BERESFORD WEBB.

METHUEN'S JUNIOR SCHOOL BOOKS

Edited by OLIVER D. INSKIP, M.A., LL.D., Head Master of Framlingham College, and W. WILLIAMSON, B.A., F.R.S.L., Head Master of the West Kent Grammar School, Brockley.

Messrs. METHUEN are issuing under the above title a series of school class books. These are adapted to the needs of the lower and middle forms of Public Schools, and are suitable for the use of candidates preparing for the Oxford and Cambridge Junior Local Examinations.

Each volume is the work of a Master who has had considerable experience in teaching his subject ; while special attention has been paid to the arrangement of the type and matter, which is as clear and concise as possible. The books contain numerous examination papers, and where the subject requires it are fully illustrated. In scholarship, in excellence of printing and lowness of price, this series will be found inferior to no other.

A CLASS BOOK OF DICTATION PASSAGES. By W. WILLIAMSON, B.A. Fifth Edition. Crown 8vo, 1s. 6d.

In use at over two hundred large Secondary Schools, including Bath College, Blackheath School, Bradfield College, Cheltenham College, Edinburgh Academy, Merchant Taylors' School, Mill Hill School, Nottingham High School, St. Olave's School, Southwark, St. Paul's School.

THE GOSPEL ACCORDING TO ST. MARK. Edited by A. E. RUBIE, M.E., Head Master of the Royal Naval School, Eltham.

With Three Maps. Crown 8vo, 1s. 6d.

Adopted at Bath College ; Mill Hill School ; Aravon School, Bray ; Grammar School, Kirkby Ravensworth ; Moorside School, Okehampton ; King's School, Canterbury, &c.

A JUNIOR ENGLISH GRAMMAR. By W. WILLIAMSON, B.A.

With numerous passages for Parsing and Analysis, and a Chapter on Essay Writing. Crown 8vo, 2s. [Just published.]

A JUNIOR CHEMISTRY. By E. A. TYLER, B.A., F.C.S., Science Master at Framlingham College. With 73 Illustrations. [In the press.]

JUNIOR EXAMINATION SERIES

EDITED BY A. M. M. STEDMAN, M.A. Fcap. 8vo, 1s. each.

This series is intended to lead up to the School Examination Series, and is for the use of Candidates preparing for the Oxford and Cambridge Junior Local Examinations.

JUNIOR FRENCH EXAMINATION PAPERS IN MISCELLANEOUS

Grammar and Idioms. By F. JACOB, M.A., Modern Language Master at Cheltenham College.

JUNIOR LATIN EXAMINATION PAPERS IN MISCELLANEOUS

Grammar and Idioms. By C. G. BOTTING, B.A., Assistant-Master at St. Paul's School.

Adopted at Harrow, Rugby, and St. Paul's, and at the following Preparatory Schools : Banstead School ; St. Ives, Clifton ; The Elms, Colwall ; Brightlands, Dulwich ; Woodlands, Folkestone ; Peterborough Lodge, Hampstead ; Streatham College ; St. Andrew's, Tenby ; Millmead, Shrewsbury ; Tredennyke, Worcester.

NEW EDUCATIONAL BOOKS

FRENCH PROSE COMPOSITION. By R. R. N. BARON, M.A.

With Vocabularies and Notes. Crown 8vo, 2s. 6d. KEY, 3s. net. Suitable for use in Upper Forms and for Candidates for Army Examinations.

GERMAN VOCABULARIES FOR REPETITION : Arranged according to subjects. By SOPHIE WRIGHT, late Scholar of Bedford College, London. Fcap. 8vo, 1s. 6d.

DENT'S SCHOOL MOLIERE.

Prepared for Schools by Prof. FREDERIC SPENCER, with Prefaces and very full Notes.

LE MISANTHROPE.

(Required for Cambridge Local Examinations, December next.)

Square crown 16mo, cloth, 1s. 3d. net.

Other Volumes in the Series:—

LE BOURGEOIS GENTILHOMME. 1s. 3d. net.

LES PRÉCIEUSES RIDICULES. 1s. net.

School World.—"Noted above all for a scholarly flavour which is too rarely found in books intended for Schools. The text is printed in the manner familiar to those who have seen the Temple Shakespeare. The notes are commendably brief, but contain many happy renderings of Molière's often rather difficult expressions. To those who have been troubled by editions with overloaded commentaries this pretty little volume will appeal irresistibly."

DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIFFMANN, M.A.

Based on the principles advocated by the pioneers of the Reform Movement in Germany (VIETOR, FRANCKE, WALTER, &c.), by the Association Phonétique Internationale, and by a large number of prominent teachers in Switzerland, Scandinavia, and America.

*. Full Particulars of the Series, post free.

IMPORTANT VOLUMES.

SIXTH EDITION. Twenty-sixth Thousand.

DENT'S FIRST FRENCH BOOK. Based on the Hölzel Pictures of the Seasons. By S. ALGE and W. RIFFMANN. Cloth, 1s. 6d. net.

DENT'S SECOND FRENCH BOOK. By S. ALGE and W. RIFFMANN. Illustrated by C. E. BROCK. Second Edition. Cloth, 1s. 6d. net.

THE JOURNAL OF EDUCATION

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	Half Page ...	£3 0 0
Quarter Page ...	1 15 0	One-Eighth Page ...	0 17 6
Per Inch in Column, 8/-.			

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

- Scholarships, Official Notices, School Transfers, Partnerships, &c.—
6d. per line; minimum charge, 5s.
 Situations Vacant and Engagements Wanted.—30 words for 2s.; each
10 words after, 6d.
 Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.
each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS

Date of publication of next issue will be found at top left-hand corner of front page.
 [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE GREAT RATING DIFFICULTY.

IT is fondly imagined in educational circles that, apart from questions of time and precedence, the principal obstacles in the way of a comprehensive Education Bill are matters connected with the claims of rival bodies to be constituted Local Authorities, of rival classes of schools for recognition and grants, or at least for eligibility for such, or, possibly, the ever-present religious war between Church and Nonconformity. It is true enough that while expert officials or minor members of the Government are working on the Bill all these points receive attention. But, once the Bill goes to the Cabinet (where it is now), religion, politics, and education go to the wall, and the Bill is being made or marred (possibly wrecked) on the great and serious question of rating. It is assumed that when you touch any question of local government the one point the electors are interested in is their rates. *Inter alia*, one may mention that the one charge against the School Boards which has never been met, is that in their system the rate-raising body is not the rate-spending body.

Now the Government at present has to deal with this point—if elementary education is brought into the Bill, how shall the rates be raised and distributed? One may say at once that secondary and technical education of course will have a limited rate, which is to be raised by the one rating authority in each area—the County and County Borough Councils; and as a Committee of these bodies is alone to be allowed to spend those rates, there is no difficulty of area, incidence, or jurisdiction. But, as regards elementary education, things at present are in such a position that there is none of this simplicity.

In a given county borough we may have eight Board schools and five voluntary schools; the whole area pays the same rate, but only the eight share it. In an administrative county, again, there are twenty School Board areas, covering only one-third of the rate area of the county, and all with different rates, while two-thirds of the county has two hundred and twelve voluntary schools who get no rate and have no rate raised in their areas; in the twenty School Board areas there are, *rari nantes*, some forty more voluntary schools in a similar invidious position to those in county boroughs. Hence it is quite plain that this state of affairs (*pace* Dr. Gow), if touched at all, cannot be tinkered with over a period of years.

Now, the first point to be dealt with is whether the elementary rate shall be unlimited everywhere, or strictly limited in

than if they came in ten lines. Since it is more important to learn five necessary words than twenty-five which are unnecessary, passages selected from books must be rewritten for the purpose of the teacher (e.g., where the original has "ceased to entertain hope," Prof. Jespersen will write "gave up hope." He has in this way simplified Stevenson's "Treasure Island" for Danish boys learning English.)

We now come to the question of the teaching of grammar. As a rule, it is assumed that a boy cannot know the meaning of *je* till he has learnt all the forms of the verb from *je puis* downwards. But it is no more rational to say that one cannot read a book without having first mastered all the accidents of the language than to say that one cannot read one without having first mastered all its syntactical peculiarities, uses of the subjunctive mood, &c. Grammatical difficulties are either concerned with words rarely used or words in common use. The former class we shall leave untouched. But what about irregularities in words of every day (*aller, il va, Mann, Männer*)? Here we must follow the method by which we learn our mother tongue. There is no more difficulty, after all, in learning the meaning of *il va, il allait* than in learning that of any two nouns (e.g., *homme, femme*). Difficulties in the construction of sentences should be postponed. For example, a boy should not be required to master long speeches in Cæsar in *oratio obliqua* till he could understand these speeches with ease if given in the direct form. Even here, then, the rewriting of the author is desirable.

The next question is: "How shall we use our Reader?" According to the old system, when a pupil passed from the exercise-book to the reading-book his business was to learn to *translate*. A sentence would be translated in class four times over for once that it was read aloud. And what were the fruits of this translation method? A boy taught by it could not understand a single colloquial sentence addressed to him, and he never got a *feeling* for the foreign language in itself, half the process of translation being a hunt after the words taken in the order of the mother tongue. Much of the time given to the lesson was spent in correcting barbarisms in the boy's use of his own language; and even so, as Darwin asserts, the system injured the sense of style and idiom in this native language. It rested altogether on the assumption that translation enters into all understanding of a foreign language—an assumption contradicted by daily experience. How many a man will understand without difficulty a sentence such as: "Pour lui il y allait de la gloire de cette maison qu'il servait depuis sa jeunesse," and yet hesitate at once when asked to translate it! To translate a foreign tongue is, in fact, a rarer art than to understand it.

And what were the supposed uses of translation? They may be thus classified:—The uses of translation from the foreign language were—(a) to make the pupil understand the foreign language; (b) to test his understanding of it. Those of translation into the foreign language were—(c) to give practice in the use of the foreign language; (d) to test the pupil's power of using it. It may be said that for (a) and (b) translation was a good way, but not the only good way, to attain the end; and that for (c) and (d) it was a bad way, except for advanced pupils.

For the end (a) what other ways beside that of translation are available? We answer: (1) *immediate perception*—the application of a foreign word to an object present, as a chair or table; (2) *mediate perception*—its application to something represented in a picture. The use of ready-made pictures is common enough in these days. Use may also be made of the blackboard, the pupil drawing the object. A word may often be taught by its context ("une fenêtre, une autre fenêtre"), or by its definition ("veuf = un homme dont la femme est morte"). In certain cases indeed the shortest way will be to translate the word, but these cases will be exceptional.

For the end (b), to test the pupil's knowledge, if translation is used, it must not be made the chief thing, and little attention should be given to a correct use of the mother tongue. It is enough to see that the pupil understands the foreign language. At a late stage in the course of instruction exercises in translation may be useful as a means of showing the difficulty of rendering idiom for idiom—even exercises in verse, especially if they are allowed to be voluntary and a prize is offered for the best.

Then, if the hour is not given to translation, how is it to be spent? The teacher who, at the end of the preceding lesson, has read over the new lesson slowly, with occasional

pauses for explanations, will now read it fluently, with natural intonation—in the early stages sentence by sentence—and require his pupils to read it after him, no halting or hesitating being tolerated. The mere reading will show if the passage is understood. Sometimes the pupils will be made to read, each taking a different character in the piece—this is useful in securing good expression. Reading in chorus and the singing of poems to some simple tune are also useful. Then, with books closed, the teacher will give a sentence and call on some boy at random to repeat it. (Prof. Jespersen advocates the practice of giving one's pupils names in the language taught—Guillaume for William, &c.—on the principle that, so far as possible, only one language should be heard during the lesson.) Sometimes one may make one boy read and another boy translate what he has heard—the same boy should not be called on to use two languages one after another—or the teacher may give a sentence in the mother-tongue and a boy translate it into the foreign language, but this only when the piece is well known. If it is badly done, let the piece be read round two or three times, and the experiment then repeated. But every such attempt at sentence-making should be oral. Nothing should be written except from dictation.

In the following chapter Prof. Jespersen suggests various exercises which are independent of the reading-book. First, he describes exercises in counting and multiplying in a foreign language. As an aid to the ready reading of a date he would have all dates (1896, &c.) in books intended for beginners expressed in words. Then he shows how the teacher may take one of the pieces which have been read and form a series of questions from it, the pupil being called on in each case to reply *in a complete sentence*. Again, an exercise may be made out of a sentence such as "La femme a cassé la marmite," the teacher basing on it a subject-question ("Qui a cassé . . .?"), a verb-question ("Qu'est-ce qu'a fait . . .?"), or an object-question ("Qu'est-ce que la femme . . .?").

In time one may demand from the pupil a repetition of the piece. Then one may construct exercises by requiring that the pupil shall turn singulars throughout into plurals; shall turn a story told of a boy into one told of a girl, or one told in the third person into one told in the first; shall change the time from present to past; shall turn indirect oration into direct, or *vice versa*. Some sentences may be turned from the active into the passive form, or from the positive into the negative.

It is by such exercises that Prof. Jespersen would have the pupil master his grammar, not by learning long lists of forms (tenses, persons, &c.) or words (exceptions to rules). Too often when lists of words are remembered the rule they refer to is quite forgotten. We can trust, in great measure, to the principle of analogy as a substitute for rules. A boy who has learnt "Video virum" will say "Video feminam" without learning a rule that transitive verbs govern the accusative.

The chief difficulty in learning to speak grammatically is the intrusion into the speaker's mind of the idiom of his mother tongue, and it is this which it is the whole aim of the new method to obviate. Even if beginners make mistakes in speaking, we must remember that it is more important our pupils should talk than that they should talk correctly. But it is a great mistake to suppose that the new method is less successful than the old in securing a mastery of grammar. Klinghardt has thrown in his lot with the new system because he could not attain grammatical correctness by the old. Walter tells us that supporters of the old system have been astonished at the correctness of speech of his pupils at Frankfurt. Our motto, then, will be: "Away with lists and rules; practise what is right again and again!"

Instead, then, of abstract rules—generally only intelligible when you see the examples—we shall take as our starting point in grammar *what the child can see*. We must train him to see and to arrange what he has seen, and to draw conclusions. We shall never tell a child what he is capable of finding out for himself. So, if we were teaching a foreign child English, we might draw his attention to the forms *my, mine*, make him collect the cases that occurred in the lesson, and draw a conclusion as to the difference in use of the two forms. Similarly we might lead him to see the different uses of English *do*, or to observe the genders of German nouns or the uses of the French subjunctive. A child so taught will, therefore, not say: "We must have the subjunctive in clauses expressing purpose (§ 226)," but "We find

the subjunctive" in such clauses. We shall not trouble to be exhaustive. Even if the method should take longer than that of teaching by set rules, we must remember that the child is being taught to use a scientific method, and therefore being set on the right path even for original investigation hereafter.

By the inductive method already described, older students may be taught to distinguish the meanings of synonyms in one language or in different languages—e.g., *homme, Mann, Mensch, man, vir*. Walter's plan may also be resorted to of giving the class a sentence and requiring each pupil to write down the same statement in as many different ways as possible.

At this point in his book Prof. Jespersen treats of that part of his subject which probably interests him most—the use of phonetics to the modern-language teacher. Reason and experience alike show that, with the aid of some phonetics, we shall secure a much better pronunciation than we shall do otherwise. If it be asked: "What is the use of troubling about pronunciation at all?" we reply: (1) We may have to speak the language; (2) even for a fine perception of its literature a good pronunciation is necessary; (3) it is even a guide to remembering the differences between similar words—e.g., *joli* and *jolly*.

How then shall we teach a good pronunciation? Discarding the haphazard way, which leads to such poor results, in our first lesson of all we shall give a little explanation and demonstration of the formation of different sounds. In this a looking-glass will be useful. Children are not scared by it, though school-masters are. This done, we shall take up a passage and read a page or two rapidly and with as complete a reproduction of the foreign intonation as possible. Then, beginning at the beginning again, we shall take each word singly, give its meaning, and write it on the blackboard phonetically, explaining each symbol used. We shall pronounce every sound (even every consonant) by itself. Some children, especially if they are very young, need no more; they can at once imitate the sound of the foreign word. Often, however, we must aid a pupil to pronounce a new sound by showing him how to use his speech-organs. If his ear is at fault, we can help him to see the difference between the foreign sounds and those familiar to him by pronouncing a sentence of his own language as a foreigner might do who introduced his native sounds into his English. For the mere purpose of learning single sounds phonetic writing is not indispensable. Its main use becomes clear to us if we see that mistakes in pronunciation fall into two classes: (a) mistakes in *forming* sounds, as when one says "pang" for French *pain*; (b) mistakes in *applying* sounds, as when one pronounces German *fuss* as short or *nuss* as long. Class (a) have nothing to do with spelling; they are mastered once for all. It is as a preventive of the mistakes which come under class (b) that phonetic writing is most useful. It will be said that we still cannot dispense with a teacher. That is true: a teacher is needed to show the right intonation of a sentence. If it is further said that phonetic writing aims at an excessive exactness, we shall reply (1) that, for elementary teaching, we use a phonetic instrument of a far simpler kind than we should use for scientific purposes; (2) that, in fact, we do aim at giving our pupils a better pronunciation than most teachers are content with. And experience shows that by our method this is not difficult to achieve.

Languages may be learnt according to four methods: let us consider them in turn. The first method is that in which all the instruction is given orally. This method is a very slow one, and is chiefly suited for the individual instruction of a very young pupil. The second method is that in which the teacher, apart from his oral teaching, uses only the recognized orthography of the foreign language. This method obliges the teacher to be constantly correcting orally mistakes due to the misleading influence of the orthography. The third method is that in which the teacher uses the recognized spelling and a phonetic spelling concurrently (as when a reading-book is in ordinary spelling but the pronunciation of the words is given phonetically in a glossary). On this method it is difficult to prevent the pupil confusing the two forms, so that, as a result, his spelling and his pronunciation are equally imperfect. The fourth method is that in which for a certain time a phonetic alphabet alone is used. This method has the advantages that the pupil encounters one difficulty at a time, and learns to read the new language fluently before he is brought face to face with the non-phonetic orthography. Having de-

termined to follow this method, we shall need phonetic texts; once having them, we can require from our pupils that they shall read intelligently and with good expression from the very beginning.

If the question is asked: "Must the pupils learn to *write* phonetically?" we reply they will write phonetically, certainly; but no *learning* to write is necessary. To take down a passage from dictation will merely mean a clear seizing of the foreign sounds they hear. How long, it will be asked, shall we use only the phonetic spelling? To this question no decided answer can be given. The time at which the pupil shall be introduced to the current orthography must depend on circumstances. In some cases Prof. Jespersen has used solely phonetic spelling for a whole year; in other cases for a shorter time. But a child learns so much more of the language when untroubled by difficulties of spelling that it can be laid down that a child who has used phonetic spelling for two years and has given half a year to orthography will know more than one who has given half a year to phonetic spelling and two and a half to orthography—i.e., half a year more on the whole. The use of a phonetic alphabet is, it must be remembered, a great stimulus to minute observation. Many teachers are scared at the thought of the difficulty they will have when pupils—so far accustomed only to the foreign language in its phonetic form—are, for the first time, introduced to it in its ordinary spelling. But all who have watched this process of transition are astonished at the ease with which it is effected. This ease is due to the two causes—(1) that children accustomed only to the phonetic spelling have a sharpened observation for the divergencies from the phonetic form which they now encounter; (2) they are tackling one difficulty at a time.

What assistance, then, is the teacher to give at this stage? He will put before them in orthography a passage already familiar to them in the phonetic form, and he will go through it word by word. In French he will now, for the first time, have to explain the use of the accents and of the *cedilla*. Then the class will spend an hour on noting and classifying the new forms. They will then be exercised in reading a book and copying passages out. After this they will be called on to write out from memory a sentence in orthography. After a quarter of a year the child will be as firmly grounded in his spelling as any pedant could desire, and more firmly grounded than ordinary children are after several years of learning the language. Meanwhile phonetic writing will not be dropped; the reading of phonetic texts will be kept up, and every new word will be represented to the class phonetically. In the increased use made of phonetics we may mark one of the chief educational advances of our day.

So far we have dealt with the more elementary stages of modern language teaching. What are we to do with pupils who have passed these stages? Prof. Jespersen answers: Make them *read*—read more and more, read better and better books, and not merely what is best from a literary point of view, but what will give the best and most favourable impression of the foreign nation whose language is being studied. This reading will be partly rapid reading, partly slow and careful reading—with every possible gradation between these extreme terms. To speak, first, of rapid reading. From the very beginning some pieces may be read less carefully than others—read, and not *learnt*; and an odd month now and then may be given to some story. A good teacher may be able to induce his pupils to read a book at home. The words will not always be looked out, but the pupil will attain facility in catching the sense, and the teacher will talk over the book afterwards with those who have read it. In some German schools all the pupils read the same book at home, and are called on to write an essay on it at the end of the time fixed. But more valuable still is slow and careful reading, combined with conversation on the subject-matter. We are not satisfied that our pupils should be able to talk only the chatter of the drawing-room. Then they must have essays to write—but on a narrowly defined subject, so that they cannot confine themselves again and again to the same little stock of words and expressions.

Such, then, is the method of teaching which Prof. Jespersen advocates. In a concluding chapter, he discusses in turn the chief hindrances which exist at present to the adoption of such a method. Though he has his own country in view, much of what he says will apply equally to England. The first is the little time allowed in the schools to modern language teaching.

Greek and Latin must be driven out from the schools. But, before that takes place, much may be done; and, the better results the modern language teacher attains, the more will he be listened to. The second hindrance is the cutting up of the pupils' time by a multiplicity of subjects of study. This is a great cause of waste of time, especially to those pupils who leave school early, before getting more than a short way in each subject. The maxim "Let each thing be done well, and one thing at a time," applies especially to the study of languages. Each language that is being learnt must have plenty of time given to it in the week, and not till two years have passed should another language be imposed on the pupil. When a language has been thoroughly studied for two years, very little time will be required afterwards to keep it up. As to the age at which a pupil should be first introduced to a foreign language, we can only say: Let it be rather too late than too early. The third hindrance is the requirement that pupils should every day be marked individually. This, of course, applies especially to Denmark. The fourth and worst hindrance is the examination system. This system gives an undue advantage to a mere crammer, and under it every teacher is hampered in his teaching by the question: Will that be asked? But we need not wait for changes in the examination system before reforming our method of teaching. To learn to produce one's knowledge of a language is the best way to take in the language. Even if one's pupils do not get full credit for their extra knowledge, one has at least a good conscience—not to speak of the pleasure which the work has brought both to teacher and class.

This is Prof. Jespersen's exhortation to teachers:—

Teach in the right way, and all the work done will be full of life and light; and, when the examination comes, your pupils will know more than if you had from the beginning paid exclusive attention to examination requirements. One's pupils really learn most when they have an inkling all through that all they do is something useful and valuable, and not too far above real life, as they in part know it, and in part begin to have some conjecture of it.

He adds a piece of practical advice:—"Do not be induced by the examination system to leave to the end the going over again of the work learnt. Keep going over it while it is new, and so you can keep your pupils fresh by reading new work with them right up to the examination."

The fifth and last hindrance lies in teachers themselves. The calibre of teachers is, however, being raised. "The time will soon have gone by when to become a modern-language master it is enough to have taken a degree in law or theology—to have studied Tacitus and Plato—and, by way of amusement, to have read some volumes of the *Revue des deux Mondes* or some novels of Freytag or Paul Heyse." But, at present, too little is done in the way of furnishing teachers with the means of improving their knowledge of a foreign language by going abroad among those who speak it. Poor pay and long hours lead naturally to a teacher's looking merely to examination results. But some teachers there will be who will break away from the ruck, even though they realize the increased demands which better methods of teaching will make on their time. We see around us signs of progress, and the Shakespearean utterance taken by Prof. Jespersen as the motto of his book is daily justified: "This was before a paradox, but now the time gives it proof."

G. C. MOORE SMITH.

"RECOMMENDED TO BE READ."

EXTENSION lectures are by now in full swing all over the country: our centre has started a course on the Renaissance in Italy. At the opening lecture I noticed a singular thing—the lecturer was so very proper and conventional in the books he recommended for study. Are University guides afraid of "the young person," or are they morally straight-laced? Why, for example, did our lecturer omit Cellini's "Autobiography" from his list of desirable books to be read? I can only suppose that poor Benvenuto is "improper"; for no one would dispute the value of his "Memories." Possibly lecturers believe that women, who chiefly compose their audiences, have no sense of humour, and are afraid they would be shocked. Perhaps that is why ours advised us to read "The Prince," at the same time carefully labelling its contents; all good women, he remarked, were rightly shocked at its tone. I wonder what

he would have said of one woman who thoroughly enjoyed that very same tone.

Still that reason won't account for the choice of novels: "Romola" finds a place on the list, while "The Cloister and the Hearth" is rejected. I should have thought that both were equally valuable so far as matter is concerned; while, as for manner, "The Cloister and the Hearth" is alive, whereas "Romola" is only a fossil. No, that is rather hard on the fossil. "Romola" was composed in the valley full of bones: bone was laboriously fitted to bone, the flesh came upon them, and the skin covered them; but, alas! no happy wind breathed upon the image thus made; the breath of life passed it by, and it never lived. I asked our lecturer why he thus discriminated. "The Cloister and the Hearth," he admitted, "is certainly a great historical novel, but I would not rank it as a work of art with 'Romola.' Do you find all these melodramatic adventures with robbers entertaining?" I did, and do, on long winter evenings beside the fire; but that is wandering from the point. I gave up the argument, seeing we were looking at the question from opposing sides.

It is not for me to criticize a great writer's work; I can but record a personal impression—to me the novel does not tell a live story. To change metaphors, the wires that move the puppets are only too visible. But I have a special grievance against the heroine—her love was such a poor affair. It disappeared altogether when Tito sold her father's library. Now love, real love, wouldn't do that—it clings to the individual in spite of the sin. In fact, love isn't love at all unless it can go down to hell with the object beloved.

Romola was a noble woman, but her nobility was responsible for much of her husband's ill-doing. She despised him, and he knew it. Scorn drove out love and with it all power to redeem.

George Eliot has given the obverse of this very finely in "Middlemarch." The wretched Bulstrode does not dare make a clean breast of his ignoble past to his wife: she hears of it from others. She locks herself first into her room to say good-bye to the old pleasant life and gather strength for the humiliation that lies before her; then she goes to her husband and puts her hand in his. There is a charming feminine touch in the description. Mrs. Bulstrode has been a leader of fashion in her little world, but, when she is ready to go downstairs, she puts on a plain black dress and net cap, symbols of her resolve to share her husband's disgrace as she had shared his prosperity.

But I ought not to cavil at book lists, for I owe a debt of gratitude to Extension lecturers—did not one of them introduce me to De Quincey? He was a fine reader, and in a fortunate moment it occurred to him to read us "Our Ladies of Sorrow." The stately roll of the sentences was perfectly fascinating, and I hurried off to the free library for more. There is a delightful edition there, presented from some gentleman's library by his widow, and I was the first person to take it out. How I enjoyed myself for weeks afterwards! The lecturer had preserved a discreet silence, and left me to discover for myself that murder was one of the fine arts. I have a weakness for fine phrases—for the sound rather than the sense, I am afraid. When I get hold of an exquisite quotation I roll it about on my lips like a child with a bullseye.

It is because of this weakness that I don't love Browning as I ought. Years ago I came across his description of an angel—"Thou bird of God." I thought it pretty till I read of "Pucel divino," and then the enchantment vanished.

Mr. Maddocks, the free librarian, and I are great friends. He comes to me for advice about the new rubbish, and I go to him for the old treasures. The volumes I borrow are always clean: often I have the pleasure of cutting the leaves open. People talk a great deal of the abuse of free libraries; they forget that everywhere there are a few people—in the minority, I admit—who like solid reading and who can't afford to buy expensive books. I believe it pays for a town to give these people the literature they want. I mean it pays financially; for these men are worth helping. It's just the same with Extensionists, who are a trying race, I admit; but among them there are always some genuine students, real lovers of literature.

I went to the lecture with one of the high-school mistresses who told me a curious story of a girl, about eighteen years old, who came to her to be coached for an examination. "What history have you read?" she asked. "I never did any history at school," was the answer; "but I have two University Extension

certificates." She had attended one course of lectures on Irish History and another on the History of the Renaissance. It is difficult to realize the state of mind in which these two periods hang in isolation and darkness. Would it be possible to choose two periods more dependent on other knowledge for their comprehension? I fear she cannot be classed among the real lovers of knowledge.

Cecil Vincent.

REVIEWS AND MINOR NOTICES.

The Life of Pasteur. By RENÉ VALLERY-RADOT. Translated from the French by Mrs. R. L. DEVONSHIRE. 2 vols. (Price 32s. Constable.)

Few more fascinating books than this biography of one of the greatest men of France and of the nineteenth century has it been our good fortune to read. The writer studiously and discreetly keeps himself in the background; from the book itself we learn next to nothing of him—only one letter addressed to "My dear René" tells us of Pasteur's affectionate regard for him—but on every page we see clearly the admiration and the love and the worship of the pupil for the master; and, as we read, we, too, catch the infection: we sorrow with Pasteur at the grave of his Camille; we sympathize with him in his struggles against ignorant and, too often, selfish opposition; we rejoice with him in his triumphant success; and, when we reach the last page, we say to ourselves: "Surely he was the most lovable of men!"

Louis Pasteur was born on December 27, 1822, at Dôle, but not long after his birth his father, who was a tanner, removed to Arbois, and it was here that all his childhood was spent; it was here that all his home affections centred; it was from here that, in October, 1894, he started on his last journey to Paris, where, on Saturday, September 23, 1895, at 4.40 in the afternoon, surrounded by his family and disciples, very peacefully he passed away.

It is remarkable that Pasteur's first attempt at standing alone should have ended in failure. In 1838 he went to Paris, to a preparatory school for the *école normale*, kept by M. Barbet, like himself a *Franc-comtois*, and he was accompanied by his friend Jules Vercel. But his home sickness was so acute and, evidently, so incurable, that M. Barbet thought it his duty to inform his parents of his state of mind, which threatened to become morbid, and he was removed. But when, after passing his examination at Dijon for the *baccalauréat des lettres* and the *baccalauréat des sciences*, he returned to Paris in 1842, to the same boarding school, but this time as a student-master, there was no weakness, no shrinking, left in him, and to his parents, who were naturally anxious as to the temptations by which he was surrounded, he wrote: "When one wishes to keep straight one can do so in this place as well as in any other; it is those who have no strength of will who succumb." Strength of will was ever afterwards one of the chief features of his character.

When admitted to the *école normale* he spent the greater part of his spare time either in the library or in the laboratory of the Sorbonne, of which, at that time, J. B. Dumas was the head. It was here that he first became interested in those *tartaric* and *paratartaric* acids the study of which first caused his name to be heard within the walls of the Institute, and may, indeed, be said to have given the direction to the studies which afterwards made his name to be heard over the whole world. We wish that we had space for the full account of his interview with J. J. Biot, the mineralogist, then seventy-four years old. We cannot refrain from giving the final scene:

"So you affirm," said Biot, "that your right-hand crystals will deviate the plane of polarization to the right, and your left-hand ones will deviate it to the left?"

"Yes," said Pasteur.

"Well, let me do the rest."

Biot himself prepared the solutions, and . . . having satisfied himself that this deviation actually took place, he took Pasteur's arm, and said to him these words: "My dear boy, I have loved science so much during my life that this touches my very heart."

So long as they lived J. B. Dumas and J. J. Biot were his warm friends, his firm supporters, and his wise counsellors.

In January, 1849, Pasteur was appointed assistant to the

Professor of Chemistry at Strasburg, and only a fortnight after his arrival in that town he made an offer of marriage to Mlle. Marie Laurent, the daughter of the Rector of the Academy; the offer was accepted, and he was married on May 29. He had, indeed, found the helpmeet for him; with Madame Pasteur it was always "the laboratory first, and everything else after it." At Strasburg he continued his researches into tartaric acid and the tartrates, which resulted in his obtaining artificially from tartaric acid *racemic* acid, which, though of precisely the same chemical composition as tartaric acid, differs from it in many important respects.

It was during his quest after racemic acid that Pasteur was first led to consider the phenomena of fermentation, and, by a lucky coincidence, he was just at this moment—viz., in September, 1854—made Professor and Dean of the new Faculté des Sciences at Lille, where he found himself in the midst of the great beet-root district and of the alcohol manufacture. Here, and at Paris, to which he was soon after removed as administrator of the *école normale*, he, little by little, and with infinite care and skill, prosecuted those researches which resulted in the proof that fermentation is a process of life; that the air is full of living germs; that these germs may be destroyed by heat, or be strained out by cotton wool; and in the final overthrow of the *heterogenists* or believers in spontaneous generation.

Pasteur was never content with any step gained; he always used it as a starting point for another step, and he always kept his final object in view. After an interview with Napoleon III. at the Tuileries, he wrote: "I assured the Emperor that all my ambition was to arrive at the knowledge of the causes of putrid and contagious diseases." The first opportunity which was given to him of proving, on a large scale and before the eyes of the world, the practical value of his work occurred in 1865, when, at the request of J. B. Dumas, he went to Alais to inquire into the *pebrine*—the terrible and mysterious disease which had almost entirely destroyed the silkworms, not only of France, but of the whole silk-growing world. It was reckoned that during the last fifteen years the loss to the one *arrondissement* of Alais had amounted to 120,000,000 francs. We have no space here in which to tell how he discovered the cause of this disease and its remedy, nor even to give an account of the equally interesting, and still more important, researches and discoveries in connexion with anthrax, chicken cholera, and puerperal fever. In the year 1882 alone nearly seven hundred head of cattle were vaccinated for anthrax. Since the antiseptic method had been adopted in surgical operations, the mortality had fallen from 50 per 100 to 5 per 100; in the lying-in hospitals, which had had a death-rate of 100, or even of 200, per 1,000, it fell to 3 per 1,000, and soon after to 1 per 1,000. And then, in 1885, came the great triumph. On July 6 of that year Joseph Meister, a little Alsatian boy, nine years old, was vaccinated for hydrophobia.

Pasteur had many friends. J. J. Biot, J. B. Dumas, de Senarmont, Claude Bernard, Henri Saint-Claire Deville, Paul Bert were his seniors or his contemporaries, and he had a host of enthusiastic and loving disciples. He was a strong man, as well able as any to stand by himself; but he needed all the help, all the encouragement, which he received from these in the struggle. So quickly have things moved that it is almost impossible for us to realize the virulence of the opposition with which his theories were met only thirty years ago. In 1873 Dr. Chassaignac denounced, at the Académie de Médecine, to which Pasteur had recently been elected, that "laboratory surgery which has destroyed very many animals and has saved very few human beings," and concluded his speech by exclaiming: "Typhoid fever, bacterization! hospital miasmata, bacterization!" Even religion was called in as an aid to his opponents. "M. Pasteur preached at the Sorbonne amidst a concert of applause which must have gladdened the angels," wrote the witty Edmond About.

For Pasteur the whole question of religion was entirely kept apart from that of science. He was a deeply religious man; his faith in God, in the unseen world, in a future life, was unwavering. He was describing himself when he spoke of "the man who mourns his dead children and who cannot, alas! prove that he will see them again, but who believes that he will and lives in that hope." But the moment that he entered his laboratory he shut the door on "spiritualism and materialism."

Closely akin to his religious temperament was his gentleness

and kindness of heart to all who were suffering. There are few more touching records than those of the anxiety which he felt for little Joseph Meister and of his sorrow at the death of Louise Pelletier.

He could not tear himself away; she herself, full of affection for him, gasped out a desire that he should not go away, that he should stay with her. She felt for his hand between two spasms. . . . When all hope had to be abandoned: "I do so wish that I could have saved your little one!" he said. And, as he came down the staircase, he burst into tears.

And M. Roux writes:

No one knows what feelings of repulsion Pasteur had to overcome before visiting patients and witnessing post-mortem examinations. His sensibility was extreme, and he suffered morally and physically from the pains of others; the cut of the bistoury opening an abscess made him wince as if he had himself received it.

In later years the ever witty Edmond About said to a foreigner who had mistaken Pasteur for a physician: "He does not cure individuals; he only tries to cure humanity." The saying was a kindly one and a true one. Pasteur's whole life was given to the service of humanity without any expectation of pecuniary reward or desire for personal glory. But there was one reward and one glory that he desired and sought most earnestly—the glory of France. The terrible war of 1870, the German occupation, the siege and the bombardment of Paris, the annexation of Alsace and Lorraine, the utter collapse of all the hopes of France, produced in him not only an intense hatred of Germany, but also a determination that his beloved and bruised country should once more take the place to which she was entitled, at the head of European civilization, not now, as he had once fondly hoped, hand in hand with Germany—for Germany had fallen back into barbarism—but alone, proudly alone. And so every success which his theories won, every honour that was done to him—his magnificent reception at the Medical Congress in London and at the Tercentenary of Edinburgh University—the gratitude of the whole world was laid humbly and reverently at the feet of France. And grateful France did honour to her son.

A few words must be said about Mrs. Devonshire's translation. For the most part it is admirable; she has caught the spirit and the swing of the original, and for page after page we read on forgetful that we are reading a translation. And then, suddenly, we are pulled up with a shock—"France was exalted with the purest patriotism." We soon start off again, but we are nervous, and are constantly irritated by such barbarisms as "scientist," "experimentation," "organic materia"; by the use of the wrong past tense, as, for example: "At one of Laurent's quiet evening 'at homes,' Laurent was saying of Pasteur: 'You do not often meet with such a hard worker'"; by "glass stick," "balloon," "pipet," "marrow," for "glass rod," "flask," "pipette," "medulla"; and by "Switzerland express," and similar awkward locutions. A grunt or a whistle relieves our irritation in such cases; but what of this one?—"There is more wit in those 100 litres than in all the books on philosophy in the world; but, as to mathematical formulæ, there are none, I believe." The original of the words which we have italicized can only be: "il n'y en a point," which is, being interpreted: "there is none at all in them."

Mrs. Devonshire has provided an index which is fairly good, though it does not include Edinburgh, and many of her readers will be grateful to her for the notes explanatory of *Ecole Normale*, *Sorbonne*, *Institut de France*, *Concours Général*, &c., which are a puzzle to most Englishmen. But the name of the English discoverer of "Le Verrier's planet" was Adams.

National Education: Essays towards a Constructive Policy; a Symposium. Edited by LAURIE MAGNUS. (Price 7s. 6d. net. Murray.)

Mr. Magnus has followed the Horatian precept—

Qui Musas amat impares,
Ternos ter cyathos attonitus petet
Vates.

His nine Muses are indeed disparate, and it is well for the harmony of the banquet that they are all soloists. At a real symposium there would assuredly have been wigs on the green, and the bard himself might have shared the fate of Orpheus.

To be serious, though the essayists are all of them authorities

on their particular subjects, and two of them at least have produced monographs of permanent value, yet, except in so far as they are one and all inspired by the "divine discontent" of the reformer, there is no unity of aim or method in the volume, and we seek in vain a broad constructive national policy. Should the State take all education as its province, and, if so, how far should it delegate its functions? Is the American ideal of free education up to the University an exemplar for England? Should private schools be licensed and inspected as in France? How far should the curricula of schools be determined *ab extra*? What should be the relations of the governing body, the head master, and the assistants? To these and similar burning questions we find no answer, or the barest hint at an answer. The book has no cumulative force, and must stand on the worth of the separate essays.

These are of various merit. Prebendary Reynolds leads off with "Church Schools and Religious Education." That religious education is a matter of greater importance than education itself expresses paradoxically what has been repeatedly said in this Journal, *nur mit ein bischen andern Worten*. Education which is not religious in the widest sense of the word is a misnomer. Agreed, but by bringing the Ark of the Covenant into the battlefield Mr. Reynolds appears to us to violate the second of his own canons, "the prevention of sacred subjects being brought into contempt for electioneering purposes." The School Board system must go—that is his first canon, laid down as axiomatic. The voluntary schools have a prescriptive and inalienable right "to train their children, in whatever schools these may be, in their ancient faiths." Here we must part company. Substitute "the Church of Rome" for the abstraction—meaningless in this context—"the voluntary schools," and the monstrosity of the claim will be apparent. That Church managers should retain in perpetuity the control and direction of their schools, and give in return nothing but the ancient buildings—many of them "bare ruined choirs"—seems to us an unequal bargain to which the ratepayers will never consent, and there is nothing in Mr. Reynolds's essay to alter our judgment.

The second essay preaches to the converted, as far as our readers are concerned. Incidentally an interesting criticism lesson is reported. The scene is a cathedral city, which can be none other than Oxford, with Miss Cooper and Mr. Keatinge for protagonists.

Sir Joshua Fitch treats of the inspection of secondary schools, and no higher authority could have been chosen. He shows that in the future there need be no line of demarcation between primary and secondary inspectors. This must not be taken to imply that the present staff at Whitehall is competent to inspect all schools. Generally he favours examination as against inspection—a proposition from which we venture to dissent:—

An examining body which undertakes to certify, not that the work of the school has been successfully done, but that it has been done in the right way, assumes two things—(1) That there is one—and one only—"right way"; and (2) that the inspector knows it.

Surely an inspector who started with such assumptions would be better qualified for the Holy Office. And, on the other hand, it is only the inspector who can check the prevailing system of running schools as racing stables, and appraising the goodness of a school by the number of plates its crack pupils win.

On the religious question Sir Joshua is diametrically opposed to Prebendary Reynolds. He holds, as we do, that it is only by maintaining the concordat of 1870, which Mr. Reynolds regards as a hollow fraud, and by applying it *mutatis mutandis* to secondary education, that we can escape from an absolutely secular education such as prevails in France and the United States.

The next four essays, nearly half the volume, are devoted to science in education and education in science—two distinct matters often confounded and not accurately discriminated by the present writers. Prof. Armstrong is the preacher rather than the teacher; he sounds the alarm, but he does not point the way. Mr. A. D. Provand supplies a useful correction to the exaggerated pretensions of platform orators on commercial and technical education. He shows that, if the sceptre of commerce is departing from England, the lack of special education is only a secondary cause. The cure for commercial depression and industrial backsliding, so far as there is one, must consist mainly in raising the general intelligence by means of a

sound general education. For the commercial school the subjects insisted on are English composition and *précis* writing, arithmetic, freehand drawing, one or two modern languages (French is far more useful than German, because the German *commis* knows English and the French *commis* does not), and, in the higher classes, economics. The curriculum strikes us as meagre; literature is wholly ignored, and "history and geography [we read] may be easily taught and need occupy little time." *Credat Judæus!*

Mr. Organ's essay is based on the report of a special committee of the London Technical Education Board of which he was Chairman, a report we noticed at the time of its appearance. The main point he makes is the distinction between the three grades of commercial education, corresponding to junior clerks, senior clerks, and managers.

Prof. Hewins sets forth briefly, but clearly, what has been attempted, and in a measure carried out, by the London School of Economics and Political Science. If only some of our ignorant, plutocratic directors of railways had been put through the course he suggests!

Mr. John C. Medd sets forth the claims of agricultural education—a province into which the present reviewer is not competent to follow him.

Mr. Magnus keeps his good wine to the last, and the only quarrel we can pick with Mr. Eve's essay on "Modern Language Teaching" is that it does not quite harmonize with the rest of the volume, being more concerned with method than educational politics. It is a triumph of tact and of higher qualities than tact, for one who is by training a classic, and who still shows a leaning towards parts of the classical discipline (witness his *encomium* of Bradley's "Arnold"), to have won the unqualified approval of an out-and-out *Neu-Philolog* such as Prof. Rippmann. The questions raised by Mr. Eve have been so often mooted in these columns that we are unwilling to reopen them, and must be content to quote without comment a few of the most striking sentences:—

At present we are confronted by the curious phenomenon that, while nine scholars out of ten find their chief delight in Greek, nine school-boys out of ten learn Latin only.—In the study of modern languages there is plenty of scope for accuracy of observation. The present writer had recently occasion to look over the papers of a number of fairly intelligent young ladies between eighteen and twenty, in which the words occurred: "Es irrt selbst in dem Busen der Gott"—an obvious reference to the voice of conscience. Again and again, in reckless defiance of all the laws of grammar, appeared the rendering: "It wanders into the bosom of God."—It is essential that class-books for all but the youngest should be worthy of minute study, and not mere ephemeral productions. At present there is a perfect mania for editing mere tales of little literary merit and still less educational value.—Even if the bulk of boys and girls leaving school at sixteen or seventeen were able to read serious French and German books with facility—and that is quite an attainable ideal—much would have been gained. As compared with the small amount of Latin they generally carry away, even such a knowledge of modern languages may fairly be called a *κτήμα ἐς αἰῶνα*—a possession for ever—not a mere *ἀγώνισμα ἐς τὸ παραχρῆμα*—an examination subject to be produced once and then forgotten for ever.

A bibliography of education seems out of place in a book of this sort, and the bibliographical note, as the editor modestly calls his contribution, is either too long or too short. We find Gomperz's "Greek Thinkers" in course of publication by Mr. Murray, and we have no Schmidt, with or without the *d*. A well selected bibliography is still a *desideratum*. Hall and Munroe are most inadequate. Mulcaster is found in neither, and Sturm has only one entry in the former. By the same token, "des Johannes Sturms" is a slip in German scholarship for which, doubtless, the printer, and not Mr. Magnus, is responsible, as he certainly is for the misspelling of Prof. Vietor's name.

François de Fénelon. By Viscount ST. CYRES.
(Price 10s. 6d. Methuen.)

Fénelon is one of the characters as fascinating to the historian as a problem play is to a certain order of playgoers. There is no end to the different points of view that may be taken about him; and even yet, perhaps, fresh material may be gathered to throw light on his genius. Lord St. Cyres endeavours to "review the whole life and works" of his subject from an impartial standpoint; and, as is often the case with such attempts, his avoidance of bias lends a certain dryness to

his treatment. It is just such types as that of the Archbishop of Cambrai that need a thoroughly sympathetic biographer and sympathy and a rigid impartiality are hardly compatible qualities. Probably a competent novelist could best give an idea of the many-sided nature—half saint, half worldling; partly philosophical, and partly swayed by meanest vanities; the sort of mixture that is found most often, perhaps, in the great Churchmen, but here compounded in an individuality that differs from others of a similar type. It is just those individual touches that make the distinction between a real portrait and a catalogue of qualities [as, e.g.: "Item, two cheeks indifferent red," and so on] that we miss in Lord St. Cyres's account. Biography is, after all, the most difficult of the literary arts. There are ten Thackerays—we had almost said two Shakespeares—to one Boswell. We find here the commonest defects in that kind—a tendency, namely, to talk about the subject instead of endeavouring to let the subject himself stand out and speak for himself. On the other hand, the writer shows a thorough first-hand acquaintance, not only with Fénelon, but with the whole history of the period, and many other things that bear more or less directly upon the matter. The chapter on mysticism, &c., which he modestly advises readers to skip, is perhaps one of the ablest, as it is the most difficult to treat with lucidity. The following passage is from the chapter "At War with Bossuet":—

And yet Mme. de Maintenon was right—with him also there was perfect sincerity; no impostor could have been so obstinate, have piled up such masses of relentless tortuosity in defence of his opinion. Through all this coil of tangled falsehood runs a thread of higher feeling—a real desire to spare his enemies, to give back peace to the Church, a real consideration for Beauvilliers and Chevreuse, a fear lest too great vigour on his part should be visited on their heads by the King. In this strange character, where all contradictories were reconciled, virtues could lie down peacefully beside their opposing evils, merits become failings, and shadows lustrous; there was no disengaging the good from the bad, no frontier post to watch where generous forbearance ended and where the pose of "dove-like" uncomplaining martyrdom began.

Teachers will naturally turn to the portions of the book which treat of Fénelon's contribution to education. And here, in particular, we think, a greater number of actual quotations would have been advisable. Lord St. Cyres maintains that Fénelon was a thorough reformer in his methods—that is, we take it, that (like all born teachers) he knew how to teach—but that he was never able to spare enough time to work out his theories fully. This would probably be the opinion of the majority of those who study the life from that point of view. The book contains many interesting portraits, a good index and chronological table, and a competent bibliography. It should certainly be purchased by any school library that can afford it. It is thoroughly readable, and will serve as an excellent introduction to a more extended study of the subject.

What Great Men have said about Great Men. A Dictionary of Quotations. By WILLIAM WALE. (Price 7s. 6d. Sonnenschein.)

This latest addition to Messrs. Sonnenschein's useful "Quotation Series" is a painstaking but uninspired volume. There is no preface to indicate the editor's plan, no working definition of a "great man." The list of names may pass muster, though we miss many famous names; but the sayers are often little men—second-rate biographers or *littérateurs*. Moreover, again and again, as we turn the pages we find the obvious and characteristic saying omitted. We can only give a few instances to indicate the *desiderata*: *Abelard*—"For whose sake Abelard, I ween, Put manhood off and manhood on"; *Æschylus*—*Aristophanes*—"Frogs"; *Addison*—Pope's lines on Atticus; *Aristotle*—"Il maestro di color cue sanno"; *Dr. Arnold*—Hawtreys's testimonial and Matthew Arnold's "Rugby Chapel"; *Ben Jonson*—Herrick's "Ah, Ben! say how or when"; *Virgil*—Horace's "animæ candidiores" and Bacon's "the royalect," &c.; *Napoleon*—Heine's "Reisebilder"; *De Quincey*—Carlyle's "Eccovi! this child has been in Hell!" Great men's sayings about great men have often been foolish and perverse—your great man is rarely a critic—but they are worth recording; and Mr. Wale has, deliberately it would seem, rejected all the *obiter dicta* to be found in memoirs, *ana*, and oral tradition. What a zest it would add to the volume if there were cross references—if we could see, side by side, what Lamb said of Coleridge and Coleridge of Lamb; what Mr. Gladstone said of Lord Beaconsfield and Lord Beaconsfield said of Mr. Gladstone; what Edward Fitz-

gerald said of Browning, and *vice versa*! Let us supply one such cross reference from personal memories. Tennyson was asked his opinion of "Mr. Sludge, the Medium." He answered: "It's a fine study, and almost poetry; but I would have done it in a quarter of the space." Mr. Browning was asked whether his own "Hervé Riel" had supplied Tennyson with a hint both in metre and treatment for his "Sir Richard Grenville." "I never thought about it," he answered; "Tennyson and I have always been the best of friends, and in poetry we have each gone our own way to work. My ballad was written at a sitting. Tennyson elaborates and polishes. I simply can't, if I would."

Hore Latina: Studies in Synonyms and Syntax. By the late ROBERT OGILVIE. Edited by A. SOUTER. (Price 12s. 6d. net. Longmans.)

Under English words, arranged alphabetically, some five hundred in number, are given the Latin equivalents, with illustrative quotations, mainly from Cicero, and short comments. Dr. Ogilvie, as the memoir by his brother justly claims, had the instincts of a scholar, and he draws distinctions between synonyms with the clearness and acumen of a logician and a lawyer. There is a table of contents which is almost a luxury, and an index of Latin words which doubles the usefulness of the book. A specimen will show the method:—"OBTAIN. *Adipisci*, through effort; *impetrare*, through petition; *nancisci*, through luck = to light upon. *Obtinere*, to maintain, hold, never strictly = to obtain. *Acquirere* differs from *adipisci* (*adsequi, consequi*) in that it means to obtain in addition = to gain more. *Obtinere* often = to make good, defend successfully, carry a point, gain a suit." Then follow nineteen quotations, à l'appui, from Cicero, Cæsar, and Quintilian. The book makes no pretence to completeness, and can serve only as a companion volume to the English-Latin dictionary; but the student who keeps it by him and consults it as occasion arises will get more grip of the Latin language than any ordinary dictionary could give him. If he is enterprising, he will have his copy interleaved and make his own additions, not neglecting, for instance, Pliny, Tacitus, and Seneca, who are almost ignored by the author. The long articles on syntax (if occupies eight pages of close print), good as they are, seem to us out of place in a book on words, and we desiderate in their stead such generalizations on the differences of English and Latin idiom as we find in Nagelsbach's "Stylistik."

The Teaching of Latin and Greek. By CHARLES E. BENNETT and GEORGE P. BRISTOL, Professors in Cornell University. (Price 5s. net. Longmans.)

The aim of this first volume of the "American Teachers' Series," as stated in the preface, is to discuss the educational value of each subject, the means for including it in the curriculum, the selection and arrangement of materials in the course, the essential features of class instruction and the various helps which are available for the use of teachers. *Seniores priores*: the classics take, by right of age, the first place. The increase in the study of Latin throughout the United States is a remarkable phenomenon to which we have more than once called attention. We wish Prof. Bristol had furnished us with similar statistics as to the study of Greek. Our impression is that it has actually declined. Prof. Bennett refuses to accept Mr. Herbert Spencer's *ipse dixit*, and fairly discusses Dr. Bain's categorical objections to classical studies, but the justification of Latin as a school subject is no more convincing to our minds than Spencer's contemptuous rejection. His argument, in brief, is *j'y suis, j'y reste*—it has proved itself the best mental discipline in the past, and there is every reason to suppose that it will continue such for all time. The obvious answer is that its rivals, the mother tongue and modern languages, have not hitherto been given a chance. It is only of recent years that they have found a place in the secondary school curriculum, and even now they are, compared with classics, half-timers. On questions of method Prof. Bennett is strongly conservative. He defends the Kerchever Arnold exercises—sentences to illustrate particular constructions—against Ascham's method of retranslation, or the modern form it has taken of imitative compositions. He rejects the reformed pronunciation as hard to acquire and useless when acquired. Of verse composition he says nothing, doubtless because that form of the treadmill is unknown in the States. There are many useful hints as to authors to be read and the order in which they should be read, and, different as our text-books and methods are, English teachers of classics will find the book well worth their perusal.

Euripides: Medea. Edited by JOHN THOMPSON, M.A., and T. R. MILLS, M.A. (Price 3s. 6d. W. B. Clive.)

Another volume of a useful series—a series too well known and well established to require particular criticism, seeing that the volumes are all much on the same lines, and have long been definitely accepted for their particular purpose.

A Short History of American Literature. By WALTER C. BRONSON, A.M. (6¼ × 4½ in., pp. x., 374; price 2s. 6d. Heath.)

Mr. Bronson is Professor of English Literature in Brown University, and his well informed and well written little book is intended primarily for

schools and colleges. We must confess that we opened it with some misgiving. There are too many so-called histories of American literature published; and we have often thought that it would be wiser not to be in such a hurry, but to wait until what is really American literature has gained more both in length and in breadth—as it is undoubtedly doing now, and has been doing for fifty years. It would be better, we think, to begin at 1800 with the novels of C. B. Brown, or at 1809 with Knickerbocker's "History of New York." Most that precedes these dates is either of little intrinsic value or belongs to religious or political controversy, or is merely imitative of English or European literature, and not really American at all. The few books of value which would be excluded, such as "The Federalist" and Franklin's "Autobiography," and perhaps one or two others, might very well be worked into the introduction. Again, to string together critical notices of the best known writers in chronological order is not to write a *history*. We require to know something of the action and reaction between the writers and their times, the mutual relations of the writers themselves, outside influences, and much else of a similar kind. History is organized and well expounded information, not a set of statements, bead-like on a string, nor a fortuitous concourse of facts. Having these views in our mind, we opened Prof. Bronson's little book, as we have said, with some misgiving. But we were soon reassured. Not that the Professor entirely agrees with the views just given, though he certainly does not on the whole disagree with them; but because he evidently understands what *history* means, shows a clear-sighted and well informed judgment, is moderate in his claims, and, above all, has an excellent sense of proportion. His short history is very good reading. He divides his subject into (1) the Colonial Period, 1607-1765; (2) the Revolutionary Period, 1765-1789; and (3) the Period of the Republic, 1789-1900—the last being subdivided as National Beginnings, 1789-1815, and the Golden Age, 1815-1870, the last thirty years, dealing mainly with living writers, being more or less supplementary. The Colonial and Revolutionary Periods may be taken as introductory. They are briefly and clearly treated, and are furnished with an appendix of "extracts." The Golden Age has 176 pages devoted to it, or more than half the body of the book. Here we have the actual heart of the subject; and very good are its appreciations and expositions. The chief writers are given the chief attention, and the minor folk—such only as can be considered in any way representative—are sketched in "as a setting for the greater, that the latter may thereby be taken out of the literary vacuum in which they might otherwise seem to stand." The quite little people must be looked for elsewhere, or in the bibliography and list of articles given at the end. The book closes with a good index. Here and there we have noticed matters at which we felt inclined to demur. For instance, we do not think the sterility of the South (pages 150, &c.) is quite adequately explained; though we cannot pretend to give a fuller explanation ourselves. Perhaps the greater amount of open-air life may have had something to do with it. But our differences of opinion are too slight to deserve mention here; and Prof. Bronson knows extremely well what he is writing about. His little book is the best on the subject which we have seen as yet.

Zoology: an Elementary Text-Book. By A. E. SHIPLEY, M.A., and E. W. MACBRIDE, M.A., D.Sc. (Price 10s. 6d. net. Cambridge University Press.)

It is not easy to give in a volume of little more than six hundred pages a clear and intelligible, and at the same time interesting, account of the form, structure, habits, and distribution of all living animals from the amoeba to man; an account in which each phylum, each order, each family—we had almost added each genus and species—has just the right amount of space given to it; an account which is technical, but never dry, full, but never prolix. The attempt to do so has often been made before now; till now it has always failed. The authors of this new volume of the "Cambridge Natural Science Manuals" modestly say in their short preface that they "have tried to write an elementary treatise on zoology which could be understood by a student who had no previous knowledge of the subject." To say that they have succeeded in their endeavour is the very lowest praise that we can give to their book. It is not, as too many books on natural history have been and are, a compilation of fragments of information drawn from the writings of men of different schools and often of opposed views; it is an original and homogeneous work, and, from the masterly and admirably written introduction to the last page, it is marked by that self-restraint and evenness of handling which come only from intimate knowledge and perfect understanding of the material with which an author has to deal. And it is original, too, in the sense that Messrs. Shipley and MacBride have not, through fear of criticism, and perhaps of censure, from other zoologists, refrained from putting forth, especially in connexion with the classification and relationship of some animals, views and hypotheses which are new. This is not, of course, the place in which to discuss these with any advantage; time and experience will test them, and in the meanwhile they will at least, as is the hope of the authors, teach the student that the object of the study of zoology is far more than the mere collection of facts. The book is not intended for *students* in the limited sense of the word: "it has been drawn up

with an eye to no examination, and does not claim to correspond with any of the numerous syllabuses and schedules issued from time to time by various boards of examiners." That is to say, it is a book which will be welcomed and used by those thousands of intelligent people who have long been in search of an intelligent and trustworthy guide, and hitherto have searched in vain; it will be in the hands of every student of animal life in the United Kingdom and in America; more than that, it will make students.

The Victorian Anthology. Edited by the Right Hon. Sir M. E. GRANT DUFF. (Price 7s. 6d. Sonnenschein.)

Like Juvenal's "Græculus," Sir M. Grant Duff is a cosmopolitan and a universal genius, an Under-Secretary of State, Governor of an Indian Province, Rector of a Scotch University, and President of half-a-dozen Royal Societies, traveller, publicist, botanist, *littérateur*, and now, to complete the parallel, "in cælum jussus ibit." He was asked last May to address the London University Extension Society on Victorian poetry, and, by the end of the year, he has compiled and printed a "Victorian Anthology" of 570 pages. This is a record in the way of book-making, and Mr. Quilter's "What's What?" is nowhere in the race. But it was not thus that Callimachus composed his "Anthology" or Francis Palgrave his "Golden Treasury." The England of Victoria, no less than the England of Elizabeth, has been "a nest of singing birds," though the finches have outnumbered the nightingales. It is easy to string together at random some two hundred and fifty Victorian poems half of which (such is the editor's modest aspiration) the reader will approve. To select, classify, and characterize the best poems of the best poets, even if the range be limited to the poets admitted to Mr. Traill's or Mr. William Archer's beadroll and all the gold dust that lies scattered in magazines and journals be ignored, is a harder task, needing time and painful discrimination, and a critical faculty, of which Sir M. Grant Duff shows little trace. The admissions are as arbitrary as the omissions. We have ten poems of Keble (a translation of Wordsworth for women, as Bagehot well said), ten of the first Lord Lytton and six of the second Lord Lytton, ten of F. W. Faber, six of the brothers Lushington, two of Sir Lewis Morris, a translation from Propertius, a pretty copy of an anonymous Eton boy, and not a line of William Allingham, O'Shaughnessy, Robert Bridges, George Meredith, or—this fills the cup of Sir Mountstuart's iniquity—Coventry Patmore.

A Text-Book of Zoology. By G. P. MUDGE, A.R.C.Sc.Lond., F.Z.S. (Price 7s. 6d. Edward Arnold.)

The preface to this book does not state that it has been drawn up with an eye to no examination by any of the boards of examiners scattered through the United Kingdom and North America—indeed, it has no preface—and yet it is extremely difficult to form a guess as to the syllabus or the schedule with which it is intended to correspond. On page 29 we read: "At the anterior and posterior ends of the body [of an invertebrate] the skin is invaginated to form respectively the mouth and anus. . . . A similar [longitudinal] section through the body of a vertebrate shows the same limiting body-wall with the two invaginations at either extremity." Mr. Mudge gives us no derivations for the technical terms which abound in the book, nor does he supply a glossary. Had he thought well to do so, we might better have understood the word *phyllogeny*.

"How To" Series.—*How to Succeed in your Examination.* By GEORGE A. WADE, B.A. Lond. (Price 2s. 6d. Grant Richards.)

How a vigorous young publisher like Mr. Grant Richards could allow such a collection of pretentious platitudes to bear his imprint is a mystery to us. There are in Mr. Wade's book a certain number of hints to candidates at public examinations, but any student must have been under very curious tuition if he has not had them dinned into him *ad nauseam* years before he is old enough to go up for an examination. A student over fifteen hardly needs advice on finding out the subjects of his examination before he begins to prepare for it—advantages of early morning study, disadvantages of alcohol and tobacco, the proper use of note-books, and suchlike. As an example of Mr. Wade's Tupperism, we may cite the following (page 105):—"There is much concentrated wisdom, as well as much nonsense, in many ancient saws and proverbs; but it is doubtful if there is any saying more pregnant with truth in any language than the fine old one that 'Prevention is better than cure.' There is scarcely a single ill that flesh is heir to but what is better for being avoided, if possible, rather than conquered. The iron wheel that has never broken must afford more feeling of security to railway travellers than the wheel that has once broken, no matter how well mended." But the worst point in Mr. Wade's book is a peculiarly impudent puff of a private establishment, repeated more than once. Mr. Wade's English is not above suspicion. On page 179 he writes: "because its standard of requirements for a 'pass' are much more difficult to satisfy," although he boasts (on page 204) that he "can reckon up at least fifty examinations of fair importance that I myself have gone through during my scholastic career." We feel that a protest against such works as this should be made. We do not suppose many students in large towns will purchase it, but the poor

student in remote country districts who expects a key to success will find herein nought but Dead Sea fruit.

Among bijou editions we have received (1) *Pen Pictures from Ruskin*, selected by CAROLINE WARTZBURG (price 2s. 6d. net, G. Allen), seventy sketches of men, women, animals, trees, and plants—a very good *florilegium*; (2) *The Spanish Gypsy, and other Poems*, by GEORGE ELIOT, Vol. X. of the "Warwick Edition" (price 2s. net, Blackwood); (3) *Thoughts of Pascal*, translated by C. S. JERRAM; (4) *St. Francis de Sales and On the Love of God*, with Notes by Canon KNOX LITTLE, "Library of Devotion" (Methuen, price 2s. net).

Messrs. Marlborough send us the seventh edition of *Poésies de l'Enfance*, par François Louis—an excellent book for repetition.

BOOKS OF THE MONTH.

Classics.

Text to Illustrate Greek Philosophy after Aristotle. Selected and arranged by J. Adam. Macmillan, 3s. 6d. net.
The Choephori of Aeschylus. Edited by T. G. Tucker. Cambridge University Press, 12s. 6d.
Latin Composition based upon Selections from Cæsar. By B. L. D'Ooge. Ginn, 2s. 6d.
"Blackie's Illustrated Greek Series."—(1) The Odyssey of Homer, I. Edited by the Rev. E. C. E. Owen. 2s. (2) Cæsar's Gallic War, Book III. Edited by John Brown, with vocabulary. 1s. 6d.

Commerce.

Commercial Law of England. By J. A. Slater. Pitman, 2s. 6d.
Commercial History. By J. R. V. Marchant. Pitman, 3s.

Divinity.

The World before Abraham, with an Introduction to the Pentateuch. By H. G. Mitchell. Constable, 5s. net.
Gospel according to St. Mark. Edited by A. H. Rubie. Methuen, 1s. 6d.

English.

A History of English Literature (600-1900). By E. Engel. Translated from the German. Methuen, 7s. 6d. net.

Introduction to Chemistry and Physics. 2 Vols. By W. H. Perkin and Bevan Lean. New edition. Macmillan, 2s. each vol.
Studies in Auditory and Visual Space Perception. By A. H. Pierce. Longmans, 6s. 6d. net.
Graduated Exercises in Elementary Practical Physics. By C. J. Leaper. Biggs & Co., 2s. 6d.
A College Text-Book of Chemistry. By Ira Remsen. Macmillan, 8s. 6d. net.

JOTTINGS.

AT the Annual Conference of the National Federation of Head Teachers' Associations a resolution in favour of one Local Authority for all education was adopted, but a further resolution that the Authority should be an Education Committee of County or County Borough Councils fell through, 17 voting for and 17 against it, and the President declining to give his casting vote.

THE Association for Promoting Elementary School Work as a Career for High-School Girls has just issued its fourth annual report. Twenty of the applicants during the past year have begun work, and of these seven are actually teaching in elementary schools. Mr. Rankine, H.M.I., bears strong testimony to the value of teachers drawn from this class: "They are intellectually more docile, have greater mental flexibility, and have not acquired fixed habits of educational practice, which prejudice them against new ideas." The Association has done much with a very small income, and deserves further support.

OUR chief need in English life is to combine clearness in thought with compromise in action. The danger of throwing too much stress on the first is that we are apt to become impatient of the second. But, if we live too exclusively in the atmosphere of compromise, we are likely to become muddled in our thinking. It is one of the great tasks of English education to inculcate the habit of clear thinking, and at the same time to teach respect for other people's opinions, and to make us ready to look out for working compromises between conflicting views.—Mr. M. E. Sadler's address to Reading College.

THE dissolution of the three federated colleges which have constituted the Victoria University is imminent, and Yorkshire is bestirring itself to follow the lead of Liverpool and Manchester. The present capital of the Yorkshire College is a little over a quarter of a million, and a great county effort will be made to raise this to half a million. Birmingham in three years subscribed £400,000, and the greatest, if not the richest, county in England should find no difficulty in raising half that sum.

MR. R. G. MCKINLAY, of the Bootle Municipal School, has been appointed Head Master of Stevenage Grammar School.

THE REV. C. EDWARD COOPER has resigned the Head Mastership of Hurstpierpoint College, a post he has held since 1880.

A HUNDRED AND SEVENTY-SEVEN courses of University Extension lectures have been provided by the Oxford Delegates during the past year. The average number of students in regular attendance was nearly eighteen thousand.

No fewer than 233 bodies have, through their officers, signed a memorial to Lord Salisbury asking that men and women may be equally qualified to serve on any Local Education Authorities which may be constituted.

SCHOOLMASTERS are often consulted by the parents of their pupils as to the pros and cons of the various professions. We might bring to their notice a section of the "Daily Mail Year Book" for 1902, entitled "The Choice of a Career: How to enter the Professions." They will find therein particulars of entrance into the professions of accountant, architect, chemist, doctor and dentist, Civil Servant, engineer, barrister and solicitor, and student interpreter. Also how a boy may enter the Army, Navy, ministry, University, Diplomatic Service, and the service of the London County Council. Many professions are very little known by parents if they happen to lie outside their own sphere; and yet analytical chemistry, mining chemistry, and the various colonial services afford fine scope and opportunities.

MR. A. DEVINE writes:—On page 36 of your issue of January you speak in a leaderette of Lord Beaconsfield's definition of a deputation as "a noun signifying many but not much." May I correct you with regard to the author of this saying? Lord Beaconsfield did not say this, but Mr. Stuart-Wortley, and the exact words were: "A noun of multitude, which signifies many but does not signify much."

AT the last Diploma Examination of the College of Preceptors there were 439 entries: 12 for the Fellowship, 45 for the Licentiate, and 382 for Associateship; of these one, four, and 108 respectively passed. This is a large increase on previous years. The Register casts its shadow before.

THE Headmaster of Uppingham School, writing to the *Times* in support of compulsory military drill, tells us that he has "known excellent boys whose ruling desire was to shoot an enemy in fair fight." Ghost of Edward Thring!

MR. ARTHUR SIDGWICK has been elected an honorary member of the Incorporated Association of Assistant Masters.

SIR JOSEPH WALTON has been elected a member of the Senate of London University by a large majority of votes over the opposing candidate, Mr. J. Easterbrook.

AN important meeting has been held in support of a fund for the endowment of a Professorship in History at the South African College, Capetown. It seems likely that the project will be immediately realized.

THE executive committee of the Carnegie Trust have paid the University fees for the last session of 2,441 students, amounting to the sum of nearly £23,000.

IT would appear that the *chef* of the Holborn Restaurant is accustomed to suit his dishes to the political views of the guests, if we may be guided by the *menu* of the Assistant Masters' annual dinner. For soup there was a choice between "Mock Turtle à la Devonshire" and "Vermicelli à la Charity Commission." One fish was "Kekewiché," and the other was treated "à la Gorst." The *entrées* were "Timbales de promotions à la Headmastership," and "Cutlets à la Governing Bodies." Roast Beef was served with the spicy sauce of "Horseshoe à la Hig-grade Schole." Several dishes with equally apposite names followed, and at the foot of the *menu* came "Coffee de Grantham."

THERE are in future to be two certificates granted by the Scotch Education Department—the Leaving Certificate proper to candidates over seventeen years of age, and an intermediate certificate for candidates over fifteen.

THE Royal Drawing Society of Great Britain and Ireland has lately published reproductions of prize drawings of the Twelfth Annual Exhibition, 1901, and we must congratulate the Society on the excellent work done by its pupils. Some of the memory drawings by children of four years old show great powers of observation and reproduction, and there is some really excellent leaf and flower drawing in the brush work. The gems of the collection are the illustrations of "Mazeppa" and "Carting Sand" (advanced brush work), both by the same hand. It is difficult to believe that these are the work of a boy of thirteen—they show real genius. Results such as these should encourage the Director to go on with the good work he has begun.

WE regret to announce the somewhat sudden death of Mr. A. W. Bennett, for some years past a regular contributor to this journal. Mr. Bennett, at the time of his death, was the editor of the *Journal of Microscopy*, and Lecturer on Botany at Guy's Hospital. For many years he was Professor of Botany at Bedford College, London. Among his numerous works the most popular was the "Flora of the Alps." His perfect simplicity of character and kind-heartedness endeared him

to a large circle of friends, and members of the Savile Club will miss a most clubbable man.

PROF. N. MURRAY BUTLER has succeeded Mr. Seth Low as President of Columbia University. The appointment will give universal satisfaction on both sides of the water. As an educational writer, Dr. Murray Butler has no living superior, and those who know him affirm that he is no less distinguished as an administrator.

THE Society of Medical Phonographers will hold its next Annual Shorthand Examination early in May, 1902. Two prizes are offered, each of the value of £5, one for first-year students and one for students of more than one year's standing. Intending candidates should send in their names, before April 15, to Dr. P. G. Griffith, Bonhams, Farnborough, Hants.

TEACHERS' GUILD NOTES.

A DETAILED account of our Educational Conference on January 13 and 14 will be found elsewhere; but a word or two of a general character concerning it may be said now. To begin with, the Lecture Hall of the College of Preceptors, the College building generally, and its situation are admirably adapted for such a gathering, which was never intended to be on the scale of a General Conference of the Guild. The subjects of discussion, with one exception, were of a purely professional character. They having been very carefully chosen, all that was necessary to the success of the Conference was that openers of discussion who could speak with knowledge and authority should be secured. The programme showed that we were fortunate in this respect, and a high standard was reached throughout in the papers read. The only subject for regret was that the dates (fixed before the arrangements for the reopening of schools were settled) clashed with the beginning of term in a great many cases. The Education Committee of the Council and its Chairman, the real authors of the programme, may be satisfied that their pains have been rewarded.

A LISTENER at such a Conference gets, as his first impression, an idea that things are very wrong in many ways in the teaching in our schools; but he has to correct this idea by remembering that experts in any subject are apt to have very high ideals, and that what they complain of is mainly a falling short of those ideals. Good work is good, though it may not be the best. The most difficult questions are, perhaps, those involved in pleas for the introduction of lessons such as are not given at all in many schools, with the inevitable consequent sacrifice to be made of part of the existing time-table. Such questions arise in connexion with Nature-study and Field-work in geography. Geometry and English literature can only properly be discussed on the basis of the "how to be undertaken," but the former two must be treated on the basis of the "whether" as well as of the "how."

THE opening papers and discussion on "The Inspection of Secondary Schools" were especially valuable as bearing on a subject of immediate importance to all teachers in such schools, and because, besides the weighty and trenchant arguments of Mr. Swallow, the views of two members of the Bryce Commission and the Consultative Committee of the Board of Education—the Chairman of Council and Mrs. Bryant—found expression. Canon Lyttelton's remarks at the close of the discussion were, unfortunately, not put on record in the daily Press, as the reporters left a few minutes before the rising of the Conference. A first-class inspectorate, which, at the same time, should not be ruinously costly, was what the speakers wanted. The Chairman suggested as a solution that a Chief Inspector, with the highest qualifications, from the point of view of those who have to be inspected, and with a salary of, say, £2,000 a year, should be chosen first, and that some five full inspectors, with similar qualifications and with £1,000 a year each, should be appointed to work with him, controlling a number of younger and less experienced men working entirely under their direction. We are not sure that, after a standard of quality has once been set, it is necessary, even from the teachers' point of view, to have men of the highest professional

calibre as inspectors. Experience of the life and working of many schools would give, for most purposes of the inspectorate, to a man or woman of talent, the desired superiority over the head of any one school.

THE Council of the Guild have modified somewhat, in details only, their resolutions on the tenure of assistant teachers in secondary schools, endowed or under proprietary bodies. These resolutions were printed in the Annual Report of the Guild for 1901. In their modified form they run as follows:—(The resolutions are intended to apply to women as well as men.)

(a) The maximum period of probation on the appointment of an assistant master to any school should not exceed one year. If at the end of the period of probation the head master should desire to retain the services of the probationer, he should recommend him to the governing body for a permanent appointment. When, however, an assistant master has had either no experience, or less than two years' experience, the probationary period should be extended to two years.

(b) A permanently appointed assistant master should only be dismissed, on the instance of the head master, by the governing body. The master threatened with dismissal should be allowed full opportunity of laying his case before the governing body.

(c) In cases of misconduct the head master should have the power of suspending an assistant master thus appointed till the case comes before the governing body for decision.

(d) A right of appeal on the part of either the head master or the assistant should in all cases lie from the governing body to the Board of Education.

(e) All internal changes in the distribution of the staff should be made by the head master. Such changes should be reported by the head master to the governing body.

(f) No assistant mastership should *ipso facto* terminate in consequence of a change of principals.

The following further resolutions have also been passed by the Council:—

(a) Head masters, if dismissed by their governing bodies, should have a right of appeal to the Board of Education.

(b) No school under governing bodies should be put on the Register of Efficient Schools, to be kept by the Board of Education, unless it accepts the foregoing conditions of tenure.

(c) Any scheme for a pension fund, framed by the governing body of a school, should apply equally to assistants and to principals.

A pamphlet on the subject of "The Tenure of Office of Assistant Masters," published anonymously in 1872 by the Rev. T. B. Rowe, then an assistant master at Uppingham, and later Head Master of Tonbridge, has recently been recirculated, without alteration, by the author. He puts the case for greater security of tenure logically and forcibly. The grievance still remains, and is felt generally by those whom the change would benefit. It will be difficult to overlook it when the organization of secondary education is taken seriously in hand.

COLONIAL AND FOREIGN NOTES.

FRANCE.

Proposals for spelling reform are taking more definite shape, and receive increased support. In the present Session of the Conseil Supérieur MM. Henri Bernès and Devinat will submit a resolution having the following objects:—(1) The Gallicizing of words of foreign origin which have been definitely adopted in French and meet a real want; (2) the unification of orthography for words of the same family; (3) the simplification of the double consonants *ph*, *th*, *rh*, and hard *ch*; (4) the simplification of doubled consonants when these have ceased to be pronounced and are useless for indicating a connexion with some Latin or Greek original; (5) the suppression of plurals in *x*; (6) the substitution of *i* for *y* of the same sound. Curious it is how what is called the reform of syntax has stimulated the demand for a revised orthography. We venture to prophesy that at least the plurals in *x* are doomed.

UNITED STATES.

If we have deprecated the touting for endowments, we have none the less great satisfaction when wealth flows into the channels of education. In America the golden stream takes this course with surprising fullness. Benefactions which in past centuries and in older countries would have fallen to the Church go to enrich the school. Let us illustrate the splendid scale of American munificence to education. In

recent year donations and bequests under this heading amounted to 21,925,436 dols. Mr. Andrew Carnegie has promised to double his already large gifts of one million dollars to the Carnegie Institute and one million dollars to his new Polytechnic School, upon conditions that are sure to be fulfilled. Under the will of Mr. Jonas G. Clark, founder of the Clark University at Worcester, that institution receives an endowment fund of two million dollars. With a kindly sense of a pressing educational want, Mr. Lewis Elkin, of Philadelphia, has left a million dollars for a teachers' annuity fund to benefit those who have taught for twenty-five years or more, this being the first fruits of an agitation for the pensioning of teachers. Mrs. Indiana Fletcher Williams has bequeathed seven hundred and fifty thousand dollars to found, as a memorial to her daughter, a college in Virginia, to be called Sweetbriar Institute; and plans have already been drawn for a range of buildings about two great terraced courts. Rutgers College has had twenty-five thousand dollars from Miss Helen Gould; whilst the University of Pennsylvania acknowledges, not money, but something of the best that money can buy, in the form of nineteen thousand volumes from the library of a late well known physician.

Not unnaturally, amid so free an outpouring of gifts, the question is still debated whether the freedom of academies is likely to be hampered by the influence of donors. The opinion of the *Educational Review* on the point is so clear and sound that we reproduce the editor's declaration in his own words:—"No institution can be a University in which a benefactor has the right to insist that the doctrines—economic, philosophic, biologic, or other—which are believed by him to be true shall be taught. Such institutions may, do, and perhaps should, exist; but they are not Universities, and by assuming the name do not become so. A University conserves the truth as truth appears in its own light. It alters its standards of truth in the various domains of knowledge with the discovery of new facts, and it entertains no prejudices which are allowed to weigh against evidence and logic. The benefactor of a University should realize this, and it should in fairness be pointed out to him when his gift is made. He may wish to propagate the Euclidean geometry, but the followers of Lobachewsky may, before a decade has passed, have shown that to be undesirable. If so, a University cannot propagate the Euclidean geometry, save for historical and comparative purposes. A thousand years ago the Ptolemaic theory of the motions of heavenly bodies might well have appealed to the analogue of the modern University benefactor. If it had done so, the foundation would soon have become ridiculous. It takes some courage to believe that truth is mighty and will prevail, but Universities have that courage and represent it before the world. To part with any portion of it for money would be to compound an intellectual felony."

From San Francisco comes the ill news that the city, after abolishing slates from the schools, has reverted to them. To the uninitiated this may seem a small thing; but the public health never is a small thing. Pleasant, on the other hand, it is to learn how the children of a Boston school have been using the town park. In it, we are told, they have watched the procession of flowers from early spring to autumn; and it has furnished material for many Nature-study lessons. The classes were taken to the garden, and, under the guidance of the teacher, made tours of inspection. Having studied in school the hyacinth, the daffodil, and the tulip, the children could enjoy the full glory of the flowers when they viewed them in their growth. The fernery, too, was a source of delight as they beheld, day by day, the unfolding of the soft, downy curls. Surely more could be done in England to utilize for the school the pleasure-grounds that are numerous in all the larger towns. What is needed in visiting such places is to substitute for gaping wonder trained and informed observation. The example of Boston shows how this may be done.

On December 14, 1901, a significant event happened in the United States. Mr. Miles O'Brien, President of the New York Board of Education, laid the corner-stone of the first high school of commerce in the city, and, indeed, in the country. The foundation has its origin in a resolve no longer to import the trained financiers and skilful accountants required for the transaction of business in the grand style, but to produce them at home. An extract from the speech delivered by Mr. Carnegie on the occasion reveals the springs of his liberality to education, and may end this note:—"Confucius," he said, "was surely among the first and wisest of true democrats, for it was he who announced, five hundred years before Christ, that, given education, there can be no distinction of classes. Education levels all, nay, I should say, elevates all, and we see in this new high school of commerce another proof of the equality of the citizen, for here the son of the labourer enters upon exactly the same terms as the son of the millionaire. Poverty is no bar. As for rank, we have none. Admission turns upon one thing: Can the student pass the examination; is he sufficiently educated? If so, he has equality with his fellows. Such is democracy, such the American ideal."

JAPAN.

The Report on Education in Japan for the thirty-second year of Meiji comes late to hand, but makes up for its tardiness by bringing welcome news of educational progress. A safe test, if not of such progress, yet at least of the wish for it, is always supplied by what is spent

to further it. The true measure of zeal is sacrifice, and not loquacity. Since during the year in question Japan devoted to the service of education yen 4,232,801, an increase as against the previous year of yen 1,237,404, the State must have recognized the value of earlier investments of the same kind. "The minds of the people," says the Report, "have been directed more than ever towards the importance of education. Instead of complaints about the heavy burden they have to bear, there is a desire to contribute more freely towards the funds needed for educational purposes." The chief objects to which additional sums were allotted were, maintenance of students, libraries, technical schools, and aid to elementary education. As by adopting Western culture the island Empire has gained such significance for the future, we lay before our readers a few more figures relating to that phase of its activity which concerns us most. The total number of schools in the Empire was 28,717; of teachers, 100,106; of students and pupils, 4,513,334; and of graduates, 684,767. This shows an increase on the previous year of 206 schools, 7,143 teachers, 265,993 students and pupils, and 58,624 graduates. Of children of school age the attendance was 72.75 per cent., or 3.84 per cent. more than in the previous year. It was a sure proof of growing enlightenment that the proportion of girls at school was notably greater than before, the local authorities encouraging them to attend and parents appreciating more justly the necessity of female education. The increase in attendance for girls alone was 5.31 per cent., whilst that for boys alone was 2.64. The Japanese have seen that educated women are an essential factor in the uniform development of a State; and, indeed, the primitive doctrine that girls had learned enough if they could pound the corn or make a fire by rubbing sticks is now discredited in several countries. We have no disposition to provoke a war, but we observe incidentally that in this matter Germany lags far behind England and the United States. Let us return, however, to Japan, and quote from the Report a paragraph bearing upon the same subject:—"The want of means for the encouragement of the higher general education of females has been keenly felt by those concerned. In February of the present year the Imperial ordinance relating to higher female schools was finally issued. The ordinance provides that higher female schools shall be established in the Hokkaido as well as in each *Fu* and *Ken*. Although no remarkable progress has yet been made in this respect, owing to the recent promulgation of the ordinance, still it may safely be inferred that the higher general education of females will be entirely remodelled in the near future. However, in regard to schools previously established, the growing number of pupils has already led to the enlargement of school buildings as well as to the improvement of school apparatus and furniture. Generally speaking, much greater attention is now being given to the training and health of the pupils."

The chief want in Japan seems to have been a supply of properly qualified teachers. Attempts were made to meet the deficiency by increasing the number of pupils in normal schools and by affording greater facility for obtaining licences. The second of these measures was of doubtful wisdom; and both together proved inadequate. As a natural consequence of the lack of teachers, the classes were overcrowded. The average number of pupils under one regular teacher was 101.46 in the case of ordinary and 65.13 in the case of higher elementary schools; and, although, if assistant and special teachers be taken into account, these figures are much reduced, there was clearly, in many instances, that overburdening of the teacher which is as injurious to his pupils as to himself. For the Kindergarten we notice that the Japanese rule is that the number of infants trained under one conductor should not exceed forty; and we think the limit is put too high. In the scarcity of native teachers it is not surprising that 398 foreign instructors are employed in Government, public, and private schools, of whom 158 are from the United States, 122 from Great Britain, 60 from France, and 24 from Germany. As these are principally engaged in the teaching of languages, English is obviously in by far the most demand.

Discussion being often raised as to the physical structure of the Japanese, anthropologists and others will thank us for citing from the Report trustworthy statistics. According to the tabulated results of examinations made in April on the physique of students and pupils in the institutions under the control of the Department of Education, the number of those examined was 8,444 males and 1,141 females, from seven to thirty-eight years of age in the former, and from seven to thirty-three years of age in the latter. The average of height, weight, and chest circumference seems to increase up to the age of twenty, when it attains its maximum. In the case of males at the age of twenty, the average height was found to be 162 centimetres, weight 53 kilogrammes, and chest circumference 80 centimetres; while in the case of females at the same age, the average height was 149 centimetres, weight 48 kilogrammes, and the chest circumference 80 centimetres. We have not at hand the figures to make a comparison which would, perhaps, be invidious; but they will be easily accessible to our readers.

VICTORIA.

The subject of technical education has been receiving the attention of a Royal Commission. It recommends that the permanent head of the Department should be an officer holding the position of Inspector-

General of Schools—some educationist of high standing and administrative skill, who would bring professional training to bear on the complex problems continually arising, and be able to keep pace with the ever-changing conditions of a progressive system of public instruction. The Commissioners approve the English and Continental system of continuation schools, and point out the benefits that would accrue to pupils of the State schools in Victoria from a similar arrangement; but they do not ask that attendance in such schools should be compulsory, as in Germany, or that the schools should be free, preferring for their parts a liberal scheme of scholarships. The tendency of the secondary schools to draw boys to professional life should be counteracted, they suggest, by the establishment of laboratories and workshops, and by more technical training during the course of instruction. With regard to the teaching body in general, they pronounce strongly in favour of "the registration of all teachers, whether primary or secondary, and of private, primary, and secondary schools, in order to secure the highest efficiency of the teaching profession, and to afford some guarantee to parents of the qualifications and capacity of teachers." We need hardly say that we regard this declaration with unmixed content.

A well-known Australian journal of education adduces a new reason for ending the war—a reason pedagogic, and to be deduced from the following story:—In a district where khaki clothing is largely made much of the work is put out to be done at home. A sorely neglected child was told one day that his mother must wash his face before he came back to school. When the boy returned in the afternoon, if anything a little dirtier than before, the teacher inquired why the face had not been washed. "Please, miss," came the answer, "mother said she couldn't be bothered; she had too much to do. I must wait till the war is over."

UNIVERSITIES AND SCHOOLS.

LONDON.

At the ordinary meeting of Convocation, held Jan. 20, Sir Joseph Walton was elected to the Senate by 1,124 votes against 381 for Mr. Easterbrook. These votes were cast solely by the Arts members, the voting being now by faculties. It may be noted that Sir J. Walton polled within ten of the votes given (Oct., 1900) for Dr. McClure, the retiring Senator.

While the votes were being counted an interesting discussion took place on the following motion: "That this House is of opinion that, in the interests of commerce, science, and education, legislation should be promptly undertaken to make compulsory in this kingdom, after a proper interval, the use of the metric system of weights and measures for all purposes." This was moved by Mr. W. Pringle, B.A., who gave a clear and full account of the reasons for the change, and pointed out that, unless we bestirred ourselves, we might find ourselves in a position of splendid isolation in this matter—a fatal one for commercial relations. All reports—consular, Chambers of Commerce, trade unions, &c.—were unanimous in favour of the movement.

The seconder, Mr. H. Hanford, B.A., joined with the mover in regretting that time had not allowed them to obtain the names of distinguished members of the House to introduce this important motion. He thought the resolution appropriate in a modern University like ours, with its schools of economics, &c., and that, in the interests of national efficiency, the enormous waste of energy involved in the present arrangements as to weights and measures and foreign trade should be remedied. The usual objections to the metric system were found by experience not to be well grounded. Coinage reform was hopeless at present.

Sir Philip Magnus warmly supported the resolution, and thought they had never before dealt so fully with a question of such import to commerce, science, and education, and he regarded the motion as a sign of the modern character of the reconstituted University. Mr. T. Wilson preferred the two systems side by side. Sir Albert Rolit gave a very hearty support to the motion: there was no doubt that the lack of the decimal system was a hindrance to our trade. Our University should unite the highest culture with the advancement of commerce. He intended to move in the Senate for the establishment of a degree in commerce.

The resolution was carried almost unanimously without any amendment having been proposed, and on the motion of Mr. Hanford, seconded by Sir A. Rolit, it was resolved to request the Senate to send a copy to the President of the Board of Trade, to the members for the University, and to the Secretary to the Decimal Association (Botolph House, Eastcheap, E.C.).

On the motion of Dr. Walmsley, it was resolved that at the meeting in May Convocation should elect a Deputy Chairman.

Mr. Hanford had given the Chairman notice of a question as to whether the reported handing over of the rest of the Imperial Institute building to the nation would prejudice the eventual possession by the University of the entire site. In reply, Sir E. Busk said that within

twelve hours of the appearance of this report our Vice-Chancellor had obtained an interview with the Government officials on the matter—a proof, at any rate, that the question was not neglected.

At the meeting of the Senate of the 22nd, Sir A. Rolit duly moved his motion for a degree in commerce, which was referred to a Special Committee for report.

At the same meeting two munificent gifts were announced, viz., £30,000 from the Drapers' Company towards the debt on University College, on condition that the latter be incorporated in the University, and its site, lands, buildings, and endowments be at the complete disposal of the University; also a second offer to the same amount on the death of the anonymous donor, and of £1,000 a year during his lifetime. The Senate and the authorities of University College must agree on a scheme before February 28, 1903.

The grant of £10,000 a year by the Technical Education Board of the London County Council was (subject to that Board's approval) allocated to (1) founding of two professorships and two assistantships in chemistry; (2) organizing teaching of German in London by appointing two professors and three readers; (3) grants of £1,425 and £1,000 a year to two institutions in aid of the Faculty of Engineering; (4) appointing and payment of the regular staff of teachers in the London School of Economics; (5) reservation of £800 a year, pending negotiations with the London County Council as to establishment of a day training college.

A scheme was also approved for establishing advanced courses of study in physiology in the University buildings, and £400 was voted to meet the donation of £2,000 by Mr. Walter Palmer, which was announced at the last meeting of the Senate.

An important report was received from the Faculty of Medicine advising "That the Senate should take steps to secure funds to enable it to establish in the near neighbourhood of the University a school of preliminary and intermediate medical studies."

The regulations in Theology for external students are (for 1902) adopted for internal students also.

Perhaps some graduates may not be aware that the office of Registrar (until lately held by Mr. Dickens) has been abolished, and that we now have a Principal, Mr. Rücker; Registrar of the Academic Council, Dr. Heath (lately Assistant Registrar); Registrar of the Council for External Students, Mr. Milnes (formerly Clerk to the Senate); and Secretary to the Senate, Mr. Percy Wallace (formerly of the London Society for Extension of University Teaching).

The number of candidates entered for the recent Matriculation was 1,658, an increase of about a hundred on the entry for January, 1901.

Mr. Francis Storr has been appointed a member of the Board of Studies in Pedagogy for 1902.

Among recent successes of women may be noted that of Miss Temple Orme at LL.D., and of Miss Ellen Mary Sharp at M.B., with the University Scholarship and a Gold Medal in Forensic Medicine. The Scholarship in Classics at B.A. was carried off by a Cambridge man (Mr. H. G. Wood), as was that in Mathematics at B.A. and B.Sc. (Mr. Frank Slator).

UNIVERSITY COLLEGE, LONDON.

Entrance scholarships for the session 1902-3 are announced as follows:—Three Andrew Scholarships, for Classics, for Mathematics and Science, for Modern Languages and English History, each of £30. Entries on or before April 30; examination begins May 13. The West Scholarship in English of £30, open to students who have passed in First Class of the June London Matriculation. In the Faculty of Medicine a Bucknall Scholarship of £30 for four years and two exhibition of 60 guineas. Entries on or before September 20.

OXFORD.

Among the losses by death, during the eight weeks which have elapsed since my last letter, the best known name is doubtless that of Sir E. Ashmead Bartlett, M.P. for a division of Sheffield. A Christ Church man of some ambition and figure, a clever speaker at the Union in the palmy days of Asquith, Thomas Raleigh, and Herbert Paul, he gave promise which, perhaps, was hardly fulfilled. A more really distinguished man was Sir H. Gilbert, formerly Professor of Rural Economy, who, for more than half a century, continued the experiments—in conjunction with Sir J. Lawes—that made him so high an authority on agricultural chemistry. Another man of science, well known to former generations at Oxford, was H. G. Madan, Classical Scholar of Corpus, afterwards Fellow of Queen's College, and for some years science master at Eton. Two deaths in the last vacation have been due to lamentable accidents. F. J. Bingham, late Exhibitioner of Keble College, was killed in the railway accident at Liverpool on December 23; and W. Clive, who graduated in 1896 from Trinity College, perished on December 9, when visiting the Grande Soufrière of Dominica, in an endeavour to save a guide of his party who had been overpowered by the sulphurous exhalations of a usually quiescent crater.

I omitted to mention in my December letter a successful raid accom-

piished in the October term against that pestilent institution, the surreptitious betting agency, which has been so disastrously increasing in various towns during the last few years. It came to the knowledge of the police that there were no less than four of these offenders, nominally "athletic purveyors"—vendors of various articles required for cricket, lawn tennis, &c.—whose real business was to provide opportunities for youth and inexperience to get rid of their money. The City and University officials acted together: evidence was quietly obtained, the attack was carefully organized, a simultaneous pounce was made, and all four were arrested. The case was clear and complete: the dupes were the witnesses; and all four offenders were fined £100, the maximum penalty allowed by the Act. The case came up before the City magistrates in the morning; and the profitable nature of the business is significantly indicated by the fact that the whole sum (£400) was paid before two o'clock on the same day.

The chief incidents of the Vacation which were of academic interest were the election of scholars for the year by a large proportion of the colleges, and the results of the examination for the principal classical prizes of the year, namely, the Ireland and Craven Scholarships. On the first point there is nothing special to record; but the winning of the Ireland by a "dark horse" excited some interest. The striking fact for some years past has been (in these contests) the indisputable pre-eminence of Balliol College; in the last ten years, for instance, besides winning the great majority of the Cravens and "Distinctions," the first place has fallen to that college no less than seven times. This year it had to content itself with one Craven and two Distinctions, the Ireland being awarded to Mr. J. Jackson, an Honorary Scholar of Queen's College, from Appleby School, in Westmorland. The triumph was all the more remarkable as it is stated on good authority that Mr. Jackson had never done Latin or Greek verses till some time after coming into residence at Oxford.

In regard to University legislation, it is too early in the term to expect any detailed information. For some years past, though not a few minor reforms have been recorded, there has been no considerable project brought before the University. Various causes are assigned for this: the general reaction (not confined to England), the exhaustion due to previous efforts, the impaired financial position of the University, the less progressive attitude of the modern Don. Some of these guesses may be partly true: but the fact is indubitable. But recently certain signs have appeared that the winter of our inactivity is passing over. There are rumours and hints of movement in more than one direction. The questions of (1) a more complete recognition by the University of the modern languages; (2) enabling mature students desirous of residing a short time in Oxford for special work, and not aiming at any degree, to become members of the University without joining either a college or the unattached; (3) reconsidering one or more of the Pass Examinations; (4) formulating the needs, either present or imminent, of the University, in regard to subjects, teachers, and institutions, as the first step towards supplying deficiencies and enlarging the University's sphere of usefulness—all these questions have certainly in the last half-year reached the stage of private discussion, and some of them have gone further. Of course discussions may end in nothing—a truth of which we have had ample experience: but it is equally true that discussion is the indispensable preliminary to action, and it may be reasonably hoped that these signs of activity will not be all abortive. A stimulus has further been supplied by recent events in the educational world, such as the vigorous start of Birmingham University, the discussion on the coming Education Bill, the bursting of the Victoria pod into three new seeds, and the first step just taken by Order in Council towards the long desired Register of Teachers.

The following appointments have been announced:—The Right Hon. J. Bryce, D.C.L., M.P., to deliver the Romanes Lecture. The Right Rev. Bishop of Oxford, the Very Rev. the Dean of Peterborough, the Rev. the Rector of Exeter College, the Rev. J. O. F. Murray, M.A. (Emmanuel College, Cambridge), the Rev. P. N. Waggett, M.A. (Christ Church), to be select preachers; P. Waterhouse, M.A. (Balliol), to be Governor of Newbury School; the Right Hon. Sir W. Hart Dyke, Bart., M.A., M.P. (Christ Church), to be Governor of South-Eastern Agricultural College, Wye; R. F. Dale, M.A. (Queen's), and W. W. How, M.A. (Merton), to be Masters of the Schools; the Rev. J. O'F. Pope (Christ Church), licensed to keep a Private Hall at 11 St. Giles, with 13 St. Giles as *sedes annexa*.

The following degrees have been approved:—Degree of D.D. by Diploma to Rev. Charles Gore, Bishop-Designate of Worcester; Degree of D.Litt. to A. J. Butler, M.A. B.N.C. (Biblical Archaeology); Degree of Bachelor of Science to A. E. Boycott, B.A. Magdalen ("Effect of Temperature on Nerves"), A. J. Eward, non-coll. ("Movements of Protoplasm"), M. H. Gordon, M.A. Keble ("Bacteriology of *Scarlatina*").

The following University scholarships, exhibitions, and prizes have been awarded:—Ireland Scholarship to J. Jackson, Hon. Scholar of Queen's College; Craven Scholarships to E. A. Burroughs (Balliol) and H. L. Henderson (Christ Church), equal; Senior Kennicott (Hebrew) Scholarship to H. W. Robinson, B.A. (non-coll.). Prizes (in the same examination) to Rev. G. H. Box, M.A., and Rev. F. A.

Ingle, B.A., both of St. John's College; Senior Mathematical Scholarship to A. W. Conway (Corpus Christi College); Junior Mathematica Scholarship to W. E. Grimshaw (Corpus Christi College); Exhibition (in the same examination) to R. C. Roe (Balliol).

CAMBRIDGE.

The vacancy in the Chair of Agriculture caused by the appointment of Dr. Somerville to a Government post has been filled by the election of Mr. T. H. Middleton, who succeeded Dr. Somerville as Professor of Agriculture at Durham. Prof. Middleton has had a wide experience of farming in Scotland, England, Wales, and India, and has acquired a high reputation as a teacher and investigator in agricultural science. He comes into residence next term, and meanwhile the academic course is being given by Mr. T. B. Wood, the Secretary of the Board of Agricultural Studies.

Dr. S. S. F. Fletcher is this term lecturing on "The History of Education from the Renaissance onwards." Mr. Sidney Lee, as Clark Lecturer, is delivering a course on "Foreign Influences on Elizabethan Literature"; and the Bishop of Coventry, as Lecturer in Pastoral Theology, on "The Pastor in Teaching, or Religious Instruction viewed in connexion with Modern Educational Methods."

In the December Examination of the Teachers' Training Syndicate two men and fifty-five women passed in the Theory, History, and Practice of Education. Forty women also obtained a certificate of practical efficiency.

A brilliant career has been brought to an untimely end by the death, from a riding accident, of Mr. B. N. Cama, Scholar of St. John's College. With his twin brother, Mr. C. N. Cama, he came to the University in 1898, bringing a high reputation from Bombay. During their college course the Parsee brothers kept step in a remarkable way, and graduated in June last as sixth and seventh Wranglers respectively. They won a distinguished place in the Indian Civil Service Examination in August, and were preparing for the final test in riding when the fatal accident took place.

The Rev. H. S. Cronin, B.D., Dean of Trinity Hall, and lately in command of the University Volunteers, has been elected a Fellow of his college. Mr. E. H. Griffiths, F.R.S., the new Principal of University College, Cardiff, has been approved for the degree of Doctor of Science. The Burney Prize, for an essay on "Design in Nature," has been awarded to Mr. D. H. Macgregor, Trinity, President of the Union Society.

SCOTLAND.

At a recent meeting of the Executive Committee of the Carnegie Trust, it was announced that fees amounting to £22,941. 16s. 6d. have been paid for 2,441 students. The total number of matriculated students in the four Universities is about six thousand, and consequently it may be inferred that about two students in five have taken advantage of the gift. Many matriculated students are, of course, ineligible; but, on the other hand, fees have been paid for many who are not matriculated students—for instance, the students of the veterinary colleges. The exaggerated newspaper rumours about the numbers are thus dispelled, and we have the satisfaction of knowing that this year about £27,000 will be transferred from the fee-paying to the equipment side of the account.

Most, if not all, of the Universities have now submitted to the Carnegie Trust statements of their needs, in so far as these come within the scope of the Trust's action. The only statement which has been published is that of Glasgow University. It asks for a capital grant of £95,000, of which £75,000 is required for laboratory extension, especially for the purpose of research. Of the remaining £20,000, £7,500 is asked for completing the endowment of a Chair of Geology and £6,500 is needed for the Library. In addition to this capital grant, the University asks for annual grants, amounting in all to over £17,000, of which about £8,000 is required for science and medicine, £1,200 for political economy, English, and history, £2,300 for post-graduate fellowships, and £2,700 for the Library. It is mentioned in course of the report that the Extension Scheme has now received subscriptions amounting to £65,000. To this fund one very interesting contribution has recently been made. The Glasgow Corporation has, by a large majority, voted £5,000 from the Common Fund, to be taken either as an addition to the general fund or as a contribution towards establishing a Lectureship on Social Philosophy, as the University authorities may determine. Several English municipalities, including London, Nottingham, Sheffield, Birmingham, Manchester, Liverpool, and Leeds, give large annual grants to Universities and colleges in their respective towns; but this is the first occasion on which a Scottish corporation has made any such grant. It is to be hoped that other Scottish municipalities may follow the example of Glasgow. In each of the University seats the town has now a share in the government of the University, and Edinburgh, in particular, boasts of its "Town's College," in which the Town Council has for hundreds of years enjoyed a great deal of patronage and rule without making any monetary contribution to its support.

The Aberdeen Extension Fund has now been practically completed, the subscriptions amounting to nearly £31,000, and the Dundee Scheme (to which reference was made in these notes some months ago) has made an excellent start with a contribution of £10,000 from Sir W. Ogilvy Dalgleish, half of which is to go towards the building of the new Medical School and half to the extinction of debt.

The Scottish Education Department has issued an important circular, in which the new arrangements regarding leaving certificates are fully explained. As was mentioned here last month, leaving certificates for individual subjects are no longer to be issued, but successful candidates "will receive instead a document certifying that they have passed in a specified subject and grade in the leaving certificate examination." There are in future to be two classes of certificate, one (the leaving certificate proper) being intended for pupils who "have been receiving higher instruction at some recognized school for not less than four years," while the other, the intermediate certificate, will be open to those who have been under instruction for not less than two years. Candidates for the leaving certificate must not be under seventeen years of age on October 1 of the year in which they pass their last written examination for the certificate, and candidates for the intermediate certificate must not be under fifteen. For the leaving certificate, candidates must pass in four subjects on the higher grade standard, or in three subjects on the higher grade standard and two on the lower. All candidates must pass in higher English and in either higher or lower mathematics, and those who take two or more languages other than English must include among these higher or lower Latin. For the intermediate certificate there are also required four subjects, at least one being on the higher standard. English and mathematics must be taken by all candidates, and the remaining subjects may be either science with one language, or languages only. None of the certificates, however, are to be given "merely on the strength of the requisite number of passes in the written examination." The Department must be satisfied, from the reports of the inspectors, that "the course of instruction undergone by the candidate has been of adequate range and quality, and that proper attention has been paid to those elements of the curriculum that do not admit of being fully tested by written papers." In particular it must be shown that pupils are continuing satisfactorily the study of subjects in which they have passed in former years, that their knowledge of a language has not been "wholly obtained from disconnected reading," but includes "a real acquaintance with at least some of the masterpieces of its literature," and that, "especially in the case of a modern language, sufficient care has been bestowed on the training of the ear." In connexion with this last requirement oral examinations are to be instituted, and "increasing importance will be attached to this aspect of the examination in future."

The new regulations have been received on the whole with favour. One important effect of them will be the sharpening of the distinction between the primary, the "higher-grade," and the secondary forms of education. Each has now its certificate of "graduation," or satisfactory completion of its training—the primary school in the merit certificate, the higher-grade school in the intermediate certificate, and the secondary school in the leaving certificate. It is, however, feared by some that this sharpening of the distinction between the various kinds of school, along with the requirement of a four-years' course of secondary education after the age of thirteen, may prevent many county schools of the type which is common in the North of Scotland from sending up as many pupils as they do at present for the leaving certificate examinations, and, consequently, that secondary education in the county districts may be discouraged. There is also difference of opinion as to the age limits. It is pointed out that some students at present pass the University Preliminary before they are seventeen years of age, and that too high an age limit will add to the cost of a secondary education, and thus reduce the number of pupils. On the other hand, there is no doubt that the average age of students entering the University is now over seventeen, and the limit will certainly have a good effect in decreasing over-pressure and cramming. As regards the intermediate certificate, it has also been suggested that, if the age limit had been fixed at fourteen, instead of fifteen, pupils of primary schools who have taken the merit certificate, say, at twelve, and who must continue to attend school until they are fourteen, would have had something definite to work for. The imposing of other tests than that of written examination is also generally commended, though there is difference of opinion as to the practicability of the oral examinations. It is impossible at present to forecast accurately the effects of the change, but they are certain to be considerable; and the working of the new regulations will for some time be watched with much interest. In any case, the general spirit and intention of the Department's action are altogether admirable.

New chemical and physical laboratories and an art room have been built in connexion with the U.F.C. Training College (Moray House), Edinburgh; and, in opening these, Mr. Thomas Shaw, M.P., said, regarding the courses now open to the students, that, "if the existing state of matters had been predicted twenty, or even ten, years ago, the man that foreshadowed it would have been regarded as an idealist or a dreamer of dreams."

The number of matriculated students at Edinburgh University

during the past year was 2,929, being an increase of 175 on the number for last year.

IRELAND.

An event of the highest importance to Dublin University and to the education of women in Ireland has recently occurred. At a meeting of the Board of Trinity College, Dublin, held in the middle of January, Dr. Mahaffy, S.F.T.C.D., introduced a resolution that the time had now come seriously to consider the opening of Trinity College to women, and the best method by which this could be carried out, and the resolution was carried by a majority of three to one. Thus, a momentous change, which eight years ago was agitated for without any effect, has been suddenly brought about at a time when no outside pressure was being used to effect it.

At the time of the Tercentenary of T.C.D., in 1892, the Central Association of Irish Schoolmistresses presented a memorial, signed by 10,500 educated Irishwomen, praying that the benefits of the College and University might be opened to women. This was accompanied by one signed by a very large number of distinguished men to the same purpose, and by one signed by almost all the Junior Fellows of T.C.D., undertaking to carry out the additional teaching that might be required. The Board were long in giving any reply, its two most influential members, the Provost (Dr. Salmon) and Dr. Ingram, being strongly opposed to such an innovation. An influential committee of public men was formed, which for three years acted with the Central Association in negotiating with the Board, and sent a deputation to discuss the matter with them. The Academic Council drew up a scheme for the admission and teaching of women, and the Board themselves took counsel's opinion as to their ability, according to the statutes of the University, to admit women; but in 1895, when at length they gave their decision, they refused the prayer of the memorial. They, however, gave permission to any woman who had passed the T.C.D. Examinations for Women, to enter for the Honours Examinations in Senior Freshman year, and for those for Honour degrees, *i.e.*, Moderatorships.

Only one woman has since made use of this permission, Miss Beatty, who eighteen months ago obtained Senior Moderatorship and Gold Medal in Modern Languages. Meanwhile the old T.C.D. Examinations for Women, which were wholly unsuitable and out of date, were so little used that in 1900 they were altered to one examination, identical with the entrance examination for men students. A number of women passed this examination in 1901, some taking Honours or "High Places at Entrance." They were, however, told this winter that they could not be allowed to advance any further in the curriculum. Probably the position that women would be left in if, as is likely, the Royal University be practically swept away and a Catholic University established, when Irish women students would have no University teaching, except such as might be provided for them in the latter, influenced Trinity College to yield to the advance of the times. The members of the Board are almost wholly different now from those in 1895, the Provost, however, remaining, and as much opposed as ever to the change. The large and increasing number of women entering the Royal also, and the remarkable distinctions they have won, may make it appear desirable to obtain such students, the numbers entering T.C.D. not being so large of late years as they formerly were.

This timely action on the part of Trinity College simplifies one of the problems before the Royal Commission. It not only provides for Protestant women, but greatly strengthens the position of the Catholic women students. The Catholic authorities can hardly refuse to give them equal advantages, especially as Trinity College will be open to them to go to, if greater advantages are afforded to them there. It is believed, however, that the Catholic bishops are not adverse to giving the full advantages of teaching and degrees to women students.

Meanwhile the opinion is steadily gaining ground that the scheme first suggested by Dr. Mahaffy (who is distinguishing himself laudably at the present juncture), of affiliated colleges with very large autonomy under Dublin University, is by far the best solution of the Irish University problem. It is also likely that a provision by which the examining shall be done by those who teach, so that the teaching shall dominate the examination, and the system of lecturers being compelled to "prepare" for examinations arranged by others, which has so disastrously held sway in Ireland, shall be done away with, will be made.

A difficulty, however, has been raised by Mr. Drummond, K.C. He holds the view that there is no "Dublin University" apart from Trinity College, that the latter is the University of Trinity College, in or near Dublin; and he supports this view by reference to the wording of all the charters, statutes, and legal documents dealing with Trinity College. This is not the general view; but, if it be the correct one, affiliated colleges could not be established under Dublin University without a complete change of the constitution of the ancient University and college, and the present Commission, without enlarged terms of reference, could not enter into such a scheme.

During the month of January three memorials were drawn up by educational associations on the subject of the evils found in the new rules of the Intermediate Board. They largely agree with the criticisms recently sent in by the Dublin Branch of the Teachers' Guild. The Irish Schoolmasters' Association, at their annual meeting on December 27, 1901, passed a series of resolutions objecting to six subjects and a percentage of 40 being necessary for a pass; to exhibitions being paid to the schools instead of, as heretofore, to the pupils; to the scheme of home reading as practically making the English course so long and difficult that it is being discarded altogether in the schools; to the addition of history to the modern languages courses; to the compulsion to take science; to the non-publication of the results; and to various other matters. The Catholic Head Masters have reiterated the objections they made last June. They also object to the mathematical courses as, in many respects, too difficult, and ask that prescribed authors shall be set in every grade. They also desire that the scope and nature of the inspection established shall be defined. Their suggestions are somewhat vague.

The Central Association of Irish Schoolmistresses held their annual meeting on January 16, when a series of resolutions were passed which agree with those of the other associations in objecting to the six subjects and percentage of 40 for a pass as producing serious overwork; to the English course; to advanced drawing being required with experimental science; to the difficulty of the mathematical courses; and to the bad arrangements for history in the programme. They add also a clause drawing the attention of the Board to the many difficulties small schools throughout the country find in preparing for the Intermediate under the new rules, and to the evil that at present the teaching of children under thirteen is wholly uninspected, undirected, and unendowed by the Intermediate Board.

It is hoped that the general unanimity of these memorials will produce some effect. The schools also protest strongly against the examinations being postponed to July. For this year the date has been fixed for June 17; but the postponement till July was defeated on the Board by one vote only, so it may again be attempted.

Most of the large schools are trying to meet the very exacting requirements of the Board for science teaching, and are fitting up laboratories at great cost—the Christian Brothers' schools in Dublin, St. Andrew's School, Stephen's Green, and Sandymount Academic Institute among others. At the opening of the new laboratories in the latter school, Mr. Gill, Secretary to the Department, spoke with much enthusiasm of the eagerness and thoroughness with which the secondary schools were taking up science teaching, and said nearly 170 schools had fitted up laboratories and arranged to take the science courses which the new Department have instituted. At the same time regular technical schools under the local Councils, assisted and supervised by the Department, are being established everywhere with the same spirit of interest and energy. The first public commercial school, similar to those established in other countries, opened in Ireland will be that in Rathmines, near Dublin, under its Urban Council and the Department, which will commence work early in March.

The Intermediate Board have entirely revised their method of examining. They have appointed eight permanent examiners, who, in consultation with a sub-committee of the Board, will set all the papers. A number of sub-examiners will be employed to assist in the correction of the papers. It is evident that much of the practical results will depend on how this latter work is done. It is deeply to be regretted that the Board, in their reforms, did not discard examinations, or much reduce them. No real improvement in methods of teaching or in avoiding overwork is possible under such a system as the present.

SCHOOLS.

ABBOTSHOLME, THE NEW SCHOOL.—A capital performance of Gilbert and Sullivan's "H.M.S. Pinafore" (by kind permission of Mrs. D'Oyley Carte) was given at the end of last term by the boys, who showed marked dramatic and musical ability. As the ages vary from eleven to eighteen, the four voices were well represented, and the balance of tone was good. The opera was learnt and rehearsed by the boys themselves; but towards the end of the term Mr. Rawlinson Wood, Mus. Bac., the visiting pianoforte master, seeing what excellent work the lads were doing, volunteered his assistance as accompanist, and Mr. Cooke, following suit, painted the very effective scenery. All the characters were taken by the boys themselves, except Josephine, the Captain's daughter, which was prettily sung and acted by the sister of one of them. There was no orchestra, as all the musical boys were on the stage; but a grand piano was ample support for the young voices, whose sweetness and freedom from forcing was a credit to the singing teachers. The distinct enunciation was also noticeable, every syllable being heard at the further end of the large hall. If we remember that the opera was got up in one term, in the boys' "free time," it may be considered a very remarkable performance. The stiff self-consciousness that too often characterizes amateur acting was entirely absent.

COLLEGE OF PRECEPTORS.

Lectures for Teachers

ON THE

SCIENCE, ART, & HISTORY OF EDUCATION.

INTELLECTUAL EDUCATION.

To be delivered by JAMES SULLY, M.A., LL.D.,
Grote Professor of the Philosophy of Mind and Logic at University College, London.

The First Course of Lectures (Thirtieth Annual Series) will commence on Thursday, February 20th, at 7 p.m.

The course, consisting of Twelve Lectures, will deal with the laws of development of the child's intelligence, with the ideal aims of intellectual training, and with the conditions which the teacher has to satisfy in order to further a complete and many-sided type of intelligence. An effort will be made to bring the principles to bear on the practical problems of school instruction.

Directions will be given as to reading, and care will be taken, by the setting of papers and by conversation, to give students a real grasp of the subjects of the Course.

SYLLABUS.

LECTURE I.—Education as viewed by science. Different directions of education. Intellectual education in relation to education as a whole. Historical evolution of idea of intellectual education. Opposition of theoretical and practical tendency. Training of faculty and useful information. Relation of formation of intelligence to acquisition of knowledge.

LECTURE II.—Idea of mental development and of education, how connected. Laws of intellectual development. Idea of infant mind as a clean slate and as a group of congenital tendencies. Reception and assimilation of material from without. Elaboration of intellectual products as work of the child's mind. Part of human surroundings and of education in child's mental development.

LECTURE III.—The function of the senses in intellectual development. Spontaneous exploration of its world by child. Importance of the finer use of sense-organs. New methods of testing the senses. Methodical exercise of attention and the development of the observing faculty. Common defects in the teacher's appeals to the senses.

LECTURE IV.—Early development of ideas. How clear images of things are formed and retained. The laws of association and the orderly arrangement of ideas. General and special characteristics of children's memories. Value and proper use by teacher of verbal memory. Is the cultivation of the memory a special aim in education?

LECTURE V.—Early forms of productive imagination in the race and in the child. How the materials of experience are transformed in imaginative processes. Value of the imagination. The disciplined activity of imagination in methodical construction of ideal products. The teacher's control of the imagination. Common errors in children's efforts to imagine things.

LECTURE VI.—The relation of imagination to general thinking. The organic connection of thought and language. First generalizations of the child. The development of general ideas in fullness and precision. Methodical exercises in generalization by the teacher. The relation of the observation to the classification of things.

LECTURE VII.—Thinking as apprehension of relations. Articulation of thought in the sentence. Judgment as means of rendering vague knowledge clear. The early forms of inference. The logical forms of the reasoning process. Educational problems growing out of the early exercise of the reasoning powers.

LECTURE VIII.—Interactions between observation, imagination, and thought. Intelligence as a trained capacity to understand. The process of assimilating knowledge and the doctrine of apperception. Early forms of apperception. Methodical apperception by way of clear general ideas and systems of ideas. The action of the teacher on child's apperceptive tendencies.

LECTURE IX.—The fiction of an isolated intellectual activity. The development of intelligence as including that of feeling and volition. The attitude of interest and attention. Different estimates of children's curiosity. The development of interests. The desire for knowledge and the higher control of the attention.

LECTURE X.—The concrete process of learning. The inquisitive attitude and its development by the teacher. The management of the material of instruction so as to promote the process of learning. The use by the teacher of the child's ideas and the art of questioning. Teaching as a progressive and systematic control of the learning process. Instruction by the teacher and self-instruction.

LECTURE XI.—Bearing of psychology and logic on methods of instruction. Adaptation of subject-matter and mode of treatment to stage of intellectual development. Method as involving advance from known to unknown and from vague to clear knowledge. Method as orderly presentation of connected parts of knowledge. Logical distinctions of method and their value for the teacher. Principles which help us in selecting and co-ordinating subjects of the curriculum.

LECTURE XII.—Intellectual idiosyncrasy. The reasons for studying the germs of individual capacity and taste. Attempts to discover the contents of children's minds and their value. Problem of adapting the process of instruction to individual capabilities and inclinations. The problem of satisfying at once the conditions of many-sidedness and individual development. Questions relating to the specialization of study.

The Fee or the Course of Twelve Lectures is Half-a-Guinea.

* * * The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

C. R. HODGSON, B.A., Secretary.

To Pass the Examinations.

TEXT-BOOKS FOR HIGHER SCHOOLS.

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

These Books are specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations, and Candidates for Minor Scholarships, &c. The Series consists of the following Books:—

ARITHMETIC.

Small amount of Theory, large amount of Practice. Worked-out Examples for each step. Prominence given to the Metric System. Laboratory Exercises in a special Section.

GEOGRAPHY.

Physical facts made the basis of Political. Commercial aspects kept constantly in view. British Empire fully treated. Many Coloured Maps and Diagrams.

ENGLISH GRAMMAR.

Examples made the basis of instruction. Analysis introduced early. Aids to Correct Speaking a prominent feature. Plenty of scope given for "practice."

ENGLISH HISTORY.

Contains landmarks of our national history. More than usual attention given to last three centuries. The Growth and Greatness of the Empire specially considered.

PUBLISHED AT ONE SHILLING EACH.

The Schoolmaster says:—"We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

A SCHOOL HYMN BOOK.

Compiled by F. GORSE, M.A., Parmiter's School, London.

Cloth boards, 6d.

Containing 128 pages, and providing Hymns for various occasions and seasons.

It also contains an Index of suitable Tunes.

The Rev. E. A. ABBOTT (late Head Master of the City of London School) says:—"Your hymns seem to me to be excellently selected—simple . . . and profoundly devotional."

The *Educational Review*, in reviewing this book, says:—"Mr. Gorse has realized the unfitness of the children's hymns in ordinary use, as being too puerile, and wisely rejects purely emotional hymns, 'expressing feelings such, for example, as weariness of life and doubt—which are quite foreign to youth.' He has produced a very suitable selection, and we like the edition of the short sacred poems for private use, and the appropriate mottoes which accompany the hymns."

De Fivas' French Class Books.

De Fivas, New Grammar of French Grammars. By Dr. V. DE FIVAS, M.A. Fifty-fifth Edition, Revised and Enlarged, with the Author's latest Notes, Corrections, and Additions. 450 pp., 2s. 6d., strongly bound. *KEY, 3s. 6d.

De Fivas, Elementary French Grammar and Reader. Fifth Edition. Fcap. 8vo, 1s. 6d. cloth.

THE UNIVERSITY CORRESPONDENT

AND

University Correspondence College Magazine.

A Journal devoted chiefly to London University Matters.

Issued on the 1st and 15th of each month. Price 1d. : by post, 1½d. Half-yearly Subscription, 1s. 6d. : Yearly Subscription, 2s. 6d.

Publishing Office: 157 Drury Lane, W.C.

All the leading parts were most admirably done, and the chorus entered fully into the fun, and did very effective by-play. The Christmas entertainment at Abbotsholme is for "the neighbours," and about two hundred guests—gentry, clergy, farmers, labourers and their wives, with a few parents—were welcomed by the Head Master and Miss Reddie.

BOLTON GRAMMAR SCHOOL.—Since the foundation, in 1877, of the valuable Thomasson Scholarships (tenable at any school in the county), only one scholar came to us previous to this year. Of the four elected recently, three have come to us. We congratulate J. Hilton on coming out first in all England in cotton-spinning, and second in the North of England in mechanical engineering, and E. N. Cunliffe on his election to a Medical Fellowship at the Owens College. The large increase in numbers (forty-three new boys joined this session) has necessitated an increase of the staff. We welcome Mr. E. P. Dixon, of Exeter College, Oxford, and Mr. M. P. Andrews, of Oriol College, Oxford.

CHELTEMHAM LADIES' COLLEGE.—The Société des Professeurs de Français en Angleterre have just issued their report of the annual *grand concours*. This year, for the first time, the President of the French Republic has offered a Sèvres vase to the two colleges, boys and girls, that have obtained the highest total. The Cheltenham Ladies' College has gained one, having reached the grand total of 3,061 for five candidates. This college obtains also the silver medal given by L'Alliance Française, besides three prizes and eleven *mentions honorables*. In the *concours des lauréats* this college also obtains a prize.

HALIFAX, THE CROSSLEY AND PORTER SCHOOLS, SAVILE PARK.—Mr. Edward Eaton Walker, B.A. Cambridge and B.Sc. London, a former pupil, has just been appointed, by the Foreign Secretary, Geologist in the British East Africa Protectorate. He spent six or seven years in Halifax; then proceeded to the Bradford Grammar School. Here he was most successful in winning open scholarships, and in due course he proceeded to Cambridge, where he obtained high honours. He will shortly start for Zanzibar and Mombasa, to commence his work under the Foreign Office.

UNIVERSITY COLLEGE SCHOOL.—School lectures for Lent term:—January 24, 3 p.m., "Africa" (Mr. A. W. Andrews, Secretary of the Geographical Teaching Association). February 14, 2.45 p.m., "Impressions of India" (Mr. C. Pilkington, of *Black and White*). March 7, 2.45 p.m., "Pipes of All Peoples, Flutes of All Ages" (Mr. J. Radcliff, F.R.A.M.), with musical illustrations. Also "Norman Influence in England" (Rev. Dr. Cunningham, of Trinity College, Cambridge).

WAKEFIELD GRAMMAR SCHOOL.—In the recent scholarships examinations at Cambridge, L. B. Booth gained £80 a year for mathematics, at Christ's College, and E. H. Jalland £100 a year—Foundation Scholarship and Cave Exhibition combined—for classics, at Clare. The Old Boys' Dinner was held on the 7th ult., and was well attended, the guest of the evening being H. M. Taylor, Esq., M.A., F.R.S., ex-Mayor of Cambridge, and late Fellow and Tutor of Trinity. The Mayor of Wakefield and the spokesman of the Governors of the School this year are both Old Savilians.

PRIZE COMPETITIONS.

The winner of the Translation Prize for December is G. E. Dartnell, Esq., Abbotsford, Salisbury.

The Translation Prize for January is awarded to "Hector."

The Extra Prize for January is awarded to "Gumption."

Quattuor robustos filios, quinque filias, tantum domum, tantas clientelas Appius regebat et caecus et senex. Intentum enim animum, tamquam arcum, habebat, nec languescens succumbebat senectuti. Tenebat non modo auctoritatem, sed etiam imperium, in suos; metuebant servi, verebantur liberi, carum omnes habebant: vigeat in illa domo mos patrius et disciplina. Ita enim senectus honesta est, si se ipsa defendit, si ius suum retinet, si nemini mancipata est, si usque ad extremum spiritum dominatur in suos. Ut enim adolescentem, in quo senile aliquid, sic senem, in quo est aliquid adolescentis, probo; quod qui sequitur, corpore senex esse poterit, animo numquam erit. Septimus mihi Originum liber est in manibus; omnia antiquitatis monumenta colligo: causarum illustrium, quascumque defendi, nunc cum maxime conficio orationes; ius augurum, pontificum, civile tracto; multum etiam Graecis literis utor; Pythagoreorumque more exercendae memoriae gratia, quid quoque die dixerim, audierim, egerim, commemoro vespere. Hae sunt exercitationes ingenii, haec curricula mentis; in his desudans atque elaborans, corporis vires non magno opere desidero. Adsum amicis; venio in senatum frequens ultroque aratro res multum et diu cogitatas, easque tuor animi, non corporis viribus. Quae si exsequi nequirem, tamen me lectulus oblectaret meus,

ea ipsa cogitantem, quae iam agere non possem : sed ut possim, facit acta vita. Semper enim in his studiis laboribusque viventi non intelligitur, quando obrepat senectus. Ita sensim sine sensu aetas senescit ; nec subito frangitur, sed diuturnitate extinguitur.

By "HECTOR."

Four stalwart sons and five daughters, a large household, and a crowd of dependants obeyed the rule of Appius, blind and old as he was. For he kept his mental powers well strung—he would not fail and give in to old age. He was still not only the master, but the autocrat, of his house ; feared by his slaves, respected by his children, beloved by all, in that household the traditional control of the head of the family was a reality. Indeed, old age is honourable only if it is independent, if its authority is unchallenged, if it has not surrendered itself into other hands, if to the last moment of life the home is dominated by its influence. For, as in a young man I like to see something elderly, so I like an old man to have a touch of the youth about him ; and he who can compass this, though his body may age, will never be old in mind. I have on hand the Seventh Book of my "Origins" ; I am amassing all records of the past ; I am just now completing a collection of the defences which I have made in celebrated cases ; I am studying law, both the common law and augural and priestly jurisprudence. Again, I apply myself much to Greek literature, while, to practise my memory, I take a hint from the Pythagoreans, and recall each evening all that I have said or heard or done in the day. Thus does my intellect get its exercise, and I run mental races : in the toil and heat of such pursuits I do not feel keenly the loss of bodily activity. I am at the service of my friends ; I constantly attend the meetings of the Senate, where I come forward with the well-considered suggestions of a long experience, and uphold them with intellectual, if not with physical, vigour. And, even if I were not equal to such efforts, I could be well content with armchair meditations on those very projects which I could no longer carry out. As it is, thanks to my past life, I have not lost the power. For one who has all his life been actively engaged in such pursuits does not notice the moment when old age begins to steal on him. Thus slowly and insensibly life passes into age, till, without any sudden break, in the fullness of time the light flickers out.

We classify the 102 versions received as follows :—

First Class.—Cato major, Tempus fugit, Jam senior mox senex, Hector, Rupes, Redwal, Gempy, T.L., E.M.M.C., H.M.I., M.G.

Second Class.—Vervigil, Ulula, Borealis, Sine labe decus, Bobbs, Glendale, Jawasentha, I.S.S., Jacobus, L.P.H., Dionca, Edna, Barbarus, Caianus, Lusignan, E.H.O., Βάρβαρος, Lorenzo, Elroy, T.G.M., Q.M., Semper eadem, Conservative.

Third Class.—27, Elm, Patrick, Avon, La Desirous, Sarnech, Herondas, Shamrock iii., Y.L., Toby, Dragon, Q.O.A., Peterite, H.E.R.J., Corinna, C.P., 59, Blobs, Franks, cos (A + B), Dimmy, Senesco, Dorothea, Tweedledum, Civis Romanus, E.S.B., Nostradamus, De Wet, Jaculum, Novimus, Leslie, Tweedledee.

Fourth Class.—Hwulum, Hanover, Venus, Clotho, M.E.R., Pingpong, Aristobulus, C.Q.X., Whitwarr, Gipsy, Salutaris, A.C.C., Holly, Chap, L.O.S., Una, Otae, Under, Quick, Sta, M.A.M., Nota, Toney, Winton, O.O.

Fifth Class.—Endirby, Curius, Cato minor, Q.Q., Lavengro, Mus, Toby, Fourth Class, Puellula, P.L.E., Colon.

I will begin by disposing of the "vulgar errors," if I may borrow without offence Sir Thomas Browne's phrase. The context shows that *languescens* cannot be concessive, "though enfeebled by age." *In manibus*, not "on hand" or "in my hands," but "in hand," "I am engaged on." *Nunc cum maxime*, "at this very moment." *Desudans*, "toil hugely," said of Sir Walter Raleigh, is distinctly preferable to "sweat." *Adsum amicus*, "I appear in court for my friends," not merely "help" or "visit," which is a positive blunder. *Lectulus*, "lounge" or "easy chair," not "bed."

To pass to higher criticism, in the first sentence the order is all-important. The chief emphasis falls on the last words ; and these in English naturally come first. "Blind, and stricken in years, Appius Claudius still governed, &c." *Tenebat*, "his personal influence was as great as ever and his word was still law." *Metuebant*, "feared as a master and revered as a parent, he was by all regarded as a friend." *Vigebat*, "the old fashions of our fathers and their rules of life were in full action in that establishment"—so runs Mr. Shuckburgh's version, perfectly correct, but limp and long-winded—eighteen words for eight in the Latin. "His household was a model of patriarchal manners and discipline." *Ita sensim*—the last sentence was the touchstone ; and even the translation with least alloy is debased coin beside the pure gold of Cicero—"So slowly and silently age steals on, and at last there is no rude shock, but life expires like a taper that has burnt to the socket" ; or "the lamp of life is not suddenly quenched, but flickers out with lapse of time." The alliteration must be preserved, and the latent metaphor must be brought out.

"Some critics might be disposed to say that it ('The Pilot') has already taken the palm among our weekly reviews for intellectual, scholarly treatment of current events."—*Manchester Courier*.

2 EXETER STREET STRAND, W.C.

THE CERES SYSTEM (Vernon's Patents).

CERES FILING CABINETS.

Times.—"By this system the most complex body of documents can be arranged with admirable simplicity."

Lancet.—"For simplicity in use and ready adaptability to varying needs and requirements of work, Mr. Vernon has devised a plan which will be difficult to rival."

Worked in File Boxes, Cabinets, Standing Desks, Writing Tables, &c., on any scale.

CERES BOX FILES.

N.B.—Letters can be "posted" into the empty end of the File, and afterwards sorted.

A Single Locked Box (in Mahogany, Walnut, Cloth-covered Wood, Japanned Tin, &c.) for all current Letters, Bills, and Papers.

Send for Explanatory Pamphlet (fully illustrated) and Sample of Card for School Register, post free.

THE CERES DEPOT, 10 John Street, Adelphi, London, W.C. (Close to Charing Cross.)

What users say:

Dr. JAMES, Rugby School.—"The Filing Drawer pedestals fit the table to a nicety, and seem to be exactly what I want."

The SECRETARY of the City of London School, Victoria Embankment, E.C.—"The Committee are well satisfied with the large Cabinet. Our correspondence and papers, printed forms, &c., are of considerable variety and quantity, and I find very great advantage in having them all together in a single Cabinet, on so simple a system. The plan of having the names, &c., of our 700 Boys on separate cards, which can be moved about according to their position and progress in the School, is also a manifest improvement on any book system."

W. M. HORNBY, Esq., Sandroyd, Cobham.—"My Writing Table is the comfort of my life. So much of my correspondence is about trifling matters which one cannot carry in one's head. This easy reference system saves such a lot of letter hunting, and the simplicity of it is making me quite a tidy man."

Dr. REDDIE, Abbotsholme New School.—"Very pleased with the Cabinet. It is an excellent invention excellently carried out, a beautiful specimen of thoughtful and skilful work."

CERES CARD SYSTEM.

Card Cabinets on the Largest Scale and with Latest Improvements.

Cards or Loose Sheets are used not only for cataloguing books in a library, but for all kinds of lists of persons and things in a growing or varying state, in place of cumbersome alphabetical or classified books, which mean ever-recurring labour and expense for re-arrangement and re-writing into new books.

The most practical application of the Ceres System. Stocked in three forms:

(a) Single column with and without Card drawer.

(b) Four drawers at table height for sorting papers on; and

(c) Six drawers, with sloping top, making a Standing Desk.

Other forms and designs, and with wider drawers for official papers, to order.

N.B.—Existing Tables can often be adapted to the system, or the lower portions of Library book-cases, &c., fitted with filing drawers.

(Late of 39 Holywell Street, Strand.)

EXTRA PRIZES.

By "GUMPTION."

"COMMON-SENSE" EXAMINATION PAPER FOR BOYS OR MIXED CLASSES.

Time allowed—30 minutes.

Give concise answers to as many as possible of the following questions:—

1. Potatoes are sometimes sold by measure and sometimes by weight. Which method do you consider preferable, and why?
2. Why are newspapers printed with several columns to the page? What special points should be considered in deciding the number of columns?
3. How many Saturdays will there be in January, 1903. How can you find this out without reference to a calendar?
4. What are the essential differences between a pudding and a pie?
5. How do you distinguish a "waxing" from a "waning" moon? Illustrate by sketches.
6. Name two materials used in the construction of modern houses which you consider the most indispensable. Give reasons for your selection.
7. In constructing a weathercock for the North Pole, what modifications would you suggest?
8. What are the advantages and disadvantages of being very tall?
9. The front wheels of an omnibus are smaller than the hind wheels, but the wheels of a railway carriage are uniform in size. What reasons can you give for this difference?
10. A grocer, about to weigh half-a-pound of sugar, discovers that all his weights are lost, except the 2-lb. and 3-lb. How can he get over the difficulty?
11. What advantage has a three-legged stool over one with four legs?
12. Tom was born on the last 29th of February in the nineteenth century and Harry on the first 28th of February in the twentieth century. What is the difference in their ages?

The competition for the Extra Prize was disappointing. Only twenty-six papers were received, and of these only three deserve notice. "Ox. Short" was far too elaborate—fox, goose, and cabbage problems raised to the nth. "E.A.F." was sensible, but the best questions were not original. The prize winner has two questions on the calendar, and we do not care for 4, 8, 11. Most candidates confused common sense with general information.

A Prize of Two Guineas is offered for the best translation of the following passage from Sainte-Beuve:—

Et après cela, innocents et lettrés que nous sommes, n'insistons plus trop sur les beaux Mémoires de l'an V, sur celui, en particulier, qui traite si bien du moral et de l'esprit commercial de ces mêmes Etats-Unis; avis à nous! n'insistons pas trop non plus sur telle ou telle circulaire remarquable, telle ou telle dépêche faite pour être montrée, et sur l'excellent discours académique de 1838. Tout cela n'était que le dehors, la décoration, le spectacle: franchement il y avait trop de reptiles par derrière, au fond de la caverne,—de cette caverne dont le vestibule passait pour le plus distingué et le plus recherché des salons.

Sir Henry Bulwer a très-bien pris et rendu la mesure de l'esprit politique et pratique en M. de Talleyrand; mais décidément son indulgence n'a pas fait assez large la part de ces vices fondamentaux; il s'est montré trop coulant sur une chose essentielle. Le flair merveilleux des événements, l'art de l'à-propos, la justesse et, au besoin, la résolution dans le conseil, M. de Talleyrand les possédait à un degré éminent; mais cela dit et reconnu, il ne songeait, après tout, qu'à réussir personnellement, à tirer son profit des circonstances: l'amour du bien public, la grandeur de l'Etat et son bon renom dans le monde ne le préoccupaient que médiocrement durant ses veilles. Il n'avait point la haute et noble ambition de ces âmes immodérées à la Richelieu, comme les appelait Saint-Evremond. Son excellent esprit, qui avait horreur des sottises, n'était pour lui qu'un moyen. Le but atteint, il arrangeait sa contenance, et ne songeait qu'à attrapper son monde, à imposer et à en imposer. Rien de grand, je le répète, même dans l'ordre politique, ne peut sortir d'un tel fonds. On n'est, tout au plus alors, et sauf le suprême bon ton, sauf l'esprit de société où il n'avait point son pareil, qu'un diminutif de Mazarin, moins l'étendue et la toute-puissance; on n'est guère qu'une meilleure édition, plus élégante et reliée avec goût, de l'abbé Dubois.

"Z.Y.X.'s" Extra Prize of Two Guineas will be awarded for the best annotation of Victor Hugo's "Hernani," Act IV., Scene ii. (the soliloquy of Don Carlos.)

We have been asked, in regard to this Prize, what is intended

by "Annotation"? Such notes and comments as a teacher would desiderate in a school edition of the play.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by February 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

PARENTS AND SCHOOL BOARDS.

By A SCHOOL BOARD MANAGER.

ANY one who watched the course of the last School Board election, and noted the absurd disproportion between the number of votes polled and the body of electors they represented, cannot but have been struck by the extraordinary apathy evinced by the London ratepayers on that important occasion. This pronounced indifference on a home question of really vital issues is all the more striking when contrasted with the feverish interest displayed by the public in military affairs seven thousand miles away. It is a melancholy, but indisputable, fact that "khaki and scarlet" have carried all before them, and have given the less exciting questions of domestic politics "no chance of a show." How may this want of interest in matters educational be accounted for?

Certainly, there is nothing dramatic or picturesque about the essentially hum-drum progress of a School Board election; neither is there anything epic about the schools themselves, and the laureate is yet unborn, who, doubtless in time to come, will interpret and voice the poetry that is still somewhere latent in those outwardly prosaic institutions. In fact, our Board schools fail, somehow, to appeal to the popular imagination. That emotionally responsive public which takes an almost morbid delight in lurid descriptions of scenes "at the front," revels with hysterical glee in warlike, not to say rowdy, demonstrations, and is ready to scream itself hoarse over burning questions of campaign administration, is oblivious of the fact that "education is a better safeguard of liberty than a standing army," and is quite callous as to the methods by which the vast machinery of our Board-school system is worked. Yet, for the average Londoner, the only side on which such questions affect him is that of his pocket. Your ordinary citizen has come to regard such institutions as more or less necessary evils, to whose maintenance the long-suffering ratepayer must resign himself with as good a grace as possible, though he will grudge an education grant far more bitterly than he would one for military armaments.

Taking the British public then on its own ground—and it is nothing to-day, if not patriotic—is it not eminently a question of patriotism, considering how inextricably the future fortunes of our Empire are bound up in the education of "the masses." "Is not education"—to quote Lord Reay's words—"a great Imperial interest"? Our very ideal of a State necessarily implies a corresponding ideal of education for that State. Yet it is extraordinary how, by a singular process of reversal, our much vaunted Imperialism, with a large majority of our countrymen, has only reference to foreign expansion and none whatever to internal development. The truer and deeper expansion is, after all, going on in our very midst, in the efforts made by our Board schools to train and fit the rising generation for their future place in our huge social economy. Few seem to recognize that our Board-school teachers are the true Empire-makers, developing, as they do, the faculties of those who are to carry on, for good or for ill, the traditions of the race. Did we realize this fact properly, it would surely be one of our most earnest pre-occupations as to how such an institution as the Board of Education is represented amongst us, and, failing such convictions, we are lamentably deficient in public spirit.

One reason for the existence of this indifference is no doubt that curse of all scholastic work, within as without, the monotony of routine which makes all school work so unattractive to the mere outsider. Every teacher, alas! knows its deadening effect: is it not the *bête noire* which persistently dogs his steps, chilling his aspirations, quenching his enthusiasms, and laying its cold hand on master and pupil alike? Much more, then, to the public is the even tenour of school work dull and devoid of

attraction. The patient and unwearying toil of those engaged therein—often culminating in efforts little short of heroic—meets with no recognition from the world at large, which turns a deaf ear to those dry statistics and technical formulæ which too often overweight educational problems. As for “the man in the street,” news of the yacht race or the last attempt to corner Botha is infinitely more interesting to him than anything the School Board can furnish.

Moreover, there is a remarkable absence of what may be called personal interest in the schools. Ratepayers do not even care to see how their often sorely grudging subsidies are spent—a fact which proves that your average voter is not so commercial-minded as he is credited with being. It is hardly too much to say that there is no branch of life and work in which so little interest is displayed as education. Our racecourses draw their thousands; our theatres and music halls are never empty; our picture galleries and museums, even our hospitals, attract their quota of visitors; but our Board schools are, as far as the general public is concerned, an undiscovered country that it has neither the will nor the curiosity to explore. The whole work is, in fact, viewed by the bulk of our upper and middle classes with a frigid indifference, which is as harmful to the true interests of national education as the pronounced hostility of that happily now fast dwindling section of the community which lifts up its hands in pious horror at the bare notion of teaching “the masses” anything beyond the three R’s.

And, if outsiders are thus indifferent, what shall be said of those who might reasonably be supposed to have the most interest in the matter? “How,” it has been asked, “is the ordinary School Board child’s parent to be got to take an interest in the school?”—a pertinent question, indeed, but difficult enough of solution. It is quite obvious that the most direct means to this desirable end would be to bring parents into closer relation with the schools; but this, in itself, is a matter entailing manifold practical difficulties, especially when it is remembered that the majority of those whose children are being educated by the State are much too deeply engrossed in the sordid task of bread-winning to have time or thought for aught else.

It is conceivable that the organization of lectures to parents, on more or less practical lines, might tend to unite together in a mutual interest a fraction at least of those concerned. But, remembering the decided preference of the proletariat for amusement to instruction, one would rather plead

for the organizing of *fêtes* on a scale commensurate with the schools in whose name they would be celebrated, which should serve more especially as a means of reunion for the parents of the scholars, and, at the same time, be identified with the work of the latter. Such *fêtes* might well take the form of a democratic equivalent to the “prize day” at our great public schools, or “Arbor-day” in the United States, so that the prize distributions might take place with a suitable “flourish of trumpets,” and not be the bald, graceless functions they now so often are.

Of the thorny question of the Church’s attitude towards Board schools one hesitates to speak, closely connected as it is with the religious difficulty; but there is little doubt that, could the Church exchange her present rôle of active hostility, or, at best, of armed truce, for that of a sympathetic ally, her moral support would be invaluable in quickening lay interest in the State’s educational work, and would ensure the suffrages of many who, at present, preserve a timid neutrality in a matter of vital importance. It is, however, an encouraging sign of the times that the barriers of prejudice are now being broken down, on many sides by the clergy themselves, a number of whom have already held out the right hand of fellowship to those who ought to be their active coadjutors in the cause of enlightenment and progress. The Bishop of Rochester’s highly sympathetic address to Board-school teachers, at a meeting held at Sion College, last year, in connexion with the Guild of St. Edmund, is an admirable case in point.

In conclusion, one practical suggestion for remedying, in part at least, the state of things as above described may be offered. To see something of the life and work in a London Board school is an education in itself—albeit, a wholesome experience too often neglected. To know something of the methods by which large numbers of children are disciplined and trained to better mental and physical development is indeed a revelation of what a great national work, what a consolidation of empire in the best and truest sense, is being carried on in our midst. May we not with reason plead with the public to take a more active interest in a matter so nearly touching our national welfare? Did they but visit the schools now and then, outsiders would find there much to awaken their admiration and to stimulate their interest, much to quicken their patriotism and deepen their pride as English citizens, and would return, perhaps, themselves the richer for new thoughts and sympathies, born of a more perfect and practical knowledge of Board-school aims and ideals.

These School and Teachers' Advertisements are continued from page 90.

Oxford University
APPOINTMENTS COMMITTEE,
Recommends Graduates of the University of Oxford for Scholastic, Tutorial, and other Appointments of all kinds.

Postal Address—The Secretary,
Appointments Committee, Oxford.
Telegrams—“Appointments, Oxford.”

Rev. M. B. FURSE, M.A., Trinity, Chairman.
V. P. SELLS, M.A., New College, Secretary.

THE ANSTEY PHYSICAL
TRAINING COLLEGE FOR WOMEN
TEACHERS offers a PROFESSIONAL TRAINING in LING’S SWEDISH SYSTEM.

The Theoretical work includes the study of Anatomy, Physiology, Hygiene, Theory of Movement, Elements of Pathology, &c.

The Practical work includes Educational Gymnastics, for schools and classes, Medical Gymnastics and Massage for the treatment of those diseases and deformities which can be cured by movements and manipulations.

Games, Swimming, and Dancing are also taught. Age of admission 18 to 30. The course lasts two years. Candidates should possess good health and education.

Examinations are held, certificates granted, and successful students introduced to posts. There are more openings for teachers trained at this College than can be filled.

Apply to the PRINCIPAL, The Leasowes, Halesowen, Worcs.

GYMNASTICS, HOOKEY, &c.

MISS SPENCER HARRY,
Principal of West Norwood Gymnasium, Knight’s Hill, is open to additional engagements, visiting, in London or vicinity.—41 Binfield Road, Clapham, S.W.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

TRAINING COLLEGE FOR SECONDARY TEACHERS.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—The Rev. DAVID J. THOMAS, M.A.
Vice-Principal—Miss PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers’ Diploma of the College of Preceptors.

Froebelian Training for Mistresses of Lower Forms. A High School for Girls, Transition Class, and Kindergarten, are attached to the College for purposes of demonstration and practice.

Matriculation Classes for intending Teachers.

DAY TRAINING COLLEGE FOR WOMEN (UNIVERSITY COLLEGE, LIVERPOOL).

The College is open to consider applications for admission from Candidates under the conditions of Art. 115 and Schedule viii. of the Government Code.

Students are required to read for the Degrees of the Victoria University. Such work forms the greater part of the course of study necessary for the Government Teacher’s Certificate.

Principal—Professor WOODWARD, B.A.

Tutor in Education—Miss C. GRAVESON, B.A.

Terms of Admission and Forms of Application may be obtained from the SECRETARY of the Day Training College, University College, Liverpool.

UNIVERSITY OF DURHAM.

DEGREES OPEN TO WOMEN.

For particulars concerning Tuition, Scholarships, and cost of residence in the Women’s Hostel, apply to the LADY PRINCIPAL, Women’s Hostel, Durham.

WESTFIELD COLLEGE (FOR WOMEN),

HAMPSTEAD, LONDON.

THREE ENTRANCE SCHOLARSHIPS of the value of from £40 to £50 a year for two years will be offered for competition at an Examination to be held on June 24th and 25th, 1902.

Candidates must not be under 18 years of age, and must have passed the Matriculation Examination of the University of London. The successful candidates will be required to come into residence in October next, and to read for the B.A. or B.Sc. Degree of the University of London. Entrance Forms and full particulars may be obtained from the Secretary, Miss S. M. SMEE.

ST. GEORGE’S TRAINING COLLEGE FOR WOMEN TEACHERS, EDINBURGH.

Principal—Miss M. R. WALKER.

This COLLEGE provides a complete course of Professional training for Ladies who desire to become Teachers in Secondary Schools or Governesses in Families. The Course, which lasts for one year, includes attendance at the University Lectures on Education, in addition to lectures delivered by the College Staff, and the Students have ample opportunities of gaining experience in Class-teaching in good Schools. Students are admitted in January and October.

Several Heriot Bursaries of £30 are offered in October.

For prospectus and further particulars apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

OXFORD LOCAL EXAMINATIONS.

LONDON COMMITTEE (BOYS).

The Regulations for the Senior, Junior, and Preliminary Examinations for 1902 can be obtained from the Secretary,

E. LAYMAN, Esq.,

1 Garden Court, Temple, E.C.

HOWELL'S SCHOOL, DENBIGH.

THE following is a list of the Teaching Staff appointed for the above School:—

HEAD MISTRESS.

Miss BELOE, B.A. (Honours) London, late Senior Mathematical Lecturer at Westfield College, London.

ASSISTANT MISTRESSES.

Miss GRETA GREIG (Somerville College, Oxford), History Honours Schools, Second Class; studied three years abroad in Paris and Leipzig; three years' teaching in Sutton High School.

Miss HILDA SMITH (Westfield College, London), B.Sc., Botany Honours Intermediate; one year Science Mistress, Croydon High School; two years and one term in charge of Science Department at St. Leonard's, St. Andrews. Also First Class Certificates, South Kensington, in Advanced Model Drawing and Advanced Light and Shade.

Miss A. E. MONK (Newnham College, Cambridge), Historical Tripos, Parts I. and II.; one year's teaching in Normal School, Bordeaux.

Miss ETHEL WORTERS (Girton College, Cambridge; Training College, Cambridge), Classical Tripos, Teachers' Training Certificate; two terms' experience in teaching in Cambridge; Tennis Champion and Captain of the Hockey team, Girton College.

Miss MARGARET GRIFFITH (Girton College, Cambridge), Scholarship on Senior Camb. to Girton (First Girl in England); Mathematical Tripos, Senior Optime seq. 42; one term's experience in teaching in Macclesfield High School.

Miss AUDREY YORKE (St. Botolph, Boston, U.S.A.), Certificate in Physical Training; Conductor of Swedish Gymnasium at Cliftonville, Margate; five years' experience in teaching.

Miss ISABEL MACFARREN (Royal Academy of Music), Silver and Bronze Medallist, R.A.M.; late resident Music Mistress in Music School, Nottingham; five years' experience in teaching.

THE UNIVERSITY DAY TRAINING COLLEGE, OXFORD.—There will be vacancies for STUDENTS (Men) in October, 1902. Candidates for admission should pay special attention to Latin and Greek with a view to passing Responsions (or an equivalent Examination). Full information concerning the new Course of Study arranged under Circular 454, and the exemptions granted in view of University Examinations, may be obtained from the Principal, MAURICE F. LATHY, M.A., 5 King Edward Street, Oxford.

1902 COMPETITION OF ESSAYISTS. R.S.P.C.A.

NOTICE TO PRINCIPALS OF LONDON SCHOOLS.

All papers relating to this year's Competition for Prizes given by the ROYAL SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS for the best Essays on the Duty of Kindness to Animals were issued on December 10, 1901. The only addresses available to the Society are derived from London and Suburban Directories, covering a radius of twenty miles from Charing Cross.

In the event of no delivery of papers having been made by post, I shall be glad to send parcels on receipt of applications from Principals.

No Essay received after March 1 next.

JOHN COLAM, Secretary.

105 Jermyn Street, St. James's, S.W.

CORRESPONDENCE LESSONS.

MISS A. W. GREGORY, L.L.A., Coaches by correspondence in English History and Literature, Anglo-Saxon, French, German, and Italian for the Higher Local, Holloway Scholarship, and other University Examinations, &c. Terms moderate. Apply—3 Ickburgh Road, Upper Clapton, N.E.

SOUTH AFRICA.—Classes in DUTCH, ZULU, and NATIVE LANGUAGES are held at King's College, London, Strand, W.C.

Apply to the SECRETARY.

THE St. Dunstan Scholastic Agency,

ST. DUNSTAN'S HOUSE,
FETTER LANE, LONDON, E.C.

Telegraphic Address, "Rivsam, London." Telephone No. 83 Holborn.

THIS Agency is established for the transaction of all Educational Business as below:—

(a) The School Transfer Department, for the sale and purchase of school properties. Partnerships arranged.

(b) The Tutorial Department, for the engagement of qualified tutors and governesses (Head and Assistant).

(c) The Pupils' Department, for the assistance of parents in selecting suitable schools for their children and for the introduction of pupils to Schools on the Agency's List.

Applications are invited from Heads of Schools, Graduates and others, in view of arrangements for next term. Schools visited and reported on. All communications to be addressed to

JOHN JACKSON, F.E.I.S.,
Manager.

GERMAN ASSOCIATION FOR MANUAL INSTRUCTION.

Courses in Leipzig for Teachers from June 30 to beginning of September. Can be entered at the beginning of each week.

Particulars of
Dr. A. PABST, Leipzig.

TRAINING COLLEGE FOR TEACHERS OF THE DEAF.

On the German or Pure Oral System.

11 FITZROY SQUARE, LONDON, W.C.

There are several Vacancies for Male and Female Students at this Training College, for whom good Appointments are easily obtainable on the completion of their Training. For all particulars apply to the Director, WILLIAM VAN PRAAGH, 11 Fitzroy Square, W.

LECTURES ON CURRENT EVENTS.

By CHARLES S. JERRAM, M.A. Oxon., Author of "The Armies of the World," &c., Lecturer at the Birkbeck, Goldsmiths' Institute, and for the Navy League.

ADDRESS—4 LAVELL STREET,
ALBION ROAD, STOKE NEWINGTON, N.

The following Principals of schools heartily commend Mr. Jerram's Lectures:—Mesdames Brichta, De la Mothe, Power, Ramsay; Misses Boyer-Brown, Cox, Coke-Smyth, Hill, Langborne, Michod, Wilkie, Woods.

These Lectures are an attempt to put in practice Mr. John Morley's well known suggestion.

PIANOFORTE, HARMONY, COUNTERPOINT, ANALYSIS OF CLASSICAL WORKS.—Miss E. MUNTZ, 60 Berners Street, W.—Visiting Lessons in Pianoforte, and Classes arranged at Schools for Senior (Local Centre) Examinations in Harmony and Counterpoint. Lectures on Musical subjects. Lessons by post for all Examinations. Pupils received at above address.

LIBERAL RELIGIOUS READING.—Pamphlets by MARTINEAU, CHANNING, STOFFORD BROOKE, and others, sent Free, and Books lent, on application to Mrs. SQUIRRELL, Lynion, Stoneygate, Leicester.

OUT OF PRINT.

THE BOUND VOLUMES of the "JOURNAL OF EDUCATION" for all years down to 1883 (inclusive) and also for 1885 are out of print. Binding Cases cannot be supplied for years previous to 1891. All Monthly Parts down to Dec., 1882 (inclusive); and also for June, 1885; Dec., 1885; Nov., 1887; and Jan., 1888, are completely out of print.

CONTINENTAL SCHOOLS AND PENSIONS.

HANOVER, 8A Marienstrasse, Germany.—Ladies' College. Modern methods. Preparation for Language examinations. Home life. Principal: Fraulein BRENDCKE, late Senior German Mistress, London High schools. Highest references. Address as above.

ECOLE PRIMAIRE SUPERIEURE, ALENCON, ORNE, FRANCE.—School for Girls. Good education. Large staff of Visiting and Resident Professors. Preparation for Examinations if desired. School situated in large grounds in healthy district. Advantages: Good food, moderate fees. References in England and France. Particulars from MADAME LA DIRECTRICE, above address.

CASSEL—EDUCATIONAL HOME.—Miss FLORENCE WEST receives Three or Four Young Ladies wishing to complete their studies. Every facility for acquiring Languages, Music, Painting, &c. Refined home. English comforts. Highest English and German references. Address—Kaiserplatz 32, Cassel.

FRANCE.—Pastor LÉON BOST, B.D., Salies-de-Béarn, Basses-Pyrénées, receives into his family a few Boarders or Pupils. French, Classics, &c. Comfortable home; mild climate. Strengthening Mineral Baths. First-class references.

PARIS.—The Widow of a French Pasteur and her daughter (Professeur de Français, Diplôme Supérieur), living in the neighbourhood of the Sorbonne and good studios, receive Boarders. Daily lessons in the French Language and Literature given when required. Real home life. Highest references. Moderate terms.—Madame RIAND MALAN, 103 rue Notre-Dame-des-Champs.

BELGIUM.—Young Lady wishing to study French and German can be received in first-class Ladies' School for £34 yearly, on condition of speaking English one hour daily. References in England.—Mme. LEUZE, 57 Avenue Soison d'Or, Bruxelles.

EDUCATION IN GERMANY.

PASTOR GOTTFRIED SCHWARZ, 23 Hauptstrasse, Heidelberg, receives a small number of Young Gentlemen wishing to study German. Board and lodging from £6 a month. Private lessons extra. Reference permitted to Prof. Ihne, Neuenheimer, Landstrasse, Heidelberg.

J. LANGHANS, M.A. Oxon. (Hertford College),

German Taylorian Scholar; Holder of French Taylorian Certificate; Author of "The German Empire and its Evolution under the Hohenzollern."

TUTOR IN MODERN LANGUAGES.

Ladies' Colleges and Schools visited in London and country.

Special subjects: Advanced French and German (Grammar, Composition, and Literature). A Course of Ten Lectures on French and Ten on German Literature, either in French, German, or English, with extracts from famous authors, specially prepared for Schools.

Address—46 Albion Road, South Hampstead, N.W.

DRAMATIC READING, ELOCUTION, AND VOICE CULTURE.

MISS ANNIE RUTTER (formerly pupil of Mrs. Fanny Stirling) receives pupils at her residence. Schools visited.

31 QUEEN SQUARE, BLOOMSBURY, LONDON, W.C.

Practical course. Teachers' courses. Professional course. Students' course. Lecture course.

DRAWING AND PAINTING LESSONS.—Two Sisters desire to increase their connexion in or near Chester. (1) Art Class Teachers' Certificate, Ablett's Certificate. High School experience. Prepares for Examinations. (2) Art Mistresses' Certificates. Silver Medallist. Paints Miniatures. Life Class at Studio, or would teach Miniature Painting. Address—P., Studio, 23 Bridge Street Row, Chester.

Books for the School Library.

Second Edition. Thoroughly Revised and partly Re-written. Pocket size. Leather, limp, gilt edges. With over 600 pages on Special Paper and Illustrations. Price 8s. 6d. net.

A HANDBOOK OF HYGIENE.

By Lieut.-Col. A. M. DAVIES, R.A.M.C.,

M.R.C.S., L.S.A., D.P.H. (Camb.); Late Assistant Professor of Hygiene, Army Medical School, Netley; Late Assistant Examiner in Hygiene, Science and Art Department.

General Contents: Air and Ventilation—Water and Water Supply—Food and Dieting—Removal and Disposal of Sewage—Habitations—Personal Hygiene—Soils and Sites—Climate and Meteorology—Causation and Prevention of Disease—Disinfection.

"The elegant dress of the little volume before us is but the outer covering of a truly rich kernel, and justly merits the praise it spontaneously calls forth. Attractive to the eye, Surgeon-Major Davies's volume is equally attractive to the mind. Students will find that its 590 pages comprise all information necessary. Compact, handy, comprehensive, it certainly merits a high place among the text-books of the day."—*Sanitary Record*.

"A singularly compact and elegant volume. . . contains an admirable *précis* of everything relating to hygiene clearly and logically arranged and easy of reference. Likely, we think, to be the favourite text-book."—*Public Health*.

Thirty-sixth Edition. Royal 8vo, handsome cloth, 10s. 6d.

A Dictionary of Domestic Medicine and Household Surgery.

By SPENCER THOMSON, M.D., L.R.C.S., and
J. CHARLES STEELE, M.D.

Thoroughly Revised and brought down to the present state of Medical Science by ALBERT WESTLAND, M.A., M.D., and GEO. REID, M.D., D.P.H. With a Section on the Maintenance of Health and the Management of Disease in Warm Climates by JAMES CANTLIE, M.A., M.B., F.R.C.S.; and Appendix on the Management of the Sick-room, and many Hints for the Diet and Comfort of Invalids.

"* All Directions given in such form as to be readily and safely followed.

"Worth its weight in gold."—*Oxford University Herald*.

"The book is one that is truly invaluable, and should find a place in all well regulated households."—*Cambridge Daily News*.

Twenty-second Edition. Revised, with numerous Illustrations.
Cloth, 3s. 6d.

A Manual of Nursing.

By LAURENCE HUMPHRY, M.A., M.D., M.R.C.S.,

Assistant Physician, late Lecturer to Probationers, at Addenbrooke's Hospital, Cambridge.

General Contents: The General Management of the Sick-room in Private Houses—General Plan of the Human Body—Diseases of the Nervous System—Respiratory System—Heart and Blood-vessels—Digestive System—Skin and Kidneys—Fever—Diseases of Children—Wounds and Fractures—Management of Childbed—Sick-room Cookery, &c., &c.

"A distinct advance on all previous manuals."—*British Medical Journal*.

"We would advise all nurses to possess a copy."—*Hospital*.

Fourth Edition. Large crown 8vo, handsome cloth, 4s.
With numerous Illustrations and Full-page Plates.

A Manual of Ambulance.

By J. SCOTT RIDDELL, C.M., M.B., M.A.,

Examiner to the St. John Ambulance Association, London.

General Contents: Outlines of Anatomy and Physiology—The Triangular Bandage and its Uses—The Roller Bandage—Fractures, Dislocations, Sprains—Hæmorrhage—Wounds—Insensibility and Fits—Asphyxia and Drowning—Suffocation—Poisoning—Burns, Frostbite, and Sunstroke—Removal of Foreign Bodies—Ambulance Transport and Stretcher Drill—Ambulance Classes—Examination Papers.

"A capital book. . . The directions are short and clear, and testify to the hand of an able surgeon."—*Edinburgh Medical Journal*.

London: CHARLES GRIFFIN & CO., Limited,
Exeter Street, Strand.

TEACHERS' GUILD CONFERENCE.

A CONFERENCE of the Teachers' Guild was held at the College of Preceptors on January 13 and 14. The Hon. the Rev. Canon LYTELTON, Chairman of Council, presided.

The CHAIRMAN said that they had met this year, not to discuss the politics of education, but strictly educational matters. There was at the moment an extra amount of agitation in the country which was only in part educational. Any one who suffered from the climate, or influenza, or a sluggish liver found relief in abusing the Head Masters' Conference. If any defects were pointed out in national character or arrest of progress in the expansion of the Empire, the fault was all laid at the door of the schoolmaster. Yet this stream of criticism was a good thing for them. In response to a national demand they must set their house in order, consider their ways, and be wise.

Observational and Field Work as the basis of Geography Teaching.

In the unavoidable absence of Prof. Seeley, Miss JOAN REYNOLDS read the first paper. In geography the problem of the teacher was where to find and how to use the raw material—not only what was provided in books, but what lay around them in Nature—to teach the pupil how to observe, to record observations, and to draw inductions. That direct observation must precede indirect was an axiom laid down in Rousseau's "Emile." The *Heimatkunde* of the Germans was practised by Pestalozzi in his school at Yverdon. He used to send his pupils out to gather their own clay, and mould in relief the valley where they found it. It was a good thing to tell children beforehand what they were expected to observe. Each child might be given a slip of paper with questions to guide its observation. All observation need not be strictly geographical. In towns it must be confined to marking and interpreting masses of buildings. Rock formation, as the basis of geography, required special attention. For the study of land forms and their history, Mawrer, Geikie, and Russell were very helpful. At the Summer Extension Meeting of 1900, Prof. Davies, after lecturing on the evolution of land forms, had taken a select class, of which she was one, to study the Cotswolds. Had representatives of Chili and Argentina attended and observed the shifting of water volumes, the present quarrel might have been avoided. Field excursions by schools could only be rare treats—twice or thrice in the year. Mr. Cowen, in his account of the annual school journey from London to Godstone, had shown how they should be prepared for and organized. In the classroom no elaborate apparatus was needed. The most important points to illustrate were relief of land and climate. The rest of geography teaching was mainly a matter of deduction. Thus, the first voyage of Columbus might be worked out by observing the prevailing winds of the Atlantic. Sections and contour lines might be made plain by gradually filling a flat vessel, and marking the ascending water levels. Dr. Mill had written a useful pamphlet on a sheet of the Sussex Ordnance map. The rarity of geography teaching by this method was due not so much to the ignorance of the teachers, but to the difficulties they encountered. The questions set in examinations did not test this kind of work. She suggested that the pupil might be set to interpret a map of the district. Direct observations of the natural features of the locality must precede the study of a map. Further, field work must not be confined to the first stages. At each stage fresh features had to be observed. The three natural stages were: 1. Observation of typical forms of earth and water. 2. Comparison and reference to causes. 3. The power to interpret the present and forecast the future.

Mr. LYDE feared he was there on false pretences. He did not care a scrap for geography apart from teaching. In the few observations he had to offer he should ignore all that Miss Reynolds thought most important. It applied to babes, not to the boys he had taught. His boys had no happy valley in which to roam, and they did not want to. Clay they had everywhere, sunshine none; they could only study rain. The average boy would not remember what you wanted him to. If you impressed on a boy that you were not going to require the heights of mountains, he would remember them to a foot. He could not draw or model himself, and he could not conceive how a class of thirty or forty could be taught out of doors to abstract the geological conformation of a valley and reproduce it pictorially or plastically. Again, in his school they had almost no apparatus, and they did not want it. He could report great progress in geography teaching. In the last ten years he had examined fifty thousand candidates, and the difference in the answers was most marked. Ten years ago the average answers were mere masses of cram; last year, out of two thousand papers, not more than 10 per cent. were "cram." Pupils found it did not pay. If field work were to be the basis of geography teaching, surely it required more than two or three days in the year. When he was at Glasgow he used to ask his class how many of them had been round the Kyles of Bute. To those who had not he would say: "Go; it only costs a shilling, and, if before next lesson you haven't been, you'll be whipped." That one expedition gave him sufficient standards of

value on which to build. He did not want appeals to the eye, but to the imagination—a much higher quality. These field excursions were, after all, play, not work, and he was certain that half even of Miss Reynolds's class were playing. The average boy did not want to do "soft" things. Set him something that is hard, and he likes doing it because it is hard. The true basis of geography teaching was not land forms, but what the boy was interested in—things to eat, things to measure, apples, gold mines, engines, tunnels through Shap Fell, gradients—in short, at any rate, in a manufacturing town, a commercial basis. They were not specialists in geography, but teachers, one of whose subjects was geography, which they had to correlate with other subjects.

Miss PUNNETT (Cambridge Training College) objected to Mr. Lyde that without perception there could be no appeal to the imagination. What was imagination but a picturing of things seen? Were none of Mr. Lyde's boys interested in science? Might not this interest afford a wider basis to build on than apples? If Mr. Lyde had ever tried field work, he would have found that the dull boys were interested in it and worked as they never had worked in the class-room.

Miss REYNOLDS, in reply, said that both she and Mr. Lyde were at one as to the necessity of arousing interest; they only differed as to the means. She had clearly laid down that the observational method was only one way of several. The difference between them was not wide. Mr. Lyde postulated one day's excursion; she asked for two. Observational work could be pursued inside as well as outside the class-room.

Holiday Courses.

The opener of this subject was Mr. M. E. SADLER, Director of Special Inquiries, Board of Education. He said that to any one who knew the time, trouble, and thought required to organize a holiday course it was an ungracious task even to hint a fault. Yet even organizers themselves must sometimes doubt whether all their efforts had left any permanent result, and be harried by the thought that they had murdered the sleep of the Long Vacation and would be chidden by the gentle Elia in the Elysian Fields. Still, they were bound to the wheel, and must follow the gleam. To all such let due thanks and honour first be given, and then criticism. The worst thing that could be said of them was that they were *holiday* courses, for it was not as though the teachers who had been slack in term-time then made up arrears; it was the industrious apprentice who frequented them. When things were properly organized, no one would be allowed to attend a holiday course without a medical certificate. True, he had never actually seen any one the worse for attending, but the theoretical objection held good that some men and women worked when they ought to be playing. But, instead of framing any general propositions, he asked leave to draw a few characters after the manner of the eighteenth-century moralists. ERMITES is a schoolmaster who conceals beneath the veil of geniality the temper of a recluse. Amid the fret and stir of term-time he sighs for the shades of Fontainebleau or the snows of the Oberland. Discipline is not his *forte*, and the least precious part of his work is done in the class-room. Especially his lessons in French are distinguished rather by zeal than by success. So Ermites nobly resolves to pass windy weeks at Easter, or scorching dog-days in August, at a French *lycée*, to acquire that most elusive of gifts—a Parisian accent. INSULARIS thinks less highly of the Continent than he ought to think, his notions of Frenchman and German being derived mainly from hair-raising extracts from the gutter press. A well selected succession of foreign holiday courses would be good for him; only, having no entrance to the language, he is only confirmed in his low estimate of the intelligence of foreigners, and fires off a letter to the *Times* exposing their ignorance. SCRUPULOSA corrects exercise books all through the term with a painful exactitude that leaves little time for private leisure or relaxation. The high Alps, in company with a friend, would suit her case far better than any holiday resort. GARRULA, the kindest but most superficial of women, has attended more holiday courses than any of her age and sex. She knows the latest lights on prehistoric man and microbes, on the Homeric question and problem plays. For her a severe course of French and German exercises may be prescribed. RUSTICA has lived a retired and limited life in the country with relations all older than herself. A considerable portion of her time is consumed in reading the *Standard* aloud and finding lost spectacles. For her a holiday course is an unmixed boon. The general inference was that for some people, at certain places and under right conditions, holiday courses were very valuable institutions. If the social side were carefully organized, they were useful in bringing people together and helping them to rub off angularities. To some people, not necessarily over-fastidious, anything that smacked of a personally conducted tour, whether as regarded places or literature, was distasteful. Others enjoyed the opportunity afforded of visiting museums, libraries, &c., in company. Why were not more holiday resorts started in the pure air of the Alps or Highlands, from which all bores were ostracized? No one could believe how dull some lecturers could be till he had heard them. The Teachers' Guild should bring out a confidential list of such holiday resorts for the initiated. His experience was that

it took three days for a holiday resort to settle down. At the end of that time a common sentiment arose that no one could predict—enthusiastic or critical, gay or in the dumps. But every holiday resort had the mind and temper that it deserved. For the study of modern languages holiday courses offered peculiar advantages. For initiating such courses their thanks were due mainly to Dr. Findlay, and for carrying out the plan to Mr. Longsdon and Mr. Marvin. Let them not, however, encourage the mischievous delusion that by devoting three weeks at Easter or a month in summer to a course at Caen or Marburg, a school acquaintance with French or German could be brought to maturity. The modern language teacher needed two years' residence abroad after taking his degree. There was at the present moment a great conflict of ideals in national life, in literature, in art, in music. English ideals were at a discount, but it did not follow that when a nation was most reviled it was furthest from the right. Could we not do more to make our foreign friends understand what England really cared for, to make them see that much of their criticism was wide of the mark, to render audible the true voice of England, as expressed by Hooker, Burke, Dean Church—each speaking to his generation the secret purpose and ideal of our national life, the embodiment of one great whole in apparently opposite tendencies, the distrust of any revolutionary solution of great questions, the resolve to maintain ancient institutions as a framework for ancient liberties, and to mould them gradually to present needs?

Mr. LONGSDON stated that in the last eight years over two thousand English students had attended holiday courses in France and Germany. The need of such courses for modern language teachers had been impressed on him, as an inspector of secondary schools, when sometimes he found the teacher actually spelling the French words, and not even pretending to be able to pronounce them. Residence in a private family was almost an essential part of a foreign holiday course. Hotels and boarding-houses were equally unsatisfactory. The influence of a small English settlement of cultured men and women in a French town was a potent factor in promoting international amenities and removing prejudices.

Inspection of Secondary Schools.

The discussion was opened by Mrs. BRYANT. Without adopting the Rosebery policy of the "clean slate," we might still be idealists. By finding out what the wisdom of the past had been aiming at we might disentangle the essential elements, and so build up an ideal of inspection. What, then, were the facts? (1) Schools had been free to choose between inspection and examination. School authorities had been anxious to see their schools inspected, but there had been no public demand for inspection. There had been of late a loud cry against the evils of over-examination; but over-inspection might prove a worse evil than any Locals. (2) The Universities had had the lion's share of examining, and had undertaken tentatively inspection. (3) A system of State inspection was growing up. (4) Governing bodies appointed at their pleasure individual examiners, and there was a great deal to be said for that plan. Thus there were, on the one hand, various voluntary agencies, and, on the other, the Local Authorities and the Board of Education. To look ahead, the Local Authorities would have the control of all secondary schools, and would be bound to make themselves acquainted with what was going on in their schools. In comparing the advantages of University and State inspection it was to be noted that the close contact of Universities and schools was a gain to both. At the Victoria University the Council desired to employ as far as possible the staff of Owens College in the work of inspection, in order that their professors might know at first hand what was being done in schools. In the public interest, and as exercising a public trust, the Local Authorities would be bound directly or indirectly to inspect, and it was equally obvious that there must be some central control. The Board of Education must keep in touch with education all over the country. But inspection was threefold—administrative, educational, and lying between them the mixed province of sanitation, buildings, plant, &c. The first part should be as far as possible in the hands of the Universities. That was what the Universities could do best—for one thing, because the schools liked it best. But for administrative inspection the Universities were obviously not fitted. How, then, were these different inspections to be combined? The best solution would seem a combination of University inspectors with one Central assessor, who should draw up a joint report; and together with these she would like to see the Local Authority (who should pay the bill) in some way associated. Examinations should be annual, but inspection of this sort at much longer intervals. A vast amount of time and money was wasted in sending some people to see that other people were doing their work properly. A very ordinary person can set a good examination, but it required an archangel to be a good inspector. If inspection were held once in every three or every five years, even by inspectors a little lower than the angels, the very ablest teachers would profit by it.

The Rev. R. D. SWALLOW expressed a general agreement with Mrs. Bryant, though his views had been somewhat modified by recent events. The Duke of Devonshire's letter to Sir John Hibbert showed that our education *ἐκκλησία* was not to be a universal or national *ἐκκλησία*.

There was no desire on the part of the Government for whole-hearted reform. Again, only the week before, the Technical Instruction Committee of the West Riding had appealed to Government to deal only with secondary schools, and he feared that this unwillingness on the part of the Local Authorities to deal with matters not already entrusted to them would give the Government an excuse for bringing in another of Sir John Gorst's little Bills. That a prominent member of the profession had lately approved that course showed the need of free discussion. They had, or would shortly have, a Register of Teachers. They still needed a register of schools, and for this a census of schools, and for this inspection. There was already a regular inspection of schools of science, and also of a rapidly increasing number of schools which accepted Clause 73 of the "Directory"; besides these, a few schools which had placed themselves under the Joint Board. All these, however, represented but a fraction of the schools of England. Virtually, all the public schools, the day schools, and the proprietary schools (except for the administrative inspection, which had passed from the Charity Commissioners to the Board of Education) were uninspected. What, then, was to be done to encourage inspection? There must be no compulsion, but gentle persuasion—i.e., an ostracism of schools which refused to admit the inspector. The inspector was, as it were, the *ἐπίσκοπος*, the bishop of the *ἐκκλησία*, the guarantor to the public of general efficiency. He brought masters in contact with wider experience than their own, and he furnished the Local and Central Authorities with materials for the co-ordination of schools. In dealing with private schools, the inspector would ask such questions as these—Does the school do what it pretends to do? Does it provide for the wants of the neighbourhood? Are the payments and pensions of assistant masters satisfactory?

Who were to be the inspectors? In the "Directory" of the Board of Education he found a list of twenty-one secondary inspectors, but of these only nine had letters attached to their names indicating a University degree, nor was there a single teacher of eminence or one who had made his mark in scholarship. The list was infected with the S. Kensington bacillus, and it did not contain the name of a single woman. The occasional inspectors were distinguished men, but, as they had heard in another place, they did not inspect, and were, he feared, only used as decoy ducks. The University inspectors, as far as his experience went, were satisfactory, but they must be paid; and, though the charges were moderate, they bore heavily on the poorer schools. In conclusion, he would venture to lay down five theses—(1) There could be no proper condition of schools unless all schools were under inspection. (2) The Consultative Committee was the proper administrative body for inspection. (3) The present inspectorate of the Board was ineffective and insufficient. (4) There should be power for the Board to delegate inspectorial powers to the Universities. (5) Inspectors should be men and women, not machines set in motion and regulated by a Department.

Mr. EVE said that in an ideal inspection there should be complete solidarity between the inspector and the teacher. Therefore the inspector should have served for at least ten years as an assistant master, and for preference five years more as a head master. Thus, if only he were endowed with modesty—the most essential quality in an inspector—he would command the confidence both of the head and the assistants.

Mr. BUCKMASTER objected that an inspector with Mr. Eve's qualifications could not be a permanent official. He would be superannuated before he had got into the swing of his work. There was the further danger that the inspectorate would be filled by head masters who had proved failures. Inspection was a trade that must be learnt like other trades. A formal inspection every five years, such as Mrs. Bryant desired, would not effect its object. To judge of the work of a school you must see it under its ordinary conditions, and visit it without notice.

Mr. THORNTON, Mr. LYDE, Mr. STORR, Mrs. GREEN, Miss PUNNETT, and Mr. ELLIOTT also took part in the debate.

The CHAIRMAN, in summing up, said the diversity of opinion showed the complexity of the problem. We did not, indeed, like Mrs. Bryant, require inspectors to be archangels. As Mr. Lyde had shown, an inspector might give valuable hints on teaching, though he knew little or nothing of the subject. Yet he held that inspection must not be forced, but allowed to grow up gradually. If it were to be attempted at once on a large scale, he doubted whether the country could furnish competent inspectors in sufficient numbers. Every profession was crying out for better materials, the Church and the Army no less than schools. Every year there was a greater drain on ability from the Colonies. As a start, he would suggest the following scheme. There should be a head inspector (he knew of one man capable of filling the post, whose name he would not reveal), with a salary of not less than £2,000, and under him five or six other permanent inspectors at salaries of £1,000. The Board thus formed should divide the country up between them. Their inspection would be so valuable that all schools would be eager to secure their services. Then let them look out for underlings, who would work under their direction and supervision. Thus a body of trained men would gradually be formed, and the work would extend by a natural process. Inspection was a national need, for at present the public did not know, and had no means of ascertaining, what any school was doing.

The second day's Conference included papers on "Nature Teaching for Children," by Mr. C. E. Rice and Miss J. C. Vinter; on "The Essentials of Geometry Teaching in Schools," by Dr. Wormell and Miss Jessie Gill; on "The Teaching of English Literature in Schools, and School Editions of English Classics," by Mr. P. A. Barnett and Mr. H. Courthope Bowen. We hope next month to give some of these papers in full.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

THE Annual General Meeting of the I.A.H.M. was held at the Guildhall on January 10 and 11, under the presidency of the Rev. Dr. Gow.

Dr. Gow, in his opening address, dealt with the general aspects of education at the present moment. The bewilderment of the Duke of Devonshire was not surprising; but, had he been in the Duke's position, he should have taken steps to sift the matter and work out clear ideas for himself. The first step was an educational survey of the whole country. After that would come a consultation with school-masters, men of business, and politicians, each on his own special topic. Lastly, these different views should be co-ordinated and embodied in a Bill. As it was, nothing of this kind had been done; still there was to be a Bill. What it would contain he could not forecast; but it was clear from the Duke's letter to Sir J. Hibbert that it would only have a reflex action on the existing endowed schools. Till the provisions of the Bill were known it would be idle to discuss its possible effects. He would, therefore, confine himself to general reflections. He did not believe that any Education Bill could have the effect they all desired—to produce a well-educated, industrious, and intelligent people. The English people were notoriously not docile—no more were the Scotch; but the Scotch loved learning and taught themselves. The English, on the other hand, especially those who set the fashion, had no love for learning, and would not teach themselves. It was as impossible to make such a people intelligent by Act of Parliament as it was to make them sober. They might spend millions of money and erect thousands of schools, and force the youth of the country into them, but they would not make scholars out of refractory materials. The one thing lacking was a general pleasure in the exercise of mental activity. That general interest did exist in Germany, and that interest, he believed, had been produced by what we in England were determined not to try—extreme simplicity of the apparatus of teaching. The general demand for an Education Bill might be quoted against him; but he thought there was in the main a demand for commodities, not a demand for education. From whom did the demand come? First and foremost, from the supporters of voluntary schools, who did not care for any schools but their own, and were indifferent to the rest of the Code so long as religious education was provided. Then there were the Town Councils, who chafed against the School Boards. Then there were the merchants, who wished other people's children to be better taught, but were careless about their own. The desire was not for education, but for some other commodity connected with education. The parents whose children were the subject of the discussion were profoundly indifferent, and chose their schools, if they exercised any choice, solely for social reasons. The moral he would draw was that it would be extremely dangerous to introduce suddenly among the English people a high standard of education. At Nottingham the founding of a University college some twenty years ago had killed all the intellectual life of the town. The professional had cowed the amateur. As in art, music, and athletics, so in education he feared that everybody would drop his books so soon as he found that he could not be a professor and earn his living by them. There was grave danger that the education which was going to be given to our youth would be such as to turn them out superficially finished and competent for a time, but rotten at the core, unwilling to learn anything that did not pay, and unable to learn that because they had not kept their intelligence lively and in working order. For this reason he hoped that the coming Education Bill would not be a very drastic affair. The adjustment of administrative difficulties, the support of institutions languishing for lack of funds, and the starting of a few experiments would, in his judgment, be sufficient for the moment. The disease was not to be cured in a hurry. A little Bill every year and a vigilant Education Department would do more good than a big Bill that would run through the country like an earthquake. A series of small Bills would alarm nobody, would maintain the public interest, and would keep the Department on the *qui vive*.

The New Education Bill.

Mr. A. F. RUTTY (Leatherhead) moved:

"That the next Education Bill provide (i.) for the efficient control of *all* secondary schools; (ii.) that every school under the supervision of a Local Authority should have a right of appeal from the Local Authority to the Board of Education in matters of curriculum and administration, as well as of finance."

They had had numerous little Bills, moribund in birth. What they wanted was a wide and comprehensive measure; but the recent letter of the Duke of Devonshire showed that the Government had no idea of anything heroic.

The main objects to be aimed at were to put an end to all schools that were not efficient, and to place schools under the effective control of some authority that would inspect and examine them. Of private schools many were excellent; but more were utterly inefficient and ought to be suppressed. We did not allow quacks in our hospitals, or tub-thumpers in our pulpits. Why should we allow charlatans to set up what they were pleased to call educational establishments, with untrained and unqualified assistants?

The Authority.

The question whether their schools would be under the Central or Local Authority had exercised them much; but the Duke's letter to Sir John Hibbert had resolved most of their doubts. Government had no intention of compelling any school to come under the Local Authority. It was also clear from this letter that there would be no exclusion of any school by name from the action of the Bill or any invidious distinction drawn between the older and the more recent foundations. With this freedom of choice he was convinced that a large number of schools would avail themselves of the opportunity, and a constantly growing number, if the Local Authority showed a disposition to leave the best of their schools alone. Yet it was a wise precaution at starting to give to all schools a right of appeal to the Board of Education.

The German Scare.

Many would resort to more drastic measures, and remodel our whole system in conformity with Germany. He trusted they would never yield to this agitation. They did not want their boys to become like German boys. They did not want to see secondary schools turned into what ought to be tertiary or their pupils converted from humanists into "heuristics" by the introduction of malodorous fireworks into the laboratory. What was wanted was to make the work as hard as German boys'. Mr. Kipling's "flannelled fools" were not made in Germany.

Mr. WERTHEIMER (Bristol) seconded. He agreed with the resolution, but disagreed with all the arguments of the mover. In particular he protested against the flippant scoff at science teaching. We wanted a definite aim for our schools—neither classical nor modern, but a mixture of the two. We had much to learn from Germany, especially as to modern language teaching.

Private Schools.

Mr. FLETCHER (Liverpool) pointed out that the first part of the resolution introduced the vexed question of private schools—a question that were better deferred. The important thing was not that all should be done, but that something should be done well. If the public schools were made efficient, the inefficient private schools would disappear of themselves. Again, if efficient control were interpreted as by the Central Authority, this would mean that the Central Authority would dictate how money raised by rates was to be spent.

Dr. FRY supported this view. Private schools sorely needed supervision; but the present Government were not likely to fall into the extreme of biting off more than they could chew.

After some further discussion it was agreed to put separately the two parts of the resolution, which were carried with only three or four dissentients.

Inspection and Examination of Schools.

Mr. J. E. KING (Manchester) moved:

"That for the inspection of secondary schools steps should be taken by the Board of Education to make effective the choice of inspection by a University organization, expressly provided under Clause 3 of the Board of Education Act."

In the new South Kensington "Directory" it was laid down that not only all recognized schools of science, but also secondary day schools receiving grants from the Board of Education, would be held to have applied for inspection under the Board of Education Act, 1899, and would be compulsorily inspected. As far as he was aware no provision had hitherto been made for the University organization of inspection advocated by the I.A.H.M. as an alternative to the Board inspection, and granted under Clause 3 of the Act. In advocating inspection he did not wish to exclude examination. The days of examination were not yet over. There might be beings who, by a two days' visit to a school, were capable of gauging its merits and defects, but such paragons were rare; otherwise the need for head masters would be over. In weighing the advantages of inspection by a University organization against one by Government officials, a recent utterance of Mr. Chamberlain on charity was to the point: "Directly you get a great organization the personal element is eliminated." Inspection was twofold, administrative—including sanitary—and educational. On the first part the Board of Education was bound to satisfy itself. With the second part the Universities should be concerned, and examination should go hand in hand with inspection. The University inspector, they desiderated,

should be like the Matinian bee, fertilizing school after school by the gentle fanning of his wings and the faint hum of his presence. To the Science and Art inspector they owed much, and bare justice had been done him by the profession, but he was rather associated in their minds with the red tape worm. It was reported that negotiations were going on between the Universities and the Board; but they must bestir themselves.

Mr. REITH (Halifax) seconded. He said that the Technical Instruction Committee of the West Riding County Council, on which he sat as an assessor, thought of instituting an inspection of their own, and he would like to know what the Association said to this proposal. The Victoria University had already been recognized as an agency under the Board of Education; and the reports of the University inspectors, if accompanied by a Board inspector's, would be recognized as valid for the administrative part. He could not, however, himself conceive a school putting itself for the first time into the hands of a moribund University. A multiplicity of inspections was greatly to be depreciated. One of their members had been inspected twenty-nine times in a year.

Mr. KAYE (Bedford) feared that the resolution involved a dual inspection, as they were bound to have an administrative inspection under the Board of Education, besides the educational inspection of the Universities, and probably another by the Local Authority. He illustrated the complexity of the problem from the case of Bedford, where there was a mixed trust in which schools of different kinds shared. They wanted as strong a body of inspectors as they could get. If the work was divided, they would not get strong men.

Dr. FINDLAY said the problem had been satisfactorily solved in Wales by the creation of a Central Board, on which the University, the Local Authorities, the Board of Education, and head teachers were all represented. For the inspectorate was wanted a body of men who had been teachers but whose life work was inspection.

Mr. PEACOCK (Wakefield) moved, as a rider: "That such inspection should be allowed, if so desired, to take the place of the annual examination ordered by the scheme of the school." They could not expect the Universities to give up their Local Examinations—the only part of their extra-mural work that paid.

Dr. SCOTT said the resolution was framed to satisfy the Board of Education Act. There must be an administrative inspection; but this might take place at any time, and need not interfere with the work of the school. What they dreaded was the uniformity of a State system, and therefore, for the educational inspection, they wished the alternative of the Universities.

Mr. MATTHEWS said they were still frightened by the bugbear of ten years ago. The elementary schools had rid themselves of a cast-iron Code and payment by results, and there was now no danger of uniformity. The Universities could not, in the matter of secondary education, be considered experts, and from the Board of Education they might hope, in time, for real experts. If a University inspector devoted his whole time to the work, he had better be under the Board; if he made inspection a *παραγωγή*, he was only an amateur.

Mr. FLETCHER urged the advantage of the Universities and schools keeping in close touch. True, the Dons knew at present little or nothing of schools; let them come and learn something.

Dr. FRY supported the resolution in the interests of freedom. The Board of Education had not, so far, appointed inspectors whom they could trust. The distinguished men who figured in the "Directory" as "occasional inspectors" (like their Chairman) were merely decoys. They were too busy men to take more than an occasional job.

Dr. GOW explained that he did not know till that morning that his name was on the list. Sir W. Abney had asked him to undertake the inspection of a particular school in his neighbourhood, and, having obtained the leave of his Governors, he had consented; but the proposal fell through, and he had never inspected for the Board.

Mr. LAFFAN desired anything that would discourage the vast system of University examinations, grouping schools of different aims all over the country—a system which was doing much to kill education in England.

The amendment was then put, and rejected by a small majority. The resolution with Mr. Peacock's rider was carried.

Pensions.

Dr. R. P. SCOTT, in the absence of Mr. Dakyns, moved:

"That the Board of Education should be empowered to adopt for teachers in public secondary schools a scheme for giving analogous advantages to those of the scheme of the Welsh Central Board."

The advantages of the Association scheme were fully set forth in the Report of the Council (page 140), and that of the Welsh Board scheme on page 51 of the same Report. Their own scheme was financially sound, but the flaw in it was that the minimum there indicated was taken by governing bodies as a maximum. Under the Welsh scheme, for every £10 contributed by the master the Central Board gave £16. Among hard cases that had come under his personal knowledge, he mentioned one of an assistant master who had been superannuated after

thirty years' service with a gratuity of £50. Half the difficulties of tenure arose from the absence of any pension scheme.

Mr. GULL (London) pointed out the wholly different conditions prevailing in England and in Wales. In Wales they had a homogeneous body of schools under one Authority, which could compel all masters in its schools to join the scheme. The Association of Head Mistresses had adopted an almost identical scheme to that of the Head Masters; and 387 mistresses had joined it, as against 156.

An amendment was moved by Mr. GULL, and seconded by Mr. TAYLOR:

"That head masters be requested to bring before governing bodies the advantages of the Association scheme of pensions." This was lost; and the original motion was carried, with the addition of the words "by means of the aid afforded by the Local Authority."

Science Grants for Secondary Day Schools.

Dr. TURPIN (Nottingham) moved:

"That this Association welcomes in Clause 73 of the 'Directory' of 1901-2 a desire on the part of the Board of Education to aid science teaching in schools without detriment to other subjects in their curricula."

Under the new scheme of the Board of Education a grant of 50s. a head could be earned by a school taking a course of science for not less than nine hours a week, but five of these hours might be given to mathematics. Four hours a week of science was not an unreasonable amount, at any rate, for the modern side of a school. It was true that schools earning the grant would come under the inspection of the Board of Education, and by Clause 7 be brought under the Local Authority; but, from his Welsh experience, he had no dread of coming under a democratic Authority.

Mr. E. W. HENSMAN (Quorn) seconded; and, after some discussion, in which Mr. COHEN, Dr. FINDLAY, Mr. REITH, and Mr. SWAN took part, the resolution was carried.

The reports of the Committees were then received, and the meeting adjourned till Friday.

FRIDAY.

Officers and Committees.

The officers of the Association were re-elected for 1902: as Secretaries—Dr. R. P. Scott and Mr. Swallow; as Treasurer—Mr. Easterbrook. Dr. SCOTT, in accepting the appointment, said he thought it most undesirable that it should come to be regarded as a life tenure; he had merited his discharge, but consented to serve for another year on the ground that it was not well to swap horses while crossing a stream.

In moving that the Report of the Joint Advisory Committee be received, Dr. SCOTT said, in taking over the work of the old Press Committee, they had attempted, with very insufficient funds, to interpret to the public the meaning of secondary education. The term was not a happy one, suggesting, as it did, to the man in the street "a secondary consideration," but the thing was good. Parents needed to be shown how it differed in kind from primary education.

Mr. SWALLOW, as Chairman of the Committee on Training of Teachers, urged the attendance of masters. He had often to contend single-handed with the experts and the women. The Association at present showed little interest in training. Doubtless the Conference of Head Masters cared as little or less, but their two representatives on this Committee—Mr. Bell and Mr. Rendall—did care and did attend. Quite lately their Secretary had addressed an inquiry to the heads of schools as to provision made for training. For every hundred answers received from head mistresses there had been but one from head masters, and that of no interest. Whether they liked or disliked training, or were indifferent, it was a question that loomed large in the future.

Mr. HINTON, as representative of the I.A.H.M. on the Joint Agency for the Supply of Assistant Masters, reported that during the past year the Agency had paid its way. He urged head masters to support it, as a boon and a blessing to assistant masters.

Dr. FRY, commenting on the small number of names on the books of the Agency, said there never was a time when the profession was less attractive than now. Till assistant masters were adequately paid and pensioned, they might legislate as they liked, but they would not get their schools properly staffed.

Mr. ARNOLD moved that the report of the Joint Scholarship Board be received.

Mr. GULL, as representative of the pension trustees, said that the actual amount of the fund was £9,329. 12s., showing a surplus of £94. 10s. over the liabilities as estimated by the actuaries. He pointed out the advantages of their scheme: it was applicable to any school with a staff of more than one, and admitted the smallest contributions. True the pensions secured under it were quite inadequate, but they were better than nothing at all. It was no good crying for the moon because you cannot get bread and butter. Head masters should approach their governing bodies, as he had done, and get them to

adopt this scheme. Then let them go to the county authorities, who held the purse, and ask them to supplement their efforts.

Engineer Officers in H.M. Navy.

Mr. EASTERBROOK moved:

"That this Association desires to draw attention to the unsatisfactory condition of service of engineer officers in H.M. Navy, and to urge upon the Admiralty that, until the service is made more attractive as to both the *status* and the pay of these officers, there will be a dearth of the most desirable candidates and a great loss of efficiency to the nation."

He said this was a national question, and the growing dissatisfaction felt by this branch of the Service constituted a grave national danger. The engineer officer, after passing the competitive examination, had to spend five years in training—from the age of sixteen to twenty-one—at a considerable expense to his parents, and then it was three years more before he became an acting engineer. On board he was classed as a non-combatant, and had no power to award even minor punishments or to sit on a court-martial. At the Admiralty Board the engineering branch had not a single representative. In consequence of their disabilities and the low rate of pay, while the total horse-power of the Navy had steadily increased, the number of candidates entering had as steadily decreased. The American Navy had had a similar experience; but a Board of Inquiry had been appointed, of which the present President was Chairman, and as the result of its report there had been a complete amalgamation of the executive and the engineers—a uniform scale of pay and rank. The same just claim should be pressed on the English Admiralty.

Dr. FRY seconded. He pointed out that the inferior *status* assigned to engineer officers was a piece of rank snobbery, paralleled by the placing, at the beginning of the South African War, colonial leaders below cadets straight from Sandhurst. For naval clerkships and cadetships a nomination was required, while for engineer officers the competition was open; therefore the engineers were supposed to come from a lower grade of society. It was a point that came home to them. There were now so few openings for the sons of poor men, and a naval engineer could live on his pay, while the clerk and the cadet could not.

Mr. REITH (Halifax) wished that Mr. Easterbrook would add something to his resolution. The conditions of entering the Service were unsatisfactory. He had passed one boy from his school, but he found that this boy cost his parents £80 a year for five years after leaving school. Nine parents out of ten could not afford to pay this, and the tenth would not.

The resolution was passed by acclamation; and it was agreed that copies of it should be sent to the Institution of Civil Engineers and other bodies which had been agitating for the same reform.

Set Books.

Dr. GRAY (Bradfield) moved:

"That in all language examinations, ancient and modern, imposed by external bodies, prescribed books should be abolished."

He apologized if he should repeat any of the arguments used at Cambridge—he had been unable to attend that Conference—when the subject had aroused extraordinary interest. The advocates of his motion hoped to erect a breakwater against the tyrannous flood of cram for examinations which threatened to engulf secondary education. The question naturally fell under the two heads of ancient and modern languages. As to Latin and Greek, it affected most the smaller grammar schools, where the disparity between the top and bottom boys in the head forms was most marked. In these schools a prescribed book was taken, and worked through from cover to cover. Here the temptation to cram was strongest, for such schools stood or fell by their percentage of successes—the bane of modern education. Prescribed books, it was said, were a necessity for small schools, which could not otherwise bring up a class to the passing standard. The book, in fact, must be learnt by heart. Modern siders who went to Oxford avowedly learnt by heart the English of the Greek play set for Smalls, and just enough of the Greek to know where to go on in their repetition. Another argument in favour of prescribed books was more entitled to consideration. Its abolition, they were told, would do away with the time-honoured "grammar method" described in Mr. Bell's paper. Here he joined issue. It would not prevent or hinder the study of grammar, but it would abolish the study of rare and abnormal forms. The gravest indictment against the system was that, at present, examining bodies have all different prescribed books—one for the Legal Preliminary, one for Chartered Accountants, one for London Matriculation, one for the Locals, and so on. It was to be hoped that the Board of Education would be able to induce these bodies to establish unity of subjects. In French and German the case against prescribed books was still stronger. In public schools the system of teaching modern languages as dead languages still prevailed, and a boy could gain honours in the Higher Certificate Examination of Oxford and Cambridge without knowing a word of the spoken tongue. Modern languages, in philological phrase, had been treated as belonging to the isolating family, not the agglutinative. It was the business of the Association to find a remedy

for these evils; and, if they failed to do so, they could not hope to retain their position as pioneers in education.

Mr. SWALLOW seconded the resolution.

Dr. FLECKER moved an amendment which, with the consent of the President, he twice amended, and which, when voted on, ran:—"That in all language examinations, except in University Matriculations, an option be allowed between prescribed books and sight translation." He considered it a boon to the mathematical and science scholar that he should be compelled once in his life to learn a Greek play by heart. As to the variety of books, Dr. Gray had overstated his case. Several of the examining Boards acted in concert. "Cram" was a question-begging term of abuse. To master a given portion of a great classic—say, a book of the *"Æneid"*—was, or might be made, part of a liberal education. It created an atmosphere in a school. Even the Common Room discussed difficulties and various renderings.

Mr. BARKER (Hatcham) moved a second amendment:—"In all language examinations . . . candidates may pass without prescribed books." In preparing for the Locals he had found no difficulty. His pupils got up the prescribed book; but, if they found they could do the unseen set as an alternative, they took that.

Mr. HINTON seconded. He favoured the policy of "Live and let live."

Mr. HOWLETT supported. He questioned whether it was sufficient for a boy to have the power of translation and nothing else. To say nothing of grammar, the knowledge of history, geography, and archaeology acquired in getting up a set book was invaluable.

Mr. CARTER (Whitechapel) opposed the amendment. Mr. Barker wished to retain set books in the interest of non-experts—*i.e.*, those who did not know much about teaching. The Governors of his school had encouraged, by the offer of special salaries, the staff to obtain certificates for conversational French and Spanish. To pass in sight translation there was no need to teach by snippets, as previous speakers had argued. His pupils passed in Latin, French, and Spanish without any such preparation. They read no snippets, but they read six French or Spanish books in the year in the place of the one prescribed. Prescribed books were advocated in the interest of the dull and stupid; but he could not conceive a plan more calculated to create dullness and stupidity than perpetual grinding at a book of *Cæsar* or a play of *Racine*. The real reason for their retention was that the majority of the secondary teachers of England were incapable of teaching French.

Mr. BIDWELL (Peterborough) saw no use in proposing the alternative, for when it was offered, as was now commonly the case, hardly any pupils took the unseen. The set book was both a drudgery and an imposture. In the Locals, he found, he could pass a stupid boy in Latin by giving him a crib to "*Cæsar*" and making him learn it.

Mr. LAFFAN hoped the amendment would not be carried, as it combined the disadvantages of both systems. On the one hand, it was bad to keep a whole class going at one book for a whole year; on the other hand, he had seen the grave evil of preparing boys for Army examinations on the snippet system. According to the amendment, both the crammers and the snippets would have their way. The whole system of examinations needed reforming. They must test something more than the empirical power of dodging unseen.

Dr. FRY went wholly with Dr. Gray, but would not be able to vote with him. Undoubtedly the prescribed books set a premium on cramming. He had asked a science boy who took up "*Plutus*," the play set for Cambridge Smalls, how he had managed. The boy said he had not found much difficulty; he knew the English off by heart, but confessed he was occasionally puzzled when the first lines of the speeches or dialogues began in a similar way. But he thought it would be a little premature to carry the reform all at once. He spoke not in his own interest, but in that of the smaller schools—the schools that had to accept pupils willy-nilly; the private establishments which "combined home comforts with the highest individual attention." He had examined a boy who came to him from such a private school in *Virgil*, which he professed to have read, and had discovered that *Virgil* was taught ten lines at a lesson, the translation being first dictated to the class and learnt by heart, and the rest of the lesson consisting in piecing the Latin words to the English. This state of things would continue till the Board of Education, as Mr. RUTTY proposed, assumed the control of all schools. Such an inspection would give the small grammar schools a bad quarter of an hour.

Mr. MADELEY (Woodbridge) supported the motion. The ideal of a language examination, he held, was a simple piece of translation and a prose composition, and nothing else. Grammar questions were most pernicious. He should like to see *Cicero* confronted with the grammar paper set for the last Junior Certificate—a harder paper, he remarked, than that set for the Higher. He had known a German boy who spoke German and English with equal fluency plucked in German at the Locals. Head masters were anxious to keep boys at school and set books drove them out. They had either to teach the set book, and so spoil the work of the form, or advise the parent to send his boy to a crammer's.

Dr. GRAY replied briefly.

Dr. FLECKER's amendment was then put and lost by a large majority.

Mr. BARKER's amendment was carried by 26 votes to 15.

Euclid.

Mr. FLETCHER (Liverpool) proposed:

"That this Association desires to press upon the Universities and other examining bodies the desirability of greater elasticity in their methods, and is of opinion that to insist upon adherence to the order of propositions in Euclid is mischievous."

He asked leave to substitute "regulation" for "methods." He deprecated, at starting, any desire to enforce his views on other teachers. All he asked was freedom for all. Nor had he taken his cue from Prof. Perry, with whose views he only partially agreed. His grievance was the obstinate insistence of Oxford and Cambridge—not on the method, but on the order, of Euclid. Geometry was valuable, both for its content—we got from it mensuration, maps, geometrical drawing—and for its discipline. The actual content of Euclid was so small that to accept less than the whole of Euclid was ridiculous. Much of Euclid—*e.g.*, that two adjacent angles are equal to two right angles—was useless, and therefore annoying, to boys. Some propositions—*e.g.*, II. 11 and IV. 10—were only of academic interest. Euclid had, as it were, tied his hands and deliberately rejected other and easier methods. The academic art was greatly cultivated at Cambridge, and used to prevail in the London Matriculation Examination, where, for instance, to mention sine or cosine in the mechanics paper was fatal. A few propositions added to knowledge, and were therefore interesting—*e.g.*, I. 47, III. 20 and 35, and a few problems. When they came to apply geometry as for geometrical drawing and mensuration they wanted the content for immediate use. But the content of Euclid was so small that it was not worth dividing, and no boy should leave school without mastering the whole of it. The main thing to consider was could a boy use it—could he do riders? Few boys could. To pass to the disciplinary value, the popular notion was that Euclid was the best possible training in rigid deductive logic. But we had no security that a boy had had that training. In most examinations he could pass on four books of Euclid, and in some on two, and in no pass examination he knew of were riders essential. In the worst cases Euclid was simply learned by heart; in the majority it was acquired with intelligent passivity, and a boy would have been better employed in learning Tennyson. The hollowness of the orthodox position was illustrated by the treatment of Book VI. In treating proportion Euclid was hampered by the imperfect method of arithmetic known to him, and found himself face to face with obscure difficulties in dealing with incommensurables. He did face and conquer them in Book V., and applied his theory in VI. 1, and the rest is plain sailing. Our pundits held that to allow a boy to use proportion in geometry would constitute a grave moral danger. But they let a boy pass gaily from Book IV. to Book VI. wholly unconscious of the difficulty. The whole thing was a piece of miserable humbug, only to be paralleled by the practice of teaching boys Greek accents without knowing, or pretending to know, their value. Deduction was comparatively a barren method. To make any real progress a boy must not only deduce—he must induce, combine, discover. If he was not mistaken, the whole body of Euclidian geometry was known when Euclid set to work. Euclid's object was to see to what fundamental assumptions he could reduce it. What were their practical needs? Many of them were working under Paragraph 73, which necessitated the co-ordination of mathematics and science. To do this they must have freedom. For his own part as a practical teacher he wanted to re-write and re-edit Euclid. The first half of the first book was wholly unsuitable for beginners—dealing, for instance, with angles which Euclid nowhere defined. Book II. he would wholly omit. Book III. was wanted, and also Book VI. 2 and 4. With a few pupils Euclid might be made instructive, but no one would maintain that teaching Euclid to a class of thirty or forty boys was interesting work. He started with no prejudice against Euclid. He had been brought up in the strictest sect of the Pharisees, and, as a boy, had enjoyed Euclid; but his experience as a teacher had convinced him that to ninety-nine boys out of a hundred Euclid was a great hindrance in their mathematical studies.

Mr. HART (Handsworth) seconded. He should be sorry to see schools cut off from the good literary influence of the Oxford and Cambridge Locals, but, if the Universities stuck to their obsolete textbooks, they must go elsewhere for examination. The adherence to Euclid involved an appalling waste of time.

Dr. GOW, before putting the resolution, wished to make a few remarks, as he had sat for many hours silent. He thought the older Universities had been unduly censured. They were the nurseries of theory. To them every theory, and every part of every theory, was of equal interest. He did not gather that Cambridge maintained Euclid because they wanted to set it in examinations; rather they set it because it was generally taught in schools, and they felt the great advantage of men coming up possessing a common foundation of knowledge to build on. In this, as in other subjects, he advocated a uniformity of subjects but not of methods.

The resolution was carried by acclamation.

Modern Language Teaching.

Mr. JAMSON SMITH (Birmingham) proposed :

"(i.) That instruction in modern languages will take the rank due to it only if its disciplinary value is emphasized at least as much as its utility. (ii.) That with a view to this end the Universities would render valuable help by allowing more scholarships for success in this branch of study, and by making one modern language an essential subject for a degree in Arts."

He had no claim to speak for first-grade schools, but only for those schools where the average leaving age was sixteen. His experience was that few boys in such schools derived any advantage from Latin. In such schools, and even in higher schools, he thought that Latin should be retained only as an optional subject. He was in no way hostile to the conversational method, and agreed with Mr. Bell that children should be so trained while their vocal organs were flexible. But the conversationists, as a rule, made two false assumptions—first, that there was anything educational in simple imitation; secondly, that there was a large demand for a colloquial knowledge of modern languages for business purposes. He had many applications for clerks from business firms, but all they required, as a rule, was the ability to read a French or German letter. What merchants looked to was not so much specific knowledge as general capacity and alertness of mind. What his resolution meant was the giving up of Latin in second-grade schools, and the study of modern languages, so as to give them the same disciplinary value. As Mr. Storr had recommended in his essay in Barnett's "Organization," he would make the reading-book the basis of instruction, and he would enforce systematic composition as in Latin teaching. Together with Miss Beale, Dr. Abbott, and Mr. Storr he held that the study of French should precede Latin. It was a misfortune that so few English teachers of French could speak the language fluently, but it was more disastrous that so few French teachers knew anything of their own literature.

Mr. GRANT (Keswick) supported the first half of the resolution, but was opposed to the second. Modern languages suffered in England rather from the idleness of the English schoolboy than from any other cause. An appeal to his pocket touched the American boy; but an English boy was unmoved by prospects of commercial advancement, and it was greatly to his credit. To make him care for subsidiary subjects an appeal must be made to religious motives.

Mr. REITH, as one of the few head masters who was his own modern language master, bore witness to the advantages of the conversational method, especially when, as in his case, he could teach boys French from the beginning. At the same time he felt the danger that the practical value of modern languages would absorb their disciplinary value. As a gymnastic he held that French was of at least equal value to Latin. French prose was a hundred times harder than Greek prose to write, and ten times harder than Latin. Again, he found that nothing woke boys up like a lesson in French philology.

The first part of the resolution was then put and agreed to, and an amendment that the resolution end at the word "study" was proposed and carried.

The meeting ended with votes of thanks to the Lord Mayor and Corporation for granting the use of the Guildhall and to Dr. Gow for so ably presiding.

THE POSITION OF THE RESIDENT ASSISTANT MASTER IN THE LARGER SECONDARY SCHOOLS.*

By J. W. LONGSDON.

IN dealing with the subject before us, I am asked to limit what I may have to say to the larger secondary schools of England. I may take it, therefore, that three types of schools will come within my purview. First, the public schools—some twenty, perhaps. These are Eton, Harrow, Rugby, Clifton, Winchester, and the rest. Until some competent authority shall issue a decision it would be dangerous to attempt a complete list, lest jealousy should be aroused by omissions. Closely following these, in grade and in type, come the class that may be called the lesser or the smaller public schools. Of these there may be some eighty. In number of boys, it is true, this second class may outstrip the former; but no complete delimitation is at present possible, and one has to be content with very rough definitions. These two classes of schools, taken together, may be further defined as follows: they include all the public schools that are socially the highest; their avowed aim is to prepare for the older Universities; their

chiefs are invited to attend the Head Masters' Conference. My third class consists of a group of schools that cannot be dissociated from the foregoing, *i.e.*, schools that are preparatory to the public schools. Of these there are a large number, mostly under private control. They are easily distinguished from other private schools in that they send some boys at least to the larger public schools and do not keep any pupils beyond the age of entrance to such schools. Their proprietors may become members of the Preparatory Schools' Association.

Here, surely, in these three types of schools, we have all that is most delightful in English education. Endowment coupled with high fees, or, in the case of the third class, still higher fees without endowment, give an income sufficient for comfort, if not for luxury. Good buildings, first-rate playing fields, a sufficient table, and generally a certain intellectual atmosphere—what more can be desired? The newly hooded graduate of Oxford or Cambridge, when he receives an appointment to one of these schools, expects and gets the congratulations of his friends, and settles down to enjoy life free from care or anxiety.

With your permission, we will consider more in detail the position and prospects of the young master in each of these three classes of schools. It must be borne in mind that here we are dealing with resident masterships only. In the larger public schools—especially in those that are situated in towns—the conditions of residence are so little irksome that a master may enjoy the comparative liberty and freedom from supervision duties of a non-resident post. It is only the house tutor who is, in the full sense of the word, a resident master.

Well, our young graduate comes to such a post. He is content to receive a salary of £200 a year, or even less. He lives free of cost; and finds his income fully sufficient at first to meet his bachelor expenses. He is fond of boys and fond of games. He is full of physical, and not without intellectual, energy. Sufficient opportunity for displaying the former is found in the playing field, and the development of the latter is not forbidden in the common room or colleague's study. His natural social affections find at first full vent among the boys and in the drawing-rooms of the married members of the staff. And then there are the holidays in Switzerland or Norway.

Truly, it is a delightful life; and the resident master may, if he is of a healthy and sanguine disposition, enjoy ten years of it before disillusionment comes. Let us for a moment consider him after the lapse of these ten years. At the age of thirty-three he takes stock of himself one gloomy November half-holiday afternoon, after a solid lunch in the boys' dining-hall. This is what he finds: The high hopes of self-culture and intellectual development with which he came down from the 'Varsity have vanished. The whole of his activities and almost every moment of his time have been claimed by the multifarious interests of house and school. He finds that he is ignorant of, and isolated from, the larger world, whether of men or letters. He is not quite sure who is the local M.P.; and, as for municipal affairs, he has long ago learnt to avoid them with disdain. The duties of citizenship are not for him: he is a man apart. Long ago he resolved to know the best that has been thought or written and to play a worthy rôle in the affairs of men. Now he reads the *Pall Mall Gazette*, for its cricket news, and Plato, with an eye on scholarship papers and peculiar uses of *av*. The school is his world. Ten years of authoritative dealing with immature intelligences have unfitted him to deal with men. In term time he is absorbed in school duties; in the holidays he lives in hotels or a tent. Again, he repeats to himself, he is a man apart.

But, as the sky grows murkier and the room thicker with tobacco smoke, he finds that there is something yet worse. His salary has remained almost what it was at the beginning; but his necessities and his power of spending money have increased. The boarding-house—the bait that tempted him to accept a low salary—now seems afar off. The house masters are young and healthy—they always are. He wants to marry—or he would want to marry if his natural instincts had not been dulled by his isolated life. Perhaps he has already looked with favour upon some fair damsel; but can he ask her to wait till he gets a house? And he will be an old man before his children are out in the world. There is a knock at the door. Robinson *major* has come to discuss the team for the next football match, and once more our resident master is plunged into the vortex of school activities, and when, next Saturday, he

* Read at the Annual Meeting of the Incorporated Association of Assistant Masters, January, 1902.

cheers on his house, he wonders why he has had a fit of the blues.

If I have not wearied you by this description of the resident master in "high life," I will attempt to portray his colleagues standing next in social rank. In our second class of schools the pleasures are not quite so prominent, while the pains are far more keenly accentuated. In the larger schools—larger, *i.e.*, in number of boys, life is much the same as I have already described—not quite so luxurious in living, not quite so easy-going in work; but the separation from one's fellow-men, the intellectual isolation, and the blunting of the natural instincts for social life are just as inevitable.

In the smaller schools of this type the young graduate comes with equally high hopes. His salary of £150 or even £100 resident appears ample for his needs. A head mastership seems always possible. In the meantime, and at first, he finds life pleasant. Boys, taken in large numbers, are always happy. Games occupy a considerable part of his and their interest. He may not know how to teach, but he rarely realizes that any importance attaches to the fact. The boys learn their declensions, and receive either marks or punishment according to the result; or they read Cicero, and find all the information they need in the annotated text. Let us suppose that this, our hero, at the age of thirty-three also, has a fit of the blues, and is talking over his woes and supposed or real wrongs to a non-resident colleague whom he has invited to his room for a pipe and a glass of whisky. It is, of course, ten o'clock. He cannot smoke before the boys go to bed, as his room opens on the corridor where the studies are; and he has not much time now, for at 10.30 he must go round the dormitories and see that lights are out. This is how his candid friend, the non-resident master, sums up the situation: "The sooner you get out of this place the better. You are simply rotting here. You never read a decent book; you don't know what goes on in the world; you never see any decent society, except the head master's wife on Sunday evenings. You are frittering away your energies in doing second-rate work. If the school were bigger, you could have the house discipline kept by a decent set of monitors. As it is you never have a moment to yourself. Dormitories, studies, dining-hall, and playing field—you have got to boss the lot; and all your evenings spent in this stuffy room correcting exercises. You have become so accustomed to your bachelor ways that you will never marry and settle down as a citizen and a parent. And an unmarried man is at best but a stunted growth. What you must do is to get out of this—either a head mastership or a greengrocer's shop, it does not much matter which." And with this the candid friend departs, leaving his colleague to lock up and put out the lights before he betakes himself to his glorified cubicle with one window opening on to the big dormitory.

I have painted the life of our resident master in our second class of schools in somewhat sombre colours. But, if you will bear with me, I must mix a still deeper tint to depict accurately the victim in the preparatory school.

Here, again, at first, everything is brilliant sunshine. The dear little fellows of ten to twelve! They are so bright and happy! They come fresh and smiling from their morning tub. Who can resist their attraction? The machinery of the house goes smoothly. There are even carpets on the floors and pictures on the walls. After a good and comfortable breakfast, the boys run off to feed their pets or oil their cricket-bats. Cheerfully at the stated hour they come to their class-rooms. The work is made delightful to them; it is all fun. At the same time, though they may not know it, they are made to learn. The school fees are high, and the mothers insist on comfort, and even on luxury; but the head master knows that his success depends ultimately on scholarships. He has clear ideas as to how these little brains are to be stuffed for Winchester or Clifton. In these schools it matters not if the assistant is ignorant of the art of teaching; he has only to do as he is told—and the head master will take care to see that his orders are obeyed. But I need not go on; everything is delightful, if it lacks the charm of variety. The salary, again, is sufficient to pay the tailor and the tobacconist and the Cook's ticket for a month in Switzerland. All this while the assistant master is young. Sooner or later comes the day of awakening. In this case it will come earlier than in the case of the public-school master.

We will suppose our resident master is thirty, and try to sum up his position. There are three things he will have to consider

—his duties towards himself as a man in his intellectual and emotional relations; his duties towards his own profession; and, lastly, towards the State.

As a Man, Intellectually.—He knows he ought to do some hard reading and hard thinking. He knows that when he left the University he was immature and had come to no definite conclusions on the philosophy of life. His new position helps him no whit. He is one of eight masters. Every alternate day he is on duty—the dear little cherubs must never be left unwatched—from seven in the morning to nine at night. After that hour he may do what he likes in the study that he shares with seven colleagues. On the other days he is occupied officially but from nine to five, and in his off hours finds only three companions in the common room. Now is his chance for work. Looking back, he finds that he has done nothing. Intellectual sloth and mental stagnation have got hold of him; the self-culture he hoped for has become a dream of the past.

As a Man—Socially.—Here again, as he looks back, he has no reason for self-congratulation. On the rare occasions when he finds himself in society with his fellows, men or women, he is awkward and ill at ease. Man should be a gregarious animal, as he finds to his cost. After a series of years, the duties of a nursemaid, which are inseparable from his position, have begun to lose their interest. His natural affections are blunted and suppressed. He is rapidly becoming a self-centred and selfish outcast from social life.

As a Man—Professionally.—Like his colleagues in the public schools, he is doing a grievous, though unwitting, wrong to his profession by accepting a resident post, which is paid, not for the value of the service rendered, but in proportion to the hope held out of making money in later life by profits on the charges for bread and butter. And what are his prospects in later life? There are three alternatives for the future before him. If he has a sufficiency of private capital, he may start a private preparatory school on his own account, and in the stress of unlimited competition, may find himself with a competence or in the Bankruptcy Court. This is a toss-up. If he has no capital, he may marry his head master's daughter and succeed to the inheritance. Failing either of these, the third alternative is to earn a shilling a day as a sandwich-man.

As a Citizen.—The greatest of all wrongs that our resident master does to his own individuality is that of unfitting himself for the duties of a citizen. What I have already said of the isolation and aloofness of the public-school master applies still more closely here. A man's duty to the State demands that he should marry and play his part in the affairs of men. A resident master in a preparatory school is a sort of superior nursemaid, whose ears are stopped with cotton wool in order that no sound from the outer world may reach him, whether of men of letters or of men of action.

For the purpose of my argument I have, of course, excluded something and suppressed not a little. There are, it is clear, resident masters who are scholars in the full sense of the word. There are others—an increasing number—who have studied the science and art of education. There are yet others who mix in the larger world without bearing the stigma of schoolmaster written upon their faces. In one great school at least the members of the staff play an important part in the control of the municipality. Every one will know of cases where men, though unmarried, have been unequalled as house masters or as head masters. But I do not think I have exaggerated on the whole in my description of the disabilities attaching to residence. A schoolmaster is, it appears, of necessity—I would it were not so—a marked man. No one is altogether at ease in his society. And this characteristic is accentuated in the case of masters in boarding schools, especially in those smaller in the number of their pupils and lower in the social scale.

Except for a few early years as house tutor, a man ought not to accept a resident mastership. Resident masterships imply boarding houses. These are one very important cause of the existing lowness of salary. When a great head master is content to receive one-third of his income as salary for work done and two-thirds from the profits of a boarding-house, it is natural that the work of a teacher should be rated low. When an assistant master in a great school is content to receive a salary of £200, or in some cases even less, it is natural that salaries should rule low in the poorer schools. No attempt is made to pay for the work at its proper value; but compensation may come later in life, in the former case, in the shape of

boarding-house profits. The vast majority of assistant masters have no such prospects. They suffer from the examples set at the top of the profession. For this cause all assistant masters, save the few lucky ones in the best schools, have reason to curse the boarding-house system in vogue in England.

No less severe an indictment may fairly be made in reference to the difficulty, or even impossibility, of marriage. A man—and a schoolmaster, after all, is, or was, a man—a man ought to marry, and to marry while he is yet young enough to bear with cheerfulness the worries of plumbers and monthly nurses. As things are our resident master remains in comfortable bachelor quarters until he has become too timid or too self-indulgent to venture upon unknown seas. Of his lack of responsibility to the State and to his fellow-men, of his intellectual stagnation and his moral dwarfing, I have said enough, as also as to his living amongst, and dealing with, immature intelligences.

For all these reasons there is enough ground, in my opinion, to condemn the system of resident masterhips. This necessarily involves an attack on boarding schools.

One must speak with bated breath about our Public Schools—with capital letters. But, with sundry exceptions, I would be prepared to condemn boarding schools as a whole. In two cases only do they seem advisable or even admissible. For the sons of country gentlemen the alternative is between a boarding school and a private tutor. The former is far preferable. We must, then, have our great public schools, and in these, as I have already pointed out, the disabilities of residence are not in all cases severe.

The second case where boarding schools are essential is for sons of parsons, doctors, farmers, and the like living in small villages too remote from railway or county town for daily attendance at the local grammar school.

In all other cases boarding schools are, in my opinion, an error, and I have no doubt that Mr. Humberstone, dealing with smaller boarding schools, will give stronger reasons than I have done for this decision. The unnatural separation of the sexes and the herding of masses of boys has much to answer for in the social life of the country. It is not only the masters who suffer. Children, boys and girls, are brought up together at home. The home life should continue as long as possible, to be followed by entrance to a day school where boys and girls are taught together—not necessarily in all subjects, but in many. The present system is, with the exceptions I have named, as unnatural as it is inexpedient. The scholastic profession should be an honoured one. Our work yields in importance to none. We should be able to do that work without ceasing to be citizens. We should be paid for our service directly in view of the value of our work to the State, and we should not allow ourselves to receive part of our income indirectly from parents under the guise of boarding fees.

THE FOURTH ANNUAL CONFERENCE OF SCIENCE TEACHERS.

ON January 9 and the following day, in the Gymnasium of the South-Western Polytechnic, was held the Annual Conference of Science Teachers. Mr. T. A. ORGAN, Vice-Chairman of the Technical Education Board of the London County Council (under the auspices of which the meetings were held), opened the proceedings with some allusions to the industries of Germany. The growth and importance of these were due, he said, to the fact that Germany had long ago recognized the value of having trained scientific men to carry out researches in connexion with commercial undertakings, and, if we were to hold our own, we must follow suit.

The first paper was read by Miss ALICE RAVENHILL, Inspector to the West Riding Technical Education Department, and was entitled "The Teaching of Hygiene." In this it was contended that the absence of a knowledge of practical hygiene causes much economic loss and many social abuses, as well as contributing towards the inefficiency of our young people. Being based upon many sciences and arts already taught in school, and affording as it does a field for their practical application, hygiene should not prove a burden to the time-tables. In America the subject in question is the only obligatory one in all elementary schools. It is, however, of equal importance to both sexes and all grades, and it should be studied in all schools. Every year in the United States sees more Universities initiate courses of sanitary science in connexion with their departments of sociology, which are well attended by both sexes.

In the second paper Dr. WARNER, Physician to the London Hospital, treated of "Mental School Hygiene," and advocated a system of education which not only puts the body well under control, but prepares the brain for what will shortly be required of it. Training, he urged, should go before the giving of instruction in the case of very young children, and for specially constituted pupils particular means of education should be adopted.

In the afternoon, Prof. TILDEN called upon Mr. FRANK E. BEDDARD, Prosector to the Zoological Society, to address the meeting upon "The Teaching of Natural History." This speaker showed the educational advantages pre-eminently possessed by zoology, and exploded the erroneous ideas that nothing of practical value results from its study, while this is necessarily expensive. He alluded to many object-lessons that could be devised, and the making of comparisons which cost nothing because no apparatus was necessary. Few persons, he felt sure, used their eyes sufficiently well to know many of the differences between a horse and a donkey, or had discovered that, whereas the first had four "chestnuts," the latter had but two.

Prof. BOTTOMLEY, of King's College, in considering "The Value of Natural History Collections for Teaching Purposes," described how a use had been found for the Prout-Newcombe Collection, taken over by the Technical Board, and now housed at Shoreditch Technical Institute. School-children had been taken to it for simple Nature-knowledge work, and specimens from it had been used as illustrations in a course of lectures for elementary teachers.

Prof. RÜCKER, Principal of the University of London, was chairman at the meeting on Friday morning, when "American Systems of Nature Study" were discussed in an amusing manner by Mr. R. HEDGER-WALLACE (formerly of the Department of Agriculture, Victoria). The subject is now so much to the fore in this country, and so many things are called Nature study, that it was interesting to find that ten or a dozen kinds have been distinguished in the United States. Mr. Hedger-Wallace spoke of the necessity of our defining at once the meaning of the words, and, although he did not do so himself, yet we may judge from his remarks that he looks upon the training in outdoor observation which is a part of the scheme of Cornell University, as true Nature study, and so the work from which information is gained. This comes rather under his heading of the normal school type and consists of object-lessons in natural history and the earth-knowledge of the Germans. Many features of American Nature study we are advised to avoid, but Mr. Hedger-Wallace said much in favour of the systems of Cornell as well as those of Clark and Perdue Universities, where two series of publications are produced—one for the use of the children and the other giving hints to their teachers.

Under the title of "Nature Study in Schools" Mr. DAVID HOUSTON (Lecturer in Biology to the Essex County Council) descanted upon the very thorough way in which, by training elementary teachers to frame Nature knowledge lessons from their own observations, this work was being introduced indirectly into the village schools of Essex by the Technical Instruction Committee of that county. Round the conference room were hung specimens of teachers' and children's work, while bound in a little volume and distributed among those present was a selection of the same, with printed lessons, pamphlets, and schedules.

At the last meeting Prof. ARMSTRONG presided, when Mr. E. E. HENNESEY (Principal of Lady Warwick's School, Bigod's Hall, Dunmow) discussed "Technical Education in Rural Secondary Schools." This speaker had collected a great deal of information as to agricultural schools which will be of much use when printed with the other papers in the *Technical Education Gazette*, and not the least valuable part of this paper was the description of the working of his own institution, which has now completed the three years' course.

Prof. MELDOLA, of Finsbury Technical College, followed with an account of "Pioneer Work in Secondary and Technical Education in Rural Districts." It comprised a history of the establishment of Lady Warwick's School, described by Mr. Hennesey, and for the various details now collected Prof. Meldola claimed no novelty, though the address forms a pleasing tribute to the "noble lady" to whom and her enterprises the speaker has acted as scientific adviser.

ASSOCIATION OF ASSISTANT MISTRESSES IN PUBLIC SECONDARY SCHOOLS.

THE eighteenth Annual General Meeting of this Association was held on Saturday, January 11, at the Women's Institute, Victoria Street, S.W. Miss E. R. PEARSON, of St. Leonard's School, St. Andrews, the President, was in the chair, and in the course of her address discussed the aim and methods of education, and said the school should be regarded merely as the sharpening of the axe, and not the felling of the tree. The school curriculum should include only those subjects which possess in the most eminent degree the capacity of stimulating the intellect and training the character. Both in elementary and in secondary schools too little value appears to be attached to the

intellectual possibilities of religious instruction. The subject has been one of such bitter controversy that it has become difficult to discuss it dispassionately. In the supposed interests of tolerance it has been thought necessary in most cases to limit religious instruction to the historical events recorded in the Bible and the elementary ethical lessons to be derived from them. By the neglect of the study of dogmatic—which, alas! means denominational—religion a great intellectual and moral opportunity is being lost. Even differences may be turned to intellectual account, for it is only by the clear apprehension of differences that the underlying unity can be grasped. Our national education needs to be more intellectually stimulating and more technical and commercial. We need not be afraid of making the English race too imaginative and unpractical.

The President's address was followed by a discussion on some points arising out of the Education Bills of 1900 and 1901, and the following resolutions were passed:—(1) "That it is essential that on Local Education Authorities women directly elected should co-operate with men." (2) "That it is desirable that the Education Authorities should include persons possessing adequate knowledge of educational matters." (3) "That it is desirable that the residue under Section 1 of the Local Taxation (Customs and Excise) Act, 1890, be definitely appropriated to purposes of education." (4) "That it is undesirable that there should be a statutory limit to the rate raised by the County Councils and Borough Councils for purposes of education other than elementary." (5) "That it is desirable that provision for appeal on specified questions on the part of governing bodies of existing schools to the Central Authority should be made."

Another resolution, "That private schools, recognized as efficient, shall be eligible for grants," was put to the meeting, but not carried.

Miss E. G. SKEAT, of the Penarth Intermediate School, read an admirable paper in the afternoon, on "The Position of the Natural Sciences in a Liberal Education." After a short historical review of the educational ideals and methods of the past in as far as they bore on the position of the natural sciences, she endeavoured to show that no education could be called liberal which did not tend to develop the faculties of every type of mind, and that in some cases these sciences succeeded where all else failed. In attempting to define the position of the natural sciences amongst the school subjects generally, Miss Skeat took an exceptionally fair view of a burning question, showing that in a liberal, as opposed to a technical, education the sciences have not so much a utilitarian as an æsthetic value, and therefore those subjects should be chosen which most tend to stimulate the imagination and awaken the perspective faculties. Miss Skeat then proceeded, amid much laughter, to quote the scheme of the chrestomathic school, using it as a text to maintain the proposition that we do not aim at universal knowledge, but at the acquisition of scientific attitude of mind. With respect to methods, Miss Skeat urged that all scientific teaching should be practical, also that enumeration of facts and terminology should not be allowed to stifle the feelings of ardent curiosity and æsthetic appreciation with which a child instinctively approaches Nature's mysteries. For only by according to the natural sciences this exalted place as helpmeet to the humanities can we hope to realize that perfect adjustment which is indispensable to the attaining of a liberal education.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.]

THE Association has now a local habitation, as well as a name. Offices have been taken at 27 Great James Street, Holborn, W.C., and are open to the inspection of members. A first selection has been made from the two hundred candidates who applied for the post of Secretary to the Association. The executive will make the final choice at an early date.

On January 15, at the Board of Education Offices, Sir George Kekewich and Sir W. Abney received two deputations on the tenure question, one from Head Masters and the other from ourselves. The deputations were introduced by Dr. Gow. The general drift of the contention put forward by the Head Masters was—(1) that in so difficult a question evidence should be taken before any change was made in the policy of the Charity Commissioners; (2) that, as county and education bodies do exercise control by grants, they will have to be consulted in the inquiry. On our behalf it was contended (1) that hardship did exist, (2) that there was doubt as to who were the employers of assistant masters, (3) that we do not want fixity, but

- Arithmetic.** By A. V. LOTHIAN, M.A., B.Sc. With Answers, 3s. 6d.
- Modern Geometry of the Point, Straight Line, and Circle.** An Elementary Treatise. By J. A. THIRD, M.A. 3s.

WILLIAM BLACKWOOD & SONS, 45 George Street, Edinburgh; and 37 Paternoster Row, London, E.C.

security. The suggestion was also thrown out that assistant masters should be represented on the Consultative Committee. Sir G. Kekewich, in replying, said that the Board of Education did not feel itself bound by the Charity Commission; it was free to do as it liked. He elicited by question that the question of tenure did not exclude that of head masters as well as assistant masters. Local Authorities would have to be considered, and that complicated the matter very much. He could give no answer then, but would lay the case before the Duke of Devonshire and Sir John Gorst.

At the Council Meeting held on January 10, at St. Paul's School, Hammersmith, Mr. J. L. Holland, of St. Olave's and St. Saviour's Grammar School, Southwark, was elected Chairman of the Association for 1902; Mr. S. E. Winbolt, of Christ's Hospital, E.C., Honorary Secretary; and Mr. F. Charles, Strand School, W.C., Treasurer. Vice-Chairmen were also elected (Messrs. E. Kitchener, Rugby School; T. E. Page, Charterhouse; G. F. Daniell, Mercers' School; and Dr. F. S. Macaulay, St. Paul's School), and vacancies on the Council were filled. Much other business was done; this will be found in the February Circular.

The General Meeting was held at St. Paul's School on Saturday, January 11. It was preceded by a service at St. Paul's Church, Hammersmith, at the close of which the Rev. A. Boyd Carpenter gave an address.

The annual Report and the annual Statement of Accounts were presented. Resolutions were moved by the Rev. J. F. Tristram, Dr. Macaulay, and Messrs. Page, Bridge, Bentley, Atkinson, and Holland.

An able and interesting lecture on "Greek Educational Ideals" was delivered by Mr. Arthur Sidgwick; and a discussion on "Resident Masterships" was opened by Messrs. Longsdon and Humberstone.

In the evening some sixty members attended the Annual Dinner at the Queen's Hall, Holborn Restaurant, where Mr. C. A. Cripps, M.P., made a sympathetic speech on the difficulties before educationists in general and assistant masters in particular.

CALENDAR FOR FEBRUARY.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 5.—University College, London. "Le Roman provençal de Flamenca," Public lecture in French, by Prof. Louis M. Brandin, at 8.30 p.m.
- 12.—College of Preceptors. Evening Meeting.
- 12, 13, 19, 20, 26, 27.—University College, London. "Dante's 'Purgatorio.'" Barlow Public Lectures, by Dr. E. Moore, at 3 p.m.
- 13.—College of Preceptors. Lectures to Teachers. First course begins.
- 14.—British Child-Study Association, Sesame Club. Dr. Shuttleworth on "What can be done for the Morally Defective Child," at 8 p.m.
- 15.—College of Preceptors. Meeting of Council.
- 15.—Post Translations, &c., for *The Journal of Education* Prize Competitions.
- 19.—University College, London. "Les Mœurs du Moyen-Age." Public lecture in French, by Prof. Louis M. Brandin, at 8.30 p.m.
- 23.—Post School News, items for this Calendar, &c., and Advertisements for the March issue of *The Journal of Education*.
- 25 (noon).—Latest time for receiving urgent prepaid school and teachers' advertisements for the March issue of *The Journal of Education*.
- 26.—University College, London. Annual General Meeting of Members of the College, at 5 p.m.

The March issue of *The Journal of Education* will be published on Friday, February 28, 1902.

THE ASSOCIATION OF UNIVERSITY WOMEN TEACHERS held its annual meeting on Saturday, January 18. Mrs. Henry Sidgwick, Principal of Newnham College, presided. The meeting was exceptionally well attended. The eighteenth annual report was adopted after congratulatory remarks of the President on the steady growth of the Association and the success of its work during the last four years. The high standard of qualification insisted on had not prevented the membership reaching well over 1,000, the increase during the past year being 258, whilst the statement of accounts showed a satisfactory financial position. The statistics recorded in the report indicated a slight improvement in the rate of salaries of assistant mistresses; also that the demand for science and modern language mistresses continued to be in excess of the supply. After the transaction of business, Sir Joshua Fitch, I.L.D., gave an interesting address to the members of the Association on "The Part of Women in National Education."

A SELECTION FROM CASSELL'S EDUCATIONAL WORKS.

JUST PUBLISHED.

MARINE PAINTING IN WATER-COLOUR.

By W. L. WYLLIE, A.R.A.

With 24 Coloured Plates. 60 pages, crown 4to, 5s.

"For all who would gain efficiency in this division of water-colour drawing no better text-book than this one could well be imagined."—*Daily Graphic*.

"The plates strikingly show the remarkable range and variety of marine painting. Mr. Wyllie's method is fully described, and the book will appeal in this respect to the student; but, as a most artistic production, it must also delight a very large public."—*Liverpool Post*.

LANDSCAPE PAINTING IN WATER-COLOUR.

By J. MACWHIRTER, R.A.

With 23 Coloured Plates. 5s.

Two large editions have already been called for.

"With the sketches to refer to, Mr. MacWhirter's precepts and hints, based upon long and varied practice, will be completely intelligible to the veriest beginner, and the student who follows his directions will find that many apparently formidable difficulties can be easily surmounted."—*Globe*.

A HISTORY OF ENGLAND.

By H. O. ARNOLD FORSTER, M.A.

Fourth Edition, Revised. Fully Illustrated. From the Landing of Julius Caesar to the Present Day. 816 pages. Cloth, 5s.; or, handsomely bound, cloth gilt, 6s. 6d.

"No one by whom or to whom this book is read will fail to realize, if he has a normal amount of reason and imagination, the continuity of English history, the connexion with the present and the past, and the profound abiding significance of the internal and external struggles of our forefathers. Nor, we should imagine, can it be studied without producing a genuine sense of the intense interest which critical periods of English history possessed for those whose lot it was to live through them."—*Spectator*.

The Cheapest and Best Dictionaries in Existence.

Cassell's French Dictionary. (French-English and English-French.) 615th Thousand. Revised and Corrected from the Latest Edition of the Dictionary of the French Academy. 1,150 pages. Cloth, 3s. 6d.; half-morocco, 5s.

"Cassell's French Dictionary seems fully to justify the claim made in its Preface—that it is at once the cheapest, the most complete and extensive, the only thoroughly accurate book of the kind in this country."—*Record*.

Cassell's German Dictionary. (German-English and English-German.) 277th Thousand. 1,120 pages. Demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

"To say this is the best of the smaller German Dictionaries in the field is faint praise, and were it not for the special merits of one or two, we might, without exaggeration, say that Miss Weir is first, and the rest nowhere."—*Journal of Education*.

Cassell's Latin Dictionary. (Latin-English and English-Latin.) 132nd Thousand. Thoroughly Revised and Corrected. Cheap Edition, 3s. 6d.; half-morocco, 5s.

"This new edition of Messrs. Cassell's Latin Dictionary has been well and widely overhauled. Its nine hundred odd pages are sure to prove a popular investment, and as regards price, at any rate, the book need fear no rival."—*University Correspondent*.

Cassell's Educational Catalogue will be sent, post free, on application.

OCCASIONAL NOTES.

THE Order in Council for a Register of Teachers is fully discussed elsewhere, and Sir John Gorst's answers in the House on the 24th ult. throw no fresh light on the doubtful points which we there confess ourselves unable to resolve. What is a "recognized school"? That is the very key of the position. Sir John refuses to answer. Will schools conducted for private profit be recognized? Yes, if they are efficient—that is, if the Board recognizes them. Will a list of recognized schools be published? The matter shall be considered. On one point only did Sir John give a plain and positive answer. An "elementary school" means, after all, a public elementary school as defined by the Code, and we were mistaken in our interpretation; but the meaning of "elementary teaching" in the same sub-section is still obscure. On the other hand, where we do not venture to hazard a conjecture, Sir John speaks as an inspired prophet. The fees in the first years, he tells us, will be more than sufficient to cover the cost of the Register, and the balance will afterwards be adjusted by reducing or increasing the fees. We only hope that the calculation may prove nearer the mark than the Government estimate of the cost of the war.

DID Lord Rosebery nod when, in his speech at Liverpool, he declined to refer to education on the score that no "comprehensive Education Bill would have a chance, if introduced after Whitsuntide"?

Lord Rosebery at Liverpool. As a matter of fact, Mr. Balfour did not himself mention Whitsuntide, but, when Mr. Trevelyan asked: "Will it be before Whitsuntide?" replied: "I hope so." This is a very different thing, and in well informed circles is taken to mean the first thing after, if not before, the Easter holidays. The second reading would then be over by Whitsuntide, and the Committee stage well on its way by

the Coronation date. But the studious avoidance by Lord Rosebery of references to education in his political speeches, together with his laudatory comments at the municipal banquet on the action of the Liverpool Town Council, permits a further conclusion to be drawn. This is that Lord Rosebery does not want to create a new line of cleavage in his party by openly throwing over *ad hoc*, so dear to many of his chief (Scotch) supporters. If he did so, he would, for the nonce, find himself opposed to the "imperial" Mr. Perks and allied with the *intransigent* Mr. Lloyd George. However, his opinions are perfectly well known to be in accord with the County Council's. It may be noted, also, that the Liverpool City Council is one of those which, like Nottingham, have expressed to the Government their desire to take over all education in the town, while the Liverpool School Board, by a majority, has supported this view to the extent of indicating a willingness to commit patriotic suicide. Hence, on the whole, we think Lord Rosebery knew what he was about.

AS we anticipated, the West Riding County Council has not secured much support for its campaign of renunciation of elementary powers. In 1896 seven County Councils (on the initiative of Northamptonshire) so far misunderstood the position as to deprecate being involved in the "contentious questions of elementary education." So far, two only—Durham and Lincoln (Lindsey), both of which were in the seven of 1896—have followed the West Riding; though no doubt Northamptonshire will not let slip the opportunity of showing that it is "agin the Government." On the other hand, over a dozen Councils have either openly dissented or taken the politer course of allowing the West Riding letter to lie on the table. It should be mentioned that Lincoln (Lindsey) does not agree with the West Riding reasons, but accepts the resolution purely in the interests of the rates of agricultural districts, and on the slightly gratuitous assumption that the alternative is for the Chancellor of the Exchequer to pay the whole cost of elementary education from Imperial funds. This is scarcely the time for such a proposal to be acceptable. We admit, however, that we were scarcely prepared for the comment of the official organ of the School Boards on the action of the West Riding and Northamptonshire Councils. That journal states boldly, and twice over: "Those who remember the controversies which surged round the Government Bill of 1896 will recall the impression created by a similar expression of opinion on the part of the County Councils Association." We do not pretend to remember; but we have been to the office of the Association, and find the unanimous resolution was exactly the opposite, and ran as follows:—

That this Association, without expressing any opinion on the controversial portions of the Education Bill, do approve generally of the proposals contained in the Bill to place the control of elementary and secondary education in the administrative counties under a Local Education Authority, and that, as regards these counties, the County Council, acting through a Committee, as the Education Authority, is well qualified to undertake the powers and duties imposed upon that body by the Bill.

Surely the *School Board Gazette* owes its readers some apology for so misleading a statement.

IT has not yet been noted how far events have placed County Councils in a much more favourable position as regards combining elementary and secondary education than they held six years ago. Practically all the questions which appeared to careful administrators likely to involve the County Authority in managerial controversies con-

nected with elementary education have been already settled. First, there is the Voluntary Schools Act of 1897, which, by placing the jurisdiction over denominational managers in the hands of non-local bodies of their own denomination, and in direct contact with the Board of Education, relieves the Local County Authority from any necessity of inquiring into, or interfering with, the functions of such bodies of managers. Next, and still more important, is the re-organization and strengthening of the Central Education Authority by the Board of Education Act, 1899. Here we have the principle of unification admitted at headquarters, so that it is difficult to say until a communication is received by the Committee of Council, or the Chief Secretary, into what compartment the matter to which it relates may properly fit. Now, one of the chief objections taken to the Bill of 1896 was, that there was then no such complete superior authority, in whose hands the making of codes, expert inspection, and the determination of supply of school places would ultimately rest, no central department which would, if necessary, coerce into doing its duty a recalcitrant or reactionary County Authority. Not only is this so, but at present any local body, brought into contact with a matter which appears likely to involve contention, can shift it on to the broader shoulders of the Board of Education.

BUT the most important factor in the situation is the greater experience of all grades of Local Authorities. The County Councils in 1896 had practically only five years' educational experience (since the receipt of the first grant under the Local Taxation Act); the Parish and Urban Councils, to whom (Section 10) the management of elementary schools was to be delegated, had only just come into existence (under the Local Government Act, 1894), and were regarded with suspicion, if not aversion, by the squire and the parson. Since then the County Councils have gradually extended the borders of their work, so that endowed schools, schools of science and art (by the beneficent operation of Clause VII. of the "Science and Art Directory"), and last year, by the same machinery, continuation schools have all come under their supervision. But, lastly, whether they liked it or not in 1896, they have been obliged by the Cockerton judgment and the Act of 1901 to take over the rating supervision (not the management necessarily or usually) of those evening schools which in 1896 were supposed by them to be elementary, and, as such, cast aside by seven of them; three only have recorded the former "contentious elementary" protest. The result, in the administrative counties at any rate, has been an increase in these schools and in their older scholars. The Urban Councils, also, all over the country, have undertaken for the County Councils the management of technical and even secondary schools, have raised annual rates for the maintenance of such schools, and in some fifteen counties have contracted loans for building new schools. The Parish Councils, too, have in numerous counties taken over with success the management of village classes and continuation schools. Having no rating powers of their own, they have requested the County Councils to specially rate their areas for these purposes, and a fair number of cases have occurred where they have asked for such rate contribution to be given to endow a school in a neighbouring town. In fact now the administrative hierarchy is complete and efficient, and there is no place for School Boards.

THE very latest argument against County Council control of education is based upon the large area of some of the rural counties and the long distances which members

County Councillors and Distances.

have to travel to meetings. We are gravely told that in one county all the members of the Council (some seventy in number), have to travel in their two journeys to and from the County Hall about five thousand miles. This looks formidable, but it really means an average of thirty-five miles each way, which, we believe, can be done under an hour, even on the South-Eastern Railway. But do these objectors know how a County Council does its work? In the first place, only some fifteen out of the seventy members will get on the Education Committee. These fifteen, with the co-opted experts, will resolve themselves into some three or four Sub-Committees of about six members each. These Sub-Committees will meet probably once a month, and the whole Committee once a quarter. No doubt the meetings will be arranged to fit in with other Committee meetings. Each quarterly meeting will last, like those of the N.U.T., for a whole day. Reports from officials and inspectors will be handed in, conferences held, and deputations of managers received. There will be no reporters, no talking to the gallery, no religious or political fireworks. In fact, the good work which School Boards do in committee, rather than their foolish performances in full Board, will be the object of imitation. It must also be remembered that County Councillors come together naturally once or twice a month for other purposes, and so will feel less than other persons the strain of this extra travelling. Besides, has not Mr. Stanley told us that County Councillors have "some leisure" and "some means"?

MR. M. D. HILL'S paper read at the Conference of Public School Science Masters deserves more attention than it has yet received. That boys should not specialize before the age of eighteen was the major premiss of his argument. But, to win scholarships at the University, boys are forced to specialize in classics or mathematics; consequently, science either goes to the wall or has to follow suit. The remedy he proposed was that all scholarship examinations should include pass papers in literature (under which head, we take it, he includes ancient and modern languages), mathematics, and science, together with alternative advanced papers in the same three subjects. If college tutors were persuaded not only to set such papers, but to disqualify any candidate who failed to obtain, say, a third of the maximum marks in any one of the three sets of pass papers, a most salutary change would undoubtedly be brought about in the curriculum of public schools. But what tutor would have the heart to reject a possible Senior Classic or Senior Wrangler for ignorance of the rudiments of science or French?

EVEN those who wholly disagree must relish plain speaking such as the Secretary of the British and Foreign Society addressed the other day to the Bromley Branch of the National Free Church Council. Mr. Bourne represents a society whose motto is to steer clear of party politics, and he introduces himself as no controversialist. Yet he starts by saying: "I do not believe it to be within the bounds of possibility that we should get a good Bill from the present Government. There is not the will, even if there is the power." He proceeds ruthlessly to dissect the Board of Education—a mere shuffling of the old pack, its Vice-President the unprofitable servant who is content to hide his talent in a somewhat soiled napkin, and its President who boasts that he is a fairly average specimen of the man in the street. Nor do Lord Hugh Cecil and the clerical party escape the

Mr. Alfred Bourne on the Education Problem.

lash. Archbishop Temple is quoted to show that pagandism has been the chief motive in promoting education. "The voluntary schools are intended as buttresses of denominationalism rather than means of education for its own sake." No real progress will be made till we convince the country that education is the work of the country as a whole, and that parsons, *qua* parsons, have no part or lot in it. Pretty straight hitting for a man of peace who does not meddle with politics or sectarian disputes!

WITH the latest volume of Special Reports, "Rural Education in France," we propose to deal next month, and will at present confine ourselves to a single aspect—its bearing on the problem of the hour. This problem—how to bring the poorest cottager in the most sparsely inhabited district within reach of an efficient

Rural Education in France.

school—France has solved, while England is only just beginning to face it. It has solved it by grasping the first principle of pedagogics—that, *en dernier ressort*, the school is the teacher. Since 1889 the State has borne the total cost of salaries. Consequently there are at the present moment in France virtually no uncertificated teachers. The humblest village school is properly staffed, and therefore efficient. We in England, as Mr. Sidney Webb has told us, are, as regards rural education, at the same stage as France in 1880, before the enforcement of compulsory attendance. If only our Minister of Education could be induced to read this report, and profit by the object-lesson! How long shall we tolerate the eighteen thousand vaccinated broomsticks officially known as "Article 68's"?

WE have received a specimen number of *Odds and Ends*, a French fortnightly published at Brussels, with the object of teaching French to English boys and girls, with a request to make it known. We gladly comply by giving a specimen of English as she is spoke at Brussels:—

"No English girl perhaps" thunde-red James Stackford irritated by the raillery of the Anglo-parisien little fop, and with such an impulse of national "amour propre" that one would have thought to have seen in a latin only. "No English girl, will! because they have not had the occasion; but there will be an Englishman, and who will do the voyage round the world without a farthing—without a farthing do you hear, gaining his living himself on the way and continually going forward, till he eventually arrives at the point of departure, not like a beggar, or a reconciled prodigal, but triumphantly 1st Class."

We may add a few specimen croppers from our new contemporary:—*Ce voyage ou plutôt cette course*, "this voyage, or rather this running"; *qui était sur les dents*, "who lost his wits"; *ces bulletins ne sont rien moins que satisfaisants*, "these reports are none of them less than satisfactory"; *des génies comme Bismarck*, "genii like Bismarck"; "He deducts from his mathematical studies some interesting conclusions."

TECHNICAL EDUCATION.

THE well arranged "Record of Technical and Secondary Education" includes an interesting return respecting the composition of Education Committees in English counties and county boroughs. It shows the proportion of members, in each case, who are also managers of voluntary schools, members of School Boards, governors of secondary schools or of higher institutions, as well as those directly connected with the teaching profession. The figures are not to be considered exhaustive, but "they are sufficiently full to indicate how largely members of these educational bodies are concerned generally with the administration of elementary, secondary, and higher education." Among thirty-seven administrative counties, for instance, there is only one case in which elementary education is not represented—and frequently largely represented—on the Committees. And secondary schools appear to be equally

well off. Of 897 members on County Committees, and 1,111 members on County Borough Committees, those who are also associated in other educational work are as follows:—

	Managers of		Members of		Governors of		Connected with
	Vol. Schools.	Board Schools.	School Boards.	Secondary Schools.	Higher Institutions.	Teaching.	
Counties (37)	367	58	117	411	116	37	
County	166	95	129	208	106	63	
Boroughs (49)							

THE Association of Technical Institutions, at their ninth annual meeting, passed a series of resolutions to encourage the Government to proceed with an Education Bill. Sir William Hart-Dyke, after moving a resolution approving the general principles of the Bill of 1901, appears to have suggested, in answer to a question, that "in all probability that body [*i.e.*, the Local Education Authority] would be an *ad hoc* one; that was to say, one intended for educational purposes only." This strange interpretation of the intentions of the Government. The Association declared in favour of placing primary, secondary, and technical education under one Local Authority, Mr. H. Hobhouse, M.P., suggesting the useful amendment that the area should not, as a rule, be smaller than a county or county borough.

THE excellent and exhaustive Report of the Technical Education Committee for Cumberland is, as usual, conspicuous for careful returns and interesting comparative statistics. The grant at the disposal of this Authority has risen from £6,000 in 1890 to £8,002 in 1900, but falling again to £7,541 for 1901. The report indicates a useful administration of these funds under a scheme which falls into three main divisions. Instruction is directly supplied in agriculture by means of the Dairy Farm School, the Travelling Dairy, experimental stations, and public lectures; in domestic science by practice lessons and demonstrations, and in the supply of central classes for teachers. Instruction is aided by grants based on attendance at evening schools and classes, by grants to technical schools, and direct contributions to urban authorities. Lastly, a complete scheme of scholarships and exhibitions has been elaborated which appears to be well designed to meet the needs of various classes in the community.

ATTENTION has been directed in this column to the unsatisfactory practice which obtains in some counties of aiding schools and classes on a basis independent of the grants paid by Government. In the Cumberland statistics relating to evening schools, the advantages of a sounder administrative policy are clearly demonstrated. "The method of aid now in force," it is said, "is based on the principle of *making up* the Government grant, provided the school is satisfactory, to a certain fixed amount, such fixed amount being based on the number of hours actually employed in teaching. That the plan has had considerable effect in the desired direction of aiding the smaller rural schools is evident from the figures, where it will be seen that the average grant from the county funds to rural schools has increased from £2. 9s. 10d. in 1898-9 to £6. 3s. 11d. last year." On the other hand, urban schools, which in 1895-6 received average grants of £25 from the Board and £7. 14s. 2d. from the County Council, obtained last year £28. 11s. 9d. from the former and £2. 8s. 4d. from the latter.

AMONG the new developments of the county scheme, it is satisfactory to note:—An optional examination established for the benefit of evening schools; the offer of nursing scholarships, modern language studentships, and an additional scholarship in agriculture; the establishment of local studentships open to students of science and art classes; the adoption of regulations for aiding secondary schools, and various changes in the method of organization and payment of grants which make for progress. Perhaps, however, the most important development is the proposal to establish a Technical College for West Cumberland. A Sub-Committee has visited various schools and colleges in the North of England, and has presented a report in which it is estimated that a building suitable for present purposes could be provided and equipped for a sum of from £12,000 to £18,000.

In the introduction of the Report of the Northumberland Technical Education Committee, it is pointed out that evening schools and classes, and, in a lesser degree, secondary day schools, are so closely associated with the work of primary schools that no consideration of the former can be complete without reference to the latter. The essential figures relating to primary education in Northumberland are therefore given. It is shown that, in round figures, £130,000 was expended on primary education during the year. In return for such expenditure, 53,937 children were under instruction in the rudiments of knowledge, of which total between seven and eight thousand are estimated to leave school each year. "It may perhaps be assumed," says the Report, "that the larger proportion of these will enter employments requiring generally the exercise of manual skill, and that opportunities for recrea-

tion, public libraries, mechanics' institutes, and the like, will sufficiently meet their needs for self-improvement." Even if this be granted, there must remain a large number who have been supplied with primary education at the public cost, for whom it is desirable, in the public interest, to provide further educational opportunities.

THESE naturally fall into two general divisions or classes:—(a) The few of exceptional merit who, with the assistance of scholarships, continue their education in day schools or colleges; (b) the larger number who attend evening classes to improve their general education, or to obtain special knowledge concurrently with industrial or commercial occupations. Under present conditions it is not practicable to arrive at any satisfactory estimate as to the extent of the provision which, in the public interest, it is desirable to make for these two classes. In regard to the secondary day school education of those who usually attend primary schools, the minor scholarships scheme of the County Council, which has been in operation ten years, has revealed a more or less constant demand on the part of two hundred individuals for secondary education, and of the number reaching scholarship standard in the examination (about 40 per cent.) not quite half have been enabled to continue their education. Beyond the age of sixteen the competition for intermediate and major scholarships has not, up to the present, demonstrated a demand in excess of the available opportunities.

As already pointed out, the existing facilities for primary education are not by any means fully exhausted; and while that is the case the question of evening instruction is of necessity complicated. It appears to be essential, under present conditions, for a reasonably complete scheme of evening instruction to include subjects of general education of an elementary type. But it appears to be essential also for such teaching to lead, by easily graduated stages, to instruction of a specialized or advanced character. The organization of evening teaching on these lines will in future be rendered much less difficult, as both evening schools and science and art classes are now under the same department of the Board of Education.

THE following summary, given in the Northumberland Report, shows the advance made as the result of the Council's operations, and the change which has taken place in the character of the work.

It is added that eight years ago, in conjunction with the Newcastle City Council and the County Council of Durham, a school of cookery was established, the success of the undertaking being demonstrated by the fact that the City Council is about to erect a new building at a cost of over £10,000. Six years ago a farm for agricultural demonstrations was secured, and secondary schools throughout the county have been rendered more efficient.

THREE THEORIES OF THE CURRICULUM— CLASSICAL, MODERN, HERBARTIAN.

By J. J. FINDLAY.

(Continued from page 109.)

PART II.

THE above dialogue has been occupied with a parallel between the ethical aim of Herbart's curriculum and that of the classical Theory as represented in English public schools. The following notes will aim at elucidating Herbart's theory somewhat further—modified perhaps by the bias which the present writer has for modern culture as a basis and preparation for ancient.

§ 1. Following the teaching of Kant, Herbart sets before us the *will* as the centre point of character. A good will is the one possession of man which in itself is absolutely good. The child, thoughtless, impressionable, curious, eager each moment to satisfy a new desire, must develop into the man, self-possessed, determined, purposeful, bent upon virtue. Has instruction any share in producing this change? Yes, says Herbart, *instruction* may and should assist in this development, although mere *knowledge* by itself cannot. "Knowledge is very often nothing beyond a dull, unexcited store of ideas—that is, of clear, complete presentations. So long as it is nothing more, you cannot develop a will out of it. If a will is to proceed out of this knowledge, it must no longer remain as a lifeless stock of information, but another ingredient must be added thereto—the knowledge must enter into the sphere of feeling, of temper, of disposition; it must be realized as something living or experienced. When this is the case, we have before us a condition of mind which we call *interest*."*

§ 2. This conception of interest plays a large part in Herbartian pedagogics, and must not be confused with the vague notions of "making our lessons interesting" which teachers often adopt without attaching any definite principle to their interpretation. We are not concerned here with plans for relieving the tedium of an unpleasant occupation by the efforts of a lively wit. This is an important matter, no doubt (for, of all unhappy teachers, save us from the bore!), but it does not concern us here. If you think that your instruction is a bitter medicine, by all means sweeten it if you can; but perhaps the prescription needs re-writing?

The interest of which Herbart speaks is an activity of the mind which reaches out into every side of life and lays hold of everything which "interests" it. To follow the simile we have already employed, we may regard interest as the motive force possessed by the child himself† which enables him to widen his *Gedankenkreis*, to push out further and further into every field.

Now, in the previous chapter we discussed the child's circle of ideas as a whole, as a series of steps—*Kulturhistorische Stufen*—tracing them especially in their relation to society, to humanity. But this is *only one side of the circle*, one direction in which the child's interests expand. Herbart bids us observe that the child possesses a *many-sidedness of interest* (*Vielseitige Interesse*) which touches at any and every point the world of sight and sound around him. If, as Herbart's psychology teaches us, this activity of interest is to be a tool by which knowledge is to be converted into useful material for "making character," we must carefully consider its nature, and we must then trace its influence, as it works year by year upon the *Gedankenkreis*, and especially upon that body of knowledge on which we have set such high value, the humanities.

§ 3. How does Herbart analyze interest? Let us take the following scheme from Rein (page 51):—

* Kein, "Pädagogik im Grundriss," page 80.

† Compare Quick, "Educational Reformers," pages 487-490.

This analysis of human activities corresponds to our own observation and experience, for we see the child as an eager little mortal, grasping each moment for a new prize, ready to accept every gift, at one moment observing intently the falling of a feather, at the next comparing intently the colours of a chequer; falling into tears at the next instant, as the mother goes for a moment out of sight. Such is the natural child, such is the happy schoolboy: if we find him otherwise, he is unnatural; he has been checked in his development; his teachers or his environment have attempted to choke some of his interests, with the result that his circle of ideas, instead of developing harmoniously as a circle should do, is taking shape as a distorted curve, extended on one side and contracted on another.

The evidence for this conception of interest, and the conviction of its importance to the teacher, must be sought in observation rather than in the text-books of pedagogics. One of the pleasantest duties of the teacher is to watch child life, and to note the range of ideas and feelings, to measure the force of interest. Apart from such investigations, a scheme such as we have sketched above will appear to be of little value; it will be as useless as the descriptions in the text-books of physics apart from the work of the laboratory.

§ 4. *A Many-sided Interest.*—With this capacity, this key to knowledge, the child sets out upon the school career. Whither will it lead him? What kind of a man will this interest, if unchecked and uncontrolled, create? Surely, it ought to develop our idea of humanity—a man of rich possession, of harmonious, all-round culture. The child whose little finger snatched at every object as it passed has won his prize, and is a man, who knows everything and feels everything, whose pulse answers to every throb of the world's heart; but he is still the child of Nature, unfettered by moral obligation or purpose, trained simply to live for life's sake, to rejoice in manhood as he rejoiced in youth, enjoying to the full the wealth of the material and spiritual world around him. This is the product, under favourable environment, of many-sided interest, *when left to itself.*

But this is *not* the product at which we are aiming. Here we have merely a full-grown child; like the child, he is aimless; he has no character, for he has no will. How shall the error be avoided? How is the child, un-moral, the sport of fancy, to be regenerated in the course of years until we turn him out a man of purpose, with moral ideals, controlling himself and controlling the world?

We know one answer to this question—the answer of Oliver Cromwell. The Puritan tells us that this capacity of interest is a thing of evil, perhaps in itself the source of all evil. We must narrow it down or choke it off. “Crucify the flesh or back into the woods.”* If you seek the heavenly life, you must flee from the world. Such an answer may be needed at the crisis of a nation's history, in hours of moral danger, in times of corruption; but as a permanent law of life it is impossible, as long as men are born with the capacity for many-sided interest.

§ 5. Our sense of the importance of these considerations will be increased by noting the harm that has resulted from the neglect of them. Let us observe two typical cases: (1) the boy who is growing up to manhood, with impulse and interest, unchecked and unlimited. His parents are wealthy and possess a happy home, but they exercise no particular influence over their child, and they send him to a school where the same neglect of character is permitted. He learns a little of many things, and his intellectual interests are stimulated, but there is no guiding purpose in it all. To all appearance such a young man, standing on the threshold of life, is perfectly fit for its duties: he is healthy, active, interested, intelligent, amiable; in reality, he is as helpless as an infant, for he has no will, no purpose—in a word, no character. (2) The other type goes to the other extreme. The parents or teachers, fearing to develop a character such as we have just described, regard this capacity for many-sided interest as an evil, and, in order to create a *strong* character, they kill off all other interests except those which they regard as supreme; they thereby attain what looks like strength, but is really narrowness. Check a child's love in flowers and animals by filling him with book knowledge, and you can destroy his interest and sympathy with Nature as effectually as if you blinded his eyes; by so doing you will probably make him a smarter bargainer on the Stock Exchange or you may

enable him to win a scholarship, but you will not make him a better man. It is within the teacher's power, by such processes, deliberately to sever the fairest branches from the tree of life, but let him not console himself with the thought that he is doing the wise gardener's work of pruning down a too luxuriant growth! Such training produces bigots, zealots, misers; but *men* it kills.

§ 6. How, then, shall we treat this dangerous, but most useful, activity? In itself it is neither good nor evil, but it is there, to use or to abuse. How shall we direct it so as to save life rather than to kill? Let us return to the classification which Herbart offers us. He distributes the pursuits of many-sided interest into two great divisions—the objective and the subjective, the world and man.

Now, which of these two has the chief claim upon us? Surely, the latter. “The proper study of mankind”—and the final interest of mankind—“is man.” This doctrine is, happily, not peculiar to Herbart. In spite of the charm, the gloss, the mystery of the natural world, men who feel and think are conscious that they themselves, their race, their life, their destiny are the supreme pursuit. It is the teacher's task to show how the gradation of rank between these two, between objective interest and subjective interest, should be maintained in the conduct of school instruction. The child, as he finds him, is sensitive to all impressions alike—senses, imagination, feeling are all there, eager to be touched and moved. *The teacher must select and prefer*—all that he offers to the child must be of interest, must touch the child's circle of ideas, but it must be presented in due rank and proportion. The child must be insensibly led to seek, (if one may venture to quote the sacred words) things that are above! He may be permitted and encouraged to love the flowers, but he must learn to love his parents also; if we let him care for animals and their wants, we must see to it that in due time he cares for the poor, and feels for them also. For the present he may delight in stories of battle and conquest, but in due time he will learn that “peace hath her victories” as well. So we are led to the principle which we briefly referred to in the previous dialogue, which the Herbartians call *concentration*. This Interest, which left to itself, is so dangerous because so aimless, can thus be turned into a useful weapon. *By bringing into relief* those objects which are of abiding worth, by *ranking* all in due proportion, we are introducing into the child's mind a controlling element, a supreme interest which does not ignore a single thread of feeling or desire, but firmly guides and leads the whole. What this supreme pursuit should be, admits of no dispute. The child at first seems wholly absorbed in the external world; his interests, to the casual observer, are almost wholly empirical and speculative. “All children are selfish” is a frequent comment of those who only see children on the outside; without intimate acquaintance we might suppose that Herbart's analysis is contrary to facts, and that the child has *no* real interest in his kind, no capacity within him to reach out beyond himself, to love his fellows, or to reverence the Unseen. But it is all there; the teacher's task is to develop the higher interests, without neglecting the lower. He must not suppress these happy interests in the natural world, but must bring them into service, by *associating* them with the eternal interests of human life.

§ 7. We must not omit to note that the principle of concentration makes a claim to be of practical value (if practical is to be distinguished from ethical), no less than of ethical value. For one of the most useful qualities that a man can possess for the business of life is the habit of concentration; the habit, that is, of doing one thing well, and of bringing all other pursuits into due subordination to this. Singleness of aim may often be identical with narrowness and bigotry, but it need not be so. Concentration of purpose enables the man of affairs to bring all the stores of his experience to bear upon the business of the moment; to collect the countless threads of interest and association, so that each shall contribute some item towards solving the one problem. If instruction can help to develop such a quality, it may be serving the ends of practical life with better success than a new technical grant from Parliament.

§ 8. It only remains in conclusion to illustrate, with less vagueness, what concentration means, in the actual programme of studies. Let us take an example. Our class has the average age of eleven, and we give them, as the *kulturhistorisches* material for the school year, the life of our forefathers from 1216 to 1485. How do we concentrate the other branches

* See Felkin's “Herbart,” page 193.

around this? That is to say, what points of common interest and association can we find in the other branches of instruction which shall serve to bind the whole together (always supposing that each branch must at the same time be carried on in a regular scheme of its own)? Some branches can obviously be associated much more easily than others. In reading we will choose simple selections from Shakespeare's historical plays and a novel or two of Scott's. In geography we wish during this year to teach our class the British Isles. Last year they learned all about England, with William the Conqueror and Domesday Book as an introduction. Now we will go off to Scotland with Edward I. and to Ireland with Richard II. But when we have got there, *i.e., when we have sufficiently established the chain of association*, we shall not make the mistake of teaching merely historical geography: the claims of geography in itself require that Scotland and Ireland shall be learned as they now exist, and learned with thoroughness.

So with all the subjects, even with arithmetic, which seems to be the furthest removed from history. A teacher who can readily invent his own examples will often find opportunity to take his illustrations and his exercises from the other branches of instruction. And he will see the advantage of so doing, not only because his psychology tells him that the law of association is a fact of mental life, but because he finds his children appreciate their "sums" so much more when they find that they can, even while at school, put their knowledge to some use; when their many-sided interest is continually appealed to, in order to teach them that school and its many lessons are not many things, but one; as the school is one and life is one. So the two threads, loftiness of purpose with breadth of sympathy, many-sidedness of interest with concentration of thought, richness of experience with singleness of aim, are united in the choice and in the disposal of our materials of instruction, as we desire to see them combine in the life upon which our pupil enters, when the school doors close behind him.

CORRESPONDENCE.

THE NEW METHOD.

To the Editor of The Journal of Education.

SIR,—I have read Mr. Webb's letter in your last issue with interest, and venture to make a few remarks upon it, as he evidently refers to what I said at the annual meeting of the Modern Language Association. Unfortunately, my words were very indifferently reported, and I had no opportunity of revising the proofs. Those who may wish to read this very brief account of the New Method (or Reform Method, as I prefer to call it) in an emended form will find it in the next number of the *Modern Language Quarterly*.

I shall deal very concisely with the various points raised in Mr. Webb's letter. Whether French or German is to be the foreign language taught first is a question which will be—indeed is being—settled by the relative importance of these languages, as well as by the practical experience of teachers. That French appeals more to the ear than German is one of those statements which it is not possible to controvert, for the simple reason that they are so vague. That French grammar is easier is perhaps true; for it is, on the whole, more a matter of memory than of reasoning; but it has yet to be shown that the language with the easier grammar affords the better mental training. I believe that, if Latin is not the first foreign language (and that will be the rule before very long), it is particularly important that German should be taken before French, on account of its grammar (including the valuable chapter on word formation), as well as for other reasons which I have given.

Mr. Webb cavils at my use of the word *child* when I speak of appealing to the sympathies of our pupils. The problem of teaching a language assumes various forms according to the age of the learner—that is clear. I was paying particular attention to the early stages, and my remarks naturally applied to French or German, whichever is taken first. When the children—or, if Mr. Webb prefers it, the "girls" and "boys"—learn their second foreign language, they are, or should be, at least two years older; and no competent teacher will teach the second language exactly as he did the first. He will, to use my own

words, appeal less to the imaginative, and more to the reasoning, faculties of his pupils. But I should be sorry to think that he ceased altogether to appeal to their emotions.

Mr. Webb tries to frighten us with the examination bogey; but our policy is to draw its teeth, and to make it a harmless dragon. It is quite certain that, if methods of teaching change, examinations will change, too. The able men who direct most of them are fully aware of this, though they rightly refrain from sanctioning a change unless it is distinctly demanded by recognized teachers. No one acquainted with our examination system can be ignorant of the striking improvements which have actually been made during the last few years; to enumerate them here would take up too much space. There is no need to change the whole system, as Mr. Webb implies; the reform of language teaching will be a slow, but sure, process.

For the present, as is natural, our energies will be directed towards bettering the *early* teaching of English and of the foreign modern languages; even at the risk of being told that we neglect the æsthetic side of language study—a charge which it would be easy to disprove—we must dwell again and again on the commonplace that the foundation must be sound.

Mr. Webb calls the method theoretically excellent, but proceeds to "greatly doubt if a young person, taught by this method, when abroad would be able to hold much of a conversation with the natives, or attain much of the confidence and freedom from 'insularity' that are expected of him; or even whether, judging from the pronunciation he is often taught, he would be able to understand a native, or be understood by him."

A good deal depends on what Mr. Webb means by *much*; and, if he speaks contemptuously of the pronunciation of our pupils, I can only express surprise at his suggesting a comparison between the results, in this respect, of the older methods and the new. That he should have had occasion "often" to condemn the pronunciation of pupils taught on the reform method is regrettable; it shows that here also there are teachers not fully qualified for their work; but it is hardly fair to lay the blame on the method, which has done more for "practical phonetics" than all the rest put together.

That those who have been taught by a competent teacher on reform method lines can converse in the foreign language with a native, and that with confidence and freedom from "insularity," is a fact which admits of no doubt whatever. "I speak from personal knowledge."—I am, Sir, yours faithfully,

WALTER RIPPMMANN.

MR. LYTTTELTON ON ATHLETICS.

"Non videmus quod in tergo est."

MR. LYTTTELTON'S short article (*Guardian*, January 8) on "Athleticism in Schools" is valuable for the best and simplest of all reasons—he understands the subject. He is a practised athlete, who has thrown off—if, indeed, he ever was possessed by—the Chauvinism of athletics. We are not bound to accept his conclusions, but his comment is based on experience and reflection, and rises far above the level of mere prejudice, usually so dominant on both sides of this question. He knows, of course, that school athletics have not, as a rule, been organized and encouraged because they were the one thing of supreme importance, but because the hours of leisure necessary in a school which is also a home for more than two-thirds of the year require "administration"; for one boy who is, most unwisely, dragged back from entomology, ornithology, or "the harvest of a quiet eye," to reluctant service of the ball, ten are drawn back, with profit to the body and soul alike, from mere listlessness and loafing. Mr. Lyttelton sees too—and we do not know that any one has expressed the thing better—that the havoc worked by athleticism has been greater in those classes who have not had the public-school training than in those who have had it. It is "among young artisans and pitmen in the North, rather than among the well-to-do Londoners of the same age," that the evil is most rampant. He even goes so far as to say that, through nature rather than through nurture, the unintellectual boy who now *is* interested in "combined athletic sport" would perhaps, without that interest, have thought about nothing at all! As, therefore, a healthy physical interest is very much better than no interest at all, the Head Master of Haileybury is inclined, though in moderation, to

argue that all is well, or at least very fairly well, with the public schools in this matter.

One may agree with almost all his premisses, and yet demur to his conclusions. Even Mr. Lyttelton, with all his penetration and good sense, has not shaken himself clear of the pleasant but fatal optimism of the public-school spirit. Are we really to be satisfied, or even nearly satisfied, with our public schools because the young pitmen and artisans, without a tithe of our advantages and opportunities, "go one or two worse" than we do, in this ruling foible? Mr. Lyttelton would abhor such a conclusion, baldly presented, and yet his argument really points or drifts to that conclusion. He wishes the blame—which he metes out unsparingly—for "the monstrous idolatry of athletes, the fatuous flattery of the Press, the interviews, the photographs, the volumes of reminiscences, dull and fallacious, . . . the huge canker of speculation and gambling, which ruins much of English sport," to be thrown on society at large, and not on the public schools! Has he realized that the public schools *are* society "in the making"; that the Press he denounces is largely manned by public-school men; that what we sow we reap; that, when he says the schools and Universities are "struggling to keep alive the lamp of learning," and that "the public school and University man, with all his defects, is *less* under the thrall of athleticism than the so-called working man of the same age," his words are a most caustic, though unconscious, satire?

Fancy "struggling to keep a lamp alive" in places that ought to be a glow of general illumination! Fancy patting the youth of the upper classes on the back, for having—with their advantages—a little more, or not less, intelligence than "the so-called working man of the same age"! This is "the pity of it"—this miserably low standard of what should be expected of people who have all the chances! The dead lift which is required, will, of course, never be achieved till it is believed in. Let us look at it by means of a parallel. Men still living can remember a time when grammar and "longs and shorts" were practically the main curriculum of a public school. Mathematics were faintly tolerated; science was hardly heard of; history was just glanced at; theology was administered in peremptory doses, swallowed with shut eyes; modern languages stood as a kind of scarecrow. Well, that not very remote time is as dead as Methuselah: not because we have left off grammar and elegiacs, but because we have expanded the curriculum and realized that other things are educative. Much remains to be done, as Mr. Lyttelton would probably insist: we shall have to include handicrafts, and train the eye and hand, before we have done with it; but still the dead lift towards variety and comprehensiveness has been achieved. The next dead lift will have to be the dispossession of the *sporting* ideal from its pride of place. Here, too, it will not be done by abolishing games, nor by discouraging any useful pleasure or exercise; here, too, addition, not subtraction, is required. The eternal *topic* of sport is vulgarizing, not so much the sportsmen or the athletes, as the less energetic lot who like to see things done vicariously. That true friend of athletics, Mr. Jackson, of Oxford, has, if we mistake not, lately avowed, after a sound defence of them, that he feels we *hear too much about them*; in other words, *minds* are too full of them. A man's sports should be like his meals, excellent in themselves, odious as a predominant topic either of thought or speech. Our contention is that school and University life is cramped and vulgarized by an excess in this direction; and to say that it is all the fault of society may be, in a way, true; but nothing can be less judicious than to talk to schoolboys or undergraduates as if society was in some way separable from them. There is so much manly good sense in Mr. Lyttelton's article that we cannot help regretting that he has allowed it to be so much vitiated by this fundamental fallacy.

JOTTINGS.

EVERY one knows the story of the Eton boy's *vulguses* on "Summer" and "Winter." The first began:

"Jam nunc prata virent vario distincta colore";
the second with

"Nunc non prata virent vario distincta colore";
and so on to the end. A scholastic contemporary adopts the same primitive method in its reviewing; but it makes a mistake, which the

Eton boy, we are sure, avoided, of showing up the two *vulguses* simultaneously. Prof. Laurie's "Training of Teachers" stands for "Summer." "It is education treated from a high philosophical standpoint"; "commendable iteration"; "more inspiring than the sayings of those who were to the Reverend Doctor Opimian and his friends 'the bore of bores'" (the grammar is not ours); and, as a crowning encomium, the article on "The General Function of the Primary School" "reeks with significance to the present crisis." Prof. Laurie might well exclaim, like Vespasian: "Ut puto deus fio!" Next we have "Winter" in the same number (there is no need to name the author). "It fell to our lot lately to read through a volume by Prof. Laurie," so the review begins; then follow "the unphilosophical standpoint," "the damnable iteration," &c., and, again, "the bore of all bores," who, of course, is Mr. X., the *jam nunc* in the case following the *nunc non*. Should such reviewing be called "twopence-a-lining" or "halfpenny-a-lining"? All depends on whether you are the writer or the reader.

FROM a general information paper: "When are Consols said to be at par?" "When one cannot order the other about."

FROM an inspector's note-book:

"Saxon and Norman and Dane are we,
But all of us Danes in our welcome of thee."

—Who is the *thee*? General chorus: "Canute!" Still small voice: "God!"

"TALBOT" desires a list of foreign training colleges for secondary teachers (women).

MISS LOSEBY, Highfield, Gainsborough, wishes to know of any one who teaches artificial memory by correspondence, or any good book on the subject.

MR. T. P. KENT, M.A., Scholar of Christ Church, Oxford, and assistant master at Cranleigh School, has been appointed Professor of Mathematics at Rondebosch College, Cape Town.

THE Heriot Trust, with an income of over £40,000 a year, have been outrunning the constable, and the Governors are appealing to the public. In supporting their appeal to manufacturers Prof. Laurie gave a striking instance of the part played by technical institutions in America. Mr. Carnegie had told him that in his huge works there was not a single head of a department who had not gone through a complete course in a science institution.

THE REV. J. R. WYNNE-EDWARDS, of Cheltenham College, is the Head Master-elect of Leeds Grammar School.

THE REV. A. H. COOMBS, assistant master and chaplain of Clifton College, has been appointed Head Master of St. John's College, Hurstpierpoint.

THE Society of Arts proposes to add a *viva voce* examination in French, German, and Italian in any centre at which twenty-four candidates can be collected. The examination will include dictation, reading, and conversation.

THE London School Board has appointed for one year seven oculists in the Medical Department. One out of the seven is a lady.

THE Consultative Committee is still considering the question of inspection of schools. There is a difficulty about Oxford and Cambridge, where there are two rival claimants, neither of whom will give way.

THE REV. T. W. SHARPE, C.B., has been elected President of the College of Preceptors, in succession to the Dean of Wells, who has filled this honorary office for the last quarter of a century. Dr. Haig-Brown, Master of the Charterhouse, is another ex-President.

It is stated that in the schools of the Halifax Board the average number of scholars per teacher is about twenty-five. A member, with an eye to the ratepayer, pointed out that, if the regulation whereby each teacher had forty-one children were enforced, the Board might dispense with the services of 169 teachers. It is to be hoped no such proposal will be entertained.

HISTORY repeats itself. The following is from one of J. R. Green's letters, dated 1867:—"I have just made one of a deputation to the Council Office about 'poor schools.' Conceive a Minister of Education who didn't know the *very rudiments* of the matter; a Vice-President who had to ask us for information supplied from his own office!"

COLONIAL AND FOREIGN NOTES.

FRANCE.

SOME particulars respecting the *colonies scolaires* of Paris will be useful or interesting to those connected with the same form of philanthropy in England. The idea of helping town children to a sojourn in the country originated, in 1876, with M. Brion, of Zürich, who, carrying off his "colony" of youngsters to the mountains, studied the effects of the change on their development. In Paris his example began to be followed some twenty years ago. Conducted on a small scale and tentatively at first, the system justified itself by its results, and has taken its place among the regular scholastic institutions of the French capital, all the *arrondissements* now sending out colonies both of boys and of girls. For colonists weak, anæmic, but not diseased, children, from ten to twelve years old, are selected by a school committee and the medical inspectors. The parent must sign a document releasing the management from all liability for accidents; after which he receives a list of articles that his child will need—clean linen, clothes, a comb, soap, and (in most cases a novelty to the user) a tooth-brush. Often assistance in money is given towards the completion of the outfit.

Most of the colonies are located in departments remote from Paris, as Doubs, Vendée, Calvados, and Orne. The high regions of the Vosges and Jura are found to be the healthiest sites. Distance from Paris—the point is worth remembering—if it adds to the expense of travelling, has for an offset the cheapness of food in the outlying districts. The children are housed in school buildings, not, as our common practice is, "boarded out." In general the duration of the holiday is twenty-one days; a longer period is not found expedient, as frequently a reaction sets in when the third week is passed, so that the energy that has been gained begins to be dissipated. The colonists are their own servants; and habits of cleanliness and order are not the least of the benefits that they get from their excursion.

M. Brouet, who has been collecting notes on the colonies for the *Revue pédagogique*, tells us that the total expenditure for them in 1901 was 326,000f. The number of colonists having been 5,104 (4,896 pupils and 208 teachers), the average cost a head was 63f., or 3f. a day. In the Vosges, 400 kilometres from Paris, a child could be maintained for 2f. 15c. a day. Rent, of course, there was none to pay. Happily we might borrow from the French a hint as to the use of elementary schools in seaside towns during the summer vacation. As to the source from which the considerable sum spent was drawn, the municipality contributed 200,000f., the financial committees of the schools 94,000f., and payments by the richer parents made up the balance.

The curative agencies employed were good food, constant occupation, and exercise in the fresh air. Under this régime boys showed an average increase of from 1 to 2 centimetres in the waist, 2 to 4 centimetres in chest measurement, and 1 to 2 kilogrammes in weight. The figures for girls were approximately the same; but they gained more than the boys in waist and less in chest measurement. Apart from the lassitude arising from the first change of air, sickness was rare.

Whilst these efforts of benevolence have been aiding the poor, the great scheme of reform for secondary education has been assuming shape. Although discussion by the Chamber has still to take place, the essential features of the new system may be regarded as fixed in a series of propositions made by the Minister of Public Instruction and adopted by the Commission de l'Enseignement. Many of the changes are administrative, calculated to promote the welfare of our French colleagues, but unprofitable for us to expound. We note, however, with satisfaction, among the proposals relating to the government of *lycées*, that school fees are to be revised and lowered; that the total number of hours given to class work and study is to be reduced to nine for pupils under sixteen years of age, to seven for those under twelve, and that a lesson is henceforth to last an hour—the wearisome two-hour period being abolished. But it is by the treatment of the plan of studies that the significance of the reform is made clear. First, the need of change is justified. Whilst the French genius is indebted to classical antiquity for so much, it would be foolish to snap abruptly the cord of communication. But since the sixteenth century, when classical studies ruled without a rival, the conditions of life have altered. The object of education is no longer to train an intellectual aristocracy, but to equip an army of labourers for the general service of the State. The privileges of classical learning must be done away with; there must be no more antithesis, no more dualism between classical and modern; secondary education, becoming more supple and diversified, must address itself to the requirements of almost all vocations; it must be divided into cycles, which mark natural halting-places, and allow pupils at fifteen years of age to change the direction of their studies or to quit the *lycée* without having wasted the time spent there. There must be a seven years' course of study, ending in a *baccalauréat* which gives access to all faculties and to all public examinations without giving a preference to any one language over another. On the other hand, a new and shorter course of instruction, not uniform for all France, but adapted to local wants, and freed from the yoke of the *baccalauréat*, must be framed for the service of commerce, industry, and agriculture.

In recognition of these necessities, the following *plans d'études* have been outlined:—Secondary education is co-ordinated with primary in such a way as to form a sequel to a course of primary instruction having a normal duration of four years. It consists itself of a course of studies lasting for seven years, and comprising two cycles—one taking up four and the other three years.

a. In the first cycle pupils have a choice between two sections. In one are taught (to leave aside subjects common to both) Latin, as obligatory, from the first year (sixth class); and Greek, as optional, from the third year (fourth class). The other has neither Latin nor Greek, but lays its stress on French, science, drawing, &c. In both sections the scheme of instruction is so organized that the pupil shall find himself, on leaving the first cycle, in possession of a body of knowledge forming a complete whole, and not of disconnected fragments.

b. In the second cycle four groups of principal courses are at the option of pupils, viz.:—(1) Latin, with Greek; (2) Latin, with a more widely developed study of languages; (3) Latin, with a more thorough study of science; (4) Languages and science, without any Latin course. This latter section, intended normally for pupils who did not take Latin in the first cycle, is open also to those who decide not to continue it in the second.

c. For pupils not proceeding to the *baccalauréat* there shall be established in a certain number of public schools, to come after the end of the first cycle, a course of studies in which various sciences are pursued with a special view to their application. This course will last for two years. It will be accommodated to the wants of particular districts.

In regard to the teaching of modern languages, the principles laid down in the ministerial circular of last November are to be observed. The chief end to be kept in sight is the effective acquisition of the everyday language; in other words, the pupil must be trained to speak and write the foreign language, not merely to translate books written in it.

The circular of November was not reproduced in this column because it contained nothing that would not be familiar to readers of *The Journal of Education*. To continue, however, our exposition of the French scheme, the radical changes set forth above involve a modification of the tests for the *baccalauréat*. The regulation now runs thus:—There is only one *baccalauréat* of secondary education. The examination is divided into two parts, separated by an interval of at least one year. In the first part, candidates have a choice between four series of tests, corresponding to the four groups of subjects in the second cycle. All diplomas of *bachelier* confer the same rights. (The matter of the second part is not stated.)

Very striking is the possibility of a Latinless *baccalauréat*, opening the way to all the faculties, and so to all the professions. We end this note with the new rules as to inspection.

The number of general inspectors will be increased, so that inspection of every *lycée* once a year will be assured. This inspection will extend to administration, internal régime, discipline, and all that concerns the moral and material well-being of the establishment. In addition, *lycées* and *collèges* will be inspected frequently by district inspectors attached to the various *académies*.

SWITZERLAND.

The letter that we here translate, allowing it to speak for itself, relates to a small matter, but it was written by a teacher in the classic land of pedagogy, and on that account alone may be of interest: "When school was over, after the usual evening prayer the children left the room one by one, each giving the teacher a hand, looking into his eyes, and saying: 'Adiò, Herr Lehrer,' or 'Adiò, Herr A.' The farewell was in each case soon ended. Only the hand of one girl used at these times to linger awhile in mine. I knew not why, for I had always said farewell to her as to the others. One evening she said good-night quickly; then, turning round, added shyly: 'My name is Emilie.' I kept the name in my mind, and next day dismissed her first, saying quite distinctly: 'Adiò, Emilie.' The other children, too, I named by name as I bade them good-night. Every eye brightened. On the following days a changed spirit seemed to have come over the little ones. Emilie, in particular, was thenceforward more trustful and more affectionate. The matter dwelt in my mind; and, as I was not on very good terms with my continuation classes, I resolved to adopt with them, likewise, a more kindly tone. I no longer called up Meier or Müller, but made a point of saying Albert Meier, Rosa Müller, and so on. The little touch of personal intimacy went to these older pupils' hearts, as to the children's. It was as if a refreshing breeze were blowing through my class-room."

UNITED STATES.

Educational reformers of a certain type demand from our schools "an open door" as loudly as if they were politicians discussing the China seas. Each has his own nostrum to introduce, and a sure conviction of its virtues. To many of those who knock we can only open to say that the house is full. Time-tables are not elastic without limit; and many authorities on education hold that we teach too little because we attempt too much. The latest subject for which teachers are required to find a place is chess. "Why?" asks a writer in the *Forum*, "has chess-playing never been introduced as part of the school curriculum?"

What school exercises concentrate attention more completely or beget more intense thinking than a good game of chess? Teaching has been defined as causing to know; and, if the thinking which accompanies chess-playing gave the pupil as much valuable information, as much useful knowledge, as arithmetic and geography are believed to give, games of chess would long ago have found a place on the school programme. And yet many exercises which are defended on the ground that they cause the pupil to think, and that they furnish excellent discipline for the mental powers, do not leave a *residuum* of knowledge more extensive or more valuable than an average game of chess."

We are far from being rooted to old tradition, and think that the claims of new disciplines should be fairly considered. But of all disciplines the question is not which are good, but which are best. Useful as a recreation, chess has no right to displace any of the recognized instruments of training. In these matters caution is needful. It would be unwise to let young enthusiasts substitute musketry and backgammon for literature and mathematics.

The evils of a multiplicity of subjects are among the points dealt with in an article (which we omitted by accident to notice last month) by Mr. Jas. P. Munroe in the *Educational Review*. He has chosen to head it "Sparing the Rod"; but the scope is wider than his title would suggest, his subject being the merits and defects of the New Education. His notion of the defects is contained in the following extract: "Many a youth to-day, expensively educated in an extreme of newness, has no strength of memory, no vigour of mind, no power of concentration, no ability to do real work. He may have skimmed over many topics, but he knows no one subject; he may exhibit a pretty facility and grace of mind, but no depth or power of thought; he may possess a certain shielded innocence, but no deep-seated morality. Such a youth is a child at twenty, at an age when to be a child is to be the prey of every evil influence." There has been, he considers, too much "atmosphere" and too little training; the abolition of that rigid discipline of which the rod is the emblem has engendered a certain moral weakness in the school. But these shortcomings of education under modern conditions, serious though they may be, are only temporary, being incidental to a time of transition and readjustment. The future is full of hope, and even at present the gain outweighs the loss: "Teaching [he observes] will never return to the use of the rod; doubtless, it will never go back to the Latin grammar and to the sort of instruction which that grammar typifies; but in one form or another teachers will, as they grasp the problem, devise means to secure to the pupil that steady discipline and that wholesome drudgery essential to the development of sound mental and moral fibre. And meanwhile, through the ferment and often the wild licence of this New Education will have been secured to every child his birthright of individual development, of self-expression, of sympathetic understanding and helpfulness from others. These could not have been attained without a reaction, often an excessive reaction, against the old methods of compulsion symbolized by the rod; but the final result will, I feel certain, amply justify even that present extravagance of *laissez-faire* and of foolish mollycoddling which brings so much modern teaching into deserved contempt."

We are not quite so contemptuous of the Latin grammar as Mr. Munroe, perhaps because we have not the skill to dispense with the use of it. Let us turn, however, to another topic. Secondary teachers in England, asking that the new educational authority should secure them fixity of tenure in their office, are told that the idea is impracticable. That is the curse of prejudice on every reform. The teachers of Omaha have got that for which the teachers of England ask. Formerly, they were elected annually, and had to receive eight votes each year from the electing body in order to retain their positions. Under the rule of the Board of Education now in force, any teacher who has taught in the public schools with approved success for five years is placed on the list of permanent teachers; he then remains in the employ of the Board constantly, unless his dismissal is recommended by the superintendent of instruction, and approved by at least eight members of the Board. The scheme is found to work admirably. Of four hundred and twenty teachers, two hundred and forty, or practically all who have served the time required by the rule, are on the permanent list, and no instance of dismissal is yet recorded. The people of Omaha agree with all the enlightened nations of Continental Europe that the interests of the schoolmaster and the community are, in this point, identical.

We borrow from the *American Journal of Education* two items of news that will interest our readers. Prof. Earl Barnes, well known in England as a lecturer on pedagogy, has accepted the invitation of the New York School of Pedagogy to give a course of six weekly lectures to the students of the school. His subject will be "The Child," discussed under the respective heads of the physical, emotional, intellectual, moral, religious, and political. Dr. Nicholas Murray Butler has been elected to the presidency of Columbia College as successor to Dr. Seth Low. This is a high honour. No man in the professorial body was so well equipped for the position, and no one from outside could have assumed these duties with more probability of eminent success. His friends in the educational field may be allowed to congratulate him upon this deserved promotion. He will not be forty years old until April, which makes his selection all the more noticeable.

QUEENSLAND.

"Quis custodiet ipsos custodes?"—Who will see to it that our teachers themselves move on the level to which they should raise our children? In morals and religion a schoolmaster is kept up to standard by the clergy; his professional energy is maintained by periodic contact with examiners and inspectors; and the certificate of an academy guarantees that his scholarship is indelibly impressed. Unhappily, he is sometimes careless of stops, and, owing to "lines" in boyhood, writes an indifferent hand. The Queensland Education Department, as watch of the watchmen, deems that these faults should be corrected, and expresses its opinion in an admonitory circular:—

"CORRESPONDENCE FROM TEACHERS.

"The penmanship and punctuation of letters forwarded to this office are often defective. The Minister desires it to be intimated that teachers who have allowed themselves to fall into habits of carelessness must give more heed to punctuation and to the quality of their penmanship. Correspondents who fail in these respects may be called upon to write their letters a second time."

Had a committee of schoolmasters addressed such a document to a ministry, what a cry of pedantry would have been raised! Yet we have seen official communications, written apparently by a paralyzed clerk, without the insertion of even the greater stops. Nor yet did we complain of that. To our thinking, a letter (or a circular), being duly legible, is well written if it be marked by good sense and good feeling. But, then, that is the view of mere pedagogues.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

THE Draft Registration Order has been the one subject of discussion at the numerous Committee meetings during the month, and wherever assistant masters congregate. Our chief feeling is one of pleasure that the costly first step towards "obtaining for teachers in secondary schools the status and authority of a learned profession" (we quote from the original statement of the aims of the A.M.A.) has at last been taken. Next to that, perhaps, is the feeling of relief that the officials of the Board of Education have stopped their ears to the cry of those who desired a low standard of qualification. The standard actually adopted is all but identical with that suggested last year by the Association at a critical period in the history of the present regulations. Finally, there is the feeling of indignation that no representation on the first Registration Council has been granted to assistant teachers. The Board of Education apparently finds it difficult to get clear of the famous clause of the Charity Commissioners which classed us with "plant and other apparatus," whose "maintenance" is an unfortunate necessity, but whose "interests" must always be flouted lest haply they become "vested." The Executive Committee has already taken steps to bring the claims of assistant teachers in this matter before the President of the Board, and we are hoping that, although our Association cannot now have the privilege of electing a member of the Council, yet assistant teachers will not be wholly unrepresented upon it. The more closely the Order is studied the more apparent the need for such representation becomes; a considerable latitude is, quite rightly, allowed to the Registration Council under more than one clause of the Schedule accompanying the Order, and it is only right that those who will in any case form the great majority of the teachers registered under Column B of the Register should have some voice as to the exercising of these discretionary powers.

The prospects of a comprehensive Education Bill this Session recede further into the distance every day. Like other professional bodies, we are doing our best to urge upon M.P.'s the importance of holding the Government to its pledge of last Session. The Suffolk Branch, in particular, has been very active in interviewing local Members of Parliament. In the middle of the month, a deputation waited upon Sir William Anson and Mr. J. G. Talbot, the Members for Oxford University, to discuss the expected Bill, and also to lay the views of the Association on tenure before them.

The revised pension scheme of the Central Welsh Board has been considered by the Parliamentary Sub-Committee. There are some important changes from the first draft, published last May, due very largely, we believe, to the action taken by the Welsh Branches, with the support and advice of the Executive and Parliamentary Committees. It was at first proposed that the pension paid should be 50 per cent. of the average salary during the five years immediately preceding retirement. The revised scheme provides that the period of average shall be the five, ten, or fifteen years preceding retirement, whichever gives the highest result. Under the first draft, a teacher permanently incapacitated was not entitled to a pension unless he had been a contributor

to the pension fund for ten years. It is now provided that a pension can be obtained after one year's payment, such pension to be one-sixtieth of the average salary, calculated in the manner already explained, and subject to an increase of one-sixtieth for every additional year's contribution paid to the fund previous to the break-down. The compulsory retiring age is sixty-five, with the option on the part of the appointing authority of requiring retirement at sixty. A clause has been added in the revised scheme permitting a teacher who has contributed to the fund for fifteen years to retire at fifty-five on a pension actuarially equivalent to the benefits to which he is entitled under the scheme. The Central Welsh Board has approved of the proposals, which have next to be submitted to the County Governing Bodies. As these are to be asked to contribute £16 to the teachers £10, the contributions under no circumstances to be returned, the scheme cannot be considered out of the wood until they have adopted it.

The first honorary members have been elected under the new rules. They are Mr. A. Sidgwick, whose election was mentioned last month; Mr. J. Montgomery, the only begetter and first Secretary of the A.M.A.; Mr. W. H. D. Rouse, whose recent promotion is a very serious loss to the Association; and Mr. J. Crichton, the first Secretary of the Legal Sub-Committee.

We have had of late to record the departure of more than one enthusiastic worker. The next to leave us will be Mr. A. Gorham, the late Secretary of the Legal Sub-Committee. It is appropriate that he should be about to re-enter the legal profession. The Association will for long miss the skill and knowledge which he brought to the consideration of its legal business. One other departure, which took place at the beginning of term, ought not to go unchronicled here. Mr. R. G. Mackinlay, the Chairman of the Lancashire and Cheshire Branch, has become a Head Master. Not the least of the many services he rendered to the Association was the writing of this monthly column of A.M.A. notes.

The last day for receiving applications for the new Secretaryship was Saturday, February 22. The Selection Committee, which consists mainly of the officers of the Association, will present three names to the Executive Committee on March 1. We hope it will then be possible to make the appointment.

BRITISH CHILD STUDY ASSOCIATION.

LONDON BRANCH.—On Friday, February 14, at the Sesame Club, Dr. Shuttleworth discussed the question of "What can be done for the morally defective child?" The lecturer said that the child is an egoist—the desire for self-gratification is predominant. In the normal child this "I" will, by-and-by, be replaced by a larger "I," and later still by a "not I." There is a change, not without struggle, from mere egoism to an increasing measure of altruism. Under suitable culture, the average child develops an ethical sense, but the morally defective always remains an intolerable egoist. Occasionally we see children precocious in all but moral feeling, though generally there is mental, as well as moral, defect. In most cases there is an evil impulse with absence of self-control. There is very great risk of such passing into the ranks of instinctive criminals. Persons thus afflicted may be classed in three groups—(1) those who have been morally defective from birth; (2) those who have become so at some physical crisis, as puberty; (3) those who become so after some serious illness, or sudden shock. It is charlatanism to say that all cases can be beneficially treated. Dr. Shuttleworth said he had no personal experience of hypnotic suggestion having been successful as a remedy. Neither will bullying cure moral imbecility. One must get at the soft side, if there is one. If these children are grouped together, it must be in small numbers. Individual personal influence must be an important factor. The right method is to preach not "Don't," but "Do," leaving no time for criminal instincts to assert themselves.

A lecture on "Neurotic Children" was given at the Cheltenham Branch of the Association, on February 11, by Dr. R. Langdon-Down. The subject is one of considerable importance to all who are concerned with education. Neurotic subjects often present themselves in the class-room, and a school may be a very dangerous place for them. The mental stimulus of the curriculum may do them harm in one way, bad or unsuitable companions may do them harm in another. Most neurotic children are very easily fatigued, and many of them have a very unfortunate habit of automatic, rather than selective, imitation. The influences of the home, however, are often more harmful in such cases than the influences of the school, and Dr. Langdon-Down suggested that any course of remedial treatment should be under the direction of some person other than the parent, and should be carried out amid surroundings which are strange to the child.

ERRATUM.—In our report of the President's address to the Annual Meeting of the Assistant Mistresses' Association there is an unfortunate misprint. "Our national education needs to be more intellectually stimulating and more technical and commercial." For "and" read "not."

Mr. Edward Arnold's Educational List.

SCIENCE AND MATHEMATICS.

THE BALANCING OF ENGINES. By W. E. DALRY, M.Inst.C.E., M.I.M.E., Professor of Mechanical Engineering at the Technical College, Finsbury. Fully Illustrated. Demy 8vo, 10s. 6d. net.

HUMAN EMBRYOLOGY AND MORPHOLOGY. By A. KEITH, M.D. (Aberdeen), F.R.C.S. (Eng.), Lecturer on Anatomy at the London Hospital Medical College. With 252 Illustrations. Demy 8vo, cloth, 12s. 6d. net.

A TEXT-BOOK OF ZOOLOGY. By G. P. MUDGE, A.R.C.Sc. Lond. Lecturer on Biology at the London School of Medicine for Women and the Polytechnic Institute, Regent Street. With 100 Illustrations. Crown 8vo, cloth, 7s. 6d.

ALGEBRA FOR BEGINNERS. By J. K. WILKINS, B.A., and W. HOLLINGSWORTH, B.A. In three Parts, carrying the pupil as far as Quadratic Equations. Part I., 4d.; Part II., 4d.; Part III., 6d. Answers to Parts I.-III. in one volume, 6d.

THE ELEMENTS OF EUCLID. By R. LACHLAN, Sc.D., formerly Fellow of Trinity College, Cambridge.

The following separate editions are now issued: Book I., cloth, 1s.; Books I. and II., cloth, 1s. 6d.; Books I., II., and III., cloth, 2s. 6d.; Books III. and IV., cloth, 2s.; Books I.-IV., cloth, 3s.; Books IV.-VI., cloth, 2s. 6d.; Books I.-VI. and XI., 4s. 6d.; Book XI., 1s.

THE ELEMENTS OF ALGEBRA. By R. LACHLAN, Sc.D. With or without Answers, 2s. 6d. Answers separately, 1s.

AN ELEMENTARY TREATISE ON PRACTICAL MATHEMATICS. By J. GRAHAM, B.A., Demonstrator of Mechanical Engineering and Applied Mathematics in the Technical College, Finsbury. Cloth, 3s. 6d.

THE CALCULUS FOR ENGINEERS. By Professor J. PERRY, F.R.S. About 400 pp., cloth, 7s. 6d.

THE ELEMENTS OF INORGANIC CHEMISTRY. For use in Schools and Colleges. By W. A. SHENSTONE, F.R.S., Lecturer in Chemistry at Clifton College. With nearly 150 Illustrations. Cloth, 4s. 6d.

LABORATORY COMPANION. 125 pp., cloth, 1s. 6d.

A TEXT-BOOK OF PHYSICAL CHEMISTRY. By Dr. R. A. LEIPFELDT, Professor of Physics at the East London Technical College. With 40 Illustrations. Cloth, 7s. 6d.

FRENCH.

MORCEAUX CHOISIS. French Prose Extracts. Selected and Edited by R. L. A. DU PONTET, M.A., Assistant Master at Winchester College. Cloth, 1s. 6d.

LES FRANÇAIS EN MÉNAGE. By JETTA S. WOLFF. With humorous Illustrations. Crown 8vo, cloth, 1s. 6d.

LES FRANÇAIS EN VOYAGE. By JETTA S. WOLFF. 1s. 6d.

FRENCH WITHOUT TEARS. By Mrs. HUGH BELL. With humorous Illustrations. Book I., cloth, 9d. Book II., cloth, 1s. Book III., cloth, 1s. 3d.

The following Volumes are all carefully prepared and annotated by such well-known Editors as Messrs. F. TARVER, J. BOILLÉ, &c., and will be found thoroughly adapted for school use.

VERNE.—VOYAGE AU CENTRE DE LA TERRE. 3s.

DUMAS.—LE MASQUE DE FER. 3s.

DUMAS.—VINGT ANS APRÈS. 3s.

FRENCH REVOLUTION READINGS. 2s.

STAHL.—MAROUSSIA. 2s.

RICHEBOURG.—LE MILLION DU PÈRE RAULOT. 2s.

BALZAC.—UNE TENEBREUSE AFFAIRE. 2s.

HUGO.—QUATRE-VINGT-TREIZE. 3s.

DUMAS.—MONTE ORISTO. 3s.

GREVILLE.—PERDUE. 3s.

SIMPLE FRENCH STORIES.

An entirely new Series of easy Texts, with Notes and Vocabulary, prepared under the General Editorship of Mr. L. VON GLEHN, Assistant Master at Merchant Taylors' School. Price of each Volume, 9d.

UN DRAME DANS LES AIRS. By JULES VERNE.

PIF-PAF. By EDOUARD LABOULAYE.

LA PETITE SOURIS GRISE; and HISTOIRE DE ROSETTE. By Madame DE SÈGUR.

MONSIEUR LE VENT ET MADAME LA PLUIE. By PAUL DE MUSSET.

UN ANNIVERSAIRE À LONDRES, and two other Stories. By P. J. STAHL.

LA FÉE GRIGNOTTE; and LA CUISINE AU SALON. From "Le Théâtre de Jeunesse."

POUCINET, and two other Tales. By EDOUARD LABOULAYE.

PRICE EIGHTEENPENCE.

THE LONDON SCHOOL ATLAS.

Edited by H. O. ARNOLD-FORSTER, M.P. Containing 48 Coloured Maps.

Instout paper wrapper with cloth strip at back, 1s. 6d.

Paper Boards, 2s.

Cloth, cut flush, 2s. 6d.

Limp Cloth, 3s.

Cloth gilt, 3s. 6d.

A complete Educational Catalogue will be forwarded post free on application.

THE MOST UP-TO-DATE ENCYCLOPÆDIA.

BY THE EDITOR OF

THE IMPERIAL DICTIONARY.

The POPULAR ENCYCLOPÆDIA is the leading reference book for people with modest purses. It is now being brought up to date by Dr. Charles Annandale, with the assistance of an army of experts.

The POPULAR ENCYCLOPÆDIA will consist of fourteen handsome Volumes, profusely illustrated, and bound in cloth with leather backs; the price of the whole being £8. 15s. Eight Volumes are ready for delivery, and the remainder will appear at intervals of two months.

By an arrangement with the Proprietors, the "Saturday Review" is enabled to offer the work on the instalment plan.

The POPULAR ENCYCLOPÆDIA is a Universal Gazetteer, an Atlas of the World, a Universal History, a Biographical Dictionary, a Commercial Dictionary, a Political Dictionary, a Dictionary of the Sciences, of Philosophy, of Theology and Religion, of the Fine Arts, of Handicrafts: in a word it is

A DICTIONARY OF GENERAL INFORMATION.

Dr. Annandale's name is a guarantee of the value of the new Edition.

ORDER FORM.

To the Proprietors of the "SATURDAY REVIEW," 38 Southampton Street, Strand, London, W.C.

Please supply me (carriage paid) with the eight volumes of the New POPULAR ENCYCLOPÆDIA, and the remaining six as published, on account of which I enclose initial payment of 5s., and agree to pay 10s. per month for seventeen months. I undertake not to part with the work until the payments are complete.

METHUEN'S JUNIOR SCHOOL BOOKS

Edited by OLIVER D. INSKIP, M.A., LL.D., Head Master of Framlingham College, and W. WILLIAMSON, B.A., F.R.S.L., Head Master of the West Kent Grammar School, Brockley.

Messrs. METHUEN are issuing under the above title a series of school class books. These are adapted to the needs of the lower and middle forms of Public Schools, and are suitable for the use of candidates preparing for the Oxford and Cambridge Junior Local Examinations.

Each volume is the work of a Master who has had considerable experience in teaching his subject ; while special attention has been paid to the arrangement of the type and matter, which is as clear and concise as possible. The books contain numerous examination papers, and where the subject requires it are fully illustrated. In scholarship, in excellence of printing and lowness of price, this series will be found inferior to no other.

A CLASS BOOK OF DICTATION PASSAGES. By W. WILLIAMSON, B.A. Fifth Edition. Crown 8vo, 1s. 6d.

In use at over two hundred and fifty Secondary Schools, including Bath College, Blackheath School, Bradfield College, Cheltenham College, Edinburgh Academy, Merchant Taylors' School, Mill Hill School, Nottingham High School, St. Olave's School, Southwark, St. Paul's School.

THE GOSPEL ACCORDING TO ST. MARK. Edited by A. E.

REHNE, M.A., Head Master of the Royal Naval School, Eltham. With Three Maps. Crown 8vo, 1s. 6d.

Adopted at Harrow ; St. Paul's School ; Bath College ; Mill Hill School ; Owen's School, Islington ; King's College, Canterbury ; Aravon School, Bray ; Grammar School, Kirkby Ravensworth ; Moor-side School, Okhampton ; Wellington College (Salop) ; Dronfield Grammar School ; &c.

A JUNIOR ENGLISH GRAMMAR. By W. WILLIAMSON, B.A.

With numerous passages for Parsing and Analysis, and a Chapter on Essay Writing. Crown 8vo, 240 pages, 2s. [Just published. "The result of thought as well as of reading. It contains the clearest account of the ground that we remember to have seen. A considerable amount of space is devoted to an explanation of a simple system of analysis. We strongly recommend this grammar to the notice of our readers."—*Secondary Education*.]

A JUNIOR CHEMISTRY. By E. A. TYLER, B.A., F.C.S., Science Master at Framlingham College. With 73 Illustrations. [In the press.]

JUNIOR EXAMINATION SERIES

EDITED BY A. M. M. STEDMAN, M.A. Fcap. 8vo, 1s. each.

This series is intended to lead up to the School Examination Series, and is for the use of Candidates preparing for the Oxford and Cambridge Junior Local Examinations.

JUNIOR FRENCH EXAMINATION PAPERS IN MISCELLANEOUS

Grammar and Idioms. By F. JACOB, M.A., Modern Language Master at Cheltenham College.

JUNIOR LATIN EXAMINATION PAPERS IN MISCELLANEOUS

Grammar and Idioms. By C. G. BOTTING, B.A., Assistant-Master at St. Paul's School.

Adopted at Harrow, Rugby, and St. Paul's, and at the following Preparatory Schools: Banstead School; Stanwix House, Carlisle; St. Ives, Clifton; The Elms, Colwall; Brightlands, Dulwich; Woodlands, Folkestone; Peterborough Lodge, Hampstead; St. Salvator's, St. Andrews; Streatham College; St. Andrew's, Tenby; Elleray Park, Wallasey; St. Ronan's, Worthing; &c.

NEW EDUCATIONAL BOOKS

FRENCH PROSE COMPOSITION. By R. R. N. BARON, M.A.

With Vocabularyes and Notes. Crown 8vo, 2s. 6d. KEY, 3s. net. Suitable for use in Upper Forms and for Candidates for Army Examinations. Adopted at Marlborough; University College, Nottingham, &c.

GERMAN VOCABULARIES FOR REPETITION: Arranged according to subjects. By SOPHIE WRIGHT, late Scholar of Bedford College, London. Fcap. 8vo, 1s. 6d.

A COMMERCIAL GEOGRAPHY OF FOREIGN NATIONS. By F. C. BOON, B.A. Crown 8vo, 2s.

A companion volume to Lyde's "Commercial Geography of the British Empire."

METHUEN & CO., 36 ESSEX STREET, STRAND, W.C.

SPECIAL EXAMINATIONS, 1902 & 1903.

LONDON MATRICULATION, 1902-1903.

JUNE 1902.

CICERO.—DE SENECTUTE. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASON, M.A. Lond. and Camb. Text and Notes. **1s. 6d.** Vocabulary, **1s.**
EURIPIDES.—MEDEA. By J. THOMPSON, M.A. Camb., and T. R. MILLS, M.A. Oxon. Text and Notes. **3s. 6d.**

JANUARY 1903.

OVID.—TRISTIA, BOOK I. By A. H. ALLCROFT, M.A. Oxon., and F. P. SHIPHAM, M.A. Lond., F.C.P. Text and Notes. **1s. 6d.** Vocabulary, **1s.**
OVID.—TRISTIA, BOOK III. By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Lond. and Camb. (Uniform with Book I. in price and arrangement of parts.)
EURIPIDES.—ALCESTIS. By J. H. HAYDON, M.A. Lond. and Camb. Text and Notes. **3s. 6d.**

JUNE 1903.

LIVY.—BOOK XXI. By A. H. ALLCROFT, M.A. Oxon. Text and Notes. **2s. 6d.** Vocabulary, **1s.**

CAMBRIDGE LOCAL EXAMINATIONS, 1902.

CAESAR.—GALLIC WAR, BOOK I. Chaps. 1-29. By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. and Lond. With Introduction, Notes, Test Questions, and Vocabulary. **1s. 6d.**

CAESAR.—GALLIC WAR, BOOK I. By A. H. ALLCROFT, M.A. Oxon., and F. G. PLAISTOWE, M.A. Camb. and Lond. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

CICERO.—PRO MILONE. By F. G. PLAISTOWE, M.A. Camb. and Lond., and W. F. MASON, M.A. Lond. and Camb. Text and Notes. **3s. 6d.** Vocabulary, **1s.**

EURIPIDES.—ALCESTIS. By J. H. HAYDON, M.A. Lond. and Camb. Text and Notes. **3s. 6d.**

THUCYDIDES.—BOOK VII. By J. F. STOUT, B.A. Camb., and F. G. PLAISTOWE, M.A. Camb. and Lond. Text and Notes. **3s. 6d.**

VERGIL.—AENEID, BOOK V. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASON, M.A. Lond. and Camb. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

XENOPHON.—ANABASIS, BOOK I. With Map. By A. H. ALLCROFT, M.A. Oxon., and F. L. D. RICHARDSON, B.A. Lond. Text and Notes. **1s. 6d.** Vocabulary, **1s.**

MILTON.—SONNETS. By W. F. MASON, M.A. Lond. and Camb. **1s. 6d.**

SHAKESPEARE.—MIDSUMMER NIGHT'S DREAM. Edited by Prof. W. J. ROLFE, D. Litt. **2s.**

SOUTH KENSINGTON EXAMINATIONS.

SUITABLE BOOKS IN THE

Organized Science Series.

ELEMENTARY STAGE. 2s. each Volume.

PRACTICAL PLANE AND SOLID GEOMETRY, FIRST STAGE. By G. F. BURN, Assoc. M. Inst. M.E. *[In preparation.]*

MACHINE CONSTRUCTION AND DRAWING, FIRST STAGE. By J. H. DALES, Assoc. M. Inst. C.E. *[In preparation.]*

BUILDING CONSTRUCTION, FIRST STAGE. By BRISSON CUNNINGHAM, B.E., Assoc. M. Inst. C.E.

MATHEMATICS, FIRST STAGE. Containing all the Algebra and Euclid required. Edited by Dr. Wm. BRIGGS, M.A., F.R.A.S. *[In preparation.]*

MECHANICS (SOLIDS), FIRST STAGE. By F. ROSENBERG, M.A., B.Sc. *Fourth Edition.*

MECHANICS OF FLUIDS, FIRST STAGE. By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition.*

SOUND, HEAT, AND LIGHT, FIRST STAGE. By JOHN DON, M.A., B.Sc.

MAGNETISM AND ELECTRICITY, FIRST STAGE. By R. H. JUDE, M.A. Cantab., D.Sc. Lond. *Second Edition.*

INORGANIC CHEMISTRY (THEORETICAL), FIRST STAGE. By G. H. BAILEY, D.Sc., Lond., Ph.D. Heidelberg. Edited by Wm. BRIGGS, LL.D., M.A., F.C.S.

BOTANY, FIRST STAGE. By A. J. EWART, D.Sc., Ph.D., F.I.L.S.

PHYSIOGRAPHY, FIRST STAGE. By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.

HYGIENE, FIRST STAGE. By R. A. LYSTER, B.Sc.

Price 1s.

INORGANIC CHEMISTRY (PRACTICAL), FIRST STAGE. By F. BEDDOW, Ph.D., D.Sc. *Second Edition.*

Price 1s. 6d.

ORGANIC CHEMISTRY (PRACTICAL). By GEORGE GEORGE, F.C.S.

Full Catalogue of the University Tutorial Series, and Lists of Books suitable for the following Examinations, free on application:

LONDON UNIVERSITIES (including the Special Subjects for 1902 and 1903), OXFORD and CAMBRIDGE LOCALS, COLLEGE OF PRECEPTORS, and South Kensington (including Books for the Advanced Stage).

THE JOURNAL OF EDUCATION

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	Half Page ...	£3 0 0
Quarter Page ...	1 15 0	One-Eighth Page ...	0 17 6
Per Inch in Column, 8/-.			

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.

Situations Vacant and Engagements Wanted.—30 words for 2s.; each 10 words after, 6d.

Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.; each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."] All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

A REGISTER OF TEACHERS.

THE "Draft Order in Council for providing the manner in which a Register of Teachers shall be formed and kept, presented pursuant to Sections 4 and 5 of the Board of Education Act, 1899," was ordered by the House of Commons to be printed January 21, 1902, and, being unopposed in the House, will on the day after this article is published have come into operation. It marks a turning-point in English education, and demands a closer and more careful study than we were able to give it after a hurried perusal at the end of last month.

We will spare our readers any retrospect. The history of the movement has been often recorded both in these pages and elsewhere, and is given at full length in Mr. Murray's recently published "National Education." Nor is it worth while to traverse the assumptions of the *Schoolmaster* and to weigh the respective claims of the National Union of Teachers, the College of Preceptors, and the Teachers' Guild to the credit of bringing about a consummation in which all three bodies, with certain reservations, alike rejoice.

It is, however, well to point out that the provisions for a Register as here ordered are in one respect a compromise between the rival camps into which the profession was divided, and, in another respect, a signal triumph for the reformers, who, in opposition to the Dean of Wells and Dr. James (*quos honoris causa nominamus*), maintained that training should eventually be made an indispensable qualification for a recognized teacher.

As to the first point, the College of Preceptors urged that elementary teachers had already in the certificate of the Board of Education all the public recognition they needed, and that their admission to a Register of secondary teachers would cheapen the Register in public estimation by confounding University graduates with men and women educated on a lower level, without any corresponding gain to themselves. On the other side, the N.U.T. protested against the snobbishness of a Register for the classes, and let it be known that any Bill drawn on these lines would be blocked by their members; while the Teachers' Guild backed them up in their contention that training was at least as important as general studies in the making of a teacher. The Consultative Committee are to be congratulated on their ingenious device—an alphabetical list with parallel A and B columns, as explained in our last number—which apparently satisfies both parties. It is not clear on

the face of it why the A teachers, whose salaries are at least equal to those of the rank and file in the B list, should not contribute their *quota* to the expenses; or why, to raise the same question in another form, these teachers should be entered *en bloc*, whether they wish to be registered or not. This, however, is the only serious objection to the arrangement that we have heard urged.

And, before proceeding to the more important aspects of the Register, we would call attention to another doubtful point under the head of finance on which the Order in Council throws no light. The expenses of the Registration Council are to be paid out of the registration fund—that is, the fees of teachers appearing in Column B and in the Supplemental Register. Now, it is impossible to form even the roughest estimate of the numbers of secondary teachers likely to register in the first year. There may be ten thousand, or even more; there may be five hundred, or even less; in a guessing competition we should be inclined to stand on the lower number—at any rate, for the first year. When we consider the vast amount of preliminary work to be done, in addition to the regular office expenses, the Registrar's salary (which cannot be put at less than £1,000 a year), and the directors' fees, the balance is likely to be on the wrong side. Who is responsible for the deficit? Undoubtedly, if we interpret the Order as a legal document, the Registration Authority—which is absurd.

On the constitution of this Authority there is little to add to what we said last month. The *Schoolmaster's* sense of justice is outraged by the allotment of one member to the N.U.T. with its roll of forty-five thousand, and of five members to the other five teaching associations, whose combined numbers amount to not more than six or seven thousand. But, when we look to the functions of the Council, the demand for proportionate representation is ridiculous. The main work of the Council will be to determine what secondary teachers are to be admitted to the Register. In the case of primary teachers no such question can arise. We see no reason why primary teachers should not have a voice in the matter; but to give them a predominant vote is a proposal worthy of Aristophanes' Sausage-seller.

After all, the constitution of the Council is only a temporary arrangement, and we must wait till the names of the six Crown nominees are known before passing judgment. If the Duke appoints three from the Consultative Committee and one representative of assistant masters and mistresses, we shall be well satisfied.

To pass from the machinery for registering to the Register, we find, in the conditions laid down for admission, an endorsement of the triple test on which the Teachers' Guild from the beginning, and the Bryce Commission in its Report, insisted—a liberal education, training under proper supervision, and experience. Various definitions of the teacher have been accepted in the past—the Church and State definition, a man licensed by the Ordinary; the Renaissance definition, a man with an M.A. degree; the Head Masters' definition, a man who has succeeded to the office by apostolical succession and the laying on of hands; the private-school masters' definition, the man who teaches in a free country because he chooses to, just as his neighbour makes boots or breeches. For the first time in England all these survivals of clericalism, mediævalism, and individualism are swept aside, and the State has made bold to affirm what has hitherto been reckoned a paradox, but will henceforth seem a platitude—that a teacher is a man who can teach. Few will now be found to dispute the theory; but, as to its application and the particular credentials demanded, there will be, even among experts, wide differences of opinion.

It will be more convenient to consider first the mature scheme after the three years of grace have passed. Under the first head the candidate must hold one of the following:—(a) University degree or its equivalent; (b) Fellowship of College of Preceptors; (c) Associateship of Royal College of Science or Central Technical College; (d) Higher Local Certificate with special honours.

Under the second head an alternative is given: *either* a year's residence at a recognized institution for training secondary teachers, *plus* a University Certificate in Theory and Practice of Teaching; or a year's training as student-teacher under supervision at a recognized school, with a *testamur* of fitness to teach, *plus* a University Certificate in Theory.

The third head, probationary experience, is defined as one

year as teacher at a recognized school, with evidence of fitness for the teaching profession.

For the coming three years, up to April 1, 1905, the conditions are greatly relaxed, and, though we have not the "gaol delivery" according to the precedent of the Medical Register Act, yet few *bona fide* teachers of three years' standing will find themselves excluded. Under "general education" the London Intermediate, Pass Moderations at Oxford, the General Examination at Cambridge, and the Licentiate'ship (not the Associateship) of the College of Preceptors will all admit. The second and third heads are fused, and the candidate must either have been a teacher in a recognized school for the three years previous to his application, or he must produce evidence of experience in teaching, "other than the teaching of an elementary school, or teaching of a purely elementary character," extending over a period of not less than three years.

The notes and queries that these two sets of regulations, even as they are here given in outline, suggest are so manifold that we are in danger of not seeing the wood for the trees. We will for the present touch only on the points which, in our judgment, most need to be elucidated or emphasized.

The first inquiry of the registrand will assuredly be: What is a recognized school? The authorized definition is modelled on the time-honoured definition of an archdeacon. A recognized school is one "recognized for the time being by the Board of Education for the purpose of the regulations in which the expression is used." Will the Board begin by issuing a provisional list of recognized schools, and, if so, on what principle will the list be framed? Will it include private schools? In the future, we may take it, recognized schools will be synonymous with schools inspected directly or indirectly by the Board; but the schools which at the present moment would satisfy this test certainly do not run to three figures. Again, what are meant by an "elementary school" and "elementary teaching" in the clause quoted above? Public elementary schools can hardly be intended, or the legal phrase would have been employed. On the other hand, it would be monstrous to disqualify a Wrangler or a First Class Classic because he has devoted himself to teaching arithmetic or *Fabule Faciles*. We remember the observation of the Cambridge professor who took himself the lowest bench and set his junior assistant to teach the highest class in physiology: "Any fool can teach the advanced students; to tackle the beginners you must know a lot!"

Once more, it is not clear whether teaching in the same classes includes private teaching. Will Mr. Scoones and his staff be registrable? These are mainly questions of interpretation, but the smooth and harmonious working of the Register depends in no small degree on the intentions of the authors; and we hope before the Order leaves the House an official answer will have been extracted.

Dismissing for the present these doubtful points, let us see what the profession will have gained by this Register which a persistent struggle of over five-and-twenty years has at last attained. Will the enemies of the Register be able to boast like the Psalmist: "He gave them their request, but sent leanness into their soul"? Will the Register consist of sixty-five thousand certificated teachers and a few score of secondary teachers, the doctrinaires and men who are on the border line of respectability, the sort of gentlemen who write F.S.L.A. and other mystic letters after their names? For our part we see no good grounds for anticipating such a *fiasco*. It is true that at present registration, like the quality of mercy, is not strained. No penalties whatsoever attach to the non-registered, and no inducements are held out to registered teachers. But there can be little doubt that in the near future the Board will refuse to recognize any school wherein the head and a substantial portion of the staff are not registered. This is how the screw can and will be applied, automatically, as it were, and without friction. The older generation of head masters, individualists like Dr. Warre and Mr. Walker and Dr. James, may or may not choose to register themselves. Even if they all abstain, and if assistant public-school masters follow their leader, their absence will not greatly matter. The younger generation, even those who disbelieve in training, will be clear-sighted enough to see that by neglecting to register they are possibly cutting themselves off from future preferment, and we prophesy that there will be an immediate rush to obtain the necessary teaching diploma.

But the effect of the Register will be more far-reaching than

this. It is hardly going too far to say that the recognition by the State of training as an essential qualification for a teacher converts by a stroke of the pen a Falstaff's regiment into a disciplined army, a distinct learned profession. In time the public, when choosing a school for their children, will not be satisfied if the head master is in Holy Orders or has distinguished himself at college, but will ask where he was trained and what experience he has had; and to appoint an unfledged Senior Classic to the head mastership of a great public school will appear as monstrous as it now would to give the command of an army division to the cadet who passed first out of Woolwich. There are anomalies and injustices in the Register which will have to be set straight. To give a single instance, one of the most deserving classes of teachers—kindergarten mistresses—will find themselves, with one exception, excluded. But these and similar defects may be easily remedied, and, on a day of victory, we are loth to utter one ill-omened word. Rather we would render thanks to the Consultative Committee for embodying in a well considered and statesmanlike scheme our highest aspirations.

REVIEWS AND MINOR NOTICES.

Poems from Victor Hugo. By Sir GEORGE YOUNG. (Price 6s. 6d. net. Macmillan.)

Victor Hugo has been worse treated by translators than any other poet of the first rank. There is a collection of translations by eminent hands that we reviewed some years ago; and, though our recollection of the particular performances is faint, we can still confidently assert that not one version out of ten rises above mediocrity. The reasons for this failure are various, and we can only glance at one of them. Victor Hugo is a master of poetical counterpoint. Songs of earliest faith and fancy, royalist and romantic; ballads full already of supple harmonies and potent masteries of music; the auroral resonance and radiance of the "Orientales"; the high and tender cadences of the "Feuilles d'Automne"; the floating and changing melodies of the "Chants du Crépuscule"; the fervent and intimate echoes of the "Voix Intérieur"; the ardent and subtle refraction of "Les Rayons et les Ombres"; the peeling thunders and blasting sunbeams of the "Châtiments"; the marvellous roll of the "Contemplations"; the terrible and splendid chronicle of human evil and good, the epic and lyric "Légende des Siècles"; the subtle and full-throated carols of vigorous and various fancy built up by vision or by memory, "Des Rues et des Bois"; and, last, the sorrowful and stormy notes of the giant organ whose keys are the months of "L'Année Terrible"—such (we are quoting from memory) is Mr. Swinburne's lyric list in 1872, and hardly half of Hugo's lyrics were then written. Where is the Aristæus to capture such a Proteus and make him tell his secret in another tongue?

Sir George Young's collection includes specimens of every kind—the purely personal lyric, idyllic, narrative, satiric, semi-dramatic, and epic. He brings to his task the first requisites of a translator—comprehension and appreciation of the original, and patient labour. As to the last quality, he tells us that many versions, or parts of versions, have been rejected for critical reasons; and even a cursory glance shows that those admitted have all been carefully elaborated. There are harshnesses, imperfect rhythms, and sometimes, to our ear, an entire failure to catch the tune; but, on the other hand, there are no loose paraphrases, no otiose epithets or stopgaps. Sir George is most successful with the narrative poems, and the free Morrisian couplets he has adopted reproduce the general effect of Hugo's alexandrines.

If space permitted, we would gladly quote a page of "Eriadvadnus," "The Lay of the Lion," or "On the March." Any shorter extract would be the proverbial brick sample of a house. With the lyrics hits and misses alternate, and, for a translator of Hugo, this is no slight achievement. Here we may illustrate from a single poem, "Matelots":—

Throb, O ye nests, feeling the small wings grow !
Thrill, O ye furrows, to the sprouting grain !
Wide on the airs around you, torches, throw
Your sparkles eddying like a soul in pain.

An excellent stanza. Then follows :

And thing and person—being—concourse—mark
Achieve its end—aim—object—law—intent ;
Bringing its fragment to the system dark,
Fashioned by God with man for implement.

This is "metaphysical" poetry with a vengeance, and the first two lines pepper you like a pom-pom :

Each atom, one or many, body, soul,
Pursues by instinct, law, its end and aim,
Adding a fragment to the mystic whole—
The universe that man and nature frame.

This, too, we confess, is *pressa oratio*, but it is intelligible and nearer the original. We must resist the temptation to go one better than the banker, and will only offer one more alternative version. Here is the last stanza of that wonderful nocturne "Le Semeur":

Pendant que, déployant ses voiles,
L'ombre où se mêle une rumeur,
Semble élargie jusqu'aux étoiles
Le geste auguste du Semeur

Sir G. Young renders :

How the shadows, gently rustling as they draw the curtain lower,
Seem to widen round the stars the kingly gesture of the Sower !

We are conceited enough to prefer :

Night drops her veil ; and in the twilight haze
Larger than human, mid the hum of even,
The Sower's form majestic, as I gaze,
Looms vast and vaster, till it towers to heaven.

But, after all has been said by way of criticism that can be said—and we might add that we look in vain for some of our favourite pieces, and that some versions which have appeared in these columns (notably Mr. F. W. Bourdillon's of "Les Djins," and Mr. James Robertson's of "Charity") might well have found a mention in the preface among the poems "done once for all"—the fact remains that Sir G. Young's anthology, by its scope and scholarship, is a worthy tribute from England to mark the centenary of Victor Hugo.

England under Protector Somerset: an Essay. By A. F. POLLARD, Assistant Editor of the "Dictionary of National Biography." (Kegan Paul.)

This is an interesting and scholarly book based on a full examination of the authorities for the period. Mr. Pollard insists strongly on the dislike with which Somerset regarded any attempt at persecution or coercion, and on his desire to steer a middle course in religious matters. His contention is generally true, and he has brought out the toleration of the Protector in a striking manner. He does not, however, seem to offer a successful defence for the illegal treatment of Gardiner; though he pleads that the Protector was only partially responsible for the Bishop's imprisonment, and was anxious to secure his liberation. Personally, Somerset was a Calvinist in doctrine and an Erastian in ecclesiastical policy; though he entrusted the clergy with more administrative power than the extreme party among the Reformers would have left to them. In some other things, too, he did not give way to the demands of the Reformers. He evidently disliked the marriage of priests; he insisted on the inviolability of marriage as propounded by the canon law; and he would not listen to a proposal for confiscating prebends for the defence of the kingdom. The abolition of chantries was, it is pointed out, in accordance with the opinion of the time, and was approved by Gardiner. It had been decreed by a statute of Henry, and Somerset simply determined that the money so gained should be spent in the promotion of education. Mr. Pollard shows that the assertion that no schools were founded under Edward VI. is based on insufficient evidence, and brings forward some instances of such foundations.

Under Somerset's rule a decided advance was made towards constitutional government: the law of treason was relaxed, the statute giving proclamations the force of law was repealed, and the authority of Parliament was more fully recognized than at any time since the early days of the Lancastrian kings. The foreign policy of the Protector, which was directed towards breaking the alliance between the French and Scots, and forming a union with Scotland, was for the time ineffectual, and was abandoned by his successor. Yet, as Mr. Pollard fairly argues, it was a wise policy, for a marriage between the

young King and Mary of Scotland would have been for the interest of England; and it did eventually bear good fruit, for the English occupation promoted the rise of Protestantism in Scotland. The Protestant party became the national party; its alliance with Elizabeth enabled it to expel the French, and as Protestantism became the dominant religion in Scotland the union of the two crowns was rendered possible. That Somerset had his faults Mr. Pollard, of course, allows; he was immoderately rapacious and too fond of power for its own sake; as a statesman he was inclined to be visionary, a man of ideas, and was ardent rather than patient and practical. Yet his achievements were great, and we are bidden to remember him with gratitude as a zealous friend of civil and religious liberty. His reputation has, as we are told here, undoubtedly suffered from a superficial appearance of continuity between his administration and the evil days of misgovernment which followed it. That he was an advocate of toleration, that he showed some respect for constitutional methods of government, and that he deeply sympathized with the poor and the oppressed are, we think, fully proved. Whether, as a matter of fact, his dealings with the Catholics were just, and whether he really ruled in a much more constitutional manner than his old master, may perhaps be questioned. Be this as it may, Mr. Pollard's work is excellent; he does not ask his readers to accept his statements without proof, and he gives a very clear and, we think, generally correct picture of the Protector and his rule. His book is one of no small importance; it deserves to be studied with attention, and it will certainly be read with pleasure.

The Æneid of Virgil, Book I. Edited by H. B. COTTERILL. With Illustrations. (Price 2s. Blackie.)

"This edition is meant especially, though not exclusively, for beginners."—The saving clause hardly justifies a volume of 159 pages, of which a hundred are notes in small print. Mr. Cotterill is a polymath, and he has brought his knowledge of German and Italian, of art and archaeology, of South Africa of to-day and North Africa under the Phœnicians, to bear with good effect on the illustration of his author. We have an epilogue to Laocœon, an appendix on astronomy, and a monograph on ancient Carthage, all most instructive for pupils who can profit by them, but what have such pupils to do with a vocabulary? "Que diable fait-il dans cette galère?" Vocabulary is a craze of the day, and we noticed lately on the cover of a school edition, "without a vocabulary," as though an apology were needed for such an omission. Riper scholars will find their account in the book, which recalls now and again "A Ten Years' Voyage in the Æneid." How refreshing a note like that on *primo prodita sonno*!—"I myself once accompanied native warriors in stealing safely through a camp of besiegers whom we saw, just as Homer describes the Thracians, asleep on the ground round their camp-fires. We were not allowed to start until after midnight." Again, on *crispere*: "Africans have a word to express this testing of a spear by a movement of the wrist and fingers, but I know of none in English." One or two minor cavils. Mr. Cotterill does not say what text he has followed, and less correct forms, such as *conjur voluunt*, are admitted. "To give loosened rein" for *dare laxas habenas* is misleading. *Dare*, with infinitive, is a prose construction found in Cicero. *Avertit*, in line 104, needs a note. There is not a possibility that *ante malorum* can mean "former evils." The note on *aversa*, line 482, is a mare's nest—the statue does not turn its head, but appears with averted looks. The illustrations are well chosen and well reproduced, and the book is cheap.

A Concise Dictionary of the French and English Languages. By F. E. A. GASC. (Price 3s. 6d. Bell & Sons.)

This is an abbreviation of Mr. Gasc's larger Dictionary, 1897 edition, and the work of curtailment has been skilfully performed. It furnishes all that the schoolboy wants, and deserves the same popularity that the larger work has obtained. We wish the author had resisted the temptation of having a fling at his rivals in the field. He provokes us to see whether we cannot detect some joints in his harness. These are rather sins of omission than of commission; but, while he justly mocks at "I am stuffed" as the English for "Je suis en chifrené," his own equivalent, "My nose is stuffed up," is not the language of polite society. The vocabulary of bicycling is not brought up to date. We miss these common words:—*La pneumatique*, le pneu, tire; le garde-chaîne (Carter), gear case; le garage, accommodation for bicycles; became for bicyclette. This is, indeed, meticulous criticism, and only intended to show that we are none of us infallible, not even the youngest. It is a thoroughly sound and scholarly dictionary.

"Heath's Modern Language Series."—*Exercises in French Syntax and Composition.* By JEANNE M. BOUVET. (Price 2s.)

The book begins with short, simple sentences on the use of the partitive article, disjunctive pronouns, and so forth, and ends with some-

what advanced composition, passages of literary composition, translations from the French for re-translation. We like best the second part, which forms the half-way house, consisting of easy stories. Mlle. Bouvet tells us she has proved the efficacy of her method by practical experiment. We should have thought the pace too severe. The notes at the bottom of the page tell too much. Thus: "You ask, who did¹ that? It² was³ I." ¹Past indefinite, ²cc, ³present tense." What is there here left for the pupil to do? The syntax rules are commendably brief, but they sometimes need qualification. Thus: "the disjunctive forms of the personal pronouns are used after the verb *être*." How about *est-il*, *peut-être*, *a-t-il*, &c.?

(1) *French Modal Auxiliaries.* By ALFRED HENNEQUIN. (Price 2s. 6d.) (2) *The French Subjunctive.* By C. C. CLARKE, Junior (Price 2s.) (Heath.)

These are two useful little monographs on difficult parts of French syntax. We doubt while the income-tax stands at 1s. 2d., with a prospect of a rise, whether many English teachers will order them for their classes, but they will find their account in purchasing them for themselves and putting their pupils through the examples either orally or on paper. It is pedantic, perhaps, to object that the word "modal" is nowhere defined except *per enumerationem simplicem*, and that all uses of *savoir*, *vouloir*, whether modal or not, are included. Mr. Clarke starts with no theory of the subjunctive. He rightly observes that the name affords us no clue to many of its uses. When he proceeds to say that a reference to Latin merely confuses the student, we venture to differ. So long as, according to our preposterous practice, Latin is studied before French, we maintain that a knowledge of the Latin syntax of the subjunctive will solve most of the difficulties in French. True, in the conditional sentence and in oblique question the languages have widely diverged, but in most other cases they march *pari passu*.

The Elements of Inorganic Chemistry. By W. A. SHENSTONE. (Price 4s. 6d. Arnold.)

This text-book is intended for the use of boys from the time they commence the study of chemistry until their school career is completed. It is so arranged that all important points, as far as possible, are subjected to the test of actual experiment by the boys themselves, and for this purpose exact directions are freely given. For facility of reference the subject-matter is divided into short numbered sections, and a teacher can easily select and specify those portions which he wishes his class to read. Paragraphs which the juniors may omit are indicated by marginal lines. We note a few slips which should be corrected in a new edition. Aluminium does not dissolve in dilute sulphuric acid, as stated; tin is not brittle at ordinary temperatures; and the melting-point of antimony is about 630° C., and not 425° C. The hand of the experienced teacher is discernible throughout, and the book can be thoroughly recommended as excellent in every way for school use.

Inorganic Chemistry. By R. MELDOLA. Revised by J. CASTELL EVANS. Fifth Edition. (Price 2s.)

Originally written some twenty years ago, this volume has now been revised and brought up to date. It gives a comprehensive elementary survey of the subject on the usual lines. Certain points, however, still need revision, and the diagrams are not such as we are accustomed to find in modern text-books. It may be noted that cuprous, and not cupric, sulphide is the product when copper and sulphur are heated together (page 18). Again, the formula of nitric oxide is given on page 144 as N₂O₂, and that of phosphorous oxide as P₂O₃ (page 152), instead of NO and P₂O₅ respectively. The electrolytic process for the production of aluminium is not mentioned; the obsolete method of reduction of the chloride by sodium is given. Matters such as these should have been corrected in a book which is otherwise trustworthy.

Practical Chemistry. By W. FRENCH. (Price 1s. 6d. Methuen.)

The course of elementary chemical experiments described in this little volume covers the syllabus of the Oxford and Cambridge Junior Local Examination (Experimental Science Section), and also includes the suggestions of the Head Masters' Association and those of the Board of Education for evening continuation schools. Full instructions are given as regards the actual operations to be performed in successfully carrying out each experiment; but the worker is very properly left, as far as possible, to make his own observations and to draw his own inferences. Any boy who has intelligently worked through the hundred experiments should have gained an insight into chemical methods, and have become acquainted, at first hand, with the fundamental laws on which the science is based. The apparatus required is extremely simple throughout, but is none the less effective.

The Foundations of Botany. By J. Y. BERGEN. (Price 6s. 6d. Ginn & Co.)

This book is written to satisfy the needs of school classes in botany, and it is certainly a marked improvement upon the usual class of books employed for this purpose. Much less time is devoted to botany in English schools than appears to be usual in America, and, in any case, it seems to be well-nigh impossible for the most industrious student to thoroughly master the contents of the book in the year's course which it is supposed to represent. Fortunately, however, the book is so

arranged that portions may be omitted if necessary. It is satisfactory to notice that the author combats the absurd prejudice against the use of the microscope as an adjunct to botanical teaching in schools, a prejudice whose main foundation is based upon the question of expense and not upon teaching utility at all. The book is remarkably free from errors, and the author has made a praiseworthy attempt to bring the subject-matter thoroughly up to date, and to give references to more advanced works on subjects which are still under discussion. The diagrams are very good. Few of the physiological experiments given could be performed by an entire class, but in the form of demonstrations they should aid greatly the students' comprehension of the plant as a living mechanism. The experiment in oxygen-making in sunlight should be performed in water at constant temperature, since a rise of temperature will cause bubbles of impure oxygen to appear on dead filaments placed in cold, well-aerated water. The index is very incomplete in character, and the glossary of technical terms might have been extended with advantage.

Advanced Physiography. By J. THORNTON. Sixth Edition. (Price 4s. 6d. Longmans.)

Former editions of this text-book have gained for it wide popularity, and in this revised form it can be thoroughly recommended as a sound and accurate manual of the subject. The average student of physiography approaches the subject with a general scientific knowledge all too meagre for its proper comprehension; but the requirements of such readers are provided for in numerous explanatory paragraphs in small type. The book is freely and excellently illustrated.

"Rulers of India."—*Asoka, the Buddhist Emperor of India.* By VINCENT A. SMITH, M.R.A.S. (7½ × 5 in., pp. 204; price 3s. 6d. Clarendon Press.)

This is a supplementary volume of that admirable series, "Rulers of India," most of the volumes of which have been noticed in these columns. From the nature of the case, it is unlike its predecessors in this series in treatment. In their case the main things were personal character and personal achievement, and the interaction of personal character and environment. In the case of Asoka, as Mr. Vincent Smith confesses in his preface, all minute biographical details are lacking, and a distinct portrait of the man Asoka cannot be given. Nevertheless, enough is known to render the subject interesting; and this has been carefully collected and excellently set forth. There are, of course, Indian and Cingalese legends concerning the great Maurya; but these are, for the most part, absurd, and, at best, are quite unreliable. In the main, what we have to depend upon are the monuments and the inscriptions. Mr. Vincent Smith begins with the history—what there is of it—of Asoka, the chronology of his period—which is somewhat of a puzzle, satisfactorily solved—and the extent and administration of the Mauryan Empire. Then he gives us chapters on "The Monuments," "The Rock Inscriptions," and "The Cave and Pillar Inscriptions," from which most of our information is derived. And, lastly, he deals with the Cingalese and Indian legends of Asoka. An appendix supplies a list of the casts of Asoka inscriptions in the Indian Museum at Calcutta; and an index concludes the volume. The result is, on the whole, as we have said, decidedly interesting. The glimpses we get of the personality of the great emperor monk who ruled the valley of the Ganges in the third century B.C. indicate a character of singular nobleness, enlightened, tolerant, and intensely humane—a true lover of his people and an earnest seeker after righteousness. Again and again the edicts urge respect to parents, love to brothers, sisters, and relatives, honour to teachers, liberality to religious folk, respect for life, tolerance, self-control. The whole set of the Emperor's mind is towards helping his people to lead healthy, worthy, and happy lives in this world, and to prepare themselves for the world to come. All religions try to do this, and, therefore, all religions should be respected. "All sects," he says in the sixth of the seven Pillar Edicts, "have been revered by me with various forms of reverence. Nevertheless, personal adherence to a man's particular creed seems to me the chief thing." But we have not space to do justice to the sayings of this true disciple of his great master Buddha. Our readers should get the book, and study them for themselves.

A History of the United States. By ALLEN C. THOMAS, A.M. New Edition, rewritten and newly illustrated. (7¼ × 5½ in., pp. xvi., 503, lxxi.; price 5s. D. C. Heath & Co.)

We do not remember to have seen this book in its earlier form. In its present form it is certainly well and accurately, though very briefly, written. The narrative is clear and impartial, and is free from the exaggeration and lack of proportion which used commonly to characterize histories written on the other side of the Atlantic. Moreover, Mr. Thomas has the art of making his story interesting, while still remaining simple, direct, and faithful to fact. The only faults we have to find with the book are that it is over-illustrated and is printed on exceedingly heavy paper. The illustrative matter—including maps (very good of their kind), portraits, reduced facsimiles of old documents, &c.—occupies very nearly as much space as the letterpress. This we think a mistake. It makes too much of a good thing, and is likely, in the majority of cases, to dissipate rather than to concentrate

attention. It is only fair, however, to add that the illustrative matter does, as a matter of fact, illustrate the text, and is not merely decorative and imaginative, as is so often the case with our own illustrated histories. The numerous portraits are from authentic sources and are well reproduced, the pictures of places or buildings are apparently from photographs, and the documents are careful facsimiles. The appendices are numerous—rather too numerous—and occupy fifty-eight pages. They include, amongst other things, the Declaration of Independence, the Constitution, Lincoln's Second Inaugural, and a list of books for teachers and readers, besides various statistical statements not absolutely necessary. There is a good index at the end. Taken as a whole, the book is a good one, and we can recommend it to our readers. It is neatly and strongly bound.

First Makers of England. By LADY MAGNUS. (6¼ × 4½ in., illustrated, pp. x., 136; price 1s. 6d. John Murray.)

This is a book written for young children. The three "first makers" chosen are Julius Cæsar, King Arthur, and Alfred the Great. It is somewhat difficult to see in what sense the first two can be called "makers of England" at all; nor are we in any way the wiser after having read what is written about them. Here and there for a page or two Lady Magnus seems to forget the distinction between British and English, and to imagine that there were English in Britain in the times of the Roman occupation. But she writes well and interestingly, and children will enjoy what she has to tell them. And, after all, the confusion between British and English is cleared up when we come to King Alfred.

A Selection from the Comedies of Marivaux. Edited by E. W. OLMSTED, Ph.D., Assistant Professor of Romance Languages in Cornell University. (Price 5s. Macmillan.)

These three plays from Marivaux are edited with care, and the notes are neither too full in themselves nor too much above the heads of the pupils. The introduction, if rather long, is full of information for the real student. Yet we cannot help doubting whether Marivaux is worth utilizing, even so, "for school and college use." It needs some breadth of culture and some experience of life to appreciate all that is best in his style; and neither our schoolboys nor our undergraduates know their Molière too well as yet. Whether from a slight affectation, or because such uses are already naturalized in America, the editor frequently uses English words in a very un-English sense. "So gracious a personality . . . and so superior a genius" (from the first three lines of the preface) would make better French than English; and the same may be said of his constant use of *mode* for *mood* as a grammatical term. However, if our boys are to read Marivaux at all, they might well fare worse than in this edition.

(1) *A Brief Sketch of French History, 1789-1815.* By L. GUILGAULT.
(2) *A Brief Sketch of French History, 1815-1873.* By H. HIRSCH.
(Price 1s. 6d. each. Blackie.)

These two little books belong to the same series; the preface to the second speaks of it as intended for young boys, while that of the first includes a reference to several public examinations, the Army included. Both books are too full for Army candidates, who can only "cram" the subject—a use which Prof. Guilgault very rightly repudiates for his manual. Both contain a very great deal of matter in a form interesting enough to adults, but we cannot help doubting their use to the schoolboy, who is seldom turned out with a fair knowledge even of the history of his own country. A French history not intended for "cram" use would probably be more useful if it were restricted to a few picturesque and instructive episodes connected by a short skeleton commentary.

Texts to illustrate a Course of Elementary Lectures on Greek Philosophy after Aristotle. Selected and arranged by J. ADAM, M.A., Hon. LL.D. of Aberdeen University, Fellow and Senior Tutor of Emmanuel College, Cambridge. (Price 3s. 6d. net. Macmillan.)

This little book of seventy pages is divided into six sections: (1) The Academy after Plato, (2) The Peripatetic School after Aristotle, (3) The Older Sceptics, (4) Epicurus, (5) The Stoics, (6) Greek Philosophy in Rome. The subsections are usually a general introduction, a sketch of the philosophy, and the chief philosophers of each school. The selection is good, the arrangement convenient, and it deserves a wide sale amongst University students. The book is nothing like so full as Ritter and Preller's well known compendium, and is insufficient by itself; but it was meant as a text-book for lectures, and, if used in conjunction with a history, will be found a valuable help to beginners. Advanced students will need something more.

A Short History of India. By ARTHUR D. INNES. (7¼ × 5 in., pp. xxxii., 373, with eight maps; price 7s. 6d. Methuen.)

Mr. Innes knows his subject well, and treats it accurately and in a very interesting manner. We can heartily recommend his "Short History" as one of the best of its kind—certainly we know of no better short account of the development of British supremacy out of the tenancy of a trading company in India. After devoting three chapters to the land and the people in the earliest times, the coming of the Mohammedans, and the rise of the Marathas, Mr. Innes takes up the

story at the arrival of European traders in the early sixteenth century, and carries it steadily forward to the transfer of the government of India to the Crown at the end of 1858. Everything of chief importance is succinctly and clearly told, and the interest is never allowed to flag. Here and there we miss episodes which, without being absolutely necessary to the narrative, are in themselves attractive. But the plan of the volume does not admit of their inclusion; and the fact that, in spite of their omission, Mr. Innes still contrives to make his story consistently interesting redounds greatly to his credit. He is strictly impartial and abstains from moralizing; while his remarks on events and men show that he has made himself well acquainted with, and has carefully thought over, Indian problems both past and present. His book is well equipped with appendices—containing a list of authorities, a glossary of terms and names, and indexes to the maps and to the general body of the text. Altogether it deserves to succeed, and will, we think, do much to make the study of Indian history sounder and more popular.

A History and Description of Roman Political Institutions. By FRANK FROST ABBOTT, Professor of Latin in the University of Chicago. (Price 7s. Ginn & Co.)

It is not long since Mr. Greenidge published his able monograph on "Roman Public Life," and we note with interest the advent of another work on the same subject. The present book is not written on quite the same plan. It gives more attention to the history, which takes up half of it; and that section is a history of Rome from the political standpoint, dealing with the political facts in their relation to the general history. It is, perhaps, to be regretted that this part was not curtailed; but, the plan granted, the execution is good; and the descriptive portions of the work are excellent. Although it is meant for beginners, it is neither shallow nor elementary, but, as far as it goes, thoroughly well done. Marginal references are given for authority, and each chapter has a bibliography. We have never seen the subject treated so clearly and so concisely. As examples, take the section on "Par Potestas and the Veto Power" (151), and those on the "Popular Assemblies" (295 *et seq.*). The subject is followed up as far as Diocletian, and an appendix gives specimens of edicts and senatorial documents. This will be an admirable companion to the Roman history for University students and the more intelligent schoolboys.

Junior French Examination Papers. By F. JACOB. (Price 1s. Methuen.)

The standard is that of the Oxford and Cambridge Junior Locals, and, judged by this standard, the papers are excellently adapted for their purpose. As indicating what French a pupil of twelve or thirteen should be expected to know, we should ruthlessly condemn at least a fourth of the questions, and *les tolérances* would cut out some more. What business has a boy of that age with she-mules or she-devils, painted glass windows, shoeing frames? A greater abomination are the lists—lists of adjectives with two forms, lists of the *-al* and *-ail* substantives, with plurals in *-als* and *-ails*, &c. On the other hand, the little sentences, French into English and English into French, at the end of each paper are well framed, and a real test of practical knowledge.

Little French Folk. By C. TALBOT ONIONS. (Price 2s. net. Simpkin, Marshall.)

Very easy stories and nursery rimes—French undefiled by one word of English, save on the title-page. All the objects mentioned are figured at the top of each page in illustrations by John Williamson. A great improvement on the Holzel "Wandtafeln," which, excellent as they are, the teacher who has used them for a whole year loathes the sight of.

Life and her Children, by Mrs. FISHER, better known as ARABELLA BUCKLEY (E. Stanford), has reached its eighteenth thousand. It is still the most stimulating of all introductions to zoology.

BOOKS OF THE MONTH.

Classics.

Classical Archaeology in Schools. By Percy Gardner. Clarendon Press, 1s. net.

The Comedies of Aristophanes: *Frogs*, *Ecclesiazusæ*. Edited, translated, and explained by B. B. Rogers. G. Bell, 15s.

CALENDAR FOR MARCH.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

1.—St. Andrews. Return forms to Secretary L.I.A. Scheme.

1.—Return forms for Oxford and Cambridge Preliminary for Holy Orders.

1.—St. Andrews University. M.A. Exams. Papers to be returned.

1.—Scotch Education Department. Teacher's Certificate. Apply for permit.

4, 5, 6.—College of Preceptors. Professional Preliminary Exam.

5.—University College, London, at 8.30 p.m. "Poésie lyrique de la France du Moyen-Age (Auditions de Chansons du Moyen-Age par Miss May Hartog)." Public lecture in French, by Prof. Louis M. Brandin.

- 5.—Oxford Exam. for Women. Return forms for Responsions.
 - 6.—Oxford Exam. for Women. First Public Exam. (Hons. Classical) begins.
 - 7.—Botanical Theatre, University College, Gower Street, at 8 p.m. Lecture on "A Visit to Sicily," with lantern slides, by Miss H. Busk. (Teachers' Guild.)
 - 8.—Return forms for Glasgow University Preliminary Exams., Arts, Science, and Medicine, also Bursaries.
 - 8.—Science and Art Department. Candidates not in Science and Art Classes to apply to Local Secretary for admission to Evening Exams.
 - 10.—Oxford Exam. for Women. First Public Exam. Holy Scripture.
 - 10.—Local Committees to apply for Exam. papers to Science and Art Department, South Kensington, for Evening Exams.
 - 10.—Central Foundation School, Spital Square, at 7.30 p.m. Paper on "Practical Arithmetic," by Miss Storr. (Teachers' Guild.)
 - 10.—Oxford Exam. for Women. First Public Exam. Pass.
 - 12.—Return forms for City and Guilds of London Institute Technological Exams.
 - 12.—College of Preceptors. Meeting of Council and Evening Meeting.
 - 13.—London Chamber of Commerce. Return forms for Junior Certificate Exam.
 - 14.—British Child-Study Association, London Branch. Miss Alice Woods on "The Work being done in Co-educational Schools," in the Ruskin Room, Sesame Club.
 - 15.—Post Translations, &c., for *The Journal of Education* Prize Competitions.
 - 15.—Sesame Club, 29 Dover Street, Piccadilly, at 8 p.m. Lecture on "Ruskin," by J. Churton Collins. (Teachers' Guild.)
 - 15.—Return forms for Pharmaceutical Society Exam.
 - 17.—Lincoln College, Oxford. Scholarship Exam.
 - 17.—Clapham Common High School for Girls, South Side, at 8 p.m. Paper on "Modern Language Teaching," by Victor Spiers. (Teachers' Guild.)
 - 17.—Surveyors' Institution. Associate and Fellowship Exam.
 - 18.—Durham University. Preliminary Arts (M.B.) Exam. begins.
 - 18.—Oxford Exams. for Women. Responsions begin.
 - 19.—University College, London, at 8.30 p.m. "Les Chefs-d'œuvre de la Peinture française du XIX^e siècle (avec projections)." Public lecture in French, by Prof. Louis M. Brandin.
 - 22.—Post School News, items for this Calendar, &c., and Advertisements for the April issue of *The Journal of Education*.
 - 25.—Local Secretaries send returns and fees to City and Guilds of London Institute.
 - 25.—London Chamber of Commerce. Commercial Certificates. Senior Exams. Return forms.
 - 25.—Durham University. Certificate of Proficiency Exam. begins.
 - 25.—Cambridge Higher Locals. Forms of Entry ready.
 - 25.—April 19.—Prof. Ernest Gardner's Easter Tour in Greece.
 - 26 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the April issue of *The Journal of Education*.
 - 26.—Oxford and Cambridge Preliminary Exam. for Holy Orders.
 - 29.—Glasgow University. Preliminary Exam. for degrees in Arts, Science, and Medicine, and Exam. for Bursaries begin.
 - 31.—Return forms for Irish Intermediate Exams. Board, Dublin (with late stamp, 10s.) ; and particulars required in the case of students for the Burke Memorial Prizes.
 - 31.—London University. Last day for entry for D.Sc. Exam.
 - 31.—National Agricultural Exams. Board. Return forms for May Exam. for National Diploma in the Science and Practice of Agriculture.
 - 31.—University College, London. Last day for notice to compete for Atkinson Morley Scholarship.
- July 2-August 28.—Vacation Course for Foreign Women Students. Apply to Mrs. Burch, 20 Museum Road, Oxford.

The April issue of *The Journal of Education* will be published on Wednesday, April 2, 1902.

UNIVERSITIES AND SCHOOLS.

BEDFORD COLLEGE FOR WOMEN.

W. H. Willcox, M.D., D.P.H., has been appointed Deputy Lecturer in Hygiene on the resignation of W. C. C. Pakes, D.P.H., F.C.S., appointed Bacteriologist to the Transvaal Government. Miss C. Parker (*Lit. Hum. Oxon.*) has been appointed assistant to A. B. Cook, M.A., Lecturer in Greek. The following students have passed the Examina-

tion of the Sanitary Inspectors' Joint Examination Board, the only examination qualifying for appointments as sanitary inspectors in the metropolis :—F. N. F. Lovibond, D. Tyas.

The following occasional lectures are open to the public without fee :—Thursday, February 20, at 5 p.m., Holland Crompton, F.C.S., Lecturer in Chemistry, on "Stories of some Familiar Scientific Instruments." Thursday, March 20, at 3 p.m., Sir Richard Jebb, Litt.D., M.P., Visitor of the College, on "Samuel Johnson."

The Council have resolved that, in order to keep a permanent record of the legacy left to the College by Mrs. Morton Sumner, the Lecturer in Geology be hereafter called the Morton Sumner Lecturer in Geology.

OXFORD.

Some further progress has been made with regard to the discussion of the reforms to which in my last letter I made reference. The Vice Chancellor has addressed a circular to the Boards of Faculties, the Delegacies, the institutions and departments of the University, and to all professors and readers, inviting their assistance in placing before the University the present and prospective needs of all the institutions and of the several branches of study and teaching carried on within its precincts. The circular aptly quotes an important precedent for this action, which (as it was a quarter of a century ago) is largely unknown to the present members of the University. A series of inquiries into the needs of the Oxford of that day in respect of buildings, institutions, and provision of teachers was set on foot during the years 1873-7, and a full statement of such requirements was published while the last University Bill was before Parliament. The Commission of 1877 adopted many of these suggestions, and others were embodied in statutes which (owing to want of funds or other causes) have not yet been carried into effect. A similar statement, the circular points out, will now be useful in preparing the way for the further development of the University, and may serve to encourage and direct the contributions of those who desire to be benefactors to learning and science. The results of this inquiry will, no doubt, be of much interest, not only to the members of the University, but to many outside its borders who recognize its importance to national education.

It is known that proposals have been under discussion in certain quarters with regard to the University entrance examination (Responsions), which is at present confined to an elementary examination in Latin, Greek, and mathematics. It has long been felt that the standard in these subjects is very inadequate, and that, in particular, in the case of Greek (where only one prepared book and half a grammar paper constitutes the minimum exacted from the candidates) the test is very unsatisfactory, while the universal requirement of the subject imposes a vexatious and useless labour on those whose studies at the University lie in the direction of mathematical, scientific, or modern subjects. The question was raised twenty-three years ago by the proposal for a special preliminary to lead to a science degree, and the proposal was negatived. Since that time there has been a great development (in the schools from which the University draws its students) of modern sides, and especially the teaching of modern languages has assumed a new importance. The growth of new Universities, with entrance examinations at once more adequate in standard and more elastic in requirements, has further emphasized the need for change in the older Universities. The question is at present only beginning to be agitated; and it is not easy to say what line will be taken in the matter. Some opinions seem to favour the addition of modern languages to the necessary minimum exacted from all candidates; others advocate the system of alternatives, allowing an option in place of Greek. At any rate, it is not doubtful that, in one shape or another, the whole question of the entrance requirements must be raised, and the abortive efforts of 1879 are, under the greatly changed circumstances of to-day, of very little assistance towards a forecast of the results.

During the past month several distinguished Oxford men have been removed by death. The most remarkable was undoubtedly Lord Dufferin, who died on February 12, at the age of seventy-five, a man of brilliant endowments, to whose many varied and public services full justice has been done in the notices that have appeared in all the papers. Sir G. W. Cox was well known to scholars of an earlier date by his "Studies in Comparative Mythology," his "History of Greece," and the "Epochs of Ancient History," of which he was the editor. Sir Griffith Evans, K.C.I.E., who died at the comparatively early age of sixty-one, was an Indian lawyer of notable energy and gifts, and for some years a member of the Council of the Viceroy. Mr. E. E. Morris, formerly of Lincoln College, who died in England of pneumonia on January 1, had been since 1883 Professor of English at Melbourne University. Besides doing a considerable amount of literary work, of which the "Dictionary of Austral English" was perhaps the most memorable, he was a man of great energy and public spirit, and the founder and supporter of much valuable social work in Melbourne. A remarkable testimony to his personal character and influence was given in the chapel of Rugby School (where Morris was educated as a boy) by Dr. James, a college friend of his at Oxford.

The following appointments have been announced :—The Rector of Lincoln, Sir J. Burdon Sanderson, and Sir W. Anson, M.P., to represent the University at the jubilee of Owens College; Dr. Greenfell and Dr. Hunt to be members of the Academy of Königsberg; The President of Magdalen, Mr. G. E. Baker (Magdalen College), and Dr. C. L. Shadwell to be Curators of the Botanic Garden; Prof. Pelham (re-elected) to be Curator of the Bodleian; Prof. Goudy to be referee in regard to college contributions for University purposes, also to be Delegate of Non-Collegiate Students; Mr. F. E. Kitchener (Trinity College, Cambridge) to be representative governor of Church Eaton Grammar School; Mr. E. M. Walker to be Delegate of Lodging Houses; the Rev. H. N. Eales (Corpus Christi College) to be Rector of Stuchbury.

Degrees: M.A. (*honoris causa*) to A. F. R. Hoernle, Ph.D., C.I.E.; to Mr. A. Winkfield, F.R.C.S., Oxford Medical Officer of Health for thirty years. Doctor of Science to Mr. J. B. Farmer, Magdalen College (degree awarded for a long series of botanical papers).

CAMBRIDGE.

The discussion in the Senate House of the proposal to permit the pollman to substitute two "Special" Examinations for the "General" and one "Special" showed that there was at least a *prima facie* case for inquiry. A syndicate will accordingly be appointed, but how composed or to what final issue are questions for the future to answer. It is not the colleges who know most of the pollman that are keenest in urging the change.

An elaborate discussion took place on January 30 on the Report of the Appointments Syndicate. The Report proposed that the University and colleges should combine to form an Appointments Board, with an annual subsidy, to carry on the work successfully initiated by the Association. The Board would act as an Intelligence Office, collecting and distributing information regarding posts which might be suitably filled by Cambridge graduates, and bringing likely applicants and employers seeking men into communication. Dr. Hobson objected that the proposal introduced "State socialism" into University affairs. Prof. Lewis thought that the existing unofficial Scholastic Agency under his direction should not be interfered with so far as educational posts were concerned. The other speakers generally defended the scheme as one worthy of academic effort, and already justified by experience. Since the discussion the Financial Board have resolved that they raise no objection to the annual grant, and the Association have agreed to transfer their "goodwill" free of liability to the new body when appointed. Lastly, the Syndicate have expressed the opinion that no difficulty need arise in referring applicants for scholastic appointments to Prof. Lewis's Agency. It is, therefore, to be hoped that the Senate will approve the scheme, and give it at least five years in which to show its capacity and to prove its practical usefulness. Opposition is, however, threatened to the Grace on February 27.

Downing College is emerging from the financial depression which a few years ago threatened its existence. It is no secret that to the Master's generosity and devotion the brighter prospects that now prevail are due. He has added the Bursarship to his other duties, and at a recent meeting Mr. Henry Jackson was appointed Senior Tutor, and Mr. Widdicombe and Mr. Crafer College Lecturers. Thus a virtually new staff has been entrusted with the college destinies, and only undergraduates in sufficient numbers are still lacking.

The Readership in Rabbinic and Talmudic, hitherto adorned by Prof. Schechter, will be vacant by his resignation on April 18. As the discoverer of the rich collection of Genizah MSS. now in the University Library, and as an erudite and inspiring writer of Jewish literature and life, he has made himself a distinguished place in his own field of learning, and the University will be much the poorer for his departure to New York.

A crowded audience at the Union Society was addressed on February 15 by the Archbishop of Canterbury on the subject of temperance. The Archbishop spoke seated, but the vigour of his speech betrayed nothing of the octogenarian; and the enthusiastic vote of thanks at the close was as heartily given as it was finely earned.

The following appointments and elections are announced :—Dr. Hill, Dr. Cunningham, and Mr. Berry, to be representative members of Girton College; Mr. W. E. Johnson, King's, to be Sidgwick Lecturer in Moral Science; Mr. C. Bendall, Caius, to be Teacher of Sanskrit; Mr. A. P. Goudy to be Teacher of Russian; Halil Halid Efendi to be Teacher of Turkish; Dr. W. E. Dixon, Assistant to the Downing Professor of Medicine, to be M.A. *honoris causa*; Mr. R. C. Richards, Trinity, to be Craven Scholar; Mr. S. A. Sydney-Turner, Trinity, to be Waddington Scholar; Mr. J. T. Sheppard, King's, to be Porson Scholar; Mr. W. Rennie, Trinity, and Mr. J. E. C. Jukes, Pembroke, to be Chancellor's Classical Medallists; Mr. C. Elsee, St. John's, to be Hulsean Prizeman; Prof. J. Osborne Reynolds, F.R.S., Queens', to be Rede Lecturer; Dr. J. Reynolds Green, F.R.S., to be a Fellow of Downing College; Lord Spencer, K.G., to be an Elector to the Professorship of Agriculture; Prof. W. H. Bennett, St. John's, to be D.Litt.; Mr. F. J. Foakes-Jackson, Jesus, to be Hulsean Lecturer.

WALES.

H.R.H. the Prince of Wales has been unanimously elected Chancellor of the University of Wales, in succession to His Majesty the King, who has expressed his sincere pleasure in assuming the title of Protector of the University. The new Chancellor was nominated by all the members of the Court of the University with the exception of two, one of whom was in Japan, and the other in Egypt.

At a meeting of the University Court, held at Shrewsbury on February 15, the question came up for consideration of the place of the installation. The following towns made application :—Cardiff, Aberystwyth, Swansea, Bangor, and Carnarvon. The towns of Bangor and Carnarvon, together with the authorities of the University College of North Wales, made joint application; and in the event it was resolved unanimously that the installation should take place in Bangor and Carnarvon. It is probable that the meeting of the University Court for the purposes of the installation will be held in the ancient castle of Carnarvon, and that the luncheon will be given in Bangor.

The University College at Bangor is passing through an acute crisis in connexion with the question of the site for the permanent college buildings. A number of towns, among them being Wrexham and Rhyl, are making application for the site of the college in case the Corporation of Bangor is unable to provide a free site as required by the college authorities.

A good deal of discussion has taken place in the newspapers of the Principality concerning the question raised by the County Governing Body of Carmarthen with respect to the regulations issued by the Central Welsh Board for the awarding of scholarships and exhibitions by the County Governing Bodies.

SCOTLAND.

The unexpected death of Prof. Adamson, of Glasgow, at the early age of fifty, is an irreparable loss to philosophical scholarship in Scotland. He was the most learned of the Scots professors of philosophy, and, although he has left very valuable work in his book on Kant and his "Encyclopedia" articles, it was felt by all who knew him that his best production was yet to come. We may hope that what the future might have given is not altogether lost to us, and that some work worthy of his great reputation may yet appear, even though it be in a comparatively imperfect form. At Manchester, Aberdeen, and Glasgow he had a career of unbroken success, not only as a teacher and thinker, but as an educational organizer and administrator. The loss of the business power which he employed so well in the establishing of Victoria University, and in the extension and management of the University of Glasgow, will be no less keenly felt than the premature passing of so learned and acute a thinker. Yet something lasting, though incalculable, remains in the institutions he has served and the men he has trained.

The University news of last month is meagre. The erection of the new medical buildings at Dundee is about to begin, and two considerable legacies have been announced, one to Edinburgh and the other to Aberdeen. The late Miss Martha Brown has left £5,000 to Edinburgh for the foundation of bursaries in Arts, and the late Surgeon-General Harvey has left £5,000 to Aberdeen, "to be disposed of at the absolute discretion of the Senatus for the purposes of the University." It is seldom that a University receives so free a bequest as this. Too often there are attached to the legacy conditions which make it difficult to administer, and which even, in some cases, tend to defeat the testator's own purpose.

Prof. Emile Bontroux, of the Sorbonne, has been appointed Gifford Lecturer at Glasgow University. He is probably the most popular of the philosophical teachers in France, and he is an enthusiastic member of the Franco-Scottish Society.

The Scottish Education Department has issued two supplementary circulars regarding the new Leaving Certificate. In one of these it announces that it "has under consideration the possibility of according some special recognition to those pupils who, although they are destined for a distinctively commercial career, may yet choose to remain at school beyond the stage at which they would be entitled to claim the Intermediate Certificate." This seems a distinct gain; but it strengthens the argument, indicated here last month, for lowering the age at which the Intermediate Certificate may be taken from fifteen to fourteen. The other circular announces that the science examination for the Leaving Certificate will be chiefly oral and practical, and that in each school it will be based upon the curriculum of the school and upon the profession made of the work done, provided these are satisfactory and adequate in amounts.

IRELAND.

The Professorship of Natural Philosophy in Trinity College, Dublin, has been given to Mr. Frederick Purser, F.T.C.D. It was previously held by Dr. F. A. Tarleton, F.T.C.D., who resigned it recently on becoming Senior Fellow.

It was stated in the last number of *The Journal of Education* that the resolution to consider the desirability of opening Trinity College

(Continued on page 192.)

A SELECTION FROM CASSELL'S EDUCATIONAL WORKS.

Uniform with MacWhirter's "Landscape Painting in Water-Colour."

JUST PUBLISHED.

MARINE PAINTING IN WATER-COLOUR.

By W. L. WYLLIE, A.R.A.

With 24 Coloured Plates. 60 pages, crown 4to, 5s.

"The plates strikingly show the remarkable range and variety of marine painting. Mr. Wyllie's method is fully described, and the book will appeal in this respect to the student; but, as a most artistic production, it must also delight a very large public."—*Liverpool Post*.

Landscape Painting in Water-Colour. By J. MACWHIRTER, R.A. With 23 Coloured Plates. 5s. Three large editions have already been called for.

"With the sketches to refer to, Mr. MacWhirter's precepts and hints, based upon long and varied practice, will be completely intelligible to the veriest beginner, and the student who follows his directions will find that many apparently formidable difficulties can be easily surmounted."—*Globe*.

A History of England. By H. O. ARNOLD-FORSTER, M.A. Fourth Edition, Revised. Fully Illustrated. From the Landing of Julius Cæsar to the Present Day. 816 pages. Cloth, 5s.; or, handsomely bound, cloth gilt, 6s. 6d.

"'The History of England,' by Mr. H. O. Arnold-Forster, M.P., which Messrs. Cassell have just issued at 5s., has all the ingredients which go to the formation of a universally popular work. While it is certain to become a standard history book in schools, it is at the same time most conveniently arranged for use in the home as a dependable book to be referred to in all matters of historical fact, and it is also written so clearly and attractively that it may be read right through merely for its interest as a straightforward and comprehensive narrative."—*Daily Mail*.

This World of Ours. By H. O. ARNOLD-FORSTER, M.A. Being Introductory Lessons to the Common-Sense Study of Geography. Fourth and Cheap Edition. Fully Illustrated. Price 2s. 6d.

"Mr. Arnold-Forster has produced a 'harmonious whole,' which impresses upon his readers that the study of geography is one of the most fascinating which could possibly be undertaken; is one which can be followed with pleasure and profit at all times and in all places, which makes travelling a perpetual enjoyment, and staying at home a perpetual opportunity."—*Practical Teacher*.

The Cheapest and Best Dictionaries in existence.

Cassell's French Dictionary. (French-English and English-French.) 615th Thousand. Revised and Corrected from the Latest Edition of the Dictionary of the French Academy. 1,150 pages. Cloth, 3s. 6d.; half-morocco, 5s.

"Cassell's French Dictionary seems fully to justify the claim made in its preface—that it is at once the cheapest, the most complete and extensive, the only thoroughly accurate book of the kind in this country."—*Record*.

Cassell's German Dictionary. (German-English and English-German.) 277th Thousand. 1,120 pages. Demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

"To say this is the best of the smaller German Dictionaries in the field is faint praise, and, were it not for the special merits of one or two, we might, without exaggeration, say that Miss Weir is first, and the rest nowhere."—*Journal of Education*.

Cassell's Latin Dictionary. (Latin-English and English-Latin.) 132nd Thousand. Thoroughly Revised and Corrected. Cheap Edition, 3s. 6d.; half-morocco, 5s.

"This new edition of Messrs. Cassell's Latin Dictionary has been well and widely overhauled. Its nine hundred odd pages are sure to prove a popular investment, and as regards price, at any rate, the book need fear no rival."—*University Correspondent*.

Cassell's English Dictionary. 25th Thousand. 1,100 pages. Demy 8vo. Cheap Edition, 3s. 6d.; half-morocco, 5s.

Cassell's Educational Catalogue will be sent, post free, on application.

CASSELL & COMPANY, Ltd., London.

NATURE STUDY.

The special attention of Schoolmasters is directed to the New Scheme for the promotion of Nature Study by means of the Competition for Collections of Wild Flowers now being inaugurated under the direction of F. E. HULME, F.L.S., F.S.A.

Full particulars will be published in Part 2 of the new Enlarged Edition of

FAMILIAR WILD FLOWERS,

published March 12, or will be sent, post free, on application to Messrs. CASSELL & COMPANY, Ltd., La Belle Sauvage, London, E.C.

"We could scarcely recommend for young dwellers in, or visitors to, the country a more seasonable work than 'FAMILIAR WILD FLOWERS.' Here portrayed with fidelity and coloured after nature are pictures of British plants well known to botanists, and in many cases familiar to the wayfarer's eye. It is a rather curious fact that **extensive ignorance prevails** as to the names and general character of flowers, even when they are quite common. . . . The collecting of wild flowers and plants is a **charming and innocent pastime**, and the delight of it will be doubled in every case where new specimens are not only discovered but identified. We could say a great deal in favour of this elegant and healthy pursuit; and to encourage and assist it is the object of these volumes, our commendation of which includes the reading as well as the pictures. Of every plant there is a **simple description**, accompanied by miscellaneous notes, both practical and literary, so that those who have only a rudimentary acquaintance with botanical science may be at once profited and pleased."—*Queen*.

NEW AND ENLARGED EDITION, in Fortnightly Parts,

price 6d. net, of

Familiar Wild Flowers.

By F. E. HULME, F.L.S., F.S.A.

With 280 Coloured Plates, including 40 specially prepared for this New Edition.

PART I. Now ready.

CASSELL & COMPANY, Ltd., LONDON,
and all Booksellers.

to women was passed by the Board with a majority of three to one. This was incorrect. The majority was five to three. As far as is known, no further steps have been taken in the matter.

In January, the Deanery of St. Patrick's Cathedral, Dublin, became vacant by the death of Dr. Jellett, a brother of the late Provost. Dr. John Henry Bernard, F.T.C.D. and Archbishop King's Lecturer in Divinity, has been appointed to this important post. Dr. Bernard is now the youngest dean in the Irish Episcopal Church. After a college career of remarkable success, in which he won all possible prizes, his chief subjects being mathematics and metaphysics, he won his fellowship in 1884, when very young. He then took orders, and, becoming Archbishop King's Lecturer, devoted himself with great zeal to the study of theology and the work of the Trinity College, Dublin, Divinity School. He now resigns his fellowship, but will continue to hold his appointment in the Divinity School. He is a man of clear logical intellect and untiring industry, and he has won great respect and popularity by his high character and winning manners. He has translated Kant's "Kritik of Judgment" with a valuable introduction and notes; and has ably edited the works of Bishop Butler. His studies have, of late years, been devoted to theology, and for the sake of active work in the Church he has now given up his academic career.

The point raised by Mr. Drummond, K.C., that a Dublin University apart from Trinity College has never existed, and consequently that a Catholic or other college could not be affiliated with Trinity under Dublin University, has aroused much controversy among the various parties in the Catholic Church. The Catholic Archbishop of Dublin replied to Mr. Drummond's letters in the *Freeman's Journal* in his usual trenchant style, adducing evidence in support of the opposite side. Dr. Delany, the Jesuit head of University College, Stephen's Green, warmly supports Mr. Drummond's view; and at a meeting of the National Literary Society, in an able speech, denounced a Catholic college co-equal with Trinity under Dublin University as a solution of the Irish University question, contending that such a college would be dominated by Trinity, and deprived of its Catholic and national spirit. The Archbishop has replied by a severe article in a Catholic ecclesiastical review, in which he declares that this opinion is being upheld by those who desire to continue the existence of the Royal University, with an endowed teaching Catholic college under it (which would naturally be left under the Jesuit management which now controls University College, attached to Royal University). They maintain that a separate Catholic University is not at present obtainable, and they wish to prevent the other alternative—a college under Dublin University—being recommended.

This difference of opinion does not render easier the work of the Royal Commission. However, many of those interested in Trinity College are equally opposed to placing a Catholic college under Dublin University, and have espoused Mr. Drummond's view as a support to their side.

In addition to the memorials from the Teachers' Guild, the Protestant and the Catholic Schoolmasters' Associations, and the Central Association of Irish Schoolmistresses, the Ulster Schoolmistresses' Association have laid some resolutions before the Intermediate Board which agree with some of those sent in by the other bodies. The Board can hardly refuse to consider the unanimous opinion of the teachers throughout the country who are trying to carry out their enormously complicated scheme. It is found in some ways unworkable; some of the rules are scarcely comprehensible, or very ambiguous; and there is no doubt of the overwork that the courses necessitate.

The Department of Agriculture and Technical Instruction have arranged for classes for teachers in experimental science and in drawing, to be held in Dublin, Belfast, and Cork this summer. The courses will begin on July 8 and end on August 1. All teachers to whom allowances are made were required to apply before March 1 for admission. Last year it was found impossible to accommodate the large number that applied to be admitted.

The Department are permitting schools to send their pupils for instruction in science to the technical schools which may exist in their neighbourhood, the secondary school receiving the grant if their pupils satisfy the inspectors, just as if they were taught within the school itself. This is some assistance to small country schools which seem likely to be crushed out of the intermediate system by the new rules, especially by the cost of the science teaching now required; but, of course, it is only possible where a technical school exists in close proximity.

The circular of queries sent out by a sub-committee of women graduates appointed by the Central Association of Irish Schoolmistresses, to be answered by all the women graduates it was possible to reach, has been extensively answered and signed. The queries, eight in number, deal with the chief points involved in the University question that specially affect women students. The answers have been classified, and the queries, with a statistical summary of the answers received, will be laid before the Royal Commission. Over three hundred answers were received; so they may be taken as fairly representative of the views and wishes of those women who know the present system from practical experience. The statement has, of course, not been published, but it is said to show much unanimity of opinion and some remarkable features.

SCHOOLS.

DURHAM HIGH SCHOOL.—Lord Durham's Prize for Modern Languages was won by C. Kendall; Crawhall Prize for Church History by B. Blenkarne; Rogers' Essay Prize by B. Smyth. Durham University Theory and Practice of Education, J. Reed; Royal Drawing Society, Honours, six; passed, fifteen. R.A.M. and R.C.M. Schools Examination: Passed, J. Love; Honours, B. Hiller. C. Clegg, a former pupil, took First Class Classical Honours in the First Year's Examination in Arts, Durham University, with an additional scholarship of £30 in October, 1901. Miss Body, late assistant mistress at Lincoln High School, has joined the staff; also Miss Lockhart, late assistant mistress at the Ladies' College, Lincoln; also Fräulein Jungermann. The annual prize-giving was held on December 17. The Bishop of Durham presided, and Mrs. Moule presented the prizes. The school had been inspected by the Rev. G. E. Mackie, the Secretary and Chief Inspector of the Church Schools Company. His report—a very satisfactory one—was read by Miss Cropper, a member of the Council of the Church Schools Company. Deeply interesting and suggestive addresses were given by the Bishop and by Miss Cropper. The programme consisted of carols, followed by kindergarten songs and games, and by an exhibition of Indian club drill and of ball and basket drill by the dancing class.

ROSSALL SCHOOL.—The examination for entrance scholarships will be held on March 18 and following days here and at Westminster and Oxford simultaneously. The Prize for Latin Hexameters was gained by R. G. L. Batley; the Navy League Senior Essay Prize by S. F. S. Johnston. A. P. W. Storrar has gained a mathematical scholarship, Sidney College, Cambridge. Sir George S. Clarke, K.C.M.G., has been appointed Governor of Victoria. S. W. Beadle has been awarded H.M.'s medal on passing out of the "Britannia," as the most worthy boy of the year in his companions' opinion. Mr. Read (who, as we have before chronicled, has gone to Winchester) is succeeded by Mr. Champ. J. M. Mollison has presented a beautiful Japanese silver cup to be a Racquets Championship Cup. The sports will be on March 29 and 31. The baths have been boarded over and gas supplied, so that we have physical drill and engineering classes there, and on wet days corps parades. Four new monitors have been appointed, P. S. Richards, F. A. Stapleton Cotton, B. F. Clarke, and A. Hall. This year more than £200 has been raised for the school mission to Newton Heath. A scheme for a triple memorial in the Chapel to those who have fallen in the present and the Afghan wars, to the Founder, Canon Beechy, and to the Rev. H. G. D. Tait, late Head Master of the Preparatory School, has now been published. It is hoped to raise £2,000 to this end.

STREATHAM HIGH SCHOOL.—The Société des Professeurs de Français en Angleterre have just issued their yearly report. The school has won the silver medal at the Grand Concours Spécial, and three prizes and two "mentions" in the Concours Mensuels.

PRIZE COMPETITIONS.

The winner of the Translation Prize for January is Sir Arthur F. Hart, Bart., Garlands, Harrow-on-the-Hill.

The Extra Prize of Two Guineas for the best annotation of "Hernani" is awarded to Jane Sailman, University College of North Wales. Honourably mentioned: Lazzara, Nita.

Et après cela, innocents et lettrés que nous sommes, n'insistons plus trop sur les beaux Mémoires de l'an V, sur celui, en particulier, qui traite si bien du moral et de l'esprit commercial de ces mêmes Etats-Unis; avis à nous! n'insistons pas trop non plus sur telle ou telle circulaire remarquable, telle ou telle dépêche faite pour être montrée, et sur l'excellent discours académique de 1838. Tout cela n'était que le dehors, la décoration, le spectacle: franchement il y avait trop de reptiles par derrière, au fond de la caverne,—de cette caverne dont le vestibule passait pour le plus distingué et le plus recherché des salons.

Sir Henry Bulwer a très-bien pris et rendu la mesure de l'esprit politique et pratique en M. de Talleyrand; mais décidément son indulgence n'a pas fait assez large la part de ces vices fondamentaux; il s'est montré trop coulant sur une chose essentielle. Le flair merveilleux des événements, l'art de l'à-propos, la justesse et, au besoin, la résolution dans le conseil, M. de Talleyrand les possédait à un degré éminent; mais cela dit et reconnu, il ne songeait, après tout, qu'à réussir personnellement, à tirer son profit des circonstances: l'amour du bien public, la grandeur de l'Etat et son bon renom dans le monde ne le préoccupaient que médiocrement durant ses veilles. Il n'avait point la haute et noble ambition de ces âmes immodérées à la Richelieu, comme les appelait Saint-Evremond. Son excellent esprit, qui avait horreur des sottises, n'était pour lui qu'un moyen. Le but atteint, il arrangeait sa conte-

FRENCH POEMS FOR CHILDREN,

SELECTED FROM MODERN AUTHORS BY

A. THIRION,

With a Preface by Miss DUIRS, Head Mistress of Sutton High School.

SIXPENCE.

LONDON: HACHETTE & Co., 18 KING WILLIAM ST., CHARING CROSS.

nance, et ne songeait qu'à attraper son monde, à *imposer* et à *en imposer*. Rien de grand, je le répète, même dans l'ordre politique, ne peut sortir d'un tel fonds. On n'est, tout au plus alors, et sauf le suprême bon ton, sauf l'esprit de société où il n'avait point son pareil, qu'un diminutif de Mazarin, moins l'étendue et la toute-puissance; on n'est guère qu'une meilleure édition, plus élégante et reliée avec goût, de l'abbé Dubois.

By "MAZEPPA."

After this exposure, however childlike and innocent men of letters may be, we shall cease to attach overmuch importance to that impressive work "Memorials of the Year V.," and, in particular, to the chapter which treats so well of the general tone and the commercial spirit of the United States—once bit twice shy—nor shall we be overmuch impressed by this or that remarkable circular, this or that despatch written with an eye to the public, or by his admirable address to the Academy in 1838. All these are but for outside display, scenery, stage effects. Not to mince matters, there were in the dark depths of the den too many slimy monsters, that den of which the entrance was considered the most exclusive and exquisite of *salons*.

Sir Henry Bulwer has taken the exact measure of M. de Talleyrand as a politician and man of action, but undoubtedly his good nature has prevented him from sufficiently emphasizing these radical defects; one essential characteristic he has slurred over. An instinctive insight into public affairs which was almost miraculous, the art of adapting himself to the exigencies of the moment, a sound judgment, and, at need, resolution in the council chamber—all these qualities M. de Talleyrand possessed in an eminent degree; but, allowing all this, we must add that his only thought was of personal success, of turning everything to his own profit; love of the common weal, the greatness of the State, and its fair fame—thoughts such as these caused him few sleepless hours. He had none of the soaring ambition of illimitable souls like Richelieu, to borrow Saint-Evremond's phrase. His bright wit, which would not tolerate stupidity, was for him but a means to an end. The end attained, he composed his features and thought only of taking in those with whom he came in contact, of posing and imposing upon them. Nothing great, I repeat, can spring from such a source, even in the world of politics. Consequently, apart from his exquisite breeding and his unparalleled social talents, he is at best a miniature Mazarin minus Mazarin's wide views and unlimited power; nothing more, in fact, than a more elegant and tastefully bound edition of Abbé Dubois.

We classify the 203 versions received as follows:—

First Class.—Nessko, Shakespere, Seq, Hägsta Domstäl, Bénévnt, E.H.O., Ulysses, Marigold, Traditore, Saint-Sulpice, Delta, C.M.I., Unsigned, Batavia, Tiveragh, Prig, Updown, Ibis, Mazeppa.

Second Class.—C.M.E.K., Tic, Gardez bien, Pea Shooter, Lough Sheelin, La Pierre Noire, Amstel, Nectarine, M.M., Mac, Oxygen, Firefly, Beckie, Mowgli, Cinna, Corbar, Chingleput, M.D.V., Z., C.Q.X., Sweet Pea, Gempy, Stedye, Endirby, Amor, H.J.W., Loseby, Merrybent, English, A Parsee, 100,000, A. Berkeley, Joe, Cairnaquheen, Sirach 2, Theo, Gadfly, Abbotsford, S.S., Exile, Quidam, J.M.A.L., Beachy Head, Tchichi, E.M.W., Rex, Aitnacaille, 'Idiárys, Sirach the Spider, Francesca, Prospero, Anchor, A.R.H., Dunnabie, Sirach, "79", C.E., Elise M., Graham, Elidir, Cymry, Hanover, H.E.R., Glenleigh, Mow, Bell.

Third Class.—Constantia, Sigrob, Whitwarra, 20A, Jamaica, C.J.T., A.W.S., Vaccination, J.B., P.J.E., Mars, Saratar-bat, Shark, Nemesis, Stefan cel Mare, Marwenne, Fortes et Fideles, A.B., Elène, Alan-a-dale, A.P.W., Fleur-de-Lys, E.A.M., Calchas, W.H.P.S., M.W.S., A.M., Hitchhurst, Mikrokosmos, D.H.W., Samarès, Knot, Backfisch, Myron, L.S.M., Apathy, Aida, Wilts, Rob Roy, Napier, Argonaut, On verra, Templestowe, Πέρκως, Tassel, Try, E.F., Kaninchen, Grahamstown, Neith, Bernardine, Ellis Talbot, Pavot, Modicum, Machiavel, Celt, G.M.E.K., Batavus, Caller Herrin, Limoisine, Scotus, Granby.

Fourth Class.—Mélanie, Mike, Ermington, Susan, Michael, Cornelian, Marie Stuart, Cunctator, Ping Pong, M.G., Ajax, Hibou d'Anjou, Yenadizzie, E.B.H., Murilo, Savoia, Snosnap, Mrs. Gamp, Great Western, A Microbe, Asor, F.B., Cherub, G.H.G., M.T., Emilia, H.M., Nemo, C.R., Anemone, B.M.

Fifth Class.—Sunflower, Quis, Astea, Sinbad, Nenufar, Tal, Mastodon, U.U., Placenta, F.Y., A.O.E., Uvula, Girlie, Undine, Silvie, Sara, Joy, Sub, Maisy, S.A.R., M.N., Paries, Ita, A.R.A., F.O., Slums.

Ste.-Beuve is never easy to render, and in this case the absence of the context added somewhat to the difficulty. Thus, without the preceding paragraph, it was impossible to tell that *cela* in the first sentence refers to the attempted blackmailing of the American Commissioners; but this is no excuse for such mistranslations as "after all," "to conclude."

(Continued on page 196.)

To Pass the Examinations.

TEXT-BOOKS FOR HIGHER SCHOOLS.

Edited by Rev. C. S. DAWE, late of St. Mark's College, Chelsea.

These Books are specially prepared for the Oxford and Cambridge Preliminary and Junior Local Examinations, and Candidates for Minor Scholarships, &c. The Series consists of the following Books:—

ARITHMETIC.

Small amount of **Theory**, large amount of **Practice**. Worked-out **Examples** for each step. Prominence given to the **Metric System**. **Laboratory Exercises** in a special Section.

GEOGRAPHY.

Physical facts made the basis of **Political**. **Commercial** aspects kept constantly in view. **British Empire** fully treated.

Many Coloured Maps and Diagrams.

ENGLISH GRAMMAR.

Examples made the basis of instruction. **Analysis** introduced **early**. Aids to **Correct Speaking** a prominent feature. Plenty of scope given for "practice."

ENGLISH HISTORY.

Contains landmarks of our national history. More than usual attention given to last three centuries. The **Growth and Greatness of the Empire** specially considered.

PUBLISHED AT ONE SHILLING EACH.

The *Schoolmaster* says:—"We can speak well of all. Each book will be found just the kind to place in the hands of pupils beginning a systematic course of study in these subjects. The Arithmetic strikes us as being especially good; in fact, the writer of this review has decided to introduce it into his own school. We feel compelled to add a word of commendation to the publishers, who have produced the books in a most pleasant and serviceable form."

FOR SPECIMENS AND FULL PARTICULARS APPLY TO

The Educational Supply Association, Ltd.,
42 Holborn Viaduct, London.

GRAMMAR ON MODERN METHODS.

PARSING AND ANALYSIS BOOKS.

By Rev. C. LITTING and GEO. HOME.

English Parsing Book.

Price 6d.

Ruled, with printed headings, large post quarto, 36 pages, thick nonpareil marble covers.

French Parsing Book.

Price 6d.

Ruled, with printed headings, large post quarto, 36 pages, thick nonpareil marble covers.

Latin Parsing Book.

Price 6d.

Ruled, with printed headings, large post quarto, 36 pages, thick nonpareil marble covers.

English Analysis Book.

Price 6d.

Ruled, with printed headings, large post quarto, 36 pages, thick nonpareil marble covers.

Oxford and Cambridge Analysis Book.

Price 6d.

Ruled for detailed analysis, large post quarto, 40 pages, coloured cover.

Practical Analysis Books.

Price 4d.

Ruled, with printed headings, large post quarto, 40 pages, coloured cover.

Vladuct Analysis Books.

Price 2d.

Ruled, with printed headings, foolscap quarto, 8" x 6¼", 24 pages, paper cover.

EDWARD STANFORD'S PUBLICATIONS.

THE STUDENT'S HANDBOOK OF STRATIGRAPHICAL GEOLOGY. By A. J. JUKES-BROWNE, B.A., F.G.S. Illustrated with Maps, Diagrams, and Figures of Fossils. Large crown 8vo, cloth, 12s. net.

OUTLINES OF GEOLOGY: an Introduction to the Science for Junior Students and General Readers. By JAMES GEIKIE, LL.D., F.R.S., Murchison Professor of Geology and Mineralogy at the University of Edinburgh. With 400 Illustrations. Third Edition, Revised. Large post 8vo, cloth, 12s.

PHYSICAL GEOLOGY AND GEOGRAPHY OF GREAT BRITAIN. By Sir ANDREW C. RAMSAY, LL.D., F.R.S., &c., late Director-General of the Geological Survey. Sixth Edition. Edited by HORACE B. WOODWARD, F.G.S., of the Geological Survey. With Numerous Illustrations and a Geological Map of Great Britain, printed in colours. Post 8vo, cloth, 10s. 6d.

THE AUTOBIOGRAPHY OF THE EARTH: A Popular Account of Geological History. By the Rev. H. N. HUTCHINSON, B.A., F.G.S. With 37 Illustrations. Crown 8vo, cloth, price 7s. 6d.

PARIS AND NEW YORK: BRENTANO'S.

Innocents et lettrés que nous sommes, "simple-minded men of letters as we are" (Lord Salisbury's "a mere child in such matters") was constantly misunderstood—"illiterate and cultured alike," "simple and educated as we are," and so on. *Les beaux Mémoires*, "fascinating Memorials"; "fine" fails to give the touch of irony. *Moral*: either keep the French word ("morale" is newspaper English) or turn "tone of society." *Avis à nous*, a very enigmatical phrase. It must refer to what precedes, not to what follows. I interpret: "the fact that Talleyrand could discourse so admirably on American morals, and behave so villainously, should put us literary critics on our guard." "Forewarned, forearmed," might serve as a translation. To translate *dépêche*, "telegram" is a strange anachronism. *Discours académique* is not "academical speech," but speech before the Academy or Institute. *Son indulgence*, &c.: here the letter killeth—"his indulgence has not represented his share of fundamental vices as sufficiently large." This is not English; in fact, is hardly intelligible. Read: "His good nature has led him to pass too lightly over these radical vices." *L'art de l'à-propos*, Bacon's "certain deliveries of a man's self that have no name," "the art of saying and doing the right thing at the right time." I do not see how it can be more briefly expressed. *Son bon renom* refers to the State, not to Talleyrand. *Ces âmes immodérées à la Richelieu*, "inordinate geniuses of the Richelieu type," or "high-flyers like Richelieu." If we do not use a somewhat far-fetched phrase, the quotation loses its point. *Son excellent esprit*, "his keen intelligence, which could not tolerate stupidity." *Attraper son monde*, "to cajole his immediate public, to pose and impose upon them," or "to overawe and overreach them." The play on words must be in some way retained. In the last sentence *on* is used to generalize the sentiment; but "one" cannot be thus used in English. It is a choice between "the man" or "he." May I add an impertinent remark? "Gauge," not "guage," is the recognised English spelling.

A Prize of Two Guineas is offered for the best translation into French prose of this extract from Kinglake's "Eothen":—

[Those to whom French is their mother-tongue are excluded from this competition, and the winner must declare that he or she has not received help from a foreigner.]

And, perhaps, as you make your difficult way through a steep and narrow alley, shut in between blank walls, and little frequented by

passers, you meet one of those coffin-shaped bundles of white linen that implies an Ottoman lady. Painfully struggling against the obstacles to progression interposed by the many folds of her clumsy drapery, by her big mud-boots, and especially by her two pairs of slippers, she works her way on full awkwardly enough; but yet there is something of womanly consciousness in the very labour and effort with which she tugs and lifts the burthen of her charms. She is closely followed by her women slaves. Of her very self you see nothing, except the dark luminous eyes that stare against your face and the tips of the painted fingers depending like rosebuds from out of the blank bastions of the fortress. She turns and turns again, and carefully glances around her on all sides to see that she is safe from the eyes of Mussulmans, and then, suddenly withdrawing the *yashmak*, she shines upon your heart and soul with all the pomp and might of her beauty. And this—it is not the light, changeful grace that leaves you to doubt whether you have fallen in love with a body or only a soul—it is the beauty that dwells secure in the perfectness of hard, downright outlines, and in the glow of generous colour. There is fire, though, too—high courage and fire enough—in the untamed mind, or spirit, or whatever it is, which drives the breath of pride through those scarcely parted lips.

You smile at pretty women—you turn pale before the beauty that is great enough to have dominion over you. She sees, and exults in your giddiness; she sees and smiles; then presently, with a sudden movement, she lays her blushing fingers upon your arm and cries out, "Yumourdjak!" (Plague! Meaning, "There is a present of the Plague for you!") This is her notion of a witticism; it is a very old piece of fun, no doubt—quite an Oriental Joe Miller.

An Extra Prize of One Guinea is offered for the best list of books to give to a boy or girl (state which) of fourteen who is in quarantine for a fortnight.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by March 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

SECURITY OF TENURE.

By T. E. PAGE.

SECURITY is one of the chief factors which regulate the investment of ordinary capital, and, similarly, when a man has to consider the investment of that capital which consists in capacity to work either with his head or his hands, he will be influenced in his choice of a calling by the amount of security, or the reverse, which it is likely to offer. In some callings the prizes are great and the risks large; in others the risk and the remuneration are more moderate; in some both are alike small. In the scholastic profession, except for a very fortunate few, the rewards are distinctly mediocre. It still remains what it was when the same fact stirred the satire of Juvenal, a profession in which work of the highest real value is often done for the poorest pay, and consequently, unless it is to sink below the level of other professions, its members ought to have some assurance that their pittance is at least safe.

The reverse is, however, undoubtedly the fact. In secondary schools every assistant master is not only appointed by the head master and dependent on him for promotion, but also liable to dismissal by him without reason assigned, and, in the great majority of cases, without any right of appeal whatever. His relation, in fact, to the head master is regarded as one of *personal* service, and he may be dismissed exactly as if he were a cook or coachman; nor, at first sight, does there seem anything unfair in this, because it represents the ordinary relation between employer and employed. But, apart from the fact that a head master is not a private employer, the conditions of scholastic life are distinctly peculiar. The ordinary possessor of any skill or capacity can usually find a free market for that capacity, so that, if it is not needed in one place, he can transfer it to another; but schoolmasters seem to belong to the vegetable kingdom, and, except in youth, not to bear transplantation. Every year, indeed, after a small number that a man stays in one place, sensibly diminishes his chance of obtaining another. By forty—an age when men in other professions are at their prime—that chance is distinctly small. By fifty—and at fifty even a schoolmaster is not necessarily decrepit—the man who is dismissed is professionally dead, and all that remains for him is to disappear. That this should be so is unreasonable, and might, perhaps, deserve the regard of those clerical head masters for whom the opportunity of promotion only ceases with the grave; but at least the fact is indubitable, and from it flows the indubitable consequence that the right of dismissal ought to be carefully guarded, not merely to save individuals from wrong, but in the general interests of education; for a profession cannot continue to attract able men if, while the pay is poor, the position is also exposed to grave and unnecessary hazard.

Nor is this hazard an imaginary one. The great majority of head masters are, indeed, disinclined to strain their strictly legal powers, and endeavour to execute what is really a public trust with judicial fairness; while in some great schools security of tenure is, perhaps, almost too great. But even in these schools cases of harsh dismissal do occur, involving great hardship and admitting no possibility of redress; so that almost thirty years ago the present Primate, doubtless with reference to what had happened at Rugby, expressed himself as “decidedly” in favour of giving a right of appeal in all cases, although he has never since taken any steps to give effect to this “pious opinion.” No one, however, need be concerned about the powerful assistant masters in large schools. They “are at ease in Zion,” and their complacent indifference to the general interests of education and of their less prosperous brethren would make any advocacy of their rights an uncongenial task. The men whose case deserves consideration are the men in hundreds of minor schools throughout the country, who, for wages often less than those of a mechanic, are yet devoting earnestness and ability to work which lies at the base of all national progress and prosperity, and who, exactly because they need help most, are least likely to obtain it; while there is considerable evidence to show that they are not only always liable to, but do frequently suffer grave hardship from, unjust dismissal.

Some portion of that evidence has, in recent years, reached the Assistant Masters' Association, and, although it necessarily consists chiefly of *ex parte* statements—for where there is no tribunal it is impossible to attain truth—yet it is certainly sufficient to create uneasiness, and three illustrative cases

deserve attention. The first occurred in a school subject to a wealthy City Company, where a master, after fifteen years' service, and at the age of forty-three, received notice three days before the end of term that he was no longer required, but that he would receive a term's salary (£50) in lieu of notice. There was no allegation of incompetence or misconduct. On the contrary, he received a high testimonial from the man who dismissed him, and also from two previous head masters, and the only reason assigned for his removal was “the need of re-organization.” It is, of course, impossible to judge; but there seem to have been other dismissals of a like nature. “Mr. B., twenty years, compelled to leave, died eighteen months later, aged forty-eight,” is the simple record of one of them, and, in this case, the previous head master, who was certainly in a position to estimate the facts, wrote in the strongest terms of the injustice and cruelty which had been committed. Nor is it possible, without some touch of emotion and even indignation, to read a document (apparently truthful) which states how, at an interview with the head master, the dismissed man's wife stated that they could wait for the promised payment of salary, because “they could pay their bills and have a pound left,” and how the head master explained that he “was compelled to do these things,” as “he thought twenty years long enough for any man to teach.”

The second case refers to a large school in which the staff had united in presenting, through the head master, a memorial to the governing body on the subject of salaries. Friction ensued, and, in the end, the head master compelled all his assistants to sign an agreement containing, among other things, a clause which made their engagements terminable at any time on one month's notice; while several masters of standing were dismissed without reason assigned, except that, according to the hackneyed phrase, it was “in the interests of the school”; and an appeal to the governing body was got rid of by a statement of the Chairman that “the sole responsibility” for the appointment and dismissal of assistant masters rested under the statutes with the head master. The exact rights of the case cannot, of course, be determined, but two clear points force themselves on the mind. One is that the head master, in compelling his assistant masters to accept the notice of a domestic servant, committed an act which was a distinct violation of the custom of the profession, and not only discreditable to himself, but injurious to a calling which he was bound in honour to assist. The second is that, in a public school enjoying public funds to be administered in the public interest, the right to sign what may be the death warrant of several subordinates ought not to be granted to any individual without it being possible in any way to drag the procedure into open day. “Slay me, but let it be in the light,” was the famous prayer which an Homeric hero addressed to Zeus; and humble assistant masters, when their doom is decided, may at least ask that these things should not be done in the dark.

The third case is well known as “the Grantham case,” and its unique importance consists in the fact that it did become the subject of a public inquiry before an Assistant Charity Commissioner. The records of the case are in evidence, and they are startling. For various reasons the head master late in December, 1900, decided to leave at once, and on December 24 he received a letter from the clerk to the governors informing him in plain terms that, whenever he terminated his engagement, the engagement of his assistant masters would terminate also. They were men of ten, fifteen, and twenty-five years' service; nor, although there were defects in the school, is there any allegation that they were to blame for them, and, on the contrary, their merits were openly asserted in court without contradiction by two governors. But, as in a private house, when the master leaves, the servants pack, so it was at Grantham. On January 17 these three men, without cause assigned, found the school doors closed in their face, and themselves without employment. They naturally addressed themselves to the governors, and the governors in February passed a resolution commiserating the injustice they had suffered, acknowledging their long service, and voting them “an *honorarium*” amounting altogether to about £150. Such are the simple facts, and it is difficult to write about them with self-restraint. It is difficult to understand how any body of governors possessing ordinary self-respect could pass a resolution expressing sympathy with these unfortunate men in the wrong they complained of, when it was absolutely in their own

power, according to the particular statutes of the school, wholly to remedy that wrong. Instead of this, they preferred to plaster it with what they called "an *honorarium*," which was, in fact, just a few pounds more than the assistant masters could have recovered in any court of law for being dismissed without notice. It is equally difficult to understand the reasons which justified the new head master in getting rid of these old servants of the school. He was asked in court to give those reasons, and he did so. The first was that he had himself been at one time junior master in the school, and he felt that awkwardness might arise from his having to rule men who had been senior to him. The second was that "he wished to have athletes." He had a third; but, when a man has already given two such reasons, it is a work of supererogation to ask what his others may be. In dealing with assistant masters, "justice, judgment, and truth" are, it seems, vain things; but it is vital that a subordinate should not be more experienced than his chief, and that he should still be able to kick a football.

That the possibility of cases such as these occurring does establish ground for inquiry, few impartial judges will deny, for it is clear that, under the present system, grievous actual wrong may be inflicted. But there is also a no less real and actual question of principle involved. Apart from the fact that a sense of strict personal dependence stunts and mars all free development of capacity, it is certain that insecurity of tenure militates against efficiency in any department of the public service. The late Prof. H. Sidgwick, in his standard work, "The Elements of Politics" (second edition, 1897), lays down the rule that in that service, "in inflicting the penalty of dismissal the superior will have to consider not whether it would be advantageous to get rid of the subordinate, but whether he has committed a sufficiently grave breach of duty" (page 360), and again (page 420) he makes this clear and important statement:

It seems especially important for the State to give to its employees as much security of tenure as can be reconciled with its need of loyal and efficient work; because they are deprived of the vague chances of rising to wealth by ability which compensate for instability of employment in many branches of private industry. If possible, therefore, the conditions of tenure, ordinarily obtainable after adequate probation, should be such as to give practically complete protection against arbitrary, oppressive, or partisan dismissals.

He does, no doubt, later on advise that, in order to secure efficiency, "where public opinion and the established traditions of the service effectually exclude partisan appointments and dismissal," the right of dismissal should rest with the heads of departments, and this might seem to suggest that a similar right should be given to head masters. But (1) in all but the largest schools the necessary checks to which he refers are certainly not effective; (2) the position of the head master of a minor school affords no such guarantee of impartiality and the absence of personal bias as is afforded by the head of a great public Department; while (3) it is exactly to some authority analogous to that of the head of a Department—say to some official or officials appointed by the Board of Education—that the majority of assistant masters would wish an appeal to lie. In all other respects Prof. Sidgwick's weighty words—the words not of an advocate, but of a cold, calm, and cautious inquirer—wholly support security of tenure, not in the interest of individuals, for that would contradict the whole tenor of his work, but in the interests of the State, in order that its work may be done in the best way by the best men. He knows nothing of the theory that subordinates are to be dismissed because their chief leaves, or because they no longer play games; nor would he countenance the views which were publicly expressed in this journal (December, 1900) by a distinguished head master, and which are of singular interest. The writer refers to a case in which he dismissed a master because "suspicions of a serious nature fell on him," although "there was no legal proof," and seems to think that, because the suspicions ultimately proved to be correct, his action was justified, although on such a principle we might half of us be in gaol. He would also dismiss a man who, though "he does his work conscientiously and well," is a "centre of sets among either masters or boys, and clearly . . . tends [*sic*] to disintegrate the social fabric of a school"; or one "who is a born tale-bearer," or whose "influence is tending to habits of great expensiveness in entertainments, or to late hours, with their usual accompaniments, among the younger members of the staff"; or one who has "aggressive opinions of a kind which I

may call agnostic," and "insinuates such opinions among the upper boys." In short, a head master is to be a despot who not only makes his own laws, but interprets and enforces them at his sole pleasure, while his functions comprise those of a grandmother, a *censor morum*, and a Grand Inquisitor.

It may be urged, however, that Prof. Sidgwick's words have no reference to schoolmasters, and yet that fact only adds to their value, because they have the advantage of being written without prejudice, while being strictly pertinent and exactly *in pari materia*. For, assuredly, if any men may claim to be engaged in the public service, it is the men who are engaged in the work of education in public schools. That work is in no sense of merely private concern, but is of national importance, and it is for the welfare of the whole community that the calling of a master in secondary schools should be made at once as secure, as honourable, and as attractive as possible; but it cannot become so as long as its members are dependent for their bread on the decision of an individual will. The power wielded by head masters is without parallel in any branch of the public service, and it is hardly to their credit that they have clung so closely to the maintenance of it in its fullness. The time has come when they must give up some part of it, and they may wisely and safely do so; for the right of appeal, which is now asked for, is, it should be remembered, a two-edged weapon which no one is likely to use rashly. The assistant master who makes an appeal may, it is true, if successful, obtain redress of wrong; but, on the other hand, if he appeals and fails—if, after his case has been heard by an impartial tribunal, sentence is given against him—then his professional ruin will be complete, and this simple fact will prove an automatic check on unreasonable appeals. Nor need it be feared that this concession of a just claim will tend to anarchy. A faint breath of independence will stir no tumult or confusion in our schools: it will prove rather a quickening spirit, fostering beneath its genial influence a larger and more vigorous, because a freer, life. The best work of the world has never yet been done by men in bondage, and it is the universal experience of all ages that liberty, although it may sometimes lapse into licence, is yet the fruitful mother of all that is best and worthiest in every department of human effort.

Finally, the argument that no right of appeal can be conceded because the reinstatement of a dismissed master would practically force a head master to resign ought, surely, to be set aside; for it wholly rests on the supposition that, in order to avoid a possible difficulty, it is better to connive at an actual injustice. If a man has done grave wrong to a subordinate, that wrong cannot be left without redress merely to save the person who inflicted it from the consequences of his own act. Supposing that act to be due to error of judgment, and supposing that an impartial tribunal, after investigation, decides that there has been such error, then no man of sense would consider such a decision as fatal to his continuance as head master, and a man of honour would rather endure any personal pain than be the cause of undeserved suffering to another. The cry "I must do as I like or resign" is, in fact, merely a sign of waywardness and weakness, which should be sternly repressed. It is not individual caprice—under whatever euphemisms that caprice may be veiled—which should govern any social organism, but law and justice; and it touches not merely the well-being of assistant masters, but also the credit and well-being of our schools and of the State, that the appeal "I am a Roman citizen and uncondemned" should never be made by any one only to be put aside with contumely and scorn.

ENGLISH LITERATURE AND ENGLISH SCHOOLS.

By P. A. BARNETT, M.A.

THERE is good reason for British teachers to feel that the place of English literature studies in schools is a matter of pressing concern to them. Apart from questions of administration and organization, with which my paper does not and cannot deal, on this pivot rest two considerations of the highest moment to each man and woman of us. The first is the importance of literature as a part of our general education; and the second is the status of the teacher as determined by the place of this subject in the curriculum. If working teachers

will themselves make up their minds, as they ought to do, on these particulars, they can defeat any efforts, however persistent and robustious, to wrest from education its noblest and most profitable instrument. If they let the case go by default, if they allow themselves to be shaken by windy and unscientific denials of the value in human education of the finest and most significant achievements of humanity, to be browbeaten by unwarrantable accusations of incompetence to use them, they may register ourselves as instructors; but as teachers?—No. This question, I say, concerns the highest interests of teaching as a profession.

It is a notable fact that, whatever may be our personal opinions, literature, as such, has comparatively little recognition in English schemes of study. From the syllabuses of a large class of important schools it is expressly excluded; and there must be some reason for this. We are, in some respects, more fortunate than our fathers. Men over middle age can recall the time when English classics were rarely read in English schools at all. Letters, indeed, were not excluded, but the training was almost entirely incidental, being given, without any literary intention, so to speak, through the Bible and the Greek and Latin classics. There arose later, together with a very just feeling that our own incomparable stores were being neglected, also a desire to provide something like the discipline of the old classical gymnastic for pupils flocking to the secondary schools with no intention of taking the full classical course. Thus the recognition of English literature as a school subject was due only partly to a sense of its signal excellence; it came in part also from a belief in the current classical gymnastic for which it was to be a substitute.

This last fact is at the bottom of many difficulties. It gives substance to the dissatisfaction felt by both men of letters and by teachers themselves at the poor results of a great deal of admirable editing and laborious instruction; and it provides ignorant denouncers of books as instruments of education with a weapon that need not be placed in their hands.

The English custom has been to prepare the masterpieces of English literature for use in the schools on the same lines and with the same apparatus as are traditional in presenting the unfamiliar texts of Latin and Greek. A boy of eighteen or nineteen may thus have covered very little ground, and covered it with much less profit than he should. He will probably have read a little Milton, a little Gray, a little Pope, and a couple of plays of Shakespeare; and he will have read them, we know well, in such a way as to be most deeply impressed by the philology, the "meanings and allusions," and so forth. The substance of the fragments so treated will be to him a matter of minor and only incidental importance; for the teacher who teaches as if his main business were to make his pupils *like* the stuff, whether they can deal with it critically and analytically or not, meets with exceedingly little encouragement. Of course it is impossible to handle great works of art, even meticulously, without deriving advantage from the experience; and, of course, there are human boys and girls (as there are teachers) who can forget the impertinences of commentation, and can get somewhere near their author's point of view. But, although it would be generally agreed that literature as material is more valuable for itself than for anything that can be said about the parts of its vehicle, important as this is in its place, yet, on the whole, our tradition and procedure, crystallized by examinations, are demonstrably unfavourable to its mastery and assimilation. Curious commentation, a very elaborate *apparatus criticus* on the classical model, is only one form of our unscrupulous interference with the author's own presentation, which is, after all, the main matter. Another, equally well meaning and equally stupefying, is the more peculiarly modern endeavour to extend the area of interest around works of literary art by making them the nucleus for all sorts of information not arising from the text, but actually antecedent to it.

When mature or experienced people have become familiar with a great work of literary art, have got to know and love it, they *sometimes* like to inform themselves of its history; no shame to them if they do not. And, when they know a good deal of an author's work, they *sometimes* like to inform themselves about his personal life; no shame to them if they do not. But it is not usually essential to a complete enjoyment, understanding, and profitable assimilation of most or the best things in literary art that the reader should know the place of the book in the history of letters, or the circumstances attending its pro-

duction, or the life of the author. Men and women who love the noble poetry of Shakespeare's sonnets may quite reasonably take only a tepid interest in the "only begotten" of them, and leave the problem, without a flutter of concern, to Prof. Beeching and Mr. Sidney Lee; and boys and girls should really care for Shakespeare's plays before they are asked to be moved by questions of date or order. Indeed, a spontaneous and effectual interest in these classes of facts arises comparatively late in our contact with books; and they assuredly come after, and not before, a book is read. We go out of our way, from sheer conscientiousness, to embarrass our school use of letters with a mass of inappropriate and misleading detail, so that the text meanders, for our pupils, between aridities that may really be endless. The common origin of much useless labour is the positively stupid ignoring of the fact that a child's sense of mere time is exceedingly small, and that archaeological details to him are naught. Twenty years or a thousand are much the same to a child of nine; he has such a small stock of consecutive incident to travel over and such poor capacity for punctuation. A mother once, inculcating the conventional proprieties in respect of knife and fork, told her little girl that she could not be permitted the same licence as was enjoyed by the ancient Britons, who planted a dish in the centre of the family circle and dipped fingers therein. "Was that," asked her daughter, "when *you* were a little girl, Mother?" On the same error is based the use of histories and primers of literature with people too young to realize what they mean. What is the name of Layamon's "Brut" or the "Ancren Riwe" to a child of twelve, or even to a youth of fifteen or sixteen? It is, of course, the old old mistake of teaching—the presentation of the details of interest arising last in ourselves as the intellectual bottle-food of our children.

These well meant and earnestly designed efforts to use *belles lettres* as a mere peg for miscellaneous instruction do certainly effect a good deal. On the one hand, a dogged pursuit of an author's meaning by grammatical and syntactical analysis, with the incidental philology, archæology, and history, is a fine exercise, both in the logic of discovery and in the complete mastery of detail. Most people who have read a great book, or even a small part of a great book, in this way, under a keen teacher, must certainly have learnt some of the best lessons of intellectual honesty, as well as of scientific procedure; for the scientific traditions of English scholarship are just grounds for national pride. And, on the other hand, the association of an author's work with what may be known of his life rounds off our knowledge, and may, in some cases, help us to a better understanding of the spirit of the text.

But all this seems to miss laboriously the main advantage of literature as school training. Some work of the kind is essential, and I must not be supposed to depreciate it; but it is essential as a form of "science," properly so-called. It is still a mastery and ordering of the knowledge of detail. It is discovery, the object of investigation being as much a part of "Nature" as carbon dioxide or steam, only subtler and more charged with meaning, with associations, and, therefore, of more complicated and general interest. We bring the book to the laboratory—the least expensive, and therefore the best of all laboratories—the school-room, and we apply our eyes and implements—our dictionaries, histories, grammars, and all others available—under the strictest canons of logic, deductive and inductive. But the process and the result are still essentially the same as in the ordinary heuristic of the positive sciences; it may be carried to a most successful end, and yet never touch the pupil's feelings. Before we begin to comment and to interpret, there must be something *in* our pupil to work upon; and this must be more than merely intellectual matter in the case of *belles lettres*.

For this, surely, is the point—it is the special business of literature in education to cultivate the feelings, and our school procedure treats it too exclusively as a gymnastic of what the psychologists call the intellect. That greater part of the school procedure which we call instruction aims properly, and even necessarily, at perfecting the powers of reason and at storing the mind with a practicable system of facts. But the larger part of life—men's aims, large and small, what men do from motives—these are determined mainly by feeling or ideas touched by emotion. "After all," says Newman, "man is not a reasoning animal; he is a seeing, feeling, contemplating, actual animal." Let us say that man is, at any rate, compact of reason and feeling both.

Now should not the school play a great part in quickening and manipulating this latter most powerful of all springs of human action? *Belles lettres*—those things in literature which are most disinterested, least applicable to the production of a material effect—are at once the greatest storehouses and the greatest nurseries of emotional ideas, and are, therefore, of supreme importance to the common man. It is the philosopher, not the common man, who is the slave of facts, of reasoned systems of what he regards as exact thought; for, by a fortunate dispensation of Providence, the common man, and the philosopher in his character of common man, is moved mostly by ideas which either have no basis in ratiocination, or else have a basis so indeterminate that the philosophers are in perpetual dispute about it, and help us little to realization. Such emotional ideas as religion, duty, honour, patriotism, faith, hope, love, enthusiasms of all sorts (even educational enthusiasms) are not to be established or analyzed by any heuristic, or even heuristic. They persist, they are eternally operative, precisely because they are primary and cannot be measured or made to depend on any positive system. And so with the myriads of ideas touched with emotion which make up the substance of *belles lettres*. The laboratory can no more establish or effectually analyze them than you can draw Leviathan from the sea with a hook. The sciences commonly so called are indispensable for establishing the facts by which these emotional ideas work themselves out into effectual action, harmonizing and concentrating them. But without ideas men are little better than automata. If, having ideas, no emotion quickens them, they are still automata, though intellectual automata. With ideas touched by emotion, they are spiritual creatures; and, if such ideas are good, they are good men, and will feel rightly and act rightly. Of course, the cultivation of the literary feeling is, as a matter of fact, undertaken by other organized agencies besides the school; the school is important chiefly because it can systematize its opportunities, and, in virtue of the intellectual standing of teachers, knows and can use the very best material. Any agency that plays upon feeling by the word so written or spoken or sung that it can be remembered or recorded is literary; and, if I were asked to name some of the most powerful literary agencies now educating the taste of the largest section of English people, I should be inclined to give precedence to the Salvation Army and the music-halls. I hope I shall not be accused of maligning the classes that do not follow the Salvation Army or frequent music-halls; they are not literary, because, on the whole, they do not remember or repeat, they do not even recognize, and, therefore, are not moved by, anything they read or hear of *belles lettres*. And I have no right to an opinion as to the character of the literature which these agencies disseminate; only I certainly think that the school is better able than they to do the early work well. Moreover, it can. Some of the time now wasted over machinery and *apparatus criticus* it could use to cover a much larger ground in a less scientific fashion; to get more stuff remembered and assimilated; to establish magnificent and beautiful images in the minds of young people—for a start made after youth is past is rarely successful—to fire them with admiration of such subtle ideas as their intellectual condition enables them to apprehend; to make them less easily the slaves of mean or maniacal ideas.

Those who deal intimately with children of all ages know well that this is possible; they know that young people detest excessive exegesis, and like good stories and good poetry, fine words and fine ideas, if they can only get enough of them. In this their instinct surely responds accurately to the appeal of the author, who wrote to be apprehended, not to be analyzed. To be sure offences will come, there must be occasional explanation; but it should be rapid. It should not dwell on difficulties, but achieve rather the main things. Do we not, all of us, this year, understand better the fine passages familiar to us last year, or the year before, or perhaps for the greater part of our lives? My suggestion then is this: that we should work almost solely with plain texts, cover a great deal of ground, and dwell rather on the æsthetic and rhetorical qualities of books than on details of less generality. Above all, we should bid our pupils admire this and that, just as we cultivate their feelings in favour of moral action by bidding them admire this good man, that good action. The feeling for literature, like the feeling for goodness, cannot be *proved* into existence. It must be *quickened* and cultivated like a habit. "Fortes creantur fortibus et bonis." A

little should, by all means, be done, for reasons already set forth, by the strictest method of exegesis, as a scientific gymnastic; but the bulk should be treated in what, for a better term, I must call the manner of impressionism.

And the time for this? one may be asked. Well, a substantial gain will come by the abandonment of most of the analytical and exegetic work; by putting the text, "*simplex munditiis*," into the hands of the class, giving them a substantial amount to be read out of school, with a little preliminary help where necessary. We may fairly hope, too, that much of the time now wasted in mumbling meagre bones of Latin and Greek by pupils who get so little profit therefrom will be diverted to the flesh and blood of English. It will, at the same time, be necessary for those who believe in the essential simplicity of education to resist stubbornly the encroachment of premature laboratory work in physical science on the small school time available for less abstract studies.

After the pupil, the teacher. We ought never to forget that for the English teacher English literature is the least specialized, is the most common property, is the most general instrument of humanization, and is, therefore, the stronghold of the teacher as such; for the first and chief business of the English teacher is to make his pupil a good man and a good Englishman. His obstinate grip on this subject will, I believe, ultimately go far to determine whether he shall be a teacher or an instructor, whether he shall concern himself with the pupil on the side of his largest sympathies and capacities for action, or whether he is to be, like the dancing master and shorthand instructor, charged, in his character of specialist, with a less significant part of his pupil's moral and intellectual outfit. It is a pity that there must needs be any special "subjects" or special teachers at all; in an ordinary school it is certain that a condition of organization is soon reached in which any further step in specializing a staff, whatever advantage it may give in instructional efficiency, hurts the corporate morale. But so long as form-teachers keep the English in their own hands, this disintegrating influence will not produce its worst effects; the tradition of liberal teaching will hold the field, and teachers will be every day doing something for the stability and dignity of their profession.

THE ESSENTIALS IN THE TEACHING OF GEOMETRY.

By Dr. R. WORMELL.

1. THE first essential to a teacher of geometry is that he shall recognize the immensity of the field of knowledge that is described by this word. No one can teach it well who thinks it as limited as the multiplication table, or as stereotyped as a single treatise on the subject, whether it be ancient or modern. This field is as boundless as space, as infinite as time. Indeed, it is more infinite than the space we live in, for it carries us into other infinities—into one, for instance, in which a spherical surface could be turned inside out without breaking the shell; into another in which the number of conic sections would be five instead of three.

Nothing could be worse for the science than that its priests should believe that all there is to know of it has been known already; that every discovery possible in elementary geometry has been made already.

It is essential that the teacher shall be able at times to lift his pupils for a moment high up on the Mountain of Truth, that they may catch a glimpse of the extent, fruitfulness, and beauty of the Land of Promise which will surely come into the possession of those who run without weariness and walk without fainting.

2. It is also essential to know that geometry is not altogether deductive. Like other sciences, it is inductive first: we have to climb the hill before we can descend. Those who have learnt it simply by reproducing demonstrations of a purely deductive type are usually unable to apply geometry. When they happen to be called on to apply it they have to start again—to build foundations for an edifice already made, or ignoring what has been done to begin to build *de novo*. Pestalozzi was right in insisting on an early presentation of the *facts* of geometry. The founders of the kindergarten were right in introducing the study of *form* in the concrete at an early stage. From the kindergarten upwards the study of solid geometry should never be

altogether thrown aside. Rousseau was right when he said: "Our geometry is not adapted to children; we seem not to comprehend that their method is not ours, and what should be for us the art of reasoning should be for them merely the art of seeing." We have, however, made great advances in methods of education since Rousseau's day.

3. After the examination of solids and forms, such as may be used in the paving of a surface with squares, triangles, hexagons, and mixed figures, come drawing and measuring. The habit should be acquired of drawing figures correctly and neatly. Some one, who could not have been a teacher, but may have been an examiner, is said to have defined geometry as the art of correct reasoning on bad figures. He was altogether wrong.* Instrumental drawing naturally associates itself with measurement and computation, carries with it knowledge of the commoner terms, and prepares the way for some definitions. Prof. O. Henrici, guided by an untranslatable German word (*Anschauung*), calls this "training in looking at a thing," or "instruction by inspection." This instruction has for some time to serve the place taken by expressed logic later on. It will be best to take the trouble of making your own list of exercises and experiments for this stage. The following are but hints:—Draw two straight lines of unequal length and write the words *smaller* on one and *larger* on the other. Draw two figures bounded by three lines each (triangles), and distinguish the larger. Draw two figures bounded by four lines each (quadrilaterals), &c. Describe two unequal circles, and distinguish the larger. A distance of 200 feet is represented on a plan by 5 inches. Make a scale of feet for the drawing. The distance between two places is 12 miles, and is represented on a map by a distance of 2 inches. Draw the scale. Construct two circles of 2-inch and 3-inch radius respectively, each being entirely outside the other. Construct two such circles intersecting. Construct two such circles touching. Construct an equilateral triangle with a side of 1 inch; another with a height of 2 inches.

4. Between this stage and that of demonstrative geometry naturally lies what Americans call "inventional geometry." The pupil's knowledge of the properties of figures and of the general notions—even the abstract notions—of geometry is here increased by experiment and practice. He is started on a voyage of discovery, simply being guided onwards without being deprived of the stimulus to individual effort. I will give illustrations as I proceed.

5. Now, having climbed the hill, we may begin to use our position of vantage for what has too frequently been regarded as the beginning. We may frame a few definitions of abstractions. We may take a block—a cube of soap, for instance—and, by cutting it, add to it two plane surfaces without increasing its bulk, and may add to its figure a number of straight lines without increasing the surfaces. Hence we can comprehend the usual definitions of straight line and surface, which are meaningless to the ordinary mind without this preparation. But I suggest that we should give definitions and axioms only as they are required, and not in the lump.

We should follow on with some simple constructions with demonstrations in Euclidean form. The construction of an equilateral triangle on a given line is a good beginning for this stage, but you will do well here and throughout to keep on using a method or a process, when once introduced, until it is assimilated by the mind of the pupil. For instance, take this problem, *Eucl. I. 1*. Having constructed the triangle *ABC*, construct equilateral triangles on each of the sides, and again on those sides, and so on. We thus learn the following:—(1) to construct a regular hexagon; (2) the hexagon is composed of six equilateral triangles; (3) the whole sheet of paper, that is to say, any plane area, may be completely covered with hexagons and therefore with equilateral triangles; (4) commencing with the side *AB*, if we construct *ABC*, then on *AC*, *ACD*, then on *CD*, *CDE*, and join *EA*, we see from the symmetry of the figure that we have erected a perpendicular to *AB* at its extremity; (5) to construct a square; (6) to cover the surface with squares, &c.

6. The order in which the propositions are to be presented is determined mainly by three obvious rules:—(1) progression as

regards difficulty; (2) exercise in the use of any method of proof when first introduced; (3) the association of propositions logically related, such as the direct theorem, its converse, and their contrapositives. We may consider a few cases for illustration. The fundamental theorem *Eucl. I. 4* is proved by superposition. After it should be taken *Eucl. I. 26* as the converse of *Eucl. I. 4*, proved also by superposition. The construction of triangles, having given two sides and included angle, or two angles and included side, should follow. It must not be supposed that this matter of superposition is so simple that it need not be dwelt on. The late Prof. Clifford dispelled that notion, and showed that the "postulate of superposition," that is to say, the postulate that a body can be moved about in space without altering its size or shape, involved a principle which, in short form, may be expressed thus: "All parts of space are exactly alike." From this he deduced definitions of a plane and a straight line. You will not, of course, trouble your young beginners with these subtleties, but they will influence the proportionate value you attach to each method and, indeed, to each proposition.

So to *Eucl. I. 4* we add *Eucl. I. 26*. We shall still label this *Eucl. I. 26* for reference, though the label no longer indicates initial order. For ticketing our separate bits of knowledge there is advantage in a universal nomenclature. Euclid's order, though not that which we ought to adopt in teaching, furnishes the tickets. This generation boasts that it is "heir to all the ages." One of the treasures which it has inherited is Euclid's "Elements."

Treasure may be used, it may be abused, it may be ignored. In the early sixties I joined my first teachers' association. I remember well being shocked by a declaration by a member which received almost universal assent. He said: "There is but one way of teaching Euclid. Give them the book and let them learn it. Then let them come up and say it. If they trip over a word, send them back. That is the only right way of teaching geometry." We have grown out of this darkness, and recognize the process described as a great abuse of Euclid.

What is chiefly essential to Euclid's method is the form of the propositions, which consist of enunciation, statement, construction, proof, conclusion. This form is entirely due to Euclid. The defects of Euclid are only palpable when the attempt is made to use the "Elements" for modern purposes without the recognition of recent knowledge, modern needs, or modern methods. For the logic of geometry therefore we are indebted to Euclid. This is everywhere acknowledged to be a potent instrument of mental culture. Before Euclid's day his propositions were almost all known. He added the demonstrations which have been the best exercises in logic in all schools since his day. This logic has added to the appreciation of the truths themselves, and given to them the dominating value as "a discipline in the habit of neatness, order, diligence, and honesty."

7. Euclid himself set us an example which is often overlooked. Even when he knew the proofs discovered by his forerunners he was not thereby deterred from trying to prove the propositions in his own way. Neither should his proofs deprive our pupils of the pleasure and discipline of discovery. Euclid had the proof of *Eucl. I. 47* given by Pythagoras; yet he found one for himself which some think more elegant than that which he inherited. To this we will return.

The next group of theorems to those illustrating simple superposition consists of *Eucl. I. 5*, *Eucl. I. 6*, *Eucl. I. 18*, *Eucl. I. 19*. The reason for the logical, as distinct from the geometrical, proof of the last should be explained and an independent proof sought. It should be noted that to apply the method of *Eucl. I. 4* to *Eucl. I. 5* one triangle has to be turned over. This introduces folding as a kind of superposition, and consequently the principle of symmetry.

The folding of the figure is often useful for the sake of elucidation. Take for instance *Eucl. I. 32*. Fold the figure so that the crease passes through the apex, and one part of the base lies on the other. Two right angles are the result. Next fold down each angle so that its vertex falls on the foot of the perpendicular crease. The three angles are now superposed on two right angles.

The same result is arrived at if a line be drawn through the vertex parallel to the base; and, again, the same if the base be produced and a line be drawn through its extremity parallel to the opposite side. Which plan is best? If we wish at the same time to prove the two propositions usually coupled in the enunciation of *Eucl. I. 32*, then, undoubtedly, the

* See two fallacies in Ball's "Mathematical Recreations," pages 32 and 33.

third is best. If only that the three angles of a triangle are equal to two right angles, then the second is best.

Euc. I. 47, Euc. I. 48, Euc. II. 12, Euc. II. 13 should form a group. The method of Euc. I. 47 is too good to be laid aside at once. It should be applied to the last two of the series.

8. Every opportunity should be taken to prepare the way for future work. For instance, Euc. III. 35 may foreshadow Euc. VI. 6, and should afford the first lesson in poles and polars. The first few propositions of Euc. VI. should be accompanied by the simpler propositions in harmonic and anharmonic ratios.

9. In demonstrative geometry it is usual to limit the instruments to the unmarked straight-edge and the compasses. In every draftsman's office the limitation would be ridiculed. It is necessary, therefore, to make it clear that the restrictions are as arbitrary as the rules of chess or football. We may remove one or more for practical purposes, and shall not thereby invalidate the result. The rules are only necessary for the game.

This may be made clear by adding some liberty and then by making the restrictions even narrower. For instance, it is usually said that it is impossible to trisect an angle. Suppose, however, that we have a marked straight-edge and compasses, then the following construction solves the problem:—Let ACB be the given angle. With C as centre and any radius marked on the straight-edge as DE , describe a circle, cutting CB in B . Produce AC and place the straight-edge so that it passes through B and has the marked radius DE , so that D is on the circumference and E on AC produced. Then BEC is one-third of BCA .

Again much projective geometry limits the instruments to the straight-edge only. We may even try the effect of banishing the ruler and using only the compasses.

Many years ago an Italian professor gave me orally a pretty little problem: "To find the centre of a given circle by arcs of circles only, that is to say, without drawing a straight line." I leave this for your recreation. If any one, after trying, asks me for the solution, I will send it.

10. Finally, let me remark that an active imagination assists the student and researcher in geometry. Its infinite range may lead him to the transcendental, the fanciful, the visionary; yet even the dreams of geometers may come to be of use in practical science. Newton was in a fit mood to take up the subject when he was longing to unveil the mysteries of fate, and searched a bookstall for a work on astrology. He found an edition of Euclid, and the bent of his life's work was thereby fixed. But I am plunging into another infinity and must forbear.

PARALLEL LIVES: CHARLOTTE YONGE AND JANE AUSTEN.

AMONG the various disquisitions on Miss Yonge and her books that have lately appeared there are very few that show any really critical appreciation. Some, indeed, can hardly be called "appreciations," at all, being simply second- or third-hand opinions on books of which the writer knows no more than the names, and not even these, accurately, as he interpolates occasionally among them those of another author's works.

With such commentators, however, we need not trouble ourselves: but some of those who are qualified to criticize intelligently and who are most genuine admirers of Miss Yonge's writings seem to have hardly dwelt emphatically enough on what was one of her strongest points—her perception of humour. This it is which, perhaps even more than certain other of her characteristics, has kept the life in her books for nearly sixty years—which has made people of widely different ages, classes, and opinions read them again and again, and be capable of laughing over and discussing them eagerly with those of two generations their juniors.

It is strange that so little stress has been laid by her critics on that sense of fun that saves her from the sickly sentiment of some of her contemporaries, or the over-seriousness of others, and makes her children, in whatever country, in whatever rank of life or whatever century she may have chosen to create them, children still, all the world over. The little Duke (William the Conqueror's great-grandfather), the boys of "Ben Sylvester's Word" and "Friarswood Post Office," were as real

to us in our childhood as Countess Kate or the little Merrifields of "The Stokesley Secret."

Who has not laughed at Susan Merrifield's various attempts at spelling "Grosvenor"; Countess Kate's idea of "making an impression" in her own favour by repeating "Ruin seize thee, ruthless King"; Fanny's letter to her brother in prison, consisting of what she knew how to spell, rather than what she wanted to say; Mrs. King's infallible method of calculation; and the young Baron's complaint of "How could one ever become a knight when the only horse one had was old enough to be one's grandmother?" These and many other samples of genuine fun have become family jokes among those whose youth, and middle age too, have known and loved Miss Yonge. Even in her earliest stories, when her point of view was not so wide as it became in latter years, this touch of humour was always there as the grain of salt that seasoned them, and, thanks to it, she would never go the lengths of which some of her own school of thought were capable; for at certain junctures she could not help laughing at her characters, and letting them laugh at each other. This quality of hers has also much to do with that all-important ingredient in her writings—her undoubted power of making her characters live. They are all (but more especially her women and children) people who live and move and have their being in that particular period, or part of the world, in which she places them.

Her women—and, we may add, her boys—are undoubtedly better drawn than her men; but is not this the case with regard to almost all lady novelists—one of the few exceptions being George Eliot? Some of her men, nevertheless, are very true to life: for instance, Tom May, who wished to be a doctor, "only he hated sick people"; the likeable, though unsteady, Edgar, in "The Pillars of the House"—they, together with Lucilla Sandbrook and Bessie Keith, may be instanced as specimens of her power of portraying natures altogether different from her own.

Another outcome of the strain of genuine humour which she possessed is that it made her always able to perceive and appreciate it in other writers, even when not wholly in sympathy with them in many ways—Jane Austen, for example, as one may see from sundry passages from her works, quoted by some of Miss Yonge's favourite characters.

There are, of course, some points in common between Jane Austen and herself besides the quality in question. Both were born and bred in a country parish, in the same county too—that of Hampshire—and grew up among the same sort of surroundings and neighbours, rich and poor; both were familiar with the ways of the village folk at their gates, and of those of the inhabitants of neighbouring garrison or cathedral town; both had the interest of watching their own young relations and the children of their own friends, growing up around them (not to mention those friends of the animal world which certainly play a not unimportant part in country society); to both, too, were open opportunities of observing sundry diverse specimens of the country clergy. Yet, with what different eyes they saw these surroundings! How unlike in their likeness! Jane Austen, in her limited field, was a great, a perfect artist. Miss Yonge was not that; but her field was wider, and so, in some respects, were her sympathies. To Jane Austen the ridiculous element was always in the foreground, whereas to Miss Yonge the pathetic and heroic were quite as much in view, keen as was her perception of the former.

"Let other pens," says Miss Austen, "dwell on guilt and misery. I quit such odious themes as soon as I can, impatient to restore everybody not greatly in fault themselves to tolerable comfort, and to have done with all the rest." This was not Miss Yonge's way of going to work. She was moralist first and humourist afterwards; her characters all have souls to be saved, and she would have felt as if deserting her colours if she had left any of her heroes or heroines, in this cheerful half-laughing fashion, "to guilt and misery," without some touch that could hint their way to repentance and redemption.

Miss Austen's humour has been an unfailing delight to about four generations: but it is a humour that has a certain pungency, that can verge upon satire, and occasionally, in her earlier novels, upon caricature (as, for instance, in Mr. Collins, in Lady Catherine de Burgh, and Mary Bennet), whereas Miss Yonge's genial fun never bordered upon that. Jane Austen only deals with men and women of a certain rank in life, the humours of childhood and those of the labouring classes being rarely touched upon; and, when she does concern herself with the

ways of children it is with no gentle hand. As to animals, they play no part among her actors, or very little. To be sure, we know that Charles Musgrove pursued a weasel, and that Willoughby possessed a black pointer, but such instances are few and far between. Miss Yonge, on the contrary, seems as much at home with the labouring classes as with her own, and draws them with a mingled pathos and humour perfectly true to life. As for animals, she introduces them into every one of her stories, and uses them frequently to emphasize some little touch of fun or melancholy, as the case may be.

With regard to the respective merits of the portraits of country clergymen by these two authoresses, we must remember that they were drawn from a different generation, and that the type which predominated in Miss Yonge's early days was as unlike that of Miss Austen's time as it was to that of our own, and, no doubt, lent itself less to caricature; but Miss Yonge, notwithstanding her veneration for such men as Keble and some of his school, was as ready as Jane Austen would have been in her place to laugh at the extravagances of enthusiastic boys—embryo curates—who look upon themselves as saviours of society, and imagine that they are predestined to set to rights better men than themselves.

Perhaps, if it is a question of comparing two kinds of humour, Mrs. Ewing has more in common with Miss Yonge than Jane Austen. She, too, spent a good deal of her life in much the same atmosphere as they did, and she, too, had a quick eye for the fun of a situation and her own special way of expressing it. Her children are as well drawn as Miss Yonge's. Her pathos and her humour are blended with a defter hand. More of an artist than Miss Yonge, more of a moralist than Jane Austen, in her short career there was not time for that vast difference between her best and her worst work which has done something towards lessening Miss Yonge's literary reputation.

In the course of a production extending over sixty years, Miss Yonge unquestionably over-wrote herself; but, in considering her claims to the saving grace of a sense of humour, we are thinking gratefully of her *best*, and maintain that in a roll which contains the names of Jane Austen, of Mrs. Gaskell, and of Mrs. Ewing there is also room for hers—not, of course, at the head of the list, as she herself would have been the first to acknowledge. Indeed, in her humility, one cannot help thinking she would have been as much distressed by a comparison of her writings with those of Jane Austen as she would be by the comments as to their respective merits which are sure to be made if certain of her admirers carry out their plan of erecting a reredos to her memory in the Lady Chapel of the very same cathedral where for so many years Jane Austen has lain in a side aisle, with only a modest brass tablet on the wall to record the fact.*

As to the ethical element in Miss Yonge's writings, her critics have, on the whole, done her justice. There is a pure, bracing atmosphere about them which must surely be felt and acknowledged by all her readers, however far from her own their theological tenets may be. The question as to whether or not her books will continue to be read is, of course, a pure speculation; but many will agree with a recent writer in the *Fortnightly*, who stoutly maintains that not only do the children of to-day pore over Miss Yonge's story-books with as much delight as did those of half a century ago, but that her novels will keep the field when many of those which have crowded them into the background of late have been forgotten, or when (as seems probable) a reaction begins in favour of the novelists whose "realism" does not necessarily mean the photography of ugliness and evil. If these predictions are verified, it will be owing, for the most part, to that grain of salt which, as we have said before, has seasoned her stories for nearly half a century.

M. and C. LEE.

CORRESPONDENCE.

MODERN LANGUAGES.

To the Editor of *The Journal of Education*.

SIR,—It is evident that there now exists in this country a strong feeling of dissatisfaction with our present-day teaching of

modern languages. Statesmen and leaders of industry and commerce, University professors and schoolmasters, journalists and parents, all raise their voices against the deplorable results which our secondary schools produce in this department. As no one has attempted to rebut the charge, it may be taken as substantially true. It will, therefore, be necessary to inquire into the cause of our shortcomings, and then to make practical proposals for a remedy.

It has been said that the cause lies in the natural inaptitude of Englishmen to acquire foreign tongues; others believe it lies in the defective methods employed in teaching them; others, again, in the incompetence of modern language teachers themselves; finally, it has been argued that it is not desirable to treat modern languages seriously, because they are but poor instruments for mental training.

The first of these arguments—or, rather, assertions—may confidently be dismissed as an exploded myth. It is simply not true that English boys have greater difficulty in learning foreign tongues than their Continental brethren. I make this statement so emphatically because I have ample and undoubted proof of its correctness. But what is true is that German boys, in particular, take infinitely more pains over their modern language work than do English lads. And the reason for this is largely to be found in the subordinate position which French and German occupy in the curriculum of our secondary schools.

The last of the arguments enumerated may at present be dismissed as, to say the least, "not proven." The evidence of Continental experience certainly does not support this charge; and we know that many men of authority in this country have abandoned the belief that classical languages hold the monopoly of higher culture. The other arguments may, and probably do, contain a certain amount of truth; but they do not go to the root of the matter.

The *fons et origo* of the whole mischief lie in the attitude of obstinate resistance which the Universities have shown to the claims of modern languages, and in the methods adopted by head masters when compelled by pressure from outside to establish what are called "modern sides." Be it remembered that most head masters are classical men who have a firm and well founded belief in their own subjects, but fail to have an adequate conception of what the mental literary and philological training in modern languages can be, and is, in a German *Realgymnasium* and University. It would be wrong, perhaps, to blame them for their ignorance in this respect; at the same time, they must be held responsible for the consequences arising from it. This explains the attitude of many head masters towards the modern sides which they had to establish. They have done all they could to keep the more promising boys on the classical side, and have "shunted" to the modern side their less promising pupils. Consequently, the bulk of the boys on the modern side have always been those who could not get on with their classics. Moreover, French and German have not been given the same status on the modern side that Latin and Greek have always held on the classical side. Now, until this attitude on the part of head masters is changed, there will be no real reform. Improvement of the methods employed in teaching modern languages will not bring about the result desired. What is wanted is that head masters should at least condescend to test the value of modern languages (1) by giving French and German on the modern side the same number of hours, both in and out of school, as they assign to Latin and Greek on the classical side; (2) by appointing to the modern side men of equally high culture and equally thorough qualifications as they demand in their classical masters; (3) by refraining from in any way influencing boys and parents in favour of the classical side.

If that is done, the modern side will be held in higher estimation than hitherto, and modern languages will, for the first time in the history of English education, have an opportunity of showing their intrinsic value. And it may be confidently expected that the Universities, which at present largely share, and indeed have created, the prejudice by which most head masters have hitherto been influenced, will give modern languages "fair play," and admit them to the same status that the classical languages have monopolized too long. Indeed, those head masters who may be willing to make proper arrangements for the teaching of modern languages will be seriously hampered in their actions until the Universities admit a modern language as an alternative for Greek in their entrance examinations.

* Quite recently Jane Austen's admirers have placed a memorial window in Winchester Cathedral, near her grave.

These primary conditions being once fulfilled, the practical difficulty presents itself of getting thoroughly qualified men to teach modern languages in schools and Universities. This difficulty is a very real one. To overcome it in the shortest possible time, it will be necessary for the State to take the matter in hand. I venture to suggest the following plan as a solution of the difficulty. Considering that it is now generally acknowledged that this modern language question is of even national importance, it would, perhaps, not be unreasonable for the Board of Education to demand some financial assistance from the Exchequer. The paltry sum of £5,000 judiciously spent for some years to come would supply England with a staff of modern language teachers second to none in the world. The manner in which this money should be spent is as follows:—Let the Board of Education invite graduates of any British University who are in possession of an honours degree, and who wish to qualify as modern language masters, to apply for studentships of the value of £100 per annum, tenable for four years. Select twenty of the applicants who seem best qualified for the task, and send them for two years to France, and subsequently for two years to Germany. The period of two years might be reduced to one year in either country for men who have graduated in modern languages in Great Britain. It should be stipulated that the holders of these studentships undertake no work for which payment is made during their residence abroad. It is essential that their whole time be given to the study of the respective languages and literatures, the institutions, manners, and customs of France and Germany, and of the methods of teaching modern languages. As a test of their application and industry, they might reasonably be expected to obtain the degrees of *Licencié ès Lettres* in France, and of *Philosophie Doctor* in Germany. Were this scheme put in operation and continued over a period of ten years, there would no longer be a dearth of properly qualified modern language teachers, and the State might be relieved from sending out more men; for by that time a new generation of properly taught and properly trained young Englishmen will have arisen, able to continue the work without spending four years abroad. But it will then be necessary to grant every modern language master a grace term once every five years, during which he receives his salary on condition that he spends the time in France or Germany for the purpose of brushing up his languages. The cost of substitutes to fill the places of those who are absent might be borne by the County Councils, municipalities, or cities.

With such a staff of teachers and with such provision for maintaining their efficiency, the question of method will solve itself; the myth of the Englishman's inaptitude for modern languages will be believed no longer; the doubt about the value of modern languages as instruments for mental training and higher culture will have vanished. The time will have come when the English clerk will be able to manage foreign correspondence as well as the German, when the English tourist will no longer be the laughing stock of foreigners for his ignorance of spoken tongues, when the English commercial traveller will be able to treat with his customers abroad in their own language, when the English officer will be as good a linguist as the German, and when a Secretary of State for Foreign Affairs will no longer be envied by all his colleagues in the Cabinet for being able to converse in French (see *Punch*, January 2, 1901).

Before closing this letter it will not be out of place to remind future contributors to this most interesting discussion that it is most essential to keep the issues clear. Before entering into details concerning the aims of modern language teaching, the methods to be employed, &c., it is all-important to know for what kind of school the prescription is to be drawn out. It is probable that in course of time England will evolve more clearly defined types of secondary schools, such as Germany, for instance, already possesses—

(A.) Schools preparing for the Universities, for the higher branches of the Civil Service, the professions, &c. (leaving age about nineteen).—(1) Classical (*Gymnasium*), with Greek and Latin in the centre; (2) Modern, with modern languages in the centre (a) with Latin (*Realgymnasium*), (b) without Latin (*Oberrealschule*).

(B.) Schools preparing directly for practical life and for the lower branches of the Civil Service, commercial life, &c. (leaving age about sixteen).—(1) Modern schools with Latin (*Realgymnasium*); (2) modern schools without Latin (*Realschule*).

There is still another kind of school in Germany, called

Progymnasium. This, as well as the *Realprogymnasium* and the *Realschule* (though their course is a complete whole), exists mainly in the smaller towns, and some of their pupils proceed afterwards to schools of class A.

It goes without saying that the aims and methods of the various kinds of schools must differ widely if they are to fill the place assigned to them in the educational system of the country. In a classical school preparing for the Universities modern languages will necessarily occupy a subordinate position, and may well be taught for mere utilitarian purposes. The methods employed should therefore leave out of consideration the teaching of composition, and should ignore all grammatical points which are not absolutely necessary for a true understanding of French and German constructions and forms. Again, in a modern school preparing for the Universities, for the higher walks of commerce, and for industry, modern languages must be the main instrument for mental training, logical thinking, and literary appreciation. Finally, a modern school preparing for business, clerkships, &c., with a leaving age of sixteen, must aim at getting the maximum of mental discipline with the maximum of practical proficiency out of the modern language teaching within the given time. The limits of time are quite sufficient for turning out youths who are perfectly capable of speaking, reading, and writing plain French and German as far as they require it. In a system of secondary schools intended for definite objects there can be no difficulty in assigning to each branch its task, or in choosing the appropriate method.

It is to be hoped that we shall have at the same time a well organized higher primary school, corresponding to the French *école primaire supérieure*, whose aim should be not to meddle with secondary education, or to become the rival of the secondary schools (as is the case with so many of our higher-grade schools), but to fill the place of a primary school with a somewhat extended curriculum, the extension being in depth rather than in width.

The time is at hand when the organization of secondary schools and school subjects on rational and definite lines has become an imperative national necessity. Let every one who has clear views on this great question bring them before the public—for it is the indifference of the general public which makes progress so difficult; and let the men at the helm see to it that something is done before it is too late—"Videant consules, ne quid res publica detrimenti capiat."—Yours, &c.

February, 1902.

ZEITGEIST.

TRAINING OF TEACHERS IN INDIA.

To the Editor of *The Journal of Education*.

SIR,—In the issue of *The Journal of Education* dated July, 1901, a reference was made under the head of "India" to the educational work being done at the Girgaum Girls' High School, Bombay. I can vouch for the fact that the Government is wholly unable to take the initiative in the establishment of what is still the most crying educational want of Bombay—training colleges for secondary teachers.

The recurrence of plague for the past six years has crippled most seriously the resources of Government. Several departments of education have suffered in consequence. As regards colleges for secondary teachers, no systematic organization by the State has been attempted or been possible. Our school has been, and is still, doing all in its power to supply the want.

The difficulties which confront us in dealing with the situation are by no means few or small. Among them are the following:—(1) the poverty of the class from which students are drawn; (2) the comparative paucity in numbers of the Europeans and Eurasians which constitute the majority of our students; (3) the necessity often experienced by young girls of earning as soon as possible a few rupees a month in order to eke out what is at best a bare livelihood for their families; (4) the low salaries obtainable by teachers, whether trained or untrained; (5) the comparatively small difference between the salaries of trained and untrained teachers; (6) the comparatively poor prospects of all European and Eurasian teachers, however efficient, in the Bombay Presidency. The reason of this is that the highest posts in native schools are filled by well educated intelligent natives. Native mission schools are as a rule managed by European or American missionaries. The highest posts in European schools are usually taken by men and women from England, Scotland, and elsewhere outside India.

Under these circumstances it would seem that the only solution of this difficult problem, the training of secondary teachers, is to be found in the meantime in the direction of establishing and maintaining a scholarship fund for needy students, so that these may be encouraged to give up one or two years for the purpose of receiving that

training for their profession as teachers which, if necessary for women and girls in England and elsewhere, *i.e.* outside India, is, to say the least, no less so for those in India. Indian-born girls, whether they be of pure European or mixed descent, have not as a general rule that physical, intellectual, and moral calibre which we are accustomed to meet with, and more or less take for granted, in England. Hence it is that they need, if anything, more help, more encouragement, stimulus, and sympathy, and even more financial assistance, than those of the corresponding social class in England. With the few scholarships hitherto available, most encouraging results have been achieved, and students have been trained who, as teachers, would compare favourably both as to character and attainments with their more favoured sisters in the United Kingdom. May I venture to hope that the sympathy of your readers may be enlisted and that some may be willing to afford much needed help to would-be students in Bombay. A full scholarship is Rs.10 12 annas per mensem or £8. 12s. per annum. I am, Sir, yours faithfully,

A. E. EDGE.
(Late Head Mistress of the Leicester High School;
present Lady Principal of the Girgaum Girls' High
School, Bombay; Fellow of the University of Bombay.)

[We shall be happy to forward to Miss Edge any contributions to the "Girgaum Scholarship Fund" sent to the Office of the *Journal*.—ED.]

A WORLD'S HISTORY FOR SCHOOLS.

To the Editor of The Journal of Education.

SIR,—In answer to "E. L.," might I call attention to "Great Events of History" (Collier), published by Nelson, Edinburgh? It is not quite what "E. L." requires, but, at the same time, I have found it an invaluable stop-gap, as it sketches in the portion 20 B.C. to A.D. 1894. As a reader I have found it useful, even in Form III, as its abundant illustrations and clear vivid style are attractive to the children. With Form IV. it can be used as a lesson-book, or oral lessons can be given on its chief chapters, the pupils revising their hazy recollections of these at home by reading the chapter for themselves. I also use it to introduce the practice of writing "recollections" in class, which encourages pupils to seek for threads of continuity; and they also learn note-taking from the descriptive chapters, most school-girls having extremely vague notions of this useful art. In Form V. I generally find the girls are quite ignorant of most of the names of celebrities appended to each period. It makes an interesting lesson to assign a name to each pupil, and require from her by the next lesson a good *oral* account of his life. This causes keen hunts through home libraries. In Upper V. we have had most animated lessons by dividing, say, Napoleon's life among a dozen or more girls. One would be required to get up his early life, another his first Italian campaign, a third the description of the Battle of Leipzig, while even the dullest mortal could collect a few facts about Josephine, Louise, or Ney. I require them to give us these *orally*, as our girls are far behind their Continental sisters in their power of fluent clear delivery. "Great Events" gives enough matter for a commencement, and the bright girls soon begin to go further afield for their facts. I have treated the Thirty Years' War, the French Revolution, the Crusades, Louis XIV., in a similar manner, and find this a good introduction to Greek and Roman history proper in Form VI. White's "Christian Centuries" is also good, but hardly suitable as a class book till Upper V. or VI.—Apologizing for trespassing on your space, I am, Sir, yours truly,

(Miss) E. C. ANDREWS.

Priory House School, York, February 3, 1902.

TESTIMONIALS—A RIGHT OR A FAVOUR?

To the Editor of The Journal of Education.

DEAR SIR,—I should like to have the opinion of your readers on the question of testimonials, and, if possible—if it is fair to ask it in this way—the legal opinion on the matter. Are head mistresses bound to give a written testimonial to the assistant mistresses if the latter have given satisfaction in their work? Or are the assistants at the mercy of the whim and caprice of their head? Supposing an assistant mistress has taught for several years in a school, and, wishing to make a change, asks for a testimonial. It sometimes happens that the head mistress replies: "It is not etiquette. I will not give you a written testimonial, but shall be glad to answer any letter or any inquiries made about you."

Supposing, for the sake of argument, that the assistant wants to take a year's holiday and rest, and meanwhile her former head mistress dies or marries or retires, and the assistant loses all clue to her whereabouts, is the assistant to forgo all the benefit of her experience in teaching because her head mistress declined to give her a written testimonial?

Or supposing the assistant mistress wishes to get a post in the neighbouring countries of Scotland or Ireland, France or Germany, or the Colonies, has she no right to demand and get a testimonial which would obviate the necessity of writing hither and thither, and the annoyance of much delay?—Yours faithfully,

HEDDA CEDERSTRÖM.

THE ENGLISH HIGH SCHOOL AT CONSTANTINOPLE.

The inauguration of the new buildings of the English High School at Constantinople took place on December 20. In the absence of the British Ambassador, the chair was taken by M. de Bunsen, who heartily congratulated the trustees on the successful completion of the new buildings, and on the admirable education given in the school under the direction of Miss Green. M. Pears, Chairman of the Committee, shortly sketched the history of the school, originally founded by Lady Stratford de Redcliffe (later Lady Canning), who about the year 1850 established the first systematic English education in Constantinople, under the Misses Welsh. In 1858 Sultan Abdul Medjid generously gave the land and the building in which, till last year, the school was carried on. During the unsettled period of the Russo-Turkish War the school was completely closed, but in 1881 Lady Stratford transferred the control of the school and premises to a body of trustees, of whom the British Ambassador was to be always president. The support and interest of successive ambassadors has been very helpful since then. In 1883 Miss Porter, of the Edghaston High School, was appointed Head Mistress, and a new period of prosperity was begun. On her marriage, some eight years later, Miss Green, previously Head Mistress of the Dudley High School, was elected, under whose direction the number of pupils has risen to 140, consisting, to a large extent, of daughters of English residents, but including also many girls of Greek, Armenian, and other nationalities; lately, for the first time, a little Turkish girl is among them. During the period of its growth, the school was greatly indebted to the late Mr. Wrench, H.M. Consul for many years at Constantinople. He took the keenest interest in its development, and on his lamented death, a few years ago, it was felt by all who knew him that the memorial raised to his honour should be devoted to the new buildings. General and warm appreciation was expressed of the excellent work being done by Miss Green and her assistants, with the heartiest good wishes for the continued success of the English High School.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

By the "Draft of an Order in Council for providing the manner in which a Register of Teachers shall be formed and kept, presented pursuant to Sections 4 and 5 of the Board of Education Act, 1899, and ordered by the House of Commons to be printed January 21, 1902," the Teachers' Guild is one of the six bodies to be represented by a member each on the first Registration Council of twelve members, of whom the six other members are to be appointed by the President of the Board of Education.

The Council of the Guild met on December 7, 1901. A list of the twenty-two members who were present is set out in the *Teachers' Guild Quarterly*, December, 1901, page 51. The chief work of the meeting was the consideration of the Chairman's motion: "That the Council deliberate on questions of curriculum to see if agreement can be attained on the right order of subjects in secondary schools," and of Miss H. Busk's motion: "That the Council draft a sketch of an Education Bill giving expression to the views of the Teachers' Guild on the organization of education." After careful discussion the curriculum question was referred to the Education and Library Committee for them to consider, if an inquiry into the matter of curriculum be undertaken, what time, trouble, and expense will be involved, and to report to the Council.

The mover of the second resolution eventually modified it to run as follows: "That the Council draft a memorandum giving expression to the views of the Guild on the organization of education and on the main points that should be included in the next Education Bill, and that it be referred to the Political Committee to prepare such a memorandum and report to the next meeting of Council." In this form the resolution was carried.

At the Council meeting on January 25, there were present the Chairman (Canon Lyttelton), Mr. J. W. Adamson, Miss A. B. Anderton, the Rev. J. O. Bevan, Mr. E. Blair, Miss H. Busk, Mr. G. F. Daniell, Miss F. Edwards, Miss M. Green, Mr. F. B. Kirkman, Mr. J. R. Langler, Mr. J. W. Longsdon, Mr. H. A. Nesbitt, Miss E. Newton, Mr. F. Storr, Mrs. J. S. Turner, Miss A. Verrall, Mr. J. Wise, Miss M. Wolsley-Lewis, and Miss A. Woods.

The following resolutions were considered and settled to be presented, in the form of a Memorandum, signed by the Chairman, to the Lord President of the Council:—

"My Lord Duke,—I have the honour to report to your Grace the following resolutions on the subject of the organization of education, and on the main points which the Council of the Teachers' Guild of Great Britain and Ireland hope to see included in the Education Bill or Bills of the present Session of Parliament.

1. That there should be one Local Authority for all education other than non-local secondary education and University education.

2. That the control of education should be a function of the Authority appointed for general local purposes, and should be exercised by a Statutory Committee in each area. The case of London and of other very large cities seems to demand separate treatment.

3. That, following the lines of the Bill brought in by the Lord President of the Council in A.D. 1900, the Statutory Committee should be an Education Committee of the administrative County Council or of the County Borough Council, formed in accordance with a scheme drawn up by the Council and approved by the Board of Education.

4. That the scheme should provide for the inclusion in the Education Committee of an adequate proportion of persons, male and female, who are not members of the Council, with experience in teaching in schools, and with expert knowledge of the requirements of the locality. These members should be co-opted by the Education Committees.

5. That the areas under the control of the Education Committees should be not less than those of existing administrative counties and county boroughs, but that the scheme may provide for a Joint Education Committee of two or more Councils, the population of the combined areas controlled by those Councils being not less than 100,000.

6. (a) That Local Education Authorities should be empowered to make grants to any efficient secondary schools, whether public or private, within their respective areas. (b) That it should be permissible to hold county scholarships at any efficient secondary school or University college.

7. That it is in the public interest that an immediate survey of all schools other than elementary should be provided for by statute, and required from each Local Authority, with details as to accessibility, buildings, fees, number of school places, number and ages of pupils, curriculum, constitution; number, qualifications, salaries, and pensions of staff; such survey being directed to ascertain how far the schools are *prima facie* suitable to the needs of the locality, and being distinct from such inspection as may be subsequently undertaken to test the efficiency of the teaching.

8. That it is desirable, in the case of proprietary schools, and essential in the case of endowed schools, that the Local Authority should be represented on the Governing Body.

9. That the Council of an administrative county or county borough be empowered to raise an education rate in accordance with the needs of its area, and to allocate that rate to the Education Committees of the Urban and Rural District Councils, School Boards, or other bodies of managers of schools, at its discretion, provided always that an appeal lie on the part of the Education Committees, &c., above-mentioned from the County Council to the Board of Education.

10. That voluntary schools should be under no disadvantage with regard to the allocation of the education rate, provided always that they accept representation of the Local Education Authority on their managing body.

11. That it be the duty of the Local Authority, to be enforced by the Board of Education, to see that an adequate supply of primary, secondary, and technical schools is provided within its area.

I venture to express the hope that these resolutions may receive consideration from your Grace in connexion with any legislation for the organization of education which may be proposed by His Majesty's Government.—I remain, your Grace's faithful servant,

E. LYTTETON,
Chairman of Council of the Teachers' Guild
(on behalf of the Council).

The local Guild for Southampton and district was formally affiliated as a branch of the Teachers' Guild.

Thirty-two Central Guild members were elected at the two Council meetings, and forty-nine Branch members, including, besides the Southampton Branch original list, one Brighton member, one Cheltenham member, and seven Norwich members.

The Council will meet again on March 6, when it will deal with important reports from its Political and Education Committees on the new "Order in Council for providing the manner in which a Register of Teachers shall be formed and kept," and on the subject of curriculum respectively. Reports will also be presented by the Organizing Committee and the Finance Committee.

CENTRAL GUILD.—The annual meeting of Section A took place on February 3, at Pond House School, Clapton, by kind invitation of the Principal, Miss Pearce. Miss Newton was elected President of the Section for the year, in succession to Mr. Stanley Anderton. At the conclusion of the business an entertainment, arranged by the staff of Pond House School, was provided. The programme included, besides music, songs, and recitations, a very successful dramatic sketch from "Cranford," and was throughout much enjoyed by those present.

A condensed Report of the Teachers' Guild Educational Conference on January 13 and 14 will appear in the *Teachers' Guild Quarterly* on March 15.

CALENDAR OF SECTION MEETINGS.

March 7.—Section B, at 8 p.m. Lecture by Miss H. Busk, "A Visit to Sicily," illustrated by a series of specially prepared lantern slides, in the Botanical Theatre, University College, Gower Street, W.C. Open also to Sections A, C, and D.

March 10.—Section A, at 7.30 p.m. Lecture by Miss Storr, "Practical Arithmetic," at the Central Foundation School, Spital Square, E.

March 14.—Section G. Annual General Meeting and Lecture. (Particulars will be sent to members.)

March 15.—Section E, at 8 p.m. Conjoint Meeting, open to all Sections. Lecture by J. Churton Collins, Esq., M.A., "Ruskin as an Educational Reformer," at the Sesame Club, 29 Dover Street, Piccadilly, W.

March 17.—Section F, at 8 p.m. Paper by Victor Spiers, Esq., "Modern Language Teaching," at the High School for Girls, Clapham Common (South Side), S.W.

May 12.—Section A, at 7.30 p.m. Paper, "Natural History Resources of this Neighbourhood," by J. E. Gardner, Esq., at Abney College, Portland House, Stamford Hill, N.

May 25.—Section E, at 8 p.m. Lecture, "Good Taste," by Miss Rossi, at 173 Cromwell Road, South Kensington, S.W.

June 6.—Section G. Visit to Windsor.

June —.—Section E, at 8 p.m. Lecture, "How to become a Humorist," by the Rev. S. C. Tickell, M.A., at St. Mark's College, Chelsea, S.W. (Exact date will be announced to members.)

The Offices of the Guild and the Library will be closed on Good Friday, Easter Eve, and Easter Monday.

BRANCHES.

Cheltenham.—A meeting of the Branch was held at the Ladies' College on December 13, 1901. The chair was taken by Mr. A. S. Owen. Officers for the ensuing year were elected. The Rev. R. Waterfield, Principal of Cheltenham College, having resigned the office of President, it was decided that the Rev. A. J. Owen be asked to undertake the office. Four members of the Committee (Rev. A. I. Smith, Mr. Tyrer, Mr. W. A. Wintour, and Miss Whittard) having resigned, Miss Sturge and Miss Brown (Cheltenham Ladies' College), Mr. M. A. Cooper (Dean Close School), and Mr. C. I. Gardiner (Cheltenham College) were elected to fill the vacancies. The other members of the Committee were next elected—viz., Miss Beale, Miss Louch, Miss Cadogan, Rev. Dr. Macgowan, Rev. J. G. Derrick, Mr. C. H. King, Mr. Wheeler, Mr. Whittard, Mr. A. S. Owen; Miss C. E. Andrews and Mr. L. M. Wallich, Hon. Secs. Mr. Wallich was re-elected Hon. Treasurer. At 8 p.m. Mr. A. J. Herbertson, Lecturer in Geography in the University of Oxford, read a very interesting paper on "The Teaching of Geography." A discussion followed, in which Miss Beale, Miss Louch, Miss Reid, Mr. Gardiner, and Mr. Wallich took part. The proceedings terminated with a vote of thanks to Mr. Herbertson, proposed by Mr. Wallich and seconded by Mr. Gardiner.

Manchester.—The Annual Meeting of the Branch was held on January 31 at the Manchester Girls' High School. Mr. H. A. Johnstone, of Stockport, the President, was in the chair, and there was a good attendance of members. The gathering included Miss S. Burstall (President-elect), Prof. Wilkins, Prof. Withers, Mr. Lyde (Head Master of Bolton Grammar School), Miss Caroline Herford, Miss Greener (Whalley Range), and Miss Lang (Bowdon). Mr. W. J. Chatterton (Hon. Secretary and Treasurer) read the report of the Council and the balance-sheet. Miss Burstall was elected President for the year 1902, Miss Caroline Herford, Mr. H. A. Johnstone, and Prof. A. S. Wilkins, Vice-Presidents; Miss S. L. Dendy, Hon. Librarian, and Miss Edith C. Wilson and Mr. W. J. Chatterton, Hon. Secretaries, the latter also being Hon. Treasurer. The new President (Miss Burstall) gave an address on "The London Technical Education Board as a Secondary Education Authority: its Work and some of its Lessons." In the course of her address Miss Burstall said she wished to put before the Guild a system of educational organization so broad, so complete, and, on the whole, so excellent, that it deserved to be known to every one interested in one of the most pressing problems of the day. It was not for her to apply to the condition of things in Manchester any lessons which could be drawn from the work of the London Technical Education Board, but she would suggest that those who were interested in the subject should study it for themselves. What was done in London might be of some suggestive value to any other great centre. Until ten years ago there was no educational organization in London. For some years after the passing of the Technical Education Acts the money which was available under them had been directed to the relief of the rates, but about ten years ago the London County Council had formed the Technical Education Board. There were thirty-five members upon that Board—twenty members of the County Council, thirteen persons elected by the City and Guilds of London Institute, the School Board for London, the London Trades Council, the Trustees of the London Parochial Charities, the Incorporated Association of Head Masters, and the National Union of Teachers, and two persons (including one woman) co-opted by the Board. There were Committees of Domestic Economy, Finance and General Purposes, Higher Education, Polytechnics, Scholarships, Science, Art, and Technology, and Secondary Schools. The Board had wisely begun by helping existing institutions, and had only filled up gaps as it had found them. It had established

a domestic economy school, an arts and crafts school, a school for lithography and photo-engraving, a school for carriage building, and other schools for trades which had not been otherwise so provided for. The Board had no power actually to build secondary schools, but it had generously helped secondary schools which were doing good work. Beginning with the encouragement of technical education, the Board found that it must encourage also secondary education, which must be at the foundation of a sound technical training. The rich schools, of course, were not assisted, but many of the boys' second-grade schools, where the fees were low, were helped considerably. The Board decided that women and girls should be assisted as much as men and boys, and it had interpreted that principle in a very generous way. The assisted secondary schools all had on their boards of governors representatives of the Technical Education Board. The expenditure of the Board last year was £200,000, of which £42,000 was granted to secondary schools for maintenance and £1,200 for equipment, £38,000 to University colleges and polytechnics for maintenance and £18,000 for equipment, £27,000 for county scholarships, £24,000 in Government grants, and £7,000 for domestic economy. The institutions aided or conducted by the Board were four schools of the Universities, nine polytechnics, six institutions conducted by the Board, ten technical institutes, eleven schools of art, seven sets of special evening classes, forty-seven secondary schools (twenty-five boys, fifteen girls, and seven mixed), and twenty-one domestic economy schools and classes. There were 2,683 scholars under the system of scholarships at secondary schools. The scholarship system was most valuable, and thousands of boys and girls had benefited under it. She only wished that Manchester had as many scholarships for elementary-school children in proportion to population as London had. It was not an unknown thing for Manchester girls to go to London in order to qualify for Intermediate Scholarships under the Technical Education Board, with maintenance, which carried them on from the age of fifteen to eighteen. The grants in aid given by the Board were most valuable, particularly to the girls' secondary schools, and sometimes they were given on the condition that good salaries were paid to the teachers. Such a system as she had sketched should appeal to that Guild, whose watchwords were unity, co-ordination, expert opinion. These principles had been successfully put into effect in the ten years' work of this educational authority, which, with vigour and initiative, had accomplished the work of unification, co-ordination, and true educational progress for the toiling millions of London. A brief discussion followed, and on the proposition of Prof. Wilkins, seconded by Prof. Withers, Miss Burstall was accorded a hearty vote of thanks.

Norwich.—The last meeting of the autumn session of the Branch was held, on December 6, 1901, at the High School, where, in the presence of a large gathering of members, Mr. Walter Rye lectured on, "Manners and the Want of Manners in the Seventeenth Century." Mr. H. Oake, B.A., the President, was in the chair. A half hour before the lecture began was devoted to the annual business of the Guild. Dr. Wheeler and Miss Howden were elected to supply two vacancies on the Committee; Miss Gadesden, Mr. D. O. Holme, and Miss Hill were elected Vice-Presidents; Mr. A. R. Golden, B.A. and Miss Lake (of the Norwich High School) Hon. Secretaries; Miss Cooper Hon. Treasurer; and Mr. A. Mottram Hon. Auditor. The annual report set forth that during the year the work of the Branch had been characterized by considerable success. A membership of about a hundred had been maintained, and many interesting lectures given. The report went on to express regret at the departure from Norwich of the Rev. F. C. Dawes, and at the death of the Rev. W. A. MacAllan, whose genial presence the members greatly missed. As in previous years, the members had been much indebted to Miss Gadesden for her hospitality on many occasions, and for her help in other ways. They recognized also the willingness with which the members of her staff supported her in an endeavour to make the meetings pleasant as well as profitable. The report continued:—"The close of this year marks a change in the office of Secretary. Mr. H. Oake, B.A., has been elected President, and Miss Hill, after three years of splendid service, has asked to be relieved of her duties. The fact that Miss Hill has now been elected to be a Vice-President will, we hope, assure her that the members fully appreciate the excellent work she has done. The Committee have been fortunate in being able to nominate as joint Secretaries Miss Lake, of the Norwich High School, and Mr. A. R. Golden, B.A., and the result shown by the voting papers recently issued testifies that we all welcome them to their post, in the assurance that we shall find in them two Secretaries who will do their best to maintain the high position we have attained among the Branches of the Guild." The report was adopted, on the motion of the Rev. H. W. Wimple and Miss C. Clark. Mr. Rye, proceeding with his lecture, said that in treating of the manners of the seventeenth century, he could truthfully take as his text the report once made by a midshipman on the manners prevailing in an island that he had had to visit—"Manners none, customs beastly." Our ancestors of three centuries ago had etiquette enough, but of real manners, as we understand them now, they had practically none. In abundant justification of this point, Mr. Rye proceeded to quote from a book entitled, "The Rules of Civility; or, Certain Ways of Deportment observed amongst all Persons of

Quality upon several Occasions." It was difficult to imagine how free spoken people must have been when it was necessary to warn them that "it is unmannerly to make comparison with the person with whom you are speaking to discover the imperfection of another, as to say to a lady, 'Such a person is of no good reputation; I know her well; she is fat and swarthy, like your ladyship.'" The "person of quality" himself got a broad hint what not to do, for he was told that it was not becoming, "when in the company of ladies, to handle them roughly, to kiss them by surprise, &c." When you visit "his lordship" you must not pick your nose or scratch; and you are "admonished to forbear hawking or spitting, as much as you can." "In conference with a person of Quality, it would be saucy or ridiculous to pull him by the Buttons, Bandstrings, or Belt, and most of all, to punch him on the Stomach." The deference which an inferior had to show in writing to a superior was of a kind which, nowadays, would be regarded as simple grovel. Simple grovelling, however, was not yet dead, and he could, if he dared, read letters from a parson not far from Norwich to his squire, thanking him for benefits received, and no doubt prospecting for others to come. In thanking him the parson wrote that the thanks of the village were due first to the squire, and secondly to Almighty God, for sending him to the parish. By way of illustrating the manners prevailing in private society in the home, in church, and elsewhere, Mr. Rye proceeded to quote copiously from various sources, Evelyn and Pepys more especially. In regard to matrimony, he made use of some interesting local references in the letters of the Le Neve, Gawdy, and Hobart families. He said: The various attempts made by Oliver Le Neve (he who killed Hobart in a duel in the pightle by Cawston Woodrow) to get married, and the trouble his friends took to find a good match for him, are all worth telling. In 1697 his friend Millicent writes him that his wife's niece is staying with them—"a young, comely, good-humoured, ingenious widow, aged between nineteen and twenty, worth at least, to our knowledge, £15,000"—and implores Le Neve to come and court her before she gets snapped up in London. Possibly Le Neve thought, with old Weller, that widows were bad enough, but that an ingenious widow was a little too much of a good thing. So nothing came of it. He was more lucky the next time, however. Millicent, who was then at Bath (then, as later, as great a marriage market as ever), writes him thus: "Come and see if there are any you like. I know two sisters who divide £1,200 per annum, and are extraordinary fine women." A month or two later matters progress a little, and he writes: "I have made inquiries about the Sheffield, £3,000 ready money will be laid down, and, if Mr. Sheffield likes, £4,000 and the estate, when he dies, between the two sisters, whose just characters are:—The eldest, tall, well-shaped, mild temper, extraordinary housewife, her father's commands a law, and not acquainted with any one young man; her face very agreeable, her age twenty-nine. The youngest sister, a beautiful face, not tall, much inclined to fat, and in her temper a perfect stoic; not of so ready or pleasing conversation as the other; her age twenty-six. If you find any suitable to your inclinations, I should be glad you'd begin whilst we are here." Le Neve, who was then about forty-three, entertained the idea; for, after some bargaining with the papa on financial matters, Millicent wrote:—"They all dined here on Tuesday, when I had the opportunity of making remarks; and I do assure you (in my opinion) the character (of them) I gave before is short (of a truth). Cousin Biddy has told the young lady who modestly consents to what her father pleases, who says you must ask his daughter whether she is wishing to be a mother-in-law." This prosaic match came off all right, for on July 31, 1707, he married his third wife, Elizabeth, daughter of Robert Sheffield. Sometimes, when would-be mothers-in-law saw an advantageous match, they dispensed with the negotiating part of the business altogether, and married the young man to their daughter right away. This was the case when (as told in the Isham diary) Lord Maidstone, the son of Earl Winchelsea, then a boy of about fourteen years old, and at Cambridge (they went early then), was brought down here into Norfolk by his tutor to avoid the plague then raging in the Varsity. As it turned out, this was jumping out of the frying-pan into the fire, for Mrs. Windham, of Felbrigg (seeing her chance to secure a live lord for a son-in-law), contrived a match, and brought it off without consulting the earl, who was extremely furious, "as the girl had very little dowry." But it didn't matter very much, for he was killed by the Dutch at sea when very young. Just as at present, however, the *nouveau riche* was often willing to pay for a noble alliance; and we read that Sir Edward Coke (ancestor of the Earl of Leicester) "would not stand out for money to match with a good family." Sometimes a girl had a narrow escape of being picked up by a fortune-hunter. In the Le Neve letters we are told how John Norris, of Norwich, having a mind that his daughter Betty should see a "little further than country breeding," sent her off to Francis Neve, a London merchant, near the Exchange (who had married his cousin), in the hopes of having her polished up a bit, and wrote that the Londoner's wife's "prudent directions we shall always listen to for her better breeding." But they reckoned without the London 'prentice, who was proverbially bold and pushful, and he soon worked on the girl's feelings, so that he almost persuaded her to say that she *had* been privately married to him, concocted a forged marriage certificate, and had the impudence to bring it

down here to her father. But the old man acted with businesslike promptitude and despatch; and, having got his daughter back, wrote sarcastically to his cousin: "I suppose you do not use to spare your apprentice to run up and down the country when he lists. I desire your order to secure him here as a runaway." It's just as lucky as not for the 'prentice that the order did not come down here in time, or the merchant's friends on the Bench at the Guildhall would have "larned him" not to do such things here. As it was, he "saw the snare, and he retired"; and so end the loves of the bold 'prentice and the country heiress. We find that, in 1632, Antony Mingay, of Norwich, advised Framlingham Gawdy of a rich widow. "One Mr. Gooch, once a chief constable, died two months ago at Hoe, near Dereham, and is said to be worth £8,000 or £10,000 or £12,000 according to different rumours." He tells him she is a comely woman, between forty and fifty, and suggests that, as Philip Calthrop lives in the same house and has much influence, he might be of use. Widows were rather prominent articles in the marriage market. Miss Mingay writes from Tunbridge Wells in 1635:—"I met a young widow in the street—Alderman Pearce's widow—she hath a great voice; I heard her talk as she went. She is worth £10,000. She hath four daughters and they have £5,000 apiece. She is tall and straight, and lives hard by the Old Exchange. Think of this." He apparently did think of this, and came to the conclusion that £10,000 was not enough for a widow with a great voice. Dealing with the customs of the times in relation to public religious observances, Mr. Rye told a number of excellent stories. The late Parson Berney, of Braconash, had been offended by two judges living in his neighbourhood, and they came unwarily into his church together one Sunday morning. Promptly he changed his text and preached at them on the subject of the unjust judge, with local illustrations. L'Estrange told a good anecdote of a pious parson, who was born before the era of teetotalism, saying, "that a glass or two of wine extraordinary would make a man praise God with much alacrity." Mr. Rye was warmly thanked for his lecture on the proposition of Dr. Wheller, seconded by the Rev. H. Wimble.

Plymouth.—On November 26 Miss Raymond, Head Mistress of the Devonport High School, favoured the Guild with a lecture on "The Early Flemish School of Painting." The lecture, which was of a most interesting and instructive character, was rendered additionally effective by limelight illustrations of some of the masterpieces of the most celebrated painters of the school. The Chair was taken by the President, Miss Turnbull, Head Mistress of the Plymouth High School, and the lecture was preceded by the usual *conversazione*, at which Miss Scott, Head Mistress of the Plymouth College for Girls, presided. The

lecturer, in the course of her remarks, stated that "The Early Flemish" artists flourished in the fifteenth century in Flanders under the rule of the House of Burgundy. Chief amongst them were Hubert and Jan van Eyck, Roger van der Weyden, Thierry Bouts, Hugo van der Goes, Hans Memlinc, and Quentin Metsys. 'The Mystic Lamb' (S. Bavon, Ghent) is the most famous picture of the school, as it is also the first extant. It is a visible 'Te Deum.' The qualities for which these painters are most celebrated are their splendid and brilliant colouring, extreme truth and accuracy—shown in the smallest detail—and exquisite perfection of finish. Their skill in portraiture and lovely delicate landscapes are also admirable. They fail at times in knowledge of perspective, in atmosphere, in freedom of grouping. These faults may be attributed, in part, to the influence of stained-glass windows, carved wood altar-pieces, painted statues in gilt niches, and manuscripts with their illuminations and miniatures. Many of these arts were practised by these Flemings as well as their own art proper. They, on the other hand, have left strong impress on succeeding ages, especially in all sacred pictures. Van der Weyden may be said to have left formulae for all the Gospel scenes. Scarcely ever is a church window filled with stained glass whose design may not be traced to Roger's influence. Jan van Eyck did not discover or invent oil-painting—as sometimes erroneously stated; but he discovered how to make a siccative oil—a revolution in painting. All the pictures (to be shown by the lantern) are painted in this medium, and on wooden panels—except one which is in tempera on linen. They are nearly all altar-pieces. These, and a few portraits, were all the art attempted then. Painting, indeed, had scarcely come to consider itself an art, but numbered itself with the handicrafts. In Jan van Eyck's days, the Guild of S. Luke (to which he and every painter was bound to belong) included saddlers and glass makers. A century later, these have dropped out, and their place is taken by rhetoricians and literary men. What was background in Van Eyck becomes foreground in the next century. Art travels North—Tournai, Brussels, Louvain, Ghent, and Bruges were the homes of the earlier Flemings, but Quentin Metsys passed on to Antwerp, and, after him, art crossed the border to find a new home in Holland amid the new influence of the Reformation. We have but few details of the lives of these men. With difficulty can we discover the place or date of birth; but from the Guild registers we can generally learn whom the painter married, when and where he joined the Guild, the place and date of his death and burial. Almost all of them appear to have led quiet, prosperous, uneventful lives. Their art was their life, and there they are imperishable."

GINN & COMPANY,

Educational Publishers,

9 ST. MARTIN'S STREET, LEICESTER SQUARE, LONDON, W.C.

Ginn & Company, 9, St. Martin's Street, W.C.

TO meet the growing demand for their school and college books, Messrs. GINN & COMPANY, the leading educational publishers of America, heretofore represented in London by an agent, have opened a Branch Office at the above address, under the management of Mr. FRED J. MATHESON, through which all business for Great Britain and Ireland, the rest of Europe, and all British Colonies and possessions, with the exception of Canada, will now be conducted.

INVITATION TO TEACHERS.

All interested in teaching are cordially invited to call at No. 9 St. Martin's Street, where special facilities are given for the inspection of the books published by Messrs. GINN & COMPANY, representative of the most advanced methods in American Education.

SOME SPECIAL FEATURES.

GINN & COMPANY desire to call special attention to their "College Series" of Greek and Latin Authors; "Latin and Greek School Classics"; their "International Modern Language Series"; and their books on Anglo-Saxon.

GINN & COMPANY publish a large assortment of English Classics edited respectively for children and for the students of Higher English.

Excellent stories of Plant and Animal Life, designed to encourage observation and Nature study by the young, are among the publications of this house which have proved most popular.

WORLD'S HISTORY.

A GENERAL HISTORY FOR COLLEGES AND HIGH SCHOOLS.

By P. V. N. MYERS, recently Professor of History and Political Economy, University of Cincinnati.

Half-leather, $7\frac{1}{2} \times 5$ ins., x. + 759 pp., 31 maps, 145 illustrations, 6s. 6d.

A complete outline in one volume of the World's History from that of Eastern Nations to the present time, accepted and recommended by all leading Colleges and Universities in the United States as the best brief course in general history.

"This is a handsome volume, well printed on good, thin paper, admirably equipped with illustrations and maps . . . and bound in half-morocco. The text is clear, readable, and well proportioned (bisecting at A.D. 476), and it attains a high level of accuracy. Altogether, the book strikes us as by far the fullest and cheapest single volume manual of 'General History' with which we are yet acquainted."—*School World*, February, 1902.

Teachers desiring to examine this book with a view to its adoption for class use may obtain a copy on approval by writing for it.

GINN & COMPANY, Educational Publishers, 9 St. Martin's Street, Leicester Square, London, W.C.

OCCASIONAL NOTES.

THE promise of the King's Speech and Mr. Balfour's assurance of an early and honourable place have been redeemed, and we have before Easter, not a lopsided measure, nor an Abbé Sieyès' *projet de loi*, a paper draft not intended to get beyond the House of Lords, but a comprehensive Bill dealing with the whole of primary and secondary education. The croakers who prophesied a half Bill or no Bill at all now tell us that either the primary part will be withdrawn or that it will be wrecked between the Symplegades of denominationalists and anti-denominationalists. We draw a more favourable horoscope, and predict that the Government will wipe out the memory of its previous retreats and failures, if only it will screw up its courage and abandon the pusillanimous policy of local option.

ALONE among our contemporaries we declined, last month, to despair of an Education Bill introduced before Easter. The dailies and the evening papers long ago predicted no Bill at all, while our weekly educational organs despaired of anything more than a truncated secondary Bill, or even only a Cockerton Continuation Bill. The Church papers have, however, stuck to their guns and fulminated unceasingly against the Government if they declined to fulfil the whole of their promise, and at once. As specimens of their faithful dealing with the powers, we find such phrases as "the Government has entirely forfeited its claim to support," is "playing fast and loose with the question." This is, undoubtedly, the way to produce a result. As long as a Bill was merely demanded by those obscure persons who are interested in education, it could with impunity be put off from year to year, but once let a powerful "interest" come in and threaten political vengeance, and the question becomes one of urgency. It

is the perilous state of the voluntary elementary schools, and the fact that in dozens of large centres of population a School Board cannot be staved off another year, which has secured for the Bill a first reading before Easter.

AS we anticipated in our last issue, the West Riding agitation against the assumption of elementary powers has died out. The sole capture since then has been the County Council of the Isle of Wight, thus making four dissentients in all. From Middlesex, as well as Surrey, has come a strong counterblast, and that county, not content with a polite negative, will ask the County Councils Association to declare "that it is desirable that the County Authorities to be established by the proposed Education Bill should at all events have the option of taking over the work of elementary education." As a specimen of how the opponents of the Government policy injure their case we need only glance at the proceedings at the last meeting of the East Suffolk Technical Committee. It should be premised that this body (whose importance may be gathered when we mention £5,000 a year as its expenditure) has from the first conducted its business with open doors like a School Board—a step taken by no other County Committee in England—and is presided over by the Rev. J. F. A. Hervey. The Chairman, having read the West Riding resolution and rebutting statements from other County Councils, delivered himself as follows:—"County Council Secretaries were no doubt desirous of taking over elementary as well as secondary education; he dared say they would take over the whole government of the country if they could." If this method of attack on public officials who, of course, cannot reply is the best weapon of this party, it must be in a perilous state. His tirade did not produce the effect desired, and the Committee declined to concur with the West Riding.

A VERY remarkable sign of the times and indication of the activity of the friends of the voluntary schools was the debate on the coming Bill initiated by Mr. Bridgeman at the London School Board on March 3. For four Progressives to vote with Mr. Bridgeman, and thus defeat the previous question by 29 to 20 votes, was practically an endorsement of his motion that all voluntary schools should receive rate-aid, while retaining their denominational teaching. Of course everybody (?) assumed, and several said, that the Authority in London which would thus take the voluntary schools under its wing would be the School Board; but the motion, as drafted, said nothing about this. Mr. Lyulph Stanley, who, like the Stuarts, learns nothing and forgets nothing, would have none of this compromising with voluntarism, but wants the Scotch system of universal School Boards. He might as well cry for the moon. Dr. Macnamara was between the devil and the deep sea, and abstained from voting. However, he characterized voluntary schools as an anachronism. He is right, but should have added that School Boards are the same, and are also an anomaly. It ought to be plain to the supporters of this motion that, if to the present issues fought out at an "*ad hoc*" election there is added the question of the financing of the schools of various denominations, the bitterness of elections will be vastly increased. No, the purport of the resolution will come—next year for London—but not by way of the School Board.

A CAMBRIDGE LECTURER in the *Saturday Review*, commenting on two recent articles in that journal dealing with Oxford and the Civil Service examina-

**Civil Service
Examinations
and the
Universities.**

tions, corrects some random statements, and gives himself some interesting statistics. The percentage of successful candidates who have had no special tuition at a crammer's works out roughly as follows:—1892, 44 per cent.; 1893, 32 per cent.; 1894, 54 per cent.; 1895, 57 per cent.; 1896, 55 per cent.; 1897, 42 per cent.; 1898, 28 per cent.; 1899, 40 per cent.; 1900, 27 per cent.; 1901, 34 per cent.

Further, since 1892, all the candidates, with scarce an exception, have been trained at some University, and 75 per cent. at Oxford and Cambridge. The contention of the *Saturday Review*, that the crammer is tending to oust these Universities, is not supported by the facts, and we agree with the "Cambridge Lecturer" that it is no bad thing for a man who has passed three or four years at the University "to concentrate himself for a short time, under able tuition, on the task of co-ordinating and testing his knowledge, with a view to examination." We fear, however, that in most cases the term or two terms spent with the crammer are devoted to tackling two or three fresh subjects, such as mental science and political economy, with a view to scoring marks. To limit the number of subjects a candidate may take up is a much-needed reform.

EARL BEAUCHAMP gently chaffed the Lord President of the Council, and referred it to the noble Duke's modesty that he should declare himself wholly unable to understand speeches on education. The Earl wanted papers in reference to the effect of the Education Act and Minute of 1901 upon evening continuation schools. He intimated that the effect had been disastrous, and stated that returns from every part of the country supported this view. For once the Duke replied as the head of a Government Department may be expected to reply. He showed a complete grasp of the position, and had the details at his finger ends. In the first place, these schools had shown a slight decrease before the Act of 1901; so that any further decrease might be referred to other causes than those Earl Beauchamp suggested. Secondly, a large proportion of evening schools were carried on by other than School Board authorities. These were not affected by recent legislation. Definite and complete returns had been obtained from 132 School Boards, out of some four hundred circularized; but figures based on these returns were necessarily fallacious. The Duke completely met Earl Beauchamp's criticisms at every point, and further expressed his conviction that when the full returns for 1901 to 1902 were at hand, a considerable increase would be shown.

PHILANTHROPY is sometimes divorced from the practical and business-like qualities which are necessary to make it succeed. But Mr. Carnegie, a businessman himself, has been able to secure a body of trustees for the administration of his Scotch benefaction who show a like qualification. The report of the executive committee on the working of the Trust for the first year is satisfactory. Applications were carefully considered, and some hundreds were refused—in itself a certain guarantee. For, at first, it was thought that a student had merely to ask in order to receive his share of the bounty. Still even now the conditions of receiving a grant are perhaps too little severe, and it may be wise to raise the standard, so that the "Carnegie students" may take the rank of "scholars." The Committee assure us that "in a large number of cases the payment of class-fees has proved a boon of the greatest value to deserving students." The case of one student who has already refunded his fees has drawn a very strong letter of appreciation from Mr. Carnegie.

**Evening
Continuation
Schools.**

THE advocates of the elementary-school master sometimes speak as if their *protégé* were only fit to be put under a glass case or wrapped in cotton wool. To the proposal that entrance to a higher-grade school should be determined by examination, and that a record should be kept of such examinations, Dr. Macnamara took a professional objection. The examination would be made the stamp of the teacher's capacity, and would become an unfair factor in the question of his promotion. To us such an argument seems paltry, and we doubt if many teachers will feel grateful to Dr. Macnamara. Of course, a teacher's success in preparing his boys for examination depends upon other things besides his capacity for teaching, and surely no Board would make promotion entirely depend upon examination results. In our opinion, a leaving examination for Standard V. as a preliminary condition to admission to a higher-grade school would be a wise precaution, and would do much to remove the feeling of insecurity that has arisen since the total abolition of individual examination. However, the London School Board would have none of it.

**Higher-Grade
Schools and
Examinations.**

WE have before us copies of two letters by the Director of Education for the Transvaal and Orange River Colony, addressed the one to English teachers entering on their new duties, the other to colonial teachers, mainly Dutch, who are already engaged in the work. To the former Mr. Sargent points out that the first common ground that we hold with the race that is fighting us to the death is the school, and the future welfare of the country will largely depend on the impressions that English teachers make on the rising generation. As to the children themselves, Mr. Sargent writes: "You will probably be struck, as I was, with their charm of manner and docility; you cannot fail to notice their perseverance and eagerness to learn." If other less amiable traits are observed, *tout savoir est tout pardonner*. As to the vexed question of language, Mr. Sargent urges teachers to learn something of Taal, "that expressive language of the Dutch Afriander population, which measures and describes everything through the experience of farm life." Secular instruction is to be given in English because Boers, no less than Dutch Afrianders, fully recognize the material, if not the intellectual, advantages of a knowledge of English. Religious instruction is to be given in Taal "lest we should produce a feeling of spiritual alienation between father and son. To my thinking, the State should not stand indifferent in matters of religion, but should give all encouragement to children to become full members of the Church to which their parents belong." The second letter treats the colonial teachers to give their stranger colleagues a hearty welcome, and contains the important announcement that training colleges are being made ready in which young teachers "may learn more of their profession than they can in the rough and tumble of a camp school." If our legislators and ministers would show a little more of the generous sympathy and wise tolerance that inspired these letters, there would be better hope of progress at home and peace abroad.

THE *Schoolmaster*, like the sullen dame in "Tam o' Shanter," has been "nursing her wrath to keep it warm." At first it expressed satisfaction with the Register, qualified by a mild expostulation as to the inadequate representation of the N.U.T. on the Council. "On further consideration," it discovers that the Register is "a sort of social *index expurgatorius*," contrived so that governors of secondary schools "may have marked off for

**The
"Schoolmaster"
on the Register.**

them all the mere elementary ones of the profession." "Having spent their time, their labour, and their money in order to confer lasting benefits upon the community at large, without, of course, receiving in the slightest degree any gratitude for, or recognition of, their efforts, they have the ineffable satisfaction of finding that the most conspicuous fruit of their disinterested labours is the fact that they are snubbed and flouted themselves."

HAVING for the last twenty years contended for an inclusive Register, and maintained, at a time when the principle had but few adherents, that the elementary teachers, as trained, had a better right than most secondary teachers to be placed on the Register, we may frankly tell our friends that this angry ebullition seems to us uncalled for and unwise. We should ourselves have preferred a simple alphabetical list, with qualifications and experience entered against each name. The Consultative Committee, on which the elementary teachers were adequately represented, preferred a double column, and, for the life of us, we cannot see the harm. In either case the class of school in which a teacher was engaged would have appeared, and those governors who object to elementary teachers (all are not so foolish) would have had no difficulty in sifting the wheat from the tares. If, on the other hand, as the College of Preceptors desired, the same standard of general education had been demanded from all, we doubt whether 1 per cent. of the forty-five thousand N.U.T. teachers would have found themselves on the Register. Can it be that the N.U.T. consider themselves "snubbed and flouted" because they are registered without fee? In that case, the insult is easily wiped out.

THE King Alfred School Society has been discussing Home Lessons, and it has issued two weighty medical opinions against the prevailing practice. Sir Joseph Fayer urges that children "under ten or twelve" (we wish he had been more definite) should work only in the early part of the day, and that for young people above that age the evening or preparation work should generally be diminished below its present standard. Sir James Crichton Browne is less measured in his language. He accuses teachers generally of imposing the heaviest part of school work—the opening up of new ground—at a time when brain function is at its lowest ebb, and pronounces that evening preparation of lessons if faithfully performed must be prejudicial to the fatigued brain. Now we are free to allow that head masters as a rule are either ignorant or careless of the laws of health, and in one or two of the London day schools a monstrous amount of home work, both in quantity and in quality, is extorted from babes and sucklings. On the other hand, in most of the girls' high schools with which we are acquainted little or no home work is exacted from the juniors, and the home work of the seniors is limited to revision, repetition, or the application of rules that have been studied in class.

TWO misstatements as to the attitude of the County Councils towards the Bill of 1896 should at once be nailed to the counter. Mr. Yoxall, in his pamphlet "The Coming Education Bill," says: "Six years ago the Technical Education Committees of the County Councils showed a dislike to taking on even the work of secondary education (in the older sense of that term); and this was one cause of the downfall of the Education Bill of 1896." The *School Board Gazette*, referring to the West Riding

resolution against elementary powers, says, twice over: "Those who remember the controversies which surged round the Government Bill of 1896 will recall the impression which was created by a similar expression of opinion on the part of the County Councils Association." Our readers will *not* be astonished to hear that there is no shadow of foundation for either of these statements. To deal with the latter first. On May 13, 1896, the County Councils Association met in a general meeting; it was unanimously resolved:

That this Association, without expressing any opinion on the controversial portions of the Education Bill, do approve generally of the proposals contained in the Bill to place the control of *elementary* and *secondary* education in administrative counties under a Local Educational Authority, and, as regards those counties, the County Council, acting through a Committee as the Educational Authority, is well qualified to undertake the powers and duties imposed upon that body by the Bill.

As regards Mr. Yoxall's statement, the facts are still more remarkable. It is true that seven County Councils in England did then resolve against *elementary* powers, but not a single one resolved against the secondary powers of the Bill. It is thus that history is made, or, rather, manufactured.

THE London School Board has ordered some hundred new pianos, and there is the usual batch of angry letters to the newspapers. Even in the prehistoric days of elementary education—before 1870—village schools had their piano or harmonium, and we should be sorry to think that any department of a London Board school is without a piano. The old superstition crops up again, this time from Leeds, that children are taught instrumental music. If they were, what would one piano be amongst four hundred girls? But for marching, physical exercises, and songs a musical instrument is of great service and holds an important position in the daily curriculum. That Mr. Forster did not contemplate such expenses is doubtless true. Still less did he perhaps foresee the time when a School Board would order a rubber-tired omnibus to take children to school. It is a logical outcome of free education. The poor little sufferer who cannot walk to school is not on that account to be neglected. The feeling of public responsibility is growing, and well that it should be so. Private munificence does much; but Homes and Institutes cannot cope with the demands made on them, and schools for physically defective children have become a necessity.

SCHOOLMASTERS sometimes wax indignant when it is suggested that they are not the best persons to advise on or to control education. But in these columns we have, so we believe, never exaggerated the importance of experts. Specialist or expert—the very name suggests a limitation. The family doctor knows the constitution of his patient, and gives advice directed towards the establishment of a general state of good health; the specialist sees disease in a single organ, and is often indifferent to general health. This is the prelude to a caution in reference to the appointment of a number of oculists to the London School Board. By all means let the children have competent help in the matter of their eyesight. It is of first importance. But we hope that, while the oculists order countless pairs of spectacles for existing children, they will not omit an inquiry into the causes of the trouble, and that they will report to the Board upon such matters as the type of the text-books used, the position of the light, the distance of the children from the black-board, and similar points.

THERE has been a remarkable change during the last six years in the opinions expressed by speakers on educational subjects with regard to private schools. This change of opinion is very largely due to the increased activity of the scholastic associations—not only those which represent the views of private schools and their proprietors, but mixed bodies like the College of Preceptors and the Teachers' Guild. By steadfastly proclaiming the necessity of maintaining and retaining such private schools as are efficient, they have at last convinced both the man in the street and the politician. There are, indeed, private schools which differ little, if at all, from elementary schools: there are others where the pretence of intellectual work is a farce, but these are a decreasing minority, and there is a danger, in our zeal for reform, of rooting out the wheat with the tares. It would be a calamity if all English schools tended to become of one type—a condition of affairs which is rapidly approaching in Wales. But now we have Sir John Gorst's statement that private schools, if efficient, will be "recognized"—recognized, we suppose, as contributing to the supply of education, and therefore not liable to undue competition.

The Private School.

A GAIN Easter has come, and we are still no nearer to any general agreement upon the date of the spring holidays. At the present moment some children from boarding schools, both boys and girls, will be at home. At the end of the present week other schools will break up, and some will begin work again. And so it will be throughout the month of April. Many schoolboys and schoolgirls look forward with but lessened pleasure to their holidays, because they will not see their brothers or sisters who may be at other boarding schools. The inconvenience is so obvious that we wonder parents have not taken up the question. By general consent the middle and end of April is the best period for the spring holidays, though this position is complicated in some districts where Easter is neglected in favour of Whitsuntide. As head masters have up to the present failed to bind themselves to take common action, it may remain perhaps for the Local Authority to set an example by pressing upon all schools over which they have influence to agree to a certain date.

Easter Holidays.

TECHNICAL EDUCATION.

THE Honorary Secretary of the Association of Technical Institutions draws attention to the fact that Sir William Hart-Dyke did not make the statement attributed to him in this column last month. We regret to have been misled by an inaccurate report, and are glad to learn that Sir William was a true prophet, inasmuch as he predicted the proposal of the Government as regards Local Authorities for Education would be against election *ad hoc*. The Bill, introduced by Mr. Balfour in a speech remarkable both for its manner and matter, is, at any rate, sound in general principle, and is likely to afford a useful basis for settlement among all but "extremists." In its present form it would be acceptable alike to progressives and unprogressives among the County Councils, and probably very few of these Authorities would object to immediately control elementary, as well as secondary and technical, education. A few Councils, it is true, have followed the lead of the West Riding, and repudiated the larger responsibility; but, on the other hand, others have expressed the opposite view.

IN the Report of the Technical Instruction Committee for the City of Liverpool, the Chairman, Councillor Oulton, in urging the necessity for early legislation, indicates the more prominent points with which a Bill should deal. Such matters as the limitation, financial or other-

wise, in regard to education, of the City Council; the constitution of the Local Education Authority, and its powers of expenditure and administration; whether primary education should be included, excluded, or be optional to the City Council; the relation which the new Authority will hold to the training of teachers; and the provision of new buildings, colleges, or schools when and where they may be required, and the relation of other than municipal schools or institutions to the Local Authority—these and other important questions are not made easier of solution by delay.

THE work of technical instruction in Liverpool as shown by the Director's Report is progressing on sound and satisfactory lines. At the beginning of last year the City Council assumed the direct responsibility for the work of the various evening science, art, and technological classes hitherto carried on as an independent organization. The new Central Technical School building, commenced in 1891, was completed during the year, and "for the first time the important central evening classes for artisan students of science and technology were able to meet in rooms specially provided, arranged, and equipped for the purpose, and under conditions which made it possible for the theoretical, and more especially the practical, part of the instruction to be efficiently carried out." The Committee now have under their control the Central Technical School, two new branch schools, and a third centre which has been considerably extended. The following facts from the report give some indication of the character and scope of the work:—Grants were paid to secondary schools amounting to £1,543, the number of pupils on the roll being 1,927. The School of Commerce, which provides systematic day courses as well as afternoon and evening classes, was attended by 219 individual students, a considerable proportion of whom attended four or five times a week. Commercial classes at other institutions attracted over two thousand students, while the number of students registered in evening classes for science, art, and technology numbered 4,153. The Committee also spent a sum of £1,290 on scholarships and exhibitions.

THE ninth Annual Report of the Education Department of the Durham Council is a well arranged and detailed review of the results obtained under a well organized scheme of operations. The following figures, relating to the educational institutions of the county, are of interest. The figures given, it is said, are from the official returns of the Board of Education:—

	No. of Schools.	No. of Scholars.	Parliamentary Grant.
Public Elementary Schools...	450	165,758	£213,113
Secondary Schools—			
Public	11	1,447	3,440
Private	34	1,652	6,202
Evening Preparatory Schools	182	13,740	2,212
Other Technical Schools and Classes	53	4,437	

THE Durham Committee has, very properly, laid down stringent regulations requiring satisfactory evidence of preparatory work before permitting students to undertake special or technical classes. "A number of students who formerly were admitted without question to any science class are now taking a systematic course; whilst a few have unreasonably declined to fall in with the scheme, and have ceased to attend the classes. Both these causes have contributed to reduce the actual number in attendance at elementary science classes and in the ordinary grade of technological and commercial subjects. On the other hand, systematic work has resulted in increased interest and in a greater proportion proceeding to advanced studies. This is shown by the statistics. The proportion of advanced work in 1898-9 was 19.3 per cent. During 1899-1900 this increased to 26.9 per cent., and in 1900-1 to 27 per cent. The policy of the Durham Committee is sound and reassuring, and, if it was generally adopted, evening class instruction throughout the country would be much more effective and much less wasteful—that is to say, commencing, in the first instance, with the preparatory classes well scattered over the country, feeding the centres conducting classes of the next higher grade, and then, in turn, handing their best students to the technical institutes in the county and county boroughs.

The expenditure of the County Education Committee for the year amounted to about £17,000. The number of students instructed was as follows:—In evening schools and classes, 7,592; in secondary schools, 1,072; holding scholarships and exhibitions, 454. It is interesting to note that there are now five technical schools in the county, towards the erection of which the County Council made substantial building grants. Rate aid is also provided in 9 of the 61 urban districts to supplement the contribution of the County Fund.

ATHLETIC GAMES AND MASTERS.

AN APOLOGY.

By H. B. TRISTRAM.

WE can always hear an undertone of opposition to the time spent on games at our public schools: and this every now and again swells out into a full chorus of indignation and expostulation. Athletic games are a sort of tame stag, ready to be turned out and hunted, whenever our educational empirics want a little excitement. But they take good care that the poor animal is never pulled down and killed. Occasionally, a red herring is dragged across the trail, and the hounds go off on another scent: it may be in pursuit of commercial education. Lately the hunt has been very hot, and the hounds have been running strongly in full cry, laid on to the scent by a poet who has certainly on former occasions succeeded in understanding and expressing the popular feeling. This time, however, he is tilting at the wrong windmill. But Kipling's attitude towards our sports reminds one of the way David Hume regarded Sir Richard Grenville's last fight in the "Revenge," as something beyond his ken, a freak, outside the scope of the sober historian.

Still, in other quarters, we do hear the question seriously asked, whether some of our recent unfortunate battles have not been lost on our playing fields. It is a most pertinent question. And, if there is any ground for answering it in the affirmative, a very serious indictment is brought against the system and management of our schools.

Such an answer may mean one of two things. To say that our playing fields are responsible for the loss of battles means either that too much time is spent over athletics to the detriment of other studies, or that those games which ought to teach quickness of judgment, power of initiative, resourcefulness, courage, and strategy have lamentably failed to do so, while there is supposed to be good authority for asserting that this was not the case a hundred years ago. And yet a hundred years ago athletic games were utterly without organization; and football, for the most part, was of the Shrove Tuesday order, such as we may still fortunately see in a few places, played up and down the main street of a town—a game without rules, played for the pure sport of playing.

How then are we to locate the blame? Many will reply that these games take up too much time at school. Well, cricket is played during one term only out of three; and football really requires very little time, certainly no longer than a boy ought to be out taking exercise, if he is to keep himself fresh and vigorous; and, if it is to be played successfully, it must be limited to three, or at the very most four, games in the week. A more serious charge against our school games is that they occupy too much of a boy's thoughts, and take his mind off other more important matters. Of such an objection I have a very keen appreciation, and I fully sympathize with those in authority who refuse to allow their boys to play any more matches in which the excitement is keen. Yet, if we are going to make any serious use of cricket and football, there must be at least a few matches in which boys take a keen interest, though it is of little importance whether they are with another school or only another house. If there is no interest in a match, it would be better not to play it. If there is interest in it, boys will think about it beforehand; and I should like to know the opinion of those concerned as to the value of the three hours' work on the morning of "Houses and Commoner Sixes."

It may be unfortunate that boys find such an absorbing interest in their games; but they must be interested in something, and only a small proportion will find the necessary interest in their book-work, unless the methods or subjects of our teaching are greatly changed. Perhaps, after all, it may be just as well that they have some healthy and inspiring subject on which to spend their constant stream of talk. But I am inclined to think that in few schools as yet has there been any attempt to make serious use of our great games. The possibilities of football and cricket as a means of education have been almost as much neglected as *Bradshaw* and whist.

If war has become more scientific during the last hundred years, no one will deny that football and cricket have developed in the same direction, and at least in an equal degree. But in speaking of a scientific training I mean something very different from the mere technical skill of playing forward straight, or taking a pass clean, and sprinting for the goal line, when there

is a clear road in. Learning to play straight is like learning to write Latin prose grammatically, or to plane a piece of wood square—of very little value as a training to those who find no difficulty in it; but an excellent discipline for those who at first think the performance of the task quite hopeless.

It is not merely to teach hand and eye to act together that we want these games. They are a valuable complement to other school work in training the intellectual, as well as the moral, faculties. Viewed in this light, cricket does not, perhaps, rank as high as football; yet it has great possibilities. The captain of a school eleven has opportunities which any one might envy; greater opportunities than the captain of a county eleven. For in first-class cricket the capabilities, style, and idiosyncrasies of most players are familiar. But it is not so in school cricket. The opposition is generally an unknown quantity, and, in spite of proverbial uncertainty, in school cricket we are constantly treated to most ridiculous surprises in bowling, as well as in batting. So a school captain has to decide, after seeing a new man play a couple of balls, what he is likely to do or try, and to place his field and change his bowling accordingly. And, if he can be taught to observe, and deduce satisfactorily on such points, surely the training is worth the expenditure of a good deal of time.

But, I am told, all that refers only to the captain; and the rest have nothing of the sort. But are they not at the same time being taught to observe? And is it nothing to teach a selfish boy, who is a slow scorer, to rise, when occasion requires, superior to averages, and hit as best he can, because his side must make fifty runs in twenty minutes? Is it nothing that a boy who is naturally slow to trust, and hesitating in his judgment, should learn to run sharp runs—a delightful amusement, yet demanding the coolest head, the most rapid decision, and the most sublime confidence between the partners? The art of running can only be acquired in matches; and, if people are not ready to sacrifice an occasional wicket in the sacred cause of education, they may win the match, but they lose something vastly more important.

Most of the educative advantages of cricket are to be found in football, and in more constant operation; while, in addition, all the physical powers are brought into action. But, though I consider football the finest physical training for boys, I regard it as hardly less important as a moral agent. My own experience of late years has been almost entirely confined to Rugby football, and in that, I confess, I am an old Tory. I am sorry to see the ever-increasing tendency to play to the three-quarters; for I am by no means alone in thinking that this tendency is interfering with the excellence of the game as a school training. What we want for our boys is the genuine hard-shoving, forward game, in which the forwards do the great bulk of the work, and I should gladly welcome any legislation that would help this. But the soul-destroying consideration of gate-money forbids it. I wish more of those interested in education could realize the value of a hard game of football—a game in which the player has to play himself out to the very end. I remember how, after a magnificent match, in which every forward on either side had to work to the last ounce, and at the end nothing was scored (I believe the ball never crossed either goal line), a boy said to me: "I didn't think a man could go through an hour's work as hard as that, and live." Was that no education for him? He had done his duty at a cost to himself that he had never known before; and he was a far better man after it than he was before it. And I doubt if football can be equalled as a training for the faculty of initiative. All through the game a player has to act on his own responsibility, and that with a furious suddenness which demands instantaneous decision. He must see the right thing to do, and do it, without the slightest hesitation; for hesitation always spells failure.

I am not going to discuss the comparative merits of the various styles of football. But we at schools have to consider how we may turn football to the greatest advantage; and I very much doubt if hitherto we have made the most of it. I believe the man who was a good soldier a hundred years ago would be a good soldier now; and I am quite sure that the man who was a good football player a hundred years ago would be a good football player now. He had then to learn everything by the light of nature, and by experience. If he was successful, he was very successful. It was the same with the old method of classical teaching. The best scholars made

themselves scholars. It was not a system calculated to make the best of merely average ability; but it was a grand system for the strongest. But now, in most cases, our scholars are carefully selected at an early age, and all through their public-school career are still more carefully coached. We may presume that the results are satisfactory for the scholars; and it does not concern us here to consider whether they are satisfactory for those of inferior brain power. What does concern us is that our school games should be so managed that not only the natural athletes, who may well be trusted to look after themselves, but also those of inferior quality, the indolent, the clumsy, and the weak, get the fullest possible good out of them.

The enemies of our classical education complain that the teaching of modern subjects in classical schools is so bad, and so little time is spared for them, owing to the all-absorbing demands of classics, that good results cannot be expected. For our athletic training we do not ask for more time, but we do ask for better teaching. If good teaching is considered so necessary for the dull or the average boy in his book-work, might not the same consideration be shown for him in his field-work? Now that our great games are universally recognized as part of our public-school system, why should the athletic master be the butt of cheap sneers? Why should it be considered ridiculous to engage masters because they understand these games? Only for pecuniary reasons do schools ever object to have a cricket professional, who is supposed to teach boys cricket. Among these professionals there are many capable men; but I think that experience has shown that, even in the technique of cricket, they are not the most successful teachers, and few of them begin to understand the real educative possibilities of the game. To do this we want a more highly trained intellect, something more than a mere athlete.

However far the doctrine that a man could teach classics because he was a scholar has been accepted in the past, it is no longer one of the cardinal points in a head master's creed. And there is no more reason for supposing that a man can teach games well because he can play them well; though, just as a man must have some personal acquaintance with the classics if he is going to teach them, so there are very few who cannot play these games moderately well and yet teach them well. But, if cricket and football are to hold the position in our schools which they deserve, if they are to be made of more real use, if they are not to be merely tolerated because they give boys something to occupy them when they are not in school, we must have a race of enthusiastic athletic masters who care nothing for their own performances, but only think of the welfare of their boys, and who can bring themselves to realize that winning matches is not the ultimate object of this part of our education.

Some such men I know, and I am confident that there must be an abundance of them in the country; but they hardly get a fair chance, and their efforts are rarely taken seriously. The advocates of other branches of education have for years past been making this same appeal—to be taken seriously. But there is an obstacle in the way which seems insuperable. *Beati possidentes!*

CORRESPONDENCE.

MODERN LANGUAGES AND THE UNIVERSITIES.— SUPPLY OF TEACHERS.

To the Editor of The Journal of Education.

SIR,—In the March number of your *Journal* "Zeitgeist," after inquiring into the main causes of our present undoubted shortcomings as regards proficiency in modern languages, especially French and German, made certain definite proposals for a sure and speedy remedy. The greater part of his letter, especially the earlier portion of it, seems to me admirable. It contains a clear and fair statement of the case, and a by no means exaggerated criticism of the position of the large majority of our head masters and of many of our Universities and University colleges. Towards the end of his letter "Zeitgeist" shows a familiarity with what has been done and is being aimed at abroad, but it seems to me that, with regard to what he says about the general state of things in this country, and the re-

medies he wishes to see applied forthwith by the Board of Education, he is not only somewhat unpractical, but decidedly unfair to some Universities, especially to the University of Cambridge.

In some cases his absolute condemnation of the policy of existing educational authorities is perfectly right and well deserved. Thus everything said by him about the indifference and total lack of sympathy on the part of nearly all the head masters of our larger secondary schools is, unfortunately, only too true. This sad fact was demonstrated again last December by their attitude at the Cambridge Conference. It seems clear that for some time to come modern language teachers have nothing to hope for from them, and no doubt future generations will lay the responsibility of neglecting a subject of the utmost national importance in great part at the door of our present head masters. Against such a charge they can hardly plead that their resolution to print and distribute Mr. Bell's paper is as much as modern language teachers and the parents sending their boys to the great public schools have a right to expect from those who claim to be leaders in the field of secondary education.

Again, the complaint of "Zeitgeist" about the indifference of the Universities to the claims of modern languages is, at least in part, well founded. The backwardness of Oxford in this respect is especially noticeable and deplorable. At this ancient seat of learning there is, up to now—in spite of the exceptional advantages afforded by the Bodleian Library and the Taylorian Institute for a thorough scientific and practical modern language study—no Honours School of Modern Languages, and apparently there does not even exist on the part of the authorities any intention of starting one. Thus, at any rate so far as *men* are concerned, Oxford has been and is actually refusing to take her share in the training of the British modern language scholars and teachers of the future.

But, in blaming the Universities as a whole and without exception, "Zeitgeist" has obviously gone too far. In his praiseworthy zeal for exposing shortcomings he has for a moment overlooked the very decided improvement which in recent years has taken place in our modern language teaching, and also in our modern language examinations. This improvement is very largely due to a band of enthusiastic English-born school and University teachers of French and German, who have received their training at Cambridge—a training which, in nearly every case, was supplemented by residence abroad. Men and women of British origin, trained at Cambridge and those other British Universities where modern languages are now seriously and effectively taught, are assisting in ever increasing numbers the best foreign teachers of modern languages in our secondary schools. The best of our school teachers, together with the most prominent University professors, began to organize their profession by starting, nearly ten years ago, the Modern Language Association, and are now actively engaged in discussing the best means of teaching their subject and of training efficient teachers for the large demands of the immediate future.

It is, therefore, not right to ignore or to underrate the work done in recent years by some, at least, of our Universities, notably by the University of Cambridge; and your able contributor might well have welcomed the gradual spreading of more satisfactory *vis-à-vis* tests in modern language examinations in schools and Universities. Most of these much needed reforms have come from one or other of our Universities, and were unheard of ten or fifteen years ago.

I think that "Zeitgeist" rightly blames the Universities for having, so far, refused to admit a modern language as an alternative for Greek in their preliminary examinations, and by so doing denied to modern languages the status that the ancient classical languages have hitherto monopolized. And here I wish to urge the University and college authorities not only to delay no longer this much needed reform of their preliminary examinations, but to go one step further. There is no possible doubt that at the present day—whatever the state of things may have been thirty years ago—the ability to read *both* French and German is absolutely indispensable for *all* kinds of higher study. Hence the Universities should, in their own interests, *insist* on a reasonable proficiency in either language being shown by any freshman reading for honours, whatever his special subject may be. For this reason, I should amend "Zeitgeist's" proposal by insisting that in the future, in all our entrance examinations (in Universities and colleges), *at least one* modern language should be made *compulsory*, and that a

second should be strongly encouraged by making it an alternative for a classical language.

So far I have, on the whole, been able to agree with the views which have so forcibly been set forth by "Zeitgeist." But when he comes to discuss the best means of obtaining in the near future a large number of thoroughly competent teachers of modern languages I feel bound to part company with him, and to enter a very strong protest against his scheme. His plan is to ask the Board of Education to set apart for about ten years the yearly sum of £5,000 for the purpose of giving travelling studentships of the value of £100 a year to intending modern language teachers. So far, so good. He rightly urges that a judicious use of this comparatively small sum would soon be attended by the most beneficial results. But he goes on to say :—

Let the Board of Education invite graduates of any British University who are in possession of an Honours degree, and who wish to qualify as modern language masters, to apply for studentships of the value of £100 per annum, tenable for four years. Select twenty of the applicants who seem best qualified for the task, and send them for two years to France and for two years to Germany. The period of two years might be reduced to one year in either country for men who have graduated in modern languages in Great Britain. . . . As a test of their application and industry, they might reasonably be expected to obtain the degree of *Licencié ès Lettres* in France, and of *Philosophie Doctor* in Germany.

It is to these proposals that I most strongly object. I consider them not only impractical, but positively mischievous. I note in passing that no women teachers are considered in this scheme, the writer being, apparently, anxious to secure in the shortest possible time a large band of able *men* to teach modern languages in our secondary schools for boys.

In his eagerness to secure modern language teachers "Zeitgeist" refuses to develop what we already have, to foster a young but promising plant; he aims at beginning afresh, and, at least, partly, with men whose bent and studies have so far *not* been modern languages. Does he really believe that for his purpose any man with a good Honours degree can compete, and should be allowed to compete, on equal terms with a man who has obtained a good Honours degree in modern languages? This seems to me to be a fatal mistake, and the adoption of this plan would certainly do modern language studies at our Universities far more harm than "Zeitgeist" has probably realized. Nothing could be more beneficial than the grant of a large number of travelling studentships to intending modern language teachers, but these studentships should *exclusively* be granted to such men as have studied the subject for years and in a thorough manner at a British University which possesses a well organized modern language department. *Only* those men should be helped by the State or by public bodies, such as County Councils, Chambers of Commerce, &c., who have spent some of the best years of their life, their energy, and their money in making themselves proficient in modern languages at one of our own Universities.

In every respect the proposal to call in graduates in other subjects seems quite unsatisfactory, and I feel sure that in no country in the world would the authorities for a moment dream of adopting such a plan. It would be an undeserved blow for those who have up to now given up their lives to modern language study and teaching; it would most surely choke and probably nip in the bud that young and promising plant of an English school of modern languages which is only just beginning to take root and to blossom forth on our soil. Certainly this cannot be the aim that "Zeitgeist" has in view. There is not even now such a dearth of duly qualified teachers of modern languages as "Zeitgeist" supposes; only these men require to have a freer hand, better opportunities, more time, encouragement, promotion, chances of head masterships, and also, as "Zeitgeist" most properly urges, and as is actually done in some foreign countries, occasionally—say once every five years—a grace term, with continuation of salary and status, in order to go abroad and brush up their knowledge of the languages.

Again, I cannot help thinking that it would be a very unwise step to *require all* the men to whom such a studentship was given to take one or even two foreign degrees. The work that would have to be done for the obtaining of these degrees would prevent most of the students from doing what is most needed to qualify for their subsequent work in this country.

Some of the best would probably graduate abroad without any compulsion, as some have done hitherto, but the majority of our graduates would certainly be unwilling to go in for two new foreign examinations, nor could it be urged that the reading for them would be the best possible use they could make of their time abroad. Would "Zeitgeist" suggest that they should be called upon to refund the money of their studentships in case they failed in these examinations? The conditions under which these studentships might be given should not contain any stipulation of the sort proposed by "Zeitgeist"; I could mention some very different conditions that might with great advantage be imposed upon the holders of such modern language studentships, but it would lead me too far to go at present into details on this subject.

In conclusion, I warmly welcome "Zeitgeist's" outspoken letter as a valuable contribution to a question the speedy solution of which is of the *greatest national importance*. The suggestion that the Board of Education might be approached is, to my mind, good, and not without promise. This is a point which the Modern Language Association might well take up and carry, to the great advantage of the country. Some other means of efficiently encouraging the study of modern languages and of increasing the number of duly qualified English-born teachers of the modern foreign tongues have been suggested in my letters to the editor of the *Times*, dated December 26, 1900, and January 29, 1901.

In further discussing this most important question from every possible point of view, we may do well to remember Heyse's maxim :

Verschiedene Ziele? Böses Spiel,
Doch können wir uns noch gelten lassen.
Verschiedene Wege zu gleichem Ziel?
Da hilft kein Gott, wir müssen uns lassen.

—Yours, &c.

SAPERE AUDE.

March, 1902.

THE NEW METHOD.

To the Editor of The Journal of Education.

SIR,—Prof. Rippmann is mistaken in considering me a bitter opponent of what he calls the Reform Method. On the contrary, I gladly welcome any system that will bring about a better state of things. It is, however, at present doubtful, to say the least, how far the method is a panacea for the various evils that now exist. They are more deep-seated than any "method," however excellent, can remedy. In his able letter in this month's issue, your correspondent "Zeitgeist" goes earnestly and thoroughly to the root of the matter. As long as modern languages are *played with* (indeed in some schools it is little else), and inserted in the curriculum merely for show or to please parents, few of whom have any idea what learning a language really means, so long shall we be far behind other nations in this respect.

I quite agree with "Zeitgeist" that it is not national inability to acquire a foreign tongue that hampers our linguistic attainments. An Englishman, if the opportunity is given him, is quite as capable in this respect as most foreigners. But whether it is his natural modesty, or diffidence, or want of "push," it nearly always happens that when an Englishman meets a foreigner the conversation is carried on in English, even though the Englishman may be the better linguist.

That excellent results can be obtained in this country is obvious from the standard reached by some of the pupils in girls' high schools, where more time is devoted to the subject. It is impossible that much can be done in two or three hours a week, divided between conversation, grammar, translation, and composition. That the work is often relegated to teachers whose knowledge of modern languages is very slender is only to be expected under the "form-master" system. As a rule, he must be a good classical or mathematical scholar, with sufficient general education to teach a certain amount of history, geography, &c., while a smattering of French and German is all that is required. To teach the lowest form the elements of Latin or Greek a University man, who has studied these languages for ten or more years, is demanded. To teach advanced French and German, one who has picked up a certain acquaintance with these from desultory study and a few weeks' residence abroad is considered amply efficient.

As for the pronunciation, I obviously did not, as Prof. Rippmann seems to think, refer solely to the new method,

indeed, I hope from it for much improvement in this respect. Of the fact that the pronunciation taught to boys (I cannot from experience speak of girls) is indifferently taught, many instances have come to my knowledge. As an example, I may quote the reply of a public-school boy, when asked how he was getting on with French and German in the higher form to which he had been promoted. "Oh," he said, "all right now, but Mr. A.'s pronunciation is so different from Mr. B.'s that at first I could hardly understand him." Mr. A. is a linguist of established reputation.

Trusting Prof. Rippmann will now wipe me off the list of opponents of the "Reform" Method, and apologizing for the length to which this letter has run,—I am, Sir, yours faithfully,
H. S. BERESFORD WEBB.

P.S.—By the omission of a comma after "excellent" in the first line of the second paragraph of my former letter, my meaning was not quite clearly expressed.

REGISTRATION.

To the Editor of the Journal of Education.

SIR,—I learn from to-day's papers that the Registration Council is now established, and will shortly be summoned by the Board of Education. Their first work will be to resolve the many vexed questions which were raised by the Order in Council and not laid by the official answers in the House. To determine what shall constitute a recognized school must occupy them for many sittings. I will not presume to indicate the solution that would satisfy me; in fact, without some preliminary census of secondary schools, the problem seems to me insoluble.

My object in addressing you is to urge some general principles which I hope will commend themselves to the Council. The Register, in its inceptive stage—that is, during the three years of grace—should follow the precedent of the Medical Register, and be as inclusive as is possible under the Order. The true policy is to get the bulk of secondary teachers upon the Register, so that a stigma shall from the first attach to any unregistered teacher. This first step attained, it will be easy afterwards to screw up the standard. I hope, therefore, that in doubtful cases—and there is, under the Order, a broad zone of doubtful cases—the Council will give the applicant the benefit of the doubt.

There are no penalties for non-registration, and at present no privileges are attached to registration. The *vis a tergo* must be applied from without, and I hope that in all future schemes for schools drawn by the Board of Education it will be enacted that the head master and a substantial proportion of the staff must be registered teachers. This may seem but a *σικυρά ρονή*, a puny motive power; but it would help to set the machine going, and its effect would be cumulative.

From my point of view, the backbone of the Register is the enforcement of training. For the first three years an alternative is allowed, and I am all in favour of this indulgence. But in the clause which admits a one-year student-teacher with a certificate in the theory of teaching there lurks a snake in the grass. If this clause is not very strictly interpreted—if, for instance, no other "supervision" but that of the head master is required—it may prove a back door by which candidates will shirk all systematic training—something like the pupil-teacher system for primary schools, or entrance to the Army through the Militia.—Yours, &c.

A TRAINER.

March 29, 1902.

MELDOLA'S "INORGANIC CHEMISTRY": A DISCLAIMER.

To the Editor of The Journal of Education.

SIR,—A notice of a book bearing the above title appears in your March issue. May I, in justice to myself, ask you to be good enough to allow me to make a public disavowal of any and every responsibility in connexion with a work which, it appears, that I am unfortunately unable to dissociate from my name? It is true that some twenty years ago I wrote a book which, in its original form, was used in many schools, and continued to be in use down to comparatively recent times. When some years ago the publisher asked me to revise it and bring it down to date I declined, on the ground that I did not consider that there was any justification for adding to the already too numerous books of that class which had come into existence since 1872. The task was then entrusted to Mr. Castell-Evans, who is alone responsible for

the work as it stands. I was not consulted at any stage of the revision, nor did I see any of the proofs. Mr. Evans states in the preface that he takes the responsibility of all additions and corrections made in the present edition. That my name should be now printed on the title-page is an anachronism, and I beg to make known through your columns my complete severance from a work which has been issued as though with my sanction without any such sanction having been given by me.—Yours obediently,

RAPHAEL MELDOLA, F.R.S.,
Professor of Chemistry in the City and Guilds of
London Institute, Technical College, Finsbury.

OXFORD SCHOLARSHIP EXAMINATIONS.

To the Editor of The Journal of Education.

SIR,—My thanks are due for your kind notice of my paper read before a recent meeting of public-school science masters, advocating reforms in the present methods of conducting scholarship examinations at the Universities. When suggesting that every boy should be examined in his school subjects, viz., literature, mathematics, and science, I meant by the former both ancient and modern languages. Latin might be made compulsory, and either Greek or a modern language chosen as an alternative. However, I do not presume to speak with authority as to the details of this part of the examination.

You rightly interpret the views of the average college don when you ask how many would sacrifice a future Senior Wrangler to his want of knowledge of science, but I am glad to be able to state that at least one college at Oxford has advertised a scholarship the examination for which is to be conducted on the lines I have indicated. The suspicion and dislike, bred of ignorance, for knowledge of scientific methods has no doubt many strongholds in this country, but, if the example set by one enlightened college be followed generally, we shall soon cease to hear the scornful diatribes against "stinks."—Yours obediently,

M. DAVENPORT-HILL.

Eton College, Windsor, March 8.

"NATURE-STUDY" EXHIBITION.

To the Editor of The Journal of Education.

SIR,—Kindly permit me to state that the above exhibition is to be held at the gardens of the Royal Botanic Society, Regent's Park, on July 23 and following days. It will be open to colleges and schools of every grade, and the exhibits will include all that bears upon "Nature-study." Happily the project has met with the support of influential representatives of every branch of education; and the amount of interest which it has aroused is very gratifying. At the same time, its ultimate success must largely depend upon the co-operation of your readers. Sir John Cockburn, K.C.M.G., is chairman of the Executive Committee; and Mr. Charles Savile Roundell, of 7 Sussex Square, Brighton, is hon. treasurer.

I shall be glad to furnish full particulars, or to meet any one who may wish to see me personally at any time by appointment either at the Botanic Gardens or in St. James's Street, S.W.—Your obedient servant,

JOHN C. MEDD,

Hon. Secretary *pro tem*.

Stratton, near Cirencester, March 19, 1902.

WRONGFUL DISMISSAL.

To the Editor of The Journal of Education.

DEAR SIR,—I send you an instance of a flagrant case of unjust dismissal which has just come under my notice, and hope you will give it a prominent place in your next issue.

The Head Master of Atherstone Grammar School, Warwickshire, resigned his post at half-term, and gave the victim in question to understand that his services would be required by the incoming Head. The latter was appointed a fortnight from the end of the term, and told the victim that he was bringing his own men ten days from the term's end. The victim had done two years' work which, all the Governors agreed, was most excellent in every way. This took place last term.

It is only by the exposure of every such case that we can hope to remedy this undoubted injustice.—Truly yours,

March 15, 1902.

MIXED COLLEGE CLASSES.

To the Editor of The Journal of Education.

DEAR SIR,—Can you send me, or tell me where I can obtain, a list of the colleges in Great Britain which admit women to their classes?—I am, yours faithfully,

AGNES S. PAUL.

Elleray, Kilcreggan, Dumbartonshire, N.B.

March 17, 1902.

[A black list of colleges which exclude women from their classes would be more manageable.—ED.]

JOTTINGS.

THE Registration Council is now complete, and is composed as follows:—Appointed by—

Head Masters' Conference, Mr. A. E. Pollard.
Incorporated Association of Head Masters, Dr. R. P. Scott.
Incorporated Association of Head Mistresses, Mrs. Woodhouse.
College of Preceptors, Mr. E. E. Pinches.
Teachers' Guild, Mr. F. Storr.
National Union of Teachers, Mr. G. Sharples.

Appointed by the President of the Board of Education—Prof. B. C. Windle, the Rev. D. J. Waller, D.D., Prof. H. L. Withers, Prof. Meldola, Miss K. T. Wallas, Mr. J. L. Holland.

THE Duke's list is framed on the lines we ventured to suggest. Taking the six names in order, we find two representatives of the Consultative Committee and one, respectively, of training colleges, of the City and Guilds Institute, of assistant mistresses, and of assistant masters.

THE Report of the Departmental Committee on the Education of Officers for the Army is in the printers' hands, and may be issued any day. The report, we learn, is unanimous, and, considering the constitution of the Committee, of which Sir Michael Foster was chairman, it is a safe inference that Latin will no longer figure among the compulsory subjects for entrance to Woolwich and Sandhurst.

THE London ratepayer, if his views are fairly interpreted by his favourite organs, the *Telegraph* and the *Daily Mail*, considers that the London School Board wastes his substance and courts popularity by overpaying its staff. The Head Teachers' Association takes a different view, and Mr. O. Jackson, the newly elected president, tells a very different tale. In 1875 the average salary of an assistant master for his first year was £104; now it is £90. The Board, according to a recent return, will require for the current year 405 assistant teachers for the girls' department and 467 for the infants' department; but it is found that so far "repeated advertisements have brought no replies." One practical suggestion of Mr. Jackson we heartily endorse. The Board must provide some compensating advantages for teachers whose work lies in poor and uncongenial neighbourhoods.

THE report on the competitive examination of Militia officers held in September, 1901, has just been issued. The results are not encouraging. Out of a total of 20,000 marks for literary subjects not one of the Cavalry officers reached 8,500. Of the winners of commissions in the Foot Guards not one reached the low standard of 42.5 per cent., and one gentleman was awarded 20 out of a possible maximum of 4,000 in elementary mathematics. On the other hand, for the Army Service Corps no successful candidate gained less than half marks.

THE City of London College has undertaken a scheme for a higher day commercial college, the chief feature of which will be the study of foreign languages and foreign business methods. To carry out the scheme a capital sum of £25,000 is required, £15,000 of which is promised by the trustees of the Mitchell City of London Charity, provided the remainder is subscribed. The cost of maintenance is put at £2,000 a year. Of this the greater part, it is hoped, will be obtained from the Technical Education Board of the London County Council and the trustees of the City Parochial Foundation.

THE dream of a universal language is at least as old as the search for the philosophers' stone, and has haunted philologists from the Babel builders down to Johan Martin Schleyer. And now Sir Frederick Bramwell comes forward with a proposal to adopt Italian as the common language of civilization. The three leading competitors—English, French, and German—are, he holds, out of the running, on account of international jealousies; and Italian confessedly comes next in order of merit. Let each Legislature, including the United States, pass a one-clause Bill enacting that a knowledge of Italian shall be an essential qualification for all Government *employés*, and the thing is done. It looks simple enough on paper, but we cannot deal with language as with sugar; and a universal language seems to us more chimerical than a universal peace convention. According to Heine, the Romans conquered the world because they had no language but their own to learn. We fear the Italians will never have the same chance.

In connexion with the National Association of Manual Training Teachers, a series of meetings will be held in the School of Technology at Manchester during Easter, culminating in a public meeting on Easter Tuesday, April 1, at 3 p.m. Sir Philip Magnus will preside, and it is hoped a good muster of all interested in the development of our educational system will be in attendance. Excellent papers have been promised by experts.

WOMEN GRADUATES WANT SUFFRAGE.—In view of the fact that the question of education is to form so large a part of the Parliamentary programme, the women graduates of those Universities of Great Britain and Ireland which allow women to take degrees—viz., the University of London, the Victoria University, the Universities of Durham, Aberdeen, Edinburgh, Glasgow, and St. Andrews, the University of Wales, and the Royal University of Ireland—intend to wait (in deputation) on the University Members of Parliament with a petition. This petition will request them to introduce into Parliament a measure which shall have for its object the granting of the suffrage to women graduates, many of whom possess all the qualifications which would enable men to vote. Miss Roper, B.A. (Vict.), of Manchester, is at the head of this movement. The petition is being signed by women graduates all over the country. The petitioners submit: (1) "That the education of the children of Great Britain is largely in the hands of women, who are, nevertheless, at great economic disadvantages in their work." (2) "That the claim of women and girls to State aid in technical education has never been fully recognized." (3) "That at the Universities of Oxford and Cambridge women may not take degrees, even after they have passed the necessary examinations."

MR. GEORGE TANSLEY, who died last month in his sixth-sixth year, after a short illness, has been justly named the second founder of the Working Men's College. He joined the college as a student in the year after its foundation by F. D. Maurice in 1854, and passed through its various grades leading to the Fellowship. His services were recognized by the late Archbishop of Canterbury, who conferred on him the Lambeth degree of M.A. In 1894 he retired from the business of caterer with which his name is still connected, and gave himself up wholly to the work of the college as a teacher and organizer. The post of Dean of Studies was created in order to give official authorization to the unique position that he had long held.

WE are grateful to the *Daily Chronicle* for gibbeting the following advertisement:—

WANTED, a MAN to give THREE HOURS' EDUCATION a day. Good wages given to a suitable man.

Unfortunately the source is not given. We should dearly have liked to make the advertiser's acquaintance, and ask him, *more Socratico*, "What is education? What are good wages?" But probably we should not have got beyond the "three R's" and 9d. an hour.

THE March number of the *Educational Times* contains some delightful reminiscences of Merchant Taylors' School in the "fifties" by "A. J. C." (Mr. Church's initials are unmistakable), from which we cull one or two characteristic anecdotes. The school in Suffolk Lane was as noisy without as within. "The Company would not allow a porter, and the head boy of my upper form had to discharge his functions. There was neither bell nor knocker," and the caller had to use the classical method of kicking. "I remember a lady, nearly related to myself, coming to make some inquiry. She was standing perplexed, when a drayman, better acquainted with the customs of the place, solved her doubts, and was good enough to administer a kick which was heard to the furthest end of the building. The young porter rushed to the door and opened his eyes wide in wonder that so delicate a foot had made so great an impression."

HERE is the *sors Virgiliana* of the School, as interpreted by Dean Mansel, himself an Old Merchant Taylor, at the tercentenary dinner: "*Ter centum regnabitur annos* (it shall be ruled for three centuries) *gente sub Iliaca* (under the Merchant Taylors' Company), *donec regina sacerdos* (till Her Majesty's Government), *Marte gravis* (pressed by a hostile Opposition), *geminam partu dabit Iliam prolem* (shall give birth to a double Royal Commission)"—that of the Public Schools and of the Universities.

WE imagined that with the death of its promoter the bogus Society of Science, Letters, and Art, Kensington, had come to an end, but a paragraph in *Truth* informs us that the business is still carried on by his widow and others, and that principals of schools, either dupes or knaves, continue to advertise honours obtained in the "Kensington Examinations."

A UNIVERSITY Extension Summer Meeting will be held at Cambridge from August 1 to 26. The meeting will be divided into two parts, the first lasting until August 13, and the second from August 14 to 26 inclusive. The general subject of the lectures will be, "Some Aspects of Life and Thought in Europe and America in the Nineteenth Century." The Vice-Chancellor (Dr. A. W. Ward) will (if his health permits) deliver the inaugural address, which will form a general introduction to the History Section. The lectures will group themselves under the following heads:—(1) History, (2) Art, Literature, and Music, (3) Physical and Natural Science, (4) Economics, (5) Educa-

tion. There will also be lectures on theological subjects. The special feature of the meeting will be the Historical Section. The lectures will deal with some of the leading political movements in Europe and America during the nineteenth century, and the prominent personages who have taken part in them. Among the lecturers will be:—The Master of Trinity, Sir Mountstuart Grant-Duff, the Hon. Canon Lyttelton, the Dean of Ely, Profs. Westlake, Vinogradoff, Erich Marcks, Messrs. A. Gilbert, R.A., Alfred East, A.R.A., G. W. E. Russell, W. N. Shaw, F.R.S., Arthur Sidgwick, Sidney Lee, and Bolton King. Prof. Sir Richard Jebb has undertaken to preside at an Educational Conference. Full information can be obtained from R. D. Roberts, M.A., Syndicate Buildings, Cambridge.

THE Jubilee of Owens College took place on the 13th and 14th ult. A record of the distinguished guests who attended, the presentation, the honorary degrees conferred, the festivities, and the speeches, is rather matter for the daily Press. The *imagines* of Brutus and Cassius were here represented by the "disruptionists"—those who would sever the connexion of the College from the Victoria University. The *Athenæum* chronicler (*aut Mahaffy aut diabolus*) has no doubt that this is the winning party. If our guess is correct, his definition of a University as "fixed in one place, and having one systematic and distinctive way of teaching every one of its students," will hardly include the University that Dr. Mahaffy described as "neither the oldest nor the newest, neither the nearest nor the furthest, neither the richest nor the poorest; possibly not the best, certainly not the worst, in the world."

DR. S. R. GARDINER, who died last month in his seventy-third year, is the third great historian whom we have lost within the last two years. He was educated at Winchester and Oxford, took a First Class in *Literæ Humaniores*, and was elected to a Fellowship at All Souls. He was for some time Professor of Modern History at King's College, London; and on Mr. Froude's death was offered, and declined, the Regius Professorship at Oxford. While known to young students mainly by his excellent general history of England and historical atlas, Dr. Gardiner was famed among scholars for his unrivalled knowledge of, and authoritative works on, the history of the seventeenth century.

THE REV. E. J. W. HOUGHTON, of Stratford-on-Avon, has been appointed to succeed Mr. Upcott as Head Master of St. Edmund's School, Canterbury.

THE Canadian Government has been asked to appoint forty additional teachers for the South African concentration camps.

THE School Management Committee of the London School Board has recommended that the salary of the principal clerk shall be raised from £600 to £700 by annual increments of £15. A correspondent in the *Standard* suggests that members of this Committee should attend an arithmetic class in an evening continuation school.

THE dearth of applicants for vacancies under the London School Board has resulted in a revision of the scale of salaries. There is a general rise in the scale all round of a few pounds. Previous service will be considered, so that a teacher coming under the Board will not necessarily be required to begin at the bottom of the scale. Further, the annual increment will begin after twelve months' completed service.

THE sum of £10,000 has been given by a donor who wishes to be anonymous for the purpose of preparing the chapel of Lancing College for immediate use.

THE Victoria University has paid a well merited compliment to Mr. C. H. Wyatt by presenting him with the honorary degree of M.A. At the same time Mr. Wyatt's salary has been raised to £1,000.

MR. H. W. ORANGE, who has been private secretary to Sir George Kekewich, sailed last month for India to take up his new appointment as Director-General of Education in India. The post was first offered to Mr. Sadler, who declined it. Mr. Mayor succeeds Mr. Orange as private secretary to Sir George.

THE REV. W. A. RENWICK, late second master of Grantham School, has been appointed Head Master of St. Michael's College, near Tenbury.

A TERRIBLE storm is raging at Hornsey between the School Board and the boot-sellers of the district. Boot clubs in two of the schools provide children with boots at a cost of one penny beyond the wholesale price. The competition does seem a little unfair, and perhaps Sir John Gorst will be called upon to give his opinion from his seat in the House.

WE recommend the following to the notice of managers of theatres.

The *University Correspondent* says it appears in the entrance hall of the University of Würzburg: "Honorable ladies who attend public lectures are informed that before entering the lecture-room they must take off their hats. In case of non-compliance with this notice they must expect to have their hats taken away by force."

TEACHERS of grammar may often have trouble with collective nouns, for popular usage is frequently opposed to orthodox rules on the point of the number of the verb to be employed. It is satisfactory to know that the House of Representatives at Washington has decided that the term "the United States" must have a singular verb.

THE village of Eccles, in Kent, is disturbed because a crucifix has been introduced into the village school. It is also asserted that the children were compelled to make ceremonial obeisances to the crucifix. This is probably a later accretion.

THE busy Secretary of the N.U.T., Mr. Voxall, who is also a Member of Parliament, has found time to write a novel dealing with life in a training college and in elementary schools. It is published under the title of "The Girl from St. Agneta's."

THE Salford School Board is arranging for lessons in music, but the pupils are to pay fees that will cover the cost of instruction. A somewhat similar proposal was brought before the London School Board and shelved.

THE Liverpool School Board has accepted an offer of £1,000 for the establishment of prizes for German and Spanish languages.

IN reply to a question, Sir John Gorst drew a distinction between schools conducted for private profit and schools under a company the dividend of which is limited to 5 per cent. This is a fair distinction. A company that pays 5 per cent. or less on its capital is much in the same position as the governors of an endowed school who have received permission from the Charity Commission to borrow money, on which interest has to be paid.

A WRITER in the *Pall Mall Gazette* laments the ignorance of country children. They know and care little or nothing of the country around them. "I was talking to three small boys on Dartmoor," he says, "and I asked them the names of some of the trees growing near. One boy only knew the oak, and not one of them had the smallest idea what the other trees were. I asked them what trees they did know. 'I know an apple tree when her hath gert apples thereon,' replied one of them." Truly there is a chance for the rural teacher to do more in this direction than he does.

THE Richmond School, the result of the most important "tenure case" ever undertaken by the National Union of Teachers, is closed, and the building is for sale. The N.U.T. will see that the staff suffer no loss.

THE London School Board has decided to close all its schools during the Coronation Week.

ANY one who wishes to receive gratis a literary journal which, though limited in its scope, is always entertaining, should forward his name and address to the Editor of the *Periodical*, Oxford University Press Warehouse, Amen Corner, London, E.C.

ON March 12 Mr. W. J. Courthope received at the offices of the Civil Service Commission a deputation from the Modern Language Association, consisting of Mr. H. W. Eve, Prof. Rippmann, Mr. Somerville, of Eton, Mr. Storr (Chairman of Committee), and Mr. W. Mansfield Poole (Hon. Secretary). The chief points urged by the deputation were (1) the emphasizing of the oral part of examination; (2) the elimination of questions on history, literature, and philology from the Army entrance papers in modern languages; (3) the setting of easier papers, especially for English into French, in these examinations; (4) a definition of what is required in French and German of candidates for the Home and Indian Civil Services, as regards Old French and German, philology, metrics, &c. It was pointed out that the papers set varied in these respects from year to year, and afforded no guidance to the teacher. Mr. Courthope undertook that the points raised should be considered by the Commissioners.

TOWARDS the £330,000 required by the scheme for the establishment of a University of Liverpool, £145,000 has already been subscribed.

By the last account over five hundred members of the University of Moscow and more than a hundred other students have been convicted

(Continued on page 244.)

FROM MR. MURRAY'S LIST OF SCHOOL BOOKS.

MURRAY'S STUDENT'S MANUALS.

ENGLISH HISTORY AND LITERATURE.

THE STUDENT'S HUME. A History of England, from the Earliest Times to the Revolution in 1688. By DAVID HUME. Incorporating the Researches of recent Historians. Revised, corrected, and continued to the Treaty of Berlin in 1873, by J. S. BREWER, M.A. With Notes, Illustrations, and 7 Coloured Maps and Woodcuts. Crown 8vo, 7s. 6d.

STUDENT'S CONSTITUTIONAL HISTORY OF ENGLAND. From the Accession of Henry VII. to the Death of George II. By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

STUDENT'S MANUAL OF THE ENGLISH LANGUAGE. By GEORGE P. MARSH. Crown 8vo, 7s. 6d.

STUDENT'S MANUAL OF ENGLISH LITERATURE. A History of English Literature of the chief English writers, founded upon the Manual of THOMAS B. SHAW. A New Edition, thoroughly Revised. By A. HAMILTON THOMPSON, B.A., of St. John's College, Cambridge, and University Extension Lecturer in English Literature. With Notes, &c. Crown 8vo, 7s. 6d.

STUDENT'S SPECIMENS OF ENGLISH LITERATURE. Selected from the Best Writers, and arranged Chronologically. By T. B. SHAW, M.A. Crown 8vo, 5s.

SCRIPTURE AND CHURCH HISTORY.

STUDENT'S OLD TESTAMENT HISTORY. From the Creation of the World to the Return of the Jews from Captivity. With an Introduction to the Books of the Old Testament. By PHILIP SMITH, B.A. With 40 Maps and Woodcuts. Crown 8vo, 7s. 6d.

STUDENT'S NEW TESTAMENT HISTORY. With an Introduction, containing the connection of the Old and New Testaments. By PHILIP SMITH, B.A. With 30 Maps and Woodcuts. Crown 8vo, 7s. 6d.

STUDENT'S MANUAL OF ECCLESIASTICAL HISTORY. A History of the Christian Church to the Reformation. By PHILIP SMITH, B.A. 2 vols. Crown 8vo, 7s. 5d. each.

PART I.—A.D. 30-1003. With Woodcuts.
PART II.—A.D. 1003-1614. With Woodcuts.

STUDENT'S MANUAL OF ENGLISH CHURCH HISTORY. By G. G. PERRY, M.A., Canon of Lincoln. 3 vols. 7s. 6d. each.

First Period—From the Planting of the Church in Britain to the Accession of Henry VIII. A.D. 536-1509.

Second Period—From the Accession of Henry VIII. to the Silencing of Convocation in the Eighteenth Century. A.D. 1509-1717.

Third Period—From the Accession of the House of Hanover to the Present Time. A.D. 1717-1884.

ANCIENT HISTORY.

STUDENT'S ANCIENT HISTORY OF THE EAST. From the Earliest Times to the Conquests of Alexander the Great, including Egypt, Assyria, Babylonia, Media, Persia, Asia Minor, and Phœnicia. By PHILIP SMITH, B.A. With 70 Woodcuts. Crown 8vo, 7s. 6d.

STUDENT'S HISTORY OF GREECE. From the Earliest Times to the Roman Conquest. With Chapters on the History of Literature and Art. By Sir WM. SMITH, D.C.L. Thoroughly Revised and in part Rewritten by G. E. MARINDIN, M.A. With many new Maps and Illustrations. Crown 8vo, 7s. 6d.

STUDENT'S HISTORY OF ROME. From the Earliest Times to the Establishment of the Empire. With Chapters on the History of Literature and Art. By Dean LIDDELL. New and Revised Edition, incorporating the results of Modern Research, by P. V. M. BENECKE, M.A., Fellow of Magdalen College, Oxford. With Coloured and other Maps and numerous Illustrations, nearly all prepared specially for this edition. Crown 8vo, 7s. 6d.

STUDENT'S HISTORY OF THE ROMAN EMPIRE. From the Establishment of the Empire to the Accession of Commodus, A.D. 180. With Coloured Maps and numerous Illustrations. By J. B. BURY, Fellow and Tutor of Trinity College, Dublin. Crown 8vo, 7s. 6d.

STUDENT'S GIBBON. A History of the Decline and Fall of the Roman Empire. Abridged from the original Work by Sir WM SMITH, D.C.L., LL.D. A New and Revised Edition in Two Parts. Crown 8vo, 5s. each.

PART I.—From the Accession of Commodus to the Death of Justinian. By A. H. J. GREENIDGE, M.A., Lecturer and late Fellow of Hertford College, Lecturer in Ancient History at Brasenose College, Oxford.

PART II.—From A.D. 565 to the Capture of Constantinople by the Turks. By J. G. C. ANDERSON, M.A., late Fellow of Lincoln College, Student and Tutor of Christ Church, Oxford. With Maps and Illustrations.

HERODOTUS. The text of Canon Rawlinson's Translation. With the Notes abridged for the use of Students. By A. J. GRANT, M.A., of King's College, Cambridge; Professor of History, Yorkshire College, Leeds; Author of "Greece in the Age of Pericles." With Map and Plans. 2 vols. Crown 8vo, 12s.

"The delightful pages of the old Greek whose flavour has been so admirably presented by Canon Rawlinson will thus be made accessible to a far wider circle than heretofore. There is no better introduction to Greek history and literature than Herodotus, and the English reader gets him here under the best possible conditions."—*Literary World*.

THE STORY OF THE PERSIAN WARS AS TOLD BY HERODOTUS. In English. Selected, arranged, and edited so as to form a History Reading Book for Schools. By the Rev. C. C. TANCOCK, Head Master of Tonbridge School. With Illustrations, Map, and Plans. Crown 8vo, 2s. 6d.

FRANCE.

STUDENT'S HISTORY OF FRANCE. From the Earliest Times to the Fall of the Second Empire. By W. H. JERVIS, M.A. A new Edition, thoroughly Revised and in great part Re-written, by ARTHUR HASSALL, M.A., Censor of Christ Church, Oxford. With a Chapter on Ancient Gaul, by F. HAVERFIELD, M.A., Student of Christ Church, Oxford. Coloured Maps and many new Woodcuts. Crown 8vo, 7s. 6d.

MURRAY'S STUDENT'S MANUALS—continued.

EUROPE.

STUDENT'S HISTORY OF MODERN EUROPE. From the Capture of Constantinople by the Turks, 1453, to the Treaty of Berlin, 1878. By RICHARD LODGE, M.A., Fellow and Tutor of Brasenose College, Oxford. Fourth Edition. Thoroughly Revised. Crown 8vo, 7s. 6d.

STUDENT'S HISTORY OF EUROPE DURING THE MIDDLE AGES. By HENRY HALLAM, LL.D. Crown 8vo, 7s. 6d.

EUROPE IN THE MIDDLE AGES. By OLIVER J. THATCHER, Ph.D., and FERDINAND SCHWILL, Ph.D. Large crown 8vo, 9s.

A GENERAL HISTORY OF EUROPE, 350-1900. By OLIVER J. THATCHER and FERDINAND SCHWILL, Authors of "Europe in the Middle Ages." Revised and adapted to the requirements of English Colleges and Schools, by ARTHUR HASSALL, M.A., Christ Church, Oxford. With Bibliographies at the end of each Section. With Maps and Genealogical Tables. Crown 8vo, 9s.

Just out.
"A model of condensation, omitting no essential facts. . . . The volume is greatly enhanced by a wealth of maps and chronological and genealogical tables. Among general histories this will take a leading place."—*Dundee Advertiser*.

GEOLOGY.

STUDENT'S ELEMENTS OF GEOLOGY. By Sir CHARLES LYELL. Thoroughly Revised by Prof. J. W. JUDD. Crown 8vo. With 600 Woodcuts. 9s.

LAW AND PHILOSOPHY.

STUDENT'S EDITION OF AUSTIN'S JURISPRUDENCE. Compiled from the larger Work. By ROBERT CAMPBELL. Crown 8vo, 12s.

AN ANALYSIS OF AUSTIN'S JURISPRUDENCE. By GORDON CAMPBELL. Crown 8vo, 6s.

TWO NEW VOLUMES IN MR. MURRAY'S

HOME AND SCHOOL LIBRARY.

Edited by LAURIE MAGNUS, M.A., Magdalen College, Oxford.

A SHORT HISTORY OF COINS AND CURRENCY. By Lord AVEBURY, F.R.S., &c. With many Illustrations. Fcap. 8vo, 2s.

THE FACE OF NATURE. Popular Readings in Elementary Science. By the Rev. C. T. OVENDEN, D.D., Canon of St. Patrick's, Rector of Enniskillen. With numerous Diagrams. Fcap. 8vo, 2s.

A List of the Volumes in this Series will be sent post free on application.

WORKS BY PROFESSOR T. D. HALL.

PRIMARY ENGLISH GRAMMAR FOR ELEMENTARY SCHOOLS. With 134 Exercises and carefully graduated Parsing Lessons. 16mo, 1s.

ETON COLLEGE BOOKS.

THE ETON LATIN GRAMMAR. For Use in the Higher Forms. By FRANCIS HAY RAWLINS, M.A., Fellow of King's College, Cambridge, and Assistant Master at Eton College, and Rev. W. R. INGE, M.A., Fellow of Hertford College, Oxford. Revised Edition. Crown 8vo, 6s.

ETON LATIN SYNTAX AND EXERCISE BOOK. Consisting of Pages 97-127 and 152-306 from the Eton Elementary Latin Exercises. Compiled, with sanction of the Head Master, by A. C. AINGER, M.A., Trinity College, Cambridge, and the late H. G. WINTLE, M.A., Christ Church, Oxford. Crown 8vo, 5s.

THE PREPARATORY ETON GRAMMAR. Containing the Accidence and the Syntax Rules with the sanction of the Head Master. By A. C. AINGER, M.A., Trinity College, Cambridge, and the late H. G. WINTLE, M.A., Christ Church, Oxford. Crown 8vo, 2s.

OID LESSONS. Being Easy Passages selected from the Elegiac Poems of Ovid, with Explanatory Notes by A. C. AINGER, M.A., and H. F. W. TATHAM, M.A., of Trinity College, Cambridge, Assistant Masters at Eton College. Crown 8vo, 2s. 6d.

THE ETON HORACE. The Odes, Epodes, and Carmen Seculare. With Notes. By F. W. CORNISH, M.A. In Two Parts. With Maps. Crown 8vo, 6s.

ETON EXERCISES IN ALGEBRA. By E. P. ROUSE and A. COCKSHOTT, Assistant Masters at Eton College. Crown 8vo, 3s.

ETON EXERCISES IN ARITHMETIC. By Rev. T. DALTON, M.A., Assistant Master at Eton College. Crown 8vo, 3s.

AN ENGLISH-LATIN GRADUS, OR VERSE-Dictionary, FOR SCHOOLS. By A. C. AINGER, Trinity College, Cambridge; Assistant Master at Eton College, and the late H. G. WINTLE, M.A., Christ Church, Oxford. This Gradus is on a new plan, intended to simplify the Composition of Latin Verses, by Classical Meanings, selected Epithets and Synonyms, &c. Crown 8vo, 9s.

JOHN MURRAY, ALBEMARLE STREET, W.

of riot and "political disaffection." Ninety-five have been banished to Siberia, and 567 have been sent to prison for various terms.

THE Board of Education has not granted the request urged by a joint deputation of the Incorporated Association of Head Masters and the Incorporated Association of Assistant Masters to refer the question of tenure in secondary schools to the Consultative Committee. The alleged ground for this refusal is that the present time is not opportune. We can conceive no more opportune moment than the *interregnum* between the Charity Commission and the Board of Education. Let us hope that the Board's answer only means a short postponement till the Committee have concluded the delicate business on which they are engaged, to determine what institutions shall be recognized as inspecting bodies under Sec. 3 (1) of the Board of Education Act, 1899. The hardest nut they have to crack is to settle the conflicting claims of the Joint Board and the Local Examination Boards of Oxford and Cambridge.

We learn from the *Schoolmaster* of March 29 that the profits of that paper for last year were under £3,000, and that this represents between 5 and 6 per cent. on the market value of shares and 100 per cent. on the original 10s. shares with 5s. paid up.

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

THE Registration Order has attracted a large share of the energies of the Branches and of the Executive Committee. While recognizing the improved status which the profession will have when the Register is effective, we are none the less concerned to secure that it shall not in its initial stage damage the position of those at present engaged in teaching, and who can show evidence of work of an efficient character. It is felt that the task of the Registration Council will at first be both laborious and delicate, and it is with much pleasure that we observe that the Teachers' Guild has selected as its representative thereon Mr. F. Storr, who adds to his many labours in the educational field the responsibilities and duties of a member of the Council and Executive Committee of the I.A.A.M.

We hope the petition forwarded to the Duke of Devonshire praying that one of the Crown nominees may be an assistant teacher may result in securing the nomination of one of our leading members, several of whom have been actively pressing the matter for some time past. Should the Assistant Mistresses also secure a nominee, it will much add to our satisfaction.

Mr. G. W. de Saulles, Designer and Engraver to the Mint, has presented the Association with a design for a corporate seal which will assuredly satisfy the most critical by its graceful composition. The difficulty has been to find a motto; the suggestion which at present holds the field is "Que regio in terris nostri non plena laboris?" Further suggestions—preferably shorter—will be welcomed, and should be sent to the Secretary, 27 Great James Street, Bedford Row, W.C., as early as possible. In the meantime we desire to record our gratitude to Mr. de Saulles. A step which we have long wished to take has just been accomplished, namely, the appointment of a paid Secretary to give all his time to the work of the Association. Mr. C. J. C. Mackness, on whom the choice of the Committee has fallen, practised as a solicitor in Scotland from 1892 to 1899, and was from 1900 to 1902 senior assistant master on the "Conway." He commenced his duties on March 25, and we may expect the working of our machinery to be much smoother and more rapid than in the past.

We have received from the Charity Commissioners a promise of assistance in securing information with regard to the expenditure of the trust moneys of endowed schools in the case of individual foundations, subject to the proviso that the information is for a purpose approved by the Commissioners. We have to thank certain influential M.P.'s for the interest they are taking in the question of the salaries of assistants in secondary schools, for it cannot be doubted that an improvement in salaries is urgently needed in the national interest.

The Education Committee has decided to send two representatives to the meeting of the British Association at Belfast.

Our membership has risen to 1,485, and the Legal Fund is now invested as a separate account.

Mr. Virgo has now resigned the position of Assistant Secretary, which he has for so long filled with the most admirable courtesy, tact, and ability. It is not going too far to say that to many of our members Mr. Virgo has personified the Association, and it is a great pleasure to us to state that his valued co-operation will still be given us on the Council, the Executive, and other Committees.

NATURE STUDY.

JUST PUBLISHED.

EYES AND NO EYES.

By ARABELLA B. BUCKLEY, Author of "Life and her Children" and "The Fairyland of Science," &c.

With 48 Full-Page Coloured Plates

and other Illustrations, expressly executed for the Work by Mr. A. FAIRFAX MUCKLEY. Handsomely bound in cloth gilt, gilt edges, 3s. 6d.

Parallel Grammar Series.

Edited by Prof. E. A. SONNENSCHN, D.Litt. Oxon., M.A. Oxon.,
DEAN OF THE FACULTY OF ARTS, UNIVERSITY OF BIRMINGHAM.

UNIFORMITY OF TERMINOLOGY AND UNIFORMITY OF CLASSIFICATION

Are the distinguishing marks of this series; all the Grammars are constructed on the same plan, and the same terminology is used to describe identical grammatical features in different languages. The principle of selection is that the existing stock of grammatical terms is sufficient for its purpose, if used economically; and the Editor has been able to carry out his scheme without the introduction of new or unfamiliar terms. Those who are acquainted with the chaos which has hitherto reigned, and the bewilderment which is caused to pupils by the gratuitous use of two or three different terms where one would suffice, all appreciate the labour which has been devoted to simplifying the study of Grammar in this series; and the general satisfaction which has been expressed by those who have used the books encourages the Publishers to hope for further support from the Scholastic World.

A PARALLEL OF GREEK AND LATIN SYNTAX, FOR USE IN SCHOOLS.

Now Ready.

By C. H. ST. L. RUSSELL, M.A., Assistant-Master in Clifton College. 3s. 6d.

LATIN GRAMMAR. By Prof. E. A. SONNENSCHN, D.Litt. Oxon. 3s. (ACCIDENCE, 1s. 6d.; SYNTAX, 1s. 6d.)

FIRST LATIN READER and WRITER (with Supplement). 2s.—
SECOND LATIN READER and WRITER. 1s. 6d.—THIRD LATIN
READER and WRITER. 2s. (All by C. M. DIX, M.A. Oxon.) FOURTH
LATIN READER and WRITER. By J. C. NICOL, M.A. Cantab., and
Rev. J. HUNTER SMITH, M.A. Oxon.

GREEK GRAMMAR. By Prof. SONNENSCHN, D.Litt. 4s. 6d. (ACCIDENCE, with Supplement, 2s.; SUPPLEMENT, 6d.;
SYNTAX, 2s. 6d.)

FIRST GREEK READER and WRITER. By J. E. SANDYS, Litt.D.,
Public Orator in Univ. of Cambridge. 2s. 6d.

ENGLISH GRAMMAR. By J. HALL, M.A.; A. J. COOPER,
F.C.P.; and Prof. SONNENSCHN, 2s. (Separately: ACCIDENCE, 1s.;
ANALYSIS and SYNTAX, 1s.)

ENGLISH EXAMPLES and EXERCISES. Part I., by M. A. WOODS,
1s. Part II., by A. J. COOPER, 1s. STEPS to ENGLISH PARSING and
ANALYSIS. By E. M. RAMSAY and C. L. RAMSAY. Vol. I. ELEMEN-
TARY. 1s. 6d. Vol. II. FURTHER EXERCISES. 1s. 6d.

Single Copies will be sent post-free to any Teacher on receipt of half published price and postage. KEYS to the Latin and German Readers and Writers may be
had by Teachers direct from the Publishers.

HEALTH, SPEECH, AND SONG: A Practical Guide to

* * * In ordering please state the period required, to avoid confusion.

Guardian.—"This is the nearest approach to the ideal School History of England which has yet been written. It is of reasonable length. A just proportion between the several periods is carefully observed. Every page bears the stamp of the practised historian and the practised teacher. Unmistakable marks of the historical insight and the historical judgment which appertain only to the aristocracy of historians are everywhere visible; but the special characteristic which to our mind raises Mr. Oman's work distinctly above previous efforts in the same direction is the gift which Matthew Arnold used to call 'lucidity.' Every sentence rings out clear and sound as a bell, without any of that affectation of childishness which was once so common, without any of the heavy dullness usually so painfully prevalent."

The Student's Synopsis of English History. Based chiefly upon Oman's "History." By C. H. EASTWOOD, Head Master of Redheugh School, Gateshead. Crown 8vo, cloth, 2s.

While this book forms an excellent companion to Oman's "History," it contains nothing to prevent its use with other manuals. It consists of Lists of Sovereigns, Genealogical Tables, a Detailed Chronological Analysis of the whole of English History, Notes on Scotland, Ireland, Wales, Education and the Press, Lists of Laws, Treaties, Great Writers and Battles, Short Biographies and Definitions.

England in the Nineteenth Century. By C. W. OMAN, M.A., Author of "A History of England," &c. With Maps and Appendices. One vol., crown 8vo, 3s. 6d.

An Illustrated School Geography. By ANDREW J. HERBERTSON, M.A., F.R.G.S., Assistant Reader in Geography at Oxford University, and ALEXIS E. FRYE. With sixteen pages of Coloured Maps, about fifty Outline and Photographic Relief Maps, and nearly seven hundred magnificent Illustrations. Large 4to (about 12 by 10 inches), 5s.

School Board Chronicle.—"Nothing finer in the shape of a modern school-book of geography has ever been published."

A Manual of Physiography. By ANDREW HERBERTSON, Ph.D., F.R.G.S., Assistant Reader in Geography at the University of Oxford. Fully Illustrated. Cloth, 4s. 6d.

PRICE EIGHTEENPENCE.

THE LONDON SCHOOL ATLAS.

Edited by H. O. ARNOLD-FORSTER, M.P. Containing 48 Coloured Maps.

In stout paper wrapper with cloth strip at back, 1s. 6d.

Paper Boards, 2s.

Limp Cloth, 3s.

Cloth, cut flush, 2s. 6d.

Cloth gilt, 3s. 6d.

A complete Educational Catalogue will be forwarded post free on application.

London: EDWARD ARNOLD, 37 Bedford Street, Strand.

SOME OF

WILLIAMS & NORGATE'S SCHOOL BOOKS.

THE FRENCH LANGUAGE.

Delbos—The Student's Graduated French Reader. For the Use of Public Schools. I.—First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., H.M.S. "Britannia." Twelfth Edition. 166 pp. Crown 8vo, cloth, 2s.

Delbos—The Student's Graduated French Reader. For the Use of Public Schools. II.—Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., H.M.S. "Britannia." Sixth Edition. 180 pp. Crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenaeum*.
"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

Eugène's The Student's Comparative Grammar of the French Language. With an Historical Sketch of the Formation of French. For the Use of Public Schools. With Exercises. By G. EUGÈNE FASSNACHT, late French Master, Westminster School. Twenty-second Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or separately, Grammar, 3s.; Exercises, 2s. 6d.

Eugène's French Method. Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Sixteenth Edition. Crown 8vo, cloth, 1s. 6d.

Eugène's Comparative French-English Studies. Grammatical and Idiomatic. Being an entirely Re-written Edition of the "French Exercises for Middle and Upper Forms." Seventeenth Edition. Cloth, 2s. 6d.

Victor Hugo—Les Misérables. Les Principaux Épisodes. Edited, with Life and Notes, by J. BOÏELLE, Officier d'Académie. Second Edition. Two Vols. Crown 8vo, cloth, each 3s. 6d.

Victor Hugo—Notre Dame de Paris. Adapted for the Use of Schools and Colleges. By J. BOÏELLE. Two Vols. Crown 8vo, each 3s.

French Composition through Lord Macaulay's English. Edited, with Notes, Hints, and Introduction, by JAMES BOÏELLE, B.A. Univ. Gall., Senior French Master, Dulwich College, &c., &c. Crown 8vo, cloth, 3s. each.

Vol. I. Frederick the Great.

Vol. II. Warren Hastings.

Vol. III. Lord Clive.

"This, we may say at once, is an exceedingly useful idea, well carried out, and one of the best things of its class that we have seen. . . . We can pronounce the equivalence of the idioms recommended to be quite unusually just."—*Saturday Review*.

THE GERMAN LANGUAGE.

Welsse's Complete Practical Grammar of the German Language. With Exercises on Conversation, Letters, Poems, and Treatises, &c. Fourth Edition, almost entirely Re-written. Crown 8vo, cloth, 6s.

"We have no hesitation in pronouncing this the fullest and most satisfactory German Grammar yet published in England."—*Journal of Education*.

Welsse's Short Guide to German Idioms. Being a Collection of the Idioms most in use. With Examination Papers. Second Edition, 8vo, cloth, 2s.

Hein's German Examination Papers. Comprising a complete set of German Papers set at the Local Examinations in the four Universities of Scotland. By G. HEIN, Aberdeen Grammar School. Crown 8vo, cloth, 2s. 6d.

A Short Sketch of German Literature. Prepared for the Scottish Leaving-Certificate Examinations. By VIVIAN PHILLIPS, B.A., Fettes College. Second Edition, Revised. Pott 8vo, 1s.

AS ADOPTED BY THE GOVERNMENT.

Fcap. 8vo, cloth, 1s. 6d.

ELEMENTARY LESSONS IN CAPE DUTCH. (AFRICANDER TAAL.)

By A. WERNER AND G. HUNT.

Containing a number of Exercises, Dialogues, and a Key.

WILLIAMS & NORGATE,

14 HENRIETTA STREET, COVENT GARDEN, LONDON;
AND 7 BROAD STREET, OXFORD.

SOUTH KENSINGTON EXAMINATIONS.

SUITABLE BOOKS IN

The Organized Science Series.

FOR THE ELEMENTARY STAGE. 2s. each Volume.

- I. **Practical Plane and Solid Geometry, First Stage.** By G. F. BURN, A.M.Inst.M.E. (Medallist in Plane and Solid Geometry). *[In preparation.]*
- II. **Machine Construction and Drawing, First Stage.** By J. H. DALES, Assoc. M. Inst. C.E. *[In preparation.]*
- III. **Building Construction, First Stage.** By BRYSSON CUNNINGHAM, B.E., Assoc. M. Inst. C.E. *[In preparation.]*
- V. **Mathematics, First Stage.** Containing all the Algebra and Euclid required. Edited by Dr. WM. BRIGGS, M.A., F.R.A.S. *[In preparation.]*
- VIA. **Mechanics (Solids), First Stage.** By F. ROSENBERG, M.A., B.Sc. *Fourth Edition.* KEY, 1s. net.
- VIB. **Mechanics of Fluids, First Stage.** By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition.*
- VII. **Applied Mechanics, First Stage.** *[In preparation.]*
- VIII. **Sound, Light, and Heat, First Stage.** By JOHN DON, M.A., B.Sc. *[In preparation.]*
- IX. **Magnetism and Electricity, First Stage.** By R. H. JUDE, M.A., D.Sc. *Second Edition.*
- X. **Inorganic Chemistry (Theoretical), First Stage.** By G. H. BAILEY, D.Sc., Ph.D. Heidelberg. Edited by Dr. WM. BRIGGS, M.A., F.C.S. *Second Edition.*
- XI. **Organic Chemistry (Theoretical), First Stage.** By R. A. LYSTER, B.Sc. *[In preparation.]*
- XIV. **Physiology, First Stage.** *[In preparation.]*
- XVII. **Botany, First Stage.** By A. J. EWART, D.Sc., Ph.D., F.L.S. *[In preparation.]*
- XVIII. **Mining, First Stage.** *[In preparation.]*
- XXII. **Steam, First Stage.** *[In preparation.]*
- XXIII. **Physiography, First Stage.** By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S. *[In preparation.]*
- XXIII. **Physiography, Section One.** By F. ROSENBERG, M.A., B.Sc. *[In preparation.]*
- XXV. **Hygiene, Section One.** By R. A. LYSTER, B.Sc. *[In preparation.]*
- XXV. **Hygiene, First Stage.** By R. A. LYSTER, B.Sc. *[In preparation.]*

Price 1s.

- Xp. **Inorganic Chemistry (Practical), First Stage.** By F. BEDDOU, Ph.D., D.Sc. *Second Edition.*

Price 1s. 6d.

- XIp. **Organic Chemistry, Practical.** By GEORGE GEORGE, F.C.S.

FOR THE ADVANCED STAGE. 3s. 6d. each Volume.

- V. **Mathematics, Second Stage.** Being the Additional Algebra and Euclid with the Trigonometry required for the Second Stage. Edited by Dr. WM. BRIGGS, M.A., F.R.A.S. *Second Edition.*
- VIA. **Mechanics, Advanced.** By Dr. WM. BRIGGS, M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. I., DYNAMICS. *Second Edition.*
- VIA. **Mechanics, Advanced.** By Dr. WM. BRIGGS, M.A., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. II., STATICS. *Second Edition.*
- VIIIC. **Heat, Advanced.** By R. WALLACE STEWART, D.Sc. Lond. *Second Edition.*
- IX. **Magnetism and Electricity, Advanced.** By R. WALLACE STEWART, D.Sc. Lond.
- X. **Inorganic Chemistry (Theoretical), Advanced.** By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by Dr. WM. BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*
- XXV. **Hygiene, Advanced.** By A. E. IKIN, B.Sc., and R. A. LYSTER, B.Sc. *[In preparation.]*

Price 2s.

- Xp. **Inorganic Chemistry (Practical), Advanced.** By Dr. WM. BRIGGS, F.C.S., F.R.A.S., and R. WALLACE STEWART, D.Sc.

Price 1s. 6d.

- XIp. **Organic Chemistry, Practical.** By GEORGE GEORGE, F.C.S.

Complete Catalogues and Lists of Books Classified for each of the following Examinations may be had free on application:

LONDON UNIVERSITY (including the Special Subjects for Matriculation, Inter. Arts and B.A., 1902 and 1903), Royal University of Ireland, and Intermediate Education Board, CAMBRIDGE and OXFORD LOCAL, and COLLEGE OF PRECEPTORS, Scotch Leaving Certificate, South Kensington, and other Examinations.

THE JOURNAL OF EDUCATION

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	Half Page ...	£3 0 0
Quarter Page ...	1 15 0	One-Eighth Page ...	0 17 6
Per Inch in Column, 8/-			

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—6d. per line; minimum charge, 5s.
Situations Vacant and Engagements Wanted.—30 words for 2s.; each 10 words after, 6d.
Lectures, Classes, Non-Resident Engagements, &c.—48 words for 3s.; each 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."] All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER," JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C.

Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE EDUCATION BILL.

So we have our Education Bill at an even earlier date than we anticipated, and the quidnuncs in the *Times* who predicted that it would share the fortunes of last year's Bill have turned out lying prophets. It is, moreover, a big Bill, and Dr. Gow's counsel of line upon line has not commended itself to the Cabinet. Lastly, if we read its horoscope aright, it is meant to pass. Mr. Balfour is its sponsor, and not Sir John Gorst, and Mr. Balfour spoke as one who had set his hand to the plough and did not mean to turn back.

The Bill is now printed, and we can discuss it as it stands without any of the reservations that both its supporters and opponents in the House were forced to make, not having the full text before them. In another column we give an analysis of the essential portions, and a copy can be procured through any bookseller, price 2d.

What, then, do we say to the Bill now we have got it? We must decline, at this stage, to give a categorical answer, and would rather borrow Cicero's commendation of a boy of promise: "Non res est, sed spes." "From the educationist," said Mr. Balfour, "I anticipate, and I believe that I shall obtain, the heartiest support." If only the temperate and conciliatory tone of the Leader of the House and his manifest desire to do justice to all parties are maintained and shared by his colleagues, we can promise him that support.

The Bill, we gladly acknowledge, concedes in principle all, or nearly all, for which we, in common with the Teachers' Guild, have contended. It gives us one Local Authority for all education, the Universities alone excepted. This Authority will act through statutory committees, and on these committees specialists—or, in the words of the Bill, "persons of experience in education and persons acquainted with the needs of the various kinds of schools in the area"—will find a place. Lastly, the Local Authority will have a substantial (though, in our judgment, not quite an adequate) share in the management of voluntary schools. For all this we are grateful.

On the other hand, the Bill bristles with difficulties; but, before we descend to particulars, we must note one radical defect which we hope to see removed. The Bill, as it now stands, is, in respect of primary education, optional. Such a decision, if adhered to, instead of producing order, would more embroil the fray. We need not labour the point. It is monstrous that, by a single vote, a County or Borough Council,

elected for wholly other purposes, should determine whether or not it will take over the control and management of elementary education, while the School Board has no voice in the matter. The permissive clauses found little favour on either side of the House, and the Government can hardly disregard the appeal of its own supporters (who are also educationists), Sir Richard Jebb and Sir William Anson. If they still hesitate, let them listen to the plain speaking of a Ministerial organ:—"A more unfortunate example of ill-timed irresolution could hardly have been devised."

When we turn to secondary education the Bill is good as far as it goes, but it needs tuning up to concert pitch. To a progressive County Council it gives ample room and scope enough, but again there is no compulsion, and with a reactionary County Council, on which the landlord element is predominant, the last state of the county is like to be worse than the first. Evening schools will be dropped, and no new schools will be started to take their place. Even the whisky money is not ear-marked, and may take the place of voluntary subscriptions, which will inevitably decline. We can see no good reason why the Board of Education should not compel the Local Authority to fulfil its duty in respect of secondary, as it does in respect of primary, education.

The same defect reveals itself with regard to training of teachers. No part of Mr. Balfour's speech gave us greater pleasure than his strictures on the unqualified staff of our primary schools and his complaint of the inadequate provision now made for the education of pupil-teachers. No less grievous was our disappointment at finding that no mention of training is made in the Bill. School Boards have been forbidden to establish training colleges, and they have even been called in question for providing pupil-teachers with special instruction. Either Mr. Balfour was indulging in a rhetorical flourish—which we are loth to admit—or he must amend the Bill by an additional clause imposing on County Councils the duty of making provision for the training of teachers.

The compromise with regard to voluntary schools seems to us, on the whole, a fair one. It will not only relieve the "intolerable strain," but it will also put an end to the "one man" manager and to the illogical logic which has hitherto ruled that the educational supply shall vary with the resources, not with the needs, of a district. Over the curriculum of a school the Local Authority will be supreme, and they will be able by inspection to see that their views prevail. Why they should be given a veto on the appointment, and not on the dismissal, of teachers we do not see; nor why this veto should only be exercised "on educational grounds" (would this cover drunkenness, or advocacy of faith-healing?). But these are minor objections. The permission to start new denominational schools irrespective of the present school supply will need to be carefully guarded; else we may witness in the next year an outburst of denominational jerry-building such as followed the Act of 1870.

The Bill, as we have said, bristles with contentious matter, and in this first article we have attempted only to deal with the broad outlines. Will there still be an annual Code? Will the Board of Education continue to inspect? What will happen in the case of a deadlock between a County Council and its Education Committee? Who is to appoint the nominated members? These are but a sample of the vexed questions that we must leave for the present. We wait with impatience the second reading, when the Government must pronounce whether the Bill is to be optional or compulsory—*signum stantis aut cadentis legis*.

REVIEWS AND MINOR NOTICES.

Psychologie de la Femme. Par HENRI MARION, Professeur à la Faculté des Lettres de Paris. (Paris: Librairie Armand Colin.)

The lectures embodied in this volume were left by the late Prof. Marion in a state of imperfect preparation for publication. The text of each lecture was fully written out; so were all extracts, allusions, and quotations; and the scheme of construction and connexion for a complete book was indicated; but there remained some final revision to do. And revision done by M. Marion himself might have carried with it some rearrange-

ment of matter, some pruning where repetition occurs, some introduction of new turns of phrase and form where monotony is felt. So the publisher thinks; while he tells us also what full competency as to the subject, and perfect respect for the idiosyncrasy of the author, Prof. Darlu has brought to the completion of the task interrupted by the death of M. Marion. It is always fair to a work that appears posthumously to take into consideration the conditions under which it has passed through the press. Yet it may be said, with perfect truth, of these studies that they really need no apology. Indeed, it is not inconceivable that they might have lost more than they could gain by being carefully corrected by the author himself. The psychology of woman is a subject of which the world of to-day may be pardoned for thinking that it has already heard rather more than enough. But a lecturer has to consider—not whether the world at large is, or is not, tired of his theme—but what the particular section of the world sitting at his feet is in need of learning about the matter. He has to focus his subject at a definite point, and he need not distress himself if a good many things that fall naturally into his canvas are familiar and hackneyed commonplaces. But when he reads over his lectures, with a view to giving them a permanent form, he is in danger of striking out too much of this commonplace matter, and so making his book too thin to be convincing. It is a great merit in M. Marion's philosophy that it accepts and endorses most of the great commonplaces about the temperament of women. Probably some people will be shocked by the passage which declares that when you have taken away from the hysterical character all that is exaggerated, morbid, and unreasonable, you get the typical temperament of the normal woman. On the face of it, this assertion looks like an insult to the sex, but really it is none. What M. Marion means, and what he makes perfectly clear to those who follow his reasoning step by step, is this: The feminine organization is, in a general way, more sensitive and responsive to suggestions from without, and especially to suggestions that come through the affections, than is the masculine organization. Every suggestion responded to is an impulse to action or expression of some kind or other. To have more impulses than others is to be a more impulsive person. The sex that has more impulses is the more impulsive sex; but to have many impulses is not to have character; and, *a fortiori*, to have more impulses than others is not to have more character than others. The beginning of character is the firm resolution that controls impulses—few or many—and compels them to serve a definite purpose of duty or aim of ambition. Therefore, woman, having, as we may say, rather more human nature in her fundamental constitution than man has, requires stronger resolution, firmer purpose, more persistent will than he does to arrive at harmonious and successful results of character and career. Hysteria is the irregular and ill-regulated action of impulses and affection, under the non-government of a diseased will. What more natural, then, than that it should be the common infirmity of the sex whose particular problem in life is how to control a larger number of quick impulses and affections without a larger share of will power. That the special endowment of the feminine sex makes it, as a whole, less fit for political life, and, indeed, for all public life and for all professional work, M. Marion does not pretend to deny. But, while endorsing these old commonplaces about the temperament of woman, he is very far, indeed, from building up on them the old-fashioned conclusions that, therefore, woman is to be denied the education which will help her to discipline her numerous and unruly host of impulses, or the openings in life which will enable her to support herself and, if necessary, her children or her parents, and so save her from some of the extra suffering to which her extra sensibility makes her liable. In the education of children, M. Marion deprecates the laying of too much stress upon the differences of sex. These differences, being natural and fundamental, may be trusted to take care of themselves. The boys will be boys and the girls girls, do what you will with them. The danger to guard against is their not becoming complete human beings. Aim, therefore, at calling out the sympathies, tastes, powers, and affections that are, or ought to be, common to both sexes. And, as a means to this end, he recommends the co-education of boys and girls. But this is by the way. The special value of M. Marion's book lies in its psychology, not in its practical economy. There are plenty of living writers and lecturers who will give us as good advice as M. Marion does about educating our girls and putting them out in the

world or keeping them at home. But there are not many who explain so clearly and so pleasantly the motives, impulses, and qualities of both men and women. Here, for instance, is a passage setting forth the difference between "impulse" and "initiative," which most people would be the better for carefully considering, whether their need be to understand their own character, or their neighbour's, more truly:—

Bien plus que le manque d'impulsion, ce qui l'empêche [the average woman] de se décider fermement, c'est l'excès d'impulsion; ce n'est pas de manquer de mobiles, c'est d'en avoir trop et d'être le jouet d'impulsions contraires. Impulsives comme nous l'avons vu, voilà pourquoi elles ont si rarement cette résolution personnelle qui est le premier trait d'un caractère. Impulsion et initiative n'est-ce pas à peu près la même chose? En effet, rien n'est plus voisin, mais à deux conditions pour le moins: d'abord, que l'impulsion, unique ou tout à fait dominante, soit, de plus, durable, et commence véritablement quelque chose, une série d'actes qui se tiennent; puis, que l'impulsion soit quelque peu réfléchie, de façon qu'on puisse dire que la raison l'accepte et la fait sienne, et non qu'elle est entraînée machinalement ou subjuguée par elle.

It would be impossible to improve upon this definition of initiative, as distinguished from impulse, and, if we take together with it the description on an earlier page of the hysterical character, we shall have almost all the psychology of the will that is necessary for practical dealing with life.

Le caractère hystérique est une maladie chronique de la volonté, une diathèse. Or, bien qu'il ne soit pas particulier aux femmes, il est chez elles infiniment plus fréquent. Mobiles à l'excès, versatiles, fantasques, ces malades n'ont de constant que leur inconstance, aujourd'hui enjouées, aimables, gracieuses, demain ennuyées, maussades et boudeuses, tirées en sens contraire par des sympathies et des antipathies incompréhensibles, indifférentes à un grand malheur, consternées par un contre-temps insignifiant, exaspérées par la plus légère plaisanterie. . . . Bref, les hystériques ne savent pas, ne peuvent pas, ne veulent pas vouloir. Elles sont dans un état d'équilibre instable, d'incoordination, d'anarchie morale. Otez maintenant l'excès de tous ces symptômes, réduisez-les de tout ce qui en fait le caractère morbide; vous avez un caractère très général de la volonté de la femme, l'explication tout au moins de peu d'aptitude à vouloir avec suite.

But then the great majority of women find the dominating influence in a sentiment either of duty, religion, or love. And to such sentiment, when it is once found and submitted to, women, M. Marion recognizes, are apt to be not less, but more, constant than men. The inconstancy of women is a thing of the intellect and the tastes, not of the heart. And he makes at least one very good and very true point in favour of women when he notes that—though a woman's affection does sometimes grow cold—the cases are rare (if not non-existent) in which this happens because the person loved has become in any way more unfortunate, less attractive, poorer, or more suffering; whereas, with man, love is not seldom known to wane simply because the object of it has ceased to be young and beautiful. Again, though he recognizes that in woman the love of domination is strong—as strong, perhaps, as in man—he notes one very remarkable difference between the manifestations of this taste for dominion. A man likes to be served by his subject: a woman likes to serve hers. In fact, the love of dominion, and the necessity for self-devotion run very much into one another in woman. A woman who can see, as M. Marion remarks, will often marry a blind man out of compassion, and find happiness in being eyes to him. But who ever heard of a man who could see voluntarily uniting himself—out of compassion—to a blind girl? From all these things it will be seen that M. Marion no more held a brief for the inferiority of woman than for her equality, or her superiority, to man; though, certainly, the drift of his argument is towards the opinion that subjection is the natural lot of the average woman. Initiative and originality being exceptional in her, she inclines to put herself under the influence, if not the recognized authority, of the sex that has more initiative. Independent action is made difficult for her by her need of affection. The woman to whom independence of character is not difficult is hardly womanly, and, therefore, she is not lovable. But, when a woman combines true womanliness—as M. Marion affirms that many do—with the qualities of *un honnête homme*, then she is the most delightful creature in the world. La Bruyère said as much of *la belle femme*. M. Marion discounts the beauty, and still accords the praise. The best friends he had were women—beautiful or not—who combined in themselves the best qualities of both sexes.

L'Université et la Société moderne. Par GUSTAVE LANSON, Maître de Conférences à l'Université de Paris. (Price 1f. 50c. Paris: A. Colin.)

It is refreshing to meet with a really thoughtful book which can yet be read with ease and pleasure; and Prof. Lanson's is emphatically of this description. Though originally published as a series of separate articles, the book shows a thorough unity of purpose; and, though dealing primarily with the special problems of the Université de France and the recent reforms of M. Leygues, it is full of suggestion to educators of all countries. It will be read with special pleasure by those who are most convinced that the great need of this century is an educational system which shall really reflect the ideas of the century, and who lament as one of the worst obstacles to real reform the popular confusion between "science" (so called) and real scientific method.

J'en veux [writes the author in his preface] à un certain esprit, qui peut également se trouver dans le moderne et dans le classique, que je blâme le moderne d'avoir emprunté au classique, et que je voudrais expulser du classique comme du moderne. La lutte me paraît devoir être non pas entre la méthode littéraire et la méthode classique, mais entre la méthode littéraire et la méthode scientifique.

Let us lay less stress upon methods of culture which are apt to train our youth

à croire que les choses sont parce qu'il nous est agréable et utile qu'elles soient;

let us abandon

l'idée de dresser la jeunesse d'une nation aux jeux aventureux du goût subjectif, de la logique imaginative et de la rhétorique brillante; for, while

l'éducation littéraire est excellente pour faire, avec beaucoup de ratés, quelques individus supérieurs qui éblouiront le monde de leur fantaisie originale et égoïste, l'éducation scientifique, seule, peut améliorer toute la jeunesse d'une nation et lui donner l'esprit de précision, de méthode et de discipline nécessaire aux œuvres collectives.

Not that Prof. Lanson undervalues true literary education, or would have the boys spend all their time learning "science," but simply that, in every subject, we should cease to pardon, for the sake of their "brilliance," ideas and methods which are demonstrably false. The most brilliant genius will be none the worse in after life for having been led by sympathetic teachers to look the facts of the world straight in the face; while the present attempt to give a "literary" training to minds empty of real ideas is admirably adapted to train a whole population accustomed to live upon words rather than upon realities.

In France the dead hand of classics has weighed even more heavily than in England upon the teaching of modern languages. But now M. Leygues has at last laid down a maxim which, if carried out in practice, will revolutionize this latter study: "Si la connaissance et la possession réelle de la langue (vivante) enseignée n'est pas donnée à l'élève, au terme d'un cours d'études, on doit considérer que cet enseignement a échoué." It is difficult to imagine a proposition theoretically more trite and superfluous, or practically more significant in its implied condemnation of the past; it is like Mr. Brodrick's solemn assurance that no high commands shall henceforth be given in peace to men to whom we should not dare to trust our fortunes in time of war. Yet, unless we are mistaken, no authority in England has yet dared to commit itself definitely even to so obvious a truism as this.

M. Lanson is justly severe upon those smatterings of biographical facts and third-hand criticism with which boys are crammed in France, as in England, under the name of "literature":

L'histoire littéraire, chose d'enseignement supérieur, est, dans l'enseignement secondaire, un fléau. Les élèves . . . ne peuvent contrôler ni comprendre les formules du maître, avec le peu qu'ils ont lu. Précédant la lecture à peu près complète ou du moins abondante des textes, le cours d'histoire littéraire est une école de psittacisme.

He seems to us less clear than usual in his exposition of the method which he would follow in teaching a Latin or Greek author (page 107); his description seems to point towards a method of minute verbal criticism which, in any but the most skilful hands, might become extremely wearisome to the pupil—so much so as to make us suspect, rightly or wrongly, that Prof. Lanson has not had much experience of actual class-drudgery with the average boy. But he pleads convincingly for a method which shall take at least as much account of a classical author's thoughts as of his phrases, and which, through the

far simpler analysis of ancient problems, shall train our boys by degrees to work out the more complicated modern problems which, from their very nearness to us, stand out in such false perspective. Not only the teacher, but all who are interested in education, will find much to stimulate thought in these hundred and fifty pages.

The Knights of Aristophanes. Edited by R. A. NEIL, M.A., LL.D. (Aberdeen), late Fellow and Tutor of Pembroke College, Cambridge; University Lecturer in Sanskrit. (Price 10s. net. Cambridge University Press.)

If anything could make Neil's friends regret his so sudden death more than they do, it would be this work, first and last flower of his classical scholarship, so delicate in its taste and humour, so sound in learning, so full of new lights on old things. Even this work is incomplete; although we have the notes very much as they were designed, the introduction is meagre, and there are indications that the editor meant to enlarge its scope and to deal with a number of collateral questions suggested by the play. As it stands, it contains a brief account of the circumstances of the play, and of the Old Comedy.

One of the wider questions opened up by "The Knights" is the relation of old to young Attica in speech and religion. Several of the notes touch on this. It is pointed out that the worship of Athena was democratic, and had the direct support of Peisistratus, Themistocles, and Pericles (line 581); that Poseidon was the aristocratic god (551), and that the oath by his name was especially used by certain classes of persons, and carried a special weight (144, &c.). But the relations between the two deities, and their reconciliation, is a complicated question; and on inquiry it might turn out that Poseidon, being the aboriginal god, continued first not only with the aristocratic class, but with the old-fashioned among the commons and with the country folk. Cleon, be it observed, is fond of swearing by Poseidon. This might be combined with other traces of old-world use, such as the subjunctive with *ei* (678, 700), and it might be shown that such irregularities as this, occurring both in the more formal style and in popular speech, are a just parallel to the English use of *thou* in prayers by all and in the conversation of the country folk. Again, the value of Aristophanes as a political critic might have been estimated. There is no doubt that the editor was ready to say something on the second point; if he appears not to have realized the first, a hint would probably have set him at work on a fruitful investigation, and would have saved him from supporting Cobet in excising these "solecisms" (698).

In the notes, the reader is struck by the keen discrimination shown, and particularly by the editor's fine tact in realizing associations. It is not too much to say that he gives us a new relish for the play. Take, for examples, the notes on *κακοδαίμων* (7), "*poor devil*, barely a serious word"; on *ἐνθού* (51), "*probably a nurse's word*"; on *ἔξω* and *σχήσω* (130); on *ὁ πένθος λεώς* (224), "*a kindly touch*"; on the nouns in *-εσμα* (278); *ἐπέτειος* (518); *ζεύγος ἐμβάδου* (872), a phrase "*as unnatural as 'a pair of two shoes'*"; *φῆγγος* (1319); and the appendix on the use of *γε*. We might suggest adding, on 98, a reference to the familiar *κατ' ἕγεν, ἕγεν, ἕγεν*; and on 1309, we see in *Ναυφάντη ἡ Ναύσσωνος* an allusion to the designation of triremes in the inscriptions, the maker's name being given in the genitive.

On 1078 *εἶεν* should be printed as one word. Once or twice the force of an idiom seems to have been missed: thus, *εἰ μή* in 185 means rather, "Oh, yes, I'm a gentleman if I am not a cad." The etymological notes are good, as would be expected; but *βάλε* the particle can hardly come from *βάλλω* (1151). With a few trifling exceptions, such as these, we have nothing but admiration for the book.

T. Macci Plauti Rudens. Editio Minor, with an Appendix on Scansion, for the use of Schools. By E. A. SONNENSCHN, D.Litt. Oxon., Professor of Latin and Greek in the University of Birmingham. (Clarendon Press.)

Prof. Sonnenschein's *Editio Maior* has long been acknowledged the standard edition of the "Rudens," and it is well enough known to need no commendation. The present is an abridgment of that, with those notes omitted which deal with textual criticism or are otherwise more advanced than the wants of a schoolboy. They might have been still further abridged

with advantage; but no doubt the University man was in the editor's eye as well as the schoolboy, and for him the notes are not too many.

The appendix on scansion is better than any other we have seen in a school-book; but it is not the right thing yet. Editors must learn to shake themselves free from Greek prejudices, frankly acknowledge that Latin poetry was naturally accented, and scan Plautus as they would (or should) scan Shakespeare. The Plautine metres are, in fact, a compromise between the formal Greek model and the indigenous accentual verse, as the English metres are, only not the same compromise. The mistake has been that hitherto editors have regarded them as the Greek model influenced by the stress-accents; whereas the truth is that they are accentual in principle, and are merely influenced to a small extent by the Greek model. The key to scansion is the colloquial accent, not of the word, but of the phrase, as Mr. Lindsay has so brilliantly shown. Prof. Sonnenschein applies his key in a half-hearted way, and still leans to the old theory. As regards the notes, we offer a few suggestions which he may, perhaps, consider in revising his larger work:—Line 7: compare the English dialectic (and American) *nights* for *by night*. Line 99: the meaning seems to be, "I understand you; I am your slave; I obey." Lines 129 *et seq.*: the mixture of construction is colloquial, as may be seen even in a writer so sensitive to style as Plato; it is surely not likely that Plautus wrested his language to make the verse scan. Line 155: could *quanti* be nominative, "how small and mean"—the proverb taking a new turn because they looked small? Line 305: compare *auditt* from *audiuit*. Line 384: the transition of *qui* to a declined pronoun by popular error should be made clearer, and illustrated by *cuius*, *-a*, *-um*. Line 495: *bito* is from *bacto* = *βαίω* with different suffix, the compounds having reacted on the vowel of the simple verb. Line 502: cases apparently depending on a verbal noun are perhaps better regarded as depending on the whole phrase. Line 583: a difference of dialect is clearly meant; cf. Aeschylus, "Choe-phori," line 561: *γλώσσαν οἴσμεν Παρηγηίδα*. Line 799: the reference should be Martial, l. cxvii. 7. Line 1290: is not the verb impersonal—"it knocks, there is knocking"?

We are glad to recommend a book not made to order, but written by one who knows his business.

"The Self-Educator Series."—*English Composition*. By G. H. THORNTON. (Price 2s. 6d. Hodder & Stoughton.)

Our first impressions of this book were favourable. "The only satisfactory way to learn composition is to compose" is an excellent beginning, and throughout the volume theory and practice go hand in hand. A closer examination shows that Mr. Thornton has not broken loose from the traditional methods of teaching rhetoric, and that he himself is anything but a safe guide or model in composition.

The first chapter starts with a most misleading metaphor. Language is "the bridge that conveys ideas from mind to mind; . . . it has no value in itself." Had Mr. Thornton read or even seen the title of Darmesteter's "*La Vie des Mots*," he would have amended his metaphor, or, at least, pointed out its inadequacy. We pass to Exercise I. The second sentence to be corrected runs: "The Frenchman regards the observation of the Sabbath from a different standpoint than we do." In the key, "observation" is corrected to "observance" (though Milton and Jeremy Taylor might pass as authorities for this use of the word), and the rest of the sentence is allowed to stand. Then we have metaphor, simile, metonymy, synecdoche, *autonomasia*, and all the troop of antic figures which are as useful to the writer as *barbara celarent* are to a pleader at the Old Bailey. All metaphors, we are told, can be expressed in the formula of a mathematical proposition, and the comparison between the surface story and the underlying meaning could be worked out in the case of "Gulliver's Travels" in mathematical form. Was it not a Scot who declined to read "Paradise Lost" because the argument was not set forth syllogistically? Bacon (here, as usual, miscalled Lord Bacon) is corrected for a too condensed style; for "imagination as one would." We are told to substitute "the habit of trying to persuade ourselves that things are what our desires would have them to be." We prefer Charybdis to Scylla. Instances of the "loose participle," against which the pupil is warned in a special paragraph, might be culled in plenty from the text;

thus, on the same page as "Lord Bacon," "Speaking generally it may be said," &c.

It is only in the last twenty pages that composition proper, that is, the essay, is discussed. Here we have some really useful hints on books to read as a preparatory course; but the specimen essays and skeletons of essays that follow leave much to be desired. Space forbids any detailed criticism, but we may quote as samples two beginnings of hints for essays:—

1. *The style is the man.*—In its widest sense this means that we are known by our manifestations. "By their deeds ye shall know them." "Manners maketh man."

2. *The exception proves the rule.*—As commonly used this proverb is false. Example: The rule, "No quadruped lays eggs," is disproved by the exception, "Crocodiles lay eggs."

For the sake of our younger readers, we may point out how wide this illustration is of the mark. The saying is nothing but a paradoxical statement of a truism; the fact that any adduced case is exceptional implies that there is a generalization (not an invariable law) to the contrary. The common fallacy lies in assuming that the case adduced is exceptional. The author is good enough to commend the "Mock Essays" in a certain work not unknown to readers of the *Journal*; but he is careful, at the same time, to warn his readers not to waste their money on purchasing the volume in which they appear, as "the book is not of general interest." We are not impartial judges, but, if we mistake not, the general reader, as well as the young essayist, will prefer for interest Mark Pattison, Mr. E. E. Bowen, Mr. Morshead, and Dr. James Ward to any of Mr. Thornton's model essays.

"English Composition" is not worse than its congeners, and in some points it is an improvement on them; but the manual of essay-writing for young scholars is still to seek.

Words and their Ways in English Speech. By JAMES BRADSTREET GREENOUGH and GEORGE LYMAN KITTREDGE. (Macmillan.)

A popular work on etymology, by two Harvard professors, which may take rank with Trench's "On Words," and Darmstadter's "La Vie des Mots." The main object of the book is to answer some of the questions that may occur to "the practical man who rides in electric cars, talks by the long-distance telephone, and dictates his letters to a stenographer, but seldom has time to think that he is the heir of all the ages." This very sentence, quoted from the preface, might serve as a text for a sermon on the divergence of idiom in England and America. Our Professors, however, write singularly pure English, and, apart from the spelling, the only clear Americanism we have detected—"we have already averted to this doctrine"—may be a misprint. Some words—as a "monk" for a monkey, a "rubber" as a word of general reproach—are new to us, and "vagarious specializations" sounds strange. The work is popular; phonetics are scarcely alluded to, and the very casual remarks on the origin of language and the home of the Aryans might well have been omitted. On the other hand, the chapters on learned and popular words, slang, fashion in language, and fossils are excellent.

In view of a second edition, which the book is sure to reach, we will put down some jottings and queries for the authors' consideration. Page 33: "humour" is not distinguished from "wit," and the true meaning of "irony" (page 221) is quite misunderstood. Page 35: "quiddity" is not a synonym of "quality," but a separate category. Page 44: *Ludi magister* is properly a trainer of gladiators, and "master" certainly did not get its honourable connotation from the schoolmaster—suffering is the badge of all our tribe. Page 50: it should be pointed out that "telegraph" is an impossible formation. Page 60: "'desire' is soldiers' slang"—we should like chapter and verse for this paradox. Page 68: "hypo" for "hypochondriac" we never met with, while "hipped" is in everyday use. Page 71: that the origin of "*ad captandum*" remarks" in the reply of a certain Congressman who insisted that he must make a speech for Buncombe—i.e., his particular constituents—wants confirmation. On the other hand, there is nothing mythical about Captain Boycott (page 378). Page 99: *vim*, as popular slang, is unknown in England. Page 102: *folio* is not "on such and such a leaf," but borrowed from the Italian, like *quarto*. Page 187: "annuitant" proves that the suffix "-ant" is not quite dead. Page 189: for "*aide-de-camp*" read

"*aide-de-camp*," and for "antiquarian," "antiquary." Page 202: a "three-foot measure," a "ten-pound weight" are still perfectly correct English. Page 208: "umbrage" is misinterpreted; "un cheval ombrageux" gives the key. Page 225: "brag," "mope," "portly," "wink," "feed" are none of them words below the dignity of poetry, as might be shown from Tennyson alone. Page 232: for "*neglegere*" read "*negligere*"; for "*strata via*," "*strata viarum*." Page 266: the superstition of "the hair of the dog that bit you" fossilized in "treacle" should have been noted. Page 288: a "publican," in its everyday sense, seems unknown in the States. Page 332: "Teetotal" is not a reduplicated form of "total." The story of the stammering total abstainer rests on good evidence. We can cap the French absurdity here given—*totalisme du thé*. "What is the French for teetotaler?" a French professor was asked, and promptly replied: "*Thé tout-à l'heure*." Page 380: "bohemian," in the social sense, is not a coinage of Thackeray. Have the Professors never heard of Murger's "*Vie de la Bohème*"? Page 381: Milton's "Atlantean" is from "Atlas," and has nothing to do with Bacon's "New Atlantis."

Eadie's Biblical Cyclopædia. New Edition. (Pp. viii., 687; price 10s. 6d. C. Griffin & Co.)

This is a new edition of an old work which has been, more or less, "brought up to date" by Prof. Sayce and others; but with one important limitation: "The principles upon which the work was based remain unchanged. Those who want the speculations of the so-called 'higher criticism' must go elsewhere." Unfortunately, not merely the "speculations," but also the most assured results, about which modern scholarship of all shades is practically unanimous, are here scouted or ignored. Nothing is now more certain, for instance, than that the Book of Isaiah falls into two distinct parts, which are distinguished by every conceivable difference of style, thought, language, historic background, &c., and belong to different categories of authorship. This, of course, is one of the commonplaces of modern Biblical science. It is not a little surprising, therefore, at this time of day, to be informed gravely:

So vivid and sublime are the prophecies in the second portion of Isaiah that a very large proportion of modern critics have attempted to set them down as belonging to a later era—as composed in times more recent than the son of Amoz. Their reluctance to acknowledge either prediction at all, or, at least, predictions of such luminous beauty and exactness, opens the path to select, among the inspired writings, what is, and what is not, authentic in their estimation. There are, however, other difficulties as well. Isaiah's style in the latter chapters does differ from the earlier; but so does the theme; and may not a writer's style vary with his subject or with his age and experience in composition? (Page 382.)

After this it is not surprising to find Moses spoken of as "the author of the Pentateuch," and to be told that

No ancient book is surrounded with such evidence of its genuineness, authenticity, and inspiration as the Pentateuch. Venerable in their age, sublime in their natural simplicity, overpowering in their evidence, and mighty in their results are the five books of Moses. (Page 460.)

As might be expected, the book is strongest on the archaeological side. Such articles as "Assyria," "Babylon," "Jerusalem," "Dwellings" are interesting, and embody some of the results of scientific research. Even Noah comes in for a share of Babylonian illumination (page 482). Many of the articles, however, even when not disfigured by unintelligent polemic against the "higher criticism," are exceedingly thin and sketchy. The best thing about the book is, undoubtedly, the illustrations (mainly photographic reproductions), which are excellent. Before the work can claim, in any real sense, to have been "brought up to date" a much more thorough-going revision will be necessary.

"Regions of the World Series."—*Britain and the British Seas.* By H. J. MACKINDER, M.A. (W. Heinemann.)

The series of twelve volumes here promised under Mr. Mackinder's editorship should do much to remove from British geographers the reproach of German superiority in this field. The first volume has the advantage of interest to English readers, and of a fullness of material, well handled by the author in his presentation of our country as "the intricate product of a continuous history, geological and human." The chapter on "Historical Geography" strikes us as particularly

illuminating, studded as it is with comparisons like that of Thanet to Zanzibar, and of the spreading Saxon settlements to the thirteen original colonies of the United States. The familiar subject of British weather and climate is treated in a solid manner that could be beaten out into much conversation. The more purely geographical features of Britain, by land and sea, are not less ably displayed as the background of a picture, on which a human interest is supplied by such themes as "Metropolitan England," "Industrial England," "Strategic Geography," &c.; and the book ends with a moral that will recommend itself to the present drift of public opinion, if not to Mr. Labouchere. As an example of the author's care in collecting materials, his chapter on "Economic Geography" acknowledges obligations to Major Craigie, of the Board of Agriculture, whose statistical work deserves such recognition beyond the official sphere. Mr. Mackinder's name—if it do not belie his nationality—invites two slight criticisms: that, like most writers, he seems rather to shirk the obscure question of islanded fragments in other counties, more common in Scotland than in England; and that, while duly mentioning the "rain shadow" of the Buchan district, he takes no note of the adjacent oasis of geniality about Forres, where the mean temperature is almost equal to that of London, warmer in winter, cooler in summer—a discovery that has made Nairn the "Brighton of the North." The book is fully illustrated by excellent maps and diagrams; and, if the rest of the series come up to this precursor, Mr. Heinemann is to be congratulated on a notable addition to educational literature.

Webster's International Dictionary. A New Edition, revised throughout under the direct supervision of W. T. HARRIS, Ph.D., LL.D. (Price £1. 10s. net. G. Bell.)

We have before us an old friend with a new face, an ancient worthy who has renewed his youth like an eagle—the simile is appropriate to the land that bore it and has fashioned it to the ripeness of full manhood. The reviewer as a rule can only sample a work of this kind, look out at random some score or more of test words and pronounce judgment accordingly. Of "Webster's Dictionary" we can speak more confidently, as during the last ten years hardly a day has passed on which we have not had occasion to consult it, and when we state that for one miss we can record a hundred hits we are speaking well within the mark.

For the thoroughness of the revision the name of Dr. W. T. Harris, the United States Commissioner of Education, is sufficient guarantee. In the first quarter of the alphabet the "Oxford Dictionary" has supplied numerous corrections. The supplement runs to 234 pages and contains twenty-five thousand additional words. This is a marvellous development for a single decade, and should the growth of words continue at the same rate the prospect is alarming not only for the lexicographer, but also for the student. Naturally three-fourths of the new words are purely technical and scientific, and it becomes a question how far technological words which could occur nowhere save in a special treatise on botany, chemistry, &c., should be admitted. Yet there are dozens of words in the supplement that every educated man uses to-day which ten years ago were almost unknown—*automobile*, *ampère*, *bridge* (the game), *commando* (whether *commandos* or *commandoes* Webster does not decide), a *peg* (a drink), *tabloid*, *taboo*.

One omission that we pointed out in the edition of 1890 has not been supplied. It is a comedy of error that the phrase "secondary education" should occur in the editor's preface, and still be absent from the Dictionary.

Dr. Harris has himself undertaken the department of philosophy and psychology, and on the first page of the supplement we find an admirable definition, or rather a description, of the philosophy of the absolute. We advise our readers to purchase the edition in full calf at an extra cost of 8s., and another 3s. 6d. will be well expended on the patent marginal index—a great saving of time in looking out words.

The Earth's Beginning. By Sir ROBERT STAWELL BALL, LL.D., F.R.S. (7½ × 5 in., pp. viii., 384, illustrated; price 7s. 6d. Cassell.)

The material of this interesting and well written book is that of the series of lectures for juvenile audiences delivered at the Royal Institution at Christmas, 1900, and providing a popular exposition of that branch

of astronomy which treats of the evolution of the earth, the planets, and the sun from primeval fire-mist—the nebular theory in fact. We must warn our readers, however, that the term "juvenile" must be taken to refer to young people of about eighteen or nineteen years of age. Clear and lively as the exposition is, it will not, we think, appeal to the young—or indeed, be quite intelligible to them—before that age. Most of us know by this time what a lecture or a book by Sir Robert Ball will be like. It will be clear, lively, interesting, and sound. He knows his subject well, and believes in it, and makes the reader believe in it too. He abounds in instructive analogies and illustrating similes. He is always on the alert and knows the probable weak points and the possible strong points of those whom he is addressing. In the book before us, having stated his problem, he begins by discussing the fire-mist and nebulae, both apparent and real, touching specially on the improvement in the instruments of observation and the uses of spectrum analysis. He then passes to consider the sun, its heat, and how this is maintained, the history of the sun, and then turns to speak of the earth, its beginning, the great boring—more than a mile deep—at Schladebach, near Leipzig, what it taught us about the internal temperature of the earth, what we may further infer from this, and so round again to the nebular origin of the earth. A chapter follows on Earthquakes and Volcanoes, and then another on Spiral and Planetary Nebulae. In the next chapter, entitled "The Unerring Guide," difficulties for the unscientific and unmathematical reader come fast and furious; but Sir Robert guides us patiently and steadily through them all—energy, the idea of the conservation of moment of momentum, the principal plane of the orbits of the planets, &c.—and lands us safely on the other side, a little breathless, perhaps, but cheery still, and ready to begin the consideration of the evolution of the solar system. This, and the *pros* and *cons* of the nebular theory occupy us for the rest of the book. The theme is certainly a magnificent one, and, as Sir Robert puts it, "represents the most daring height to which the human intellect has ever ventured to soar in its efforts to understand the great operations of Nature." The mere affairs of everyday life shrink into insignificance in the presence of such mighty phenomena, of such enormous difficulties tracked down and explained with such skill, such intellectual power, such untiring patience. The greatest of the conceptions involved daunts and amazes the mind when first we endeavour to think in terms so vast, and it takes time to grow accustomed to sizes in comparison with which this solid earth of ours is but as a mustard seed, and to distances so huge as to be well-nigh unthinkable. Sir Robert Ball is well aware of this, and, pitying our infirmities, does not hurry us along too quickly, but gives time and space for the ideas to work and spread, and for our minds to rouse and stir themselves to the height of his great argument—and is bright and cheering all the while. The book is one which girls and boys of sound and generous education should read during the last year at school.

Studies in Auditory and Visual Space Perception. By ARTHUR HENRY PIERCE, Ph.D. (7½ × 5 in., pp. vii., 361, with diagrams; price 6s. 6d. net. Longmans.)

Dr. Pierce is Professor of Psychology in Smith College. This collection of essays represents the regular publication demanded of a Kellogg University Fellow of Amherst College, and is a contribution to a particular field of experimental psychology. It is so much outside our usual lines that we must content ourselves with a very brief description. Rather more than half the book deals with the localization of sound. The rest treats of seven illusions in visual space perception. Dr. Pierce first sets forth the theories and results which have been arrived at, up to the recent past, concerning auditory space perception. The general purport of these is against there being any such thing. Then he gives and discusses the results of more recent experiments by himself and others—especially as regards direction and distance. His conclusion is in favour of there being a power to localize sound; but adds—"as complete as it might be ideally, our auditory space is at a low grade of development, and its harmonization with the other spaces is far from complete by reason of the small practical utility of such an achievement. . . . So far as it goes it is no less real than its sister spaces, and to an extent much greater than is commonly acknowledged it contributes to their development." The discussion of the visual illusions is clever and interesting.

"The Pitt Press Shakespeare."—*Macbeth*. Edited by A. W. VERITY, M.A. (6½ × 4¼ in., pp. xlviii., 288; price 1s. 6d. Pitt Press.)

That this is a learned and scholarly edition of the play a very slight inspection will readily reveal. Indeed, as a small edition for adult students it has not its equal. But we cannot speak so highly of it as a school edition. In the introduction, in the notes, and in the appendices it contains much more—very much more—than is needed by pupils of school age; while, except in two or perhaps three of its sections, the introduction does not introduce, but criticizes, illustrates, and expands; and, in fact, includes much which, if included in a school edition at all, should come *after* the text and in the form of an appendix. Mr. Verity seems to be losing touch with the needs of schoolboys and schoolgirls. He has had such a magnificent quarry to draw material from in Furness's "Variorum" edition that he has been unable to

refrain from borrowing a little of everything. Moreover his own independent study of "Macbeth" has evidently been so full and close that he cannot bring himself to leave any point untouched, and ends by burying the text in a great pile of material nearly one-half of which is quite unfitted for ordinary school use. The text occupies thirty-eight pages of large print, the introduction forty-eight pages and the notes and appendices two hundred pages of small print. The fault of the edition from a school point of view is its lack of discrimination; but, apart from this, the book is an excellent one in every way—sound, scholarly, and appreciative. The notes, though somewhat too numerous and occasionally too full, are otherwise models of what notes should be. They treat the play as a play and as a work of art, are unfailingly appreciative of touches of character and dramatic intention, and are well informed in every way. The appendices also are well written, interesting, and instructive. Indeed, there is little or nothing of prime importance in Furness's large collection of material which is left unrepresented, besides which, there are the results of Mr. Verity's own careful study. The general plan of the volume follows that of the rest of the series. To teachers and adult students we heartily recommend this edition; but for pupils of school age we think it will be wiser to choose something less elaborate.

"The Warwick Shakespeare."—*Much Ado about Nothing*. Edited by J. C. SMITH, M.A. (7 × 4¼ in., pp. xxiv., 173; price 1s. 6d. Blackie.)

This is a satisfactory example of a good series. The notes are moderate in number and in length, are well informed, and show as a rule a commendable consciousness that they refer to a work of art, and that a play. We have noticed no omissions and nothing that is superfluous in them. What is called an introduction, though for the most part it does little enough, except in one section, to prepare the young beginner for an intelligent study of the play, is not over full, and is of the usual kind, dealing with the history of the play, the source of its plot, and its date. It would be well, by the way, if Mr. Verity's plan were followed and when the source or sources of a play are given, to state what is actually implied in this. As a rule Shakespeare finds in his sources little more than dead material of a story, with the barest hints for characters and situations, which by his wonderful art he converts into a piece of real life, with its living, breathing men and women. The talk about sources is often very misleading, and needs a caution. The section of the introduction which we have mentioned as an exception is entitled "Criticism." Though as criticism it should come *after*, instead of *before*, the text, it does in many ways serve to arouse the curiosity and interest of the learner in what is to follow, and to direct his attention to matters which it will be well to observe. Moreover, it is in itself a good piece of work, and adequately discusses the various points which a study of the play will have made interesting to the student. On the whole then, as we have said, this edition is a satisfactory one.

The Student's Synopsis of English History. Compiled by C. H. EASTWOOD. (7¼ × 5 in., pp. 163; price 2s. Edward Arnold.)

This useful and well planned little book is based mainly on Professor Oman's well known "History of England," but numerous other sources have been drawn upon as well. Everything seems to have been thought of and put into its right place—even "Landmarks of the History of Education" is allowed a page to itself. Of course the "Chronological Analysis" occupies the lion's share of the space. But room is also found for Important Laws and Enactments, Important Treaties, Great Writers, Definition of Historical Terms, and half-a-dozen other things which we expect to find in books of this sort. The general plan is certainly good, and, as far as we have been able to test it, the information given is accurate and clearly expressed.

"University Tutorial Series."—*The Tutorial History of English Literature*. By A. J. WYATT, M.A. (6¾ × 4¾ in., pp. xii., 223; price 2s. 6d. W. B. Clive.)

Of small books on English literature there is no end, and most of those which call themselves "Histories of English Literature" are not *histories* in any true sense, and are of very little value to any one. Mr. Wyatt's little book, however, is an exception—it is a history, and a very readable one. It is well written, well informed, and accurate, and its critical judgments are sound and appreciative. The lesser writers are mentioned, if at all, only incidentally. Our attention is drawn only to the greater writers, and even then only to some of the more important aspects of their work; while the period covered ends at 1832. And so by not attempting to do too much Mr. Wyatt has done a great deal. His book is one of the best of its size which we have seen. In order to avoid the reproach that books of this kind lead the young to substitute reading *about* authors' works for the reading of the works themselves, each chapter is provided with a brief list of works which should be read before the chapter is attempted. If Mr. Wyatt can induce teachers to carry out this plan conscientiously, then his book will be a boon indeed. But we are not very hopeful. However, the blame will not rest with him. The book is healthily free from critical labels and literary formulae; and the connecting links between one period and the next and between one writer and another are very satisfactorily dealt with.

"Descriptive Geographies from Original Sources."—*North America*. Selected and edited by F. D. HERBERTSON, B.A., and A. J. HERBERTSON, Ph.D. (6¾ × 4¾ in., pp. xxxvi., 252, illustrated; price 2s. A. & C. Black.)

This series attempts to depict the world in the language of men who have seen it—hence the statement "from original sources." The book may be used either as a class text-book or simply as a reader. Those who choose the former will require something more in detail and in statistics that is provided by the illustrative passages. For these a fairly satisfactory introduction has been specially prepared. But we fancy most teachers will prefer to use the book as a reader; and a very interesting one they will find it. Both the letterpress and the pictures have been well selected, and are very various in character. The only fault we have to find is that the majority of the selections are much too brief. You no sooner get interested than you find you have come to the end of the passage. Perhaps it would have been better to have made more of the passages long and to have been contented with fewer of them. It is difficult to say. But, in any case, we have here a very interesting little book on a new plan. A useful bibliography and an index are given at the end.

"Cambridge Bible for Schools."—*The Book of Daniel*. With Introduction and Notes. By S. R. DRIVER, D.D. (Price 2s. 6d. Cambridge University Press.)

This is a model commentary, exhibiting a perfect combination of lucid statement and scholarship in its highest form. Besides the commentary proper (pages 1–206), which is packed with valuable exegetical and philological notes, there is an elaborate introduction, covering over one hundred pages, in which the main problems of the history and interpretation of the book are discussed. Regarding the vexed question of authorship and date Dr. Driver's conclusion is as follows: "Internal evidence demonstrates, with a cogency that cannot be resisted, that the Book of Daniel must have been written not earlier than c. 300 B.C., and in Palestine; and there are considerations which make it highly probable that it was, in fact, composed during the persecution of Antiochus Epiphanes, between B.C. 168 and B.C. 165 (page xlvi.). The arguments on which this conclusion is based are set forth, in masterly fashion, in the pages that follow. The subsidiary questions that arise in connexion with the book—such as the rise and nature of apocalyptic, the doctrines of the resurrection, Kingdom of God, &c., are also fully dealt with. One slight quotation—a characterization of apocalyptic literature generally—may be cited here: "Apocalyptic prophecy arose in an age in which there were no longer any prophets of the older type, addressing themselves directly to the needs of the times and speaking in person to the people in the name of God, and it consists essentially of a development and adaptation of the ideas and promises expressed by the older prophets, designed especially with the object of affording encouragement and consolation to faithful Israelites in a period of national distress" (page lxxviii.). The book is one that will appeal not merely to the intelligent English reader, but to the specialist as well, many valuable philological observations and data being scattered about its pages. It can, however, be recommended unreservedly to the perusal of non-specialists, who will find in it all the help needed for the elucidation of a difficult and important piece of literature. The publication of such a commentary in the Cambridge Series will probably exercise a decisive influence on English theological opinion regarding the Book of Daniel. Everybody concerned is to be congratulated cordially on its appearance.

Essays from De Quincey. Edited by J. H. FOWLER, M.A., Assistant Master at Clifton College, Author of "A Manual of Essay-Writing." (1s. Black.)

We regret that in the crowd of books that came upon us last year we allowed Mr. Fowler's charming and most acceptable volume of "Essays from De Quincey" to pass unnoticed. That the general public should for so long have known De Quincey almost exclusively as the author of "The Confessions of an Opium-Eater" and the essay on "Murder considered as a Fine Art" has been a misfortune to literature. Mr. Fowler has taken away the reproach by placing within reach of the general reader and every schoolboy and schoolgirl the splendours of the series of papers on "The English Mail-Coach," the enthusiasm of the vindication of "Joan of Arc," the critical insight of the reflections on "The Knocking at the Doors in 'Macbeth,'" and the idyllic pathos and sublime simplicity of the "Memorials of Grasmere." Whoever reads these essays through—and to begin any one of them is to read the whole of all—must evermore count De Quincey among the friends of his heart and his imagination; besides having learned something of the scope and uses of that "literary sense" upon which Mr. Fowler discourses so admirably in his preface. We hope the edition of which a copy is now before us was sold out long ago. But the demand for the book ought not to stop until everybody who can read English has possessed himself or herself of it.

Naples, Past and Present. By ARTHUR H. NORWAY. (Methuen.) Another book we have neglected too long is Mr. Norway's admirable book on Naples. It teems with information topographical and historical, and has numerous delicate illustrations over and above the wood-

pictures in the text. A good index and an erudite appendix complete the usefulness of the volume.

The Story of a Child. Translated from the French of PIERRE LOTI by CAROLINE F. SMITH. (Price 5s. 8d. net. American School Text-book Agency.)

France is rich in autobiographies of childhood—witness Lamartine, Renan, George Sand. Those who have enjoyed “*Les Pêcheurs d’Islande*” (and who has not?) will likewise relish the childish memories of a singularly sensitive and nature-loving solitary. The editor tells us that Miss Smith has “caught the subtle charm of Loti’s style,” and we can, with slight reservations, endorse this high praise. There is occasionally stiffness and a fondness for Latin derivatives—“commencement” for “beginning,” “environing” for “surrounding”; and “My God! I felt as if I should faint” is hardly the speech of an English child.

The College Student and his Problems. By JAMES HULME CANFIELD. (Price 4s. 6d. net. Macmillan.)

These counsels were addressed in the first instance to students of the Columbia University, but, *mutatis mutandis*, they will apply equally to Oxford and Cambridge undergraduates. The hints on the selection of a course of studies, on distribution of time, on the choice of a career, show plain common sense. The motto of the book might be “Shun delights and live laborious days,” and there is but little of the “desipere in loco.”

Readings on the “Paradiso” of Dante. Chiefly based on the Commentary of Benvenuto da Imola. By the HON. WILLIAM WARREN VERNON, M.A. With an Introduction by the BISHOP OF RIPON. 2 vols. (Macmillan.)

These admirable volumes form a very welcome and important contribution to modern Dante study, and are a worthy conclusion to the author’s previous labours, undertaken and completed in a spirit of reverence for his theme, of comprehensive sympathy with the “poeta altissimo,” and of scholarly insight and handling in dealing with the difficulties with which the “*Paradiso*” teems. Like his preceding works on the “*Inferno*” and “*Purgatorio*,” these present ones “are based,” we are told in the preface, “upon the famous Latin commentary of Benvenuto da Imola . . . and follow the same order and plan, which has been to take the text verse by verse, to give a faithful translation, to connect the narrative with a running commentary, to explain all difficulties as they arise, and to supply in numerous footnotes a key to philological, literary, and historical doubts.” Dantists can hardly be thankful enough to Mr. Vernon for bringing the commentary of Da Imola thus within their reach, and they owe a deep and lasting debt of gratitude to the author for his labours. Only those who have measured for themselves the difficulties of the task can realize how Herculean those labours have been, how tireless and patient the scholarship which has poured old wine into such new and attractive vessels. Indeed, as the Bishop of Ripon says in his sympathetic introduction, “we are tempted to be envious of the young student of to-day, who can make his first excursion into the realms which Dante opens, under the well-skilled guidance of Mr. William Warren Vernon,” and we may be sure there will be many who will only too gladly avail themselves of such invaluable help. The books are enriched by an excellent bibliography, admirable plans of the “*Paradiso*” as imagined by Dante, and a copious index, while the “preliminary chapter” is a veritable *multum in parvo* of Dante lore, bristling with interesting suggestions for the student of the “*Divina Commedia*.”

Comparative Anatomy of Animals. Vol. I. By G. C. BOURNE. (Price 4s. 6d. G. Bell & Sons.)

It can hardly be claimed that this book fulfils the purpose for which it has been written, namely, to satisfy the requirements of the elementary examinations at the leading Universities of Great Britain. The present volume only carries the work as far as the *Cœlenterata*, and also gives an account of the Frog, a large part of which might with advantage have been omitted, since it really falls within the scope of a practical book such as Marshall and Hurst’s “*The Frog*,” and can only be mastered by a student in connexion with his practical work. The author takes the Frog as a general type of animal structure, then passes to histology and cell-structure, and then commences at the base of the scale of organization and works upwards. The avowed purpose is to lead the student gradually from familiar to unfamiliar things, but it is difficult to see how this purpose is accomplished by suddenly immersing a beginner in a mass of details concerning the complicated anatomy of a highly organized Vertebrate such as the Frog. They are just as unfamiliar as is the structure of the cell, and, moreover, the beginner who has mastered the Frog is likely to be considerably confused when he attempts to compare its anatomy with that of an *Amœba*, *Actinophærium*, or *Myxomycete*, which are the types next discussed. The author has clearly had very little experience of elementary teaching, and an elementary book written with an eye to examinations is not the proper place to insert detailed accounts of original observations of little intrinsic value. The book might either be condensed and simplified so as to fulfil its original purpose, or might be extended and amplified to form a more advanced treatise. At present it fulfils neither purpose.

Practical Exercises in Magnetism and Electricity. By H. E. HADLEY. (Price 2s. 6d. Macmillan.)

There is an increasing tendency to insist on a practical acquaintance of elementary students not merely with the qualitative observation of the fundamental phenomena of magnetism and electricity, but with simple measurements arising out of them. It is to meet the needs of such, without reference to any particular syllabus, that this book has been written. Sufficient explanation of the theory of each experiment is given to make the method clear to the student who has previously been instructed in the lecture-room, and the apparatus used is of the simplest character, so that the worker is never in danger of losing sight of the quantity he has to measure. The order and arrangement of the experiments closely follow the same author’s “*Magnetism and Electricity for Beginners*,” and the two courses could be worked together with great advantage. In experiment 45, would it not be advisable to abolish the tripod for some non-magnetic support? It may also be pointed out that galvanized iron is not tinned, but is coated with zinc.

Memories Grave and Gay: Forty Years of School Inspection. By JOHN KERR, LL.D. (Price 6s. Blackwood.)

The name of John Kerr is known and honoured throughout the length and breadth of Scotland, and we are glad that he has yielded to the solicitations of his friends and given to the public some memorials of a full, if not eventful, life. He carries us back to a time when the inspector was half knight-errant and half missionary, sometimes regarded as a Roman publican, gathering where he had not sown; but sometimes, as was the case with Dr. Kerr, welcomed as a bringer of good tidings, cheering the solitary dominie in his Highland bothie, not disdaining to visit the humblest dame’s school, picking out the sharp lad who would win for himself a bursary, the friend alike of masters, visitors, ministers, and managers. We only wish that Dr. Kerr had given us more of his official life. He was from the first a sturdy reformer, and helped to shake off the tyranny of the Saxon Code. He must in his time have done battle in high places, and withstood the powers that be, but on all esoteric matters he is discreetly reticent. Men of mark, Lord Singer, Lord Playfair, Sir G. Grove, Robertson Smith, Norman Macleod, Alexander Smith, flit across the pages, but they are mostly shadows. Not so James Beattie, the cobbler school-master, a genuine Scotch Pestalozzi in miniature. That is a masterly sketch which we are glad to see exhumed from an old volume of *Good Words*. The gay, however, preponderates over the grave, and Dr. Kerr has a fund of good stories, of which we will only quote two or three to whet the reader’s appetite. Two old cronies are talking over a lately deceased comrade, and one says: “The ways of Providence, Duncan, is fery strange. Why should Hector, a younger man than you or me, and a strong man, too, be taken before us?” Duncan answers: “Yes, Donald, the ways of Providence is fery strange, to be sure. I’ll not jist be able to say why Hector has been taken away before us; but there was one thing I noticed—I always thoct he wud be puttin’ too much waater in his whusky.” Two friends find that they can only muster between them the price of one glass of whisky, and are about to share it when they are joined by a third, to whom one of them offers the glass. He accepts, and, according to the etiquette of workmen, offers each a glass in return. The first remarks to the second: “Now, wasna that weel managed?” “It was so,” replies the second; “but, man, it was an awfu’ risk.”

Test Papers in General Knowledge. By H. S. COOKE. (Price 1s. 6d. Macmillan.)

Mr. Cooke is Head Master of the Pupil-Teachers’ Classes at Reading College, and these test papers are designed primarily for pupil-teachers’ centres. The compiler hopes that they may be also used in the higher classes of elementary schools and in secondary schools. We doubt whether it is possible to find the common denominator of three sets of pupils differing so widely. The last, for instance, will know the names of the three Fates, and may possibly know the names of the nine Muses, though if they can name the three Gorgons they are wiser than the present reviewer; but is this a question for a Board-school child? To say there are numberless other questions that we could not answer is not necessarily a condemnation of the book, and perhaps we are only exposing our own ignorance. We will give a few samples, and leave our readers to judge: “Who built the Bridgewater Canal?” “Distinguish between *electric* and *eclectic*, *wig* and *wigwam*.” “What are the second-class fares by the (1) Elder-Dempster, (2) Shaw-Savill, (3) Wilson Line?” “How would you begin a letter to the mayor of your native town?” “Why does Dundee make so much jam, and why is Yarmouth so noted for herrings?” “How long will our coal supply last?” “What steps may be taken to cure sea-sickness?” (We wait anxiously for the promised key.) “What are the duties of the present Poet Laureate?” (Would “to write Jameson Odes in the *Times*” get marks?) “What is a public school?” (This is a conundrum.) “Who wrote the Book of Psalms?” “What are the usual portents of rain to be observed in Nature?” “Discuss the truth, or otherwise, of the following statement: ‘Never sit down to dinner with thirteen in the company.’”

A French and English Word Book. By H. EGREN and P. B. BURNET, with an explanatory Preface by R. J. LLOYD. (Price 8s. 6d. Heinemann.)

This new dictionary has two original features. First, by indicating what letters are silent and by diacritical signs it shows the pronunciation of every word. Secondly, it indicates in briefest compass the derivation of words. An instance will explain: "Clo-re" [L. *claudere*] signifies the *o* of "into," silent *e*, and the superscribed *a* shows that the word is of direct popular Latin origin; "closerie¹⁴" shows that the word was introduced in the fourteenth century. As to the former innovation we feel some hesitation in pronouncing. It has the sanction of Dr. Lloyd, a high authority in such matters; but we are afraid that the average schoolboy will make nothing of those d—d dots (we are quoting Lord Randolph Churchill), and therefore should prefer a phonetic transcript. The philological device is most ingenious, and in every way commendable. To take Gasc as a standard of comparison, Egren's type is far superior; the black letters of the head words catch one's eye at once. *Per contra*, Gasc is much fuller. We took as a test words that occur, or are suggested, by the passage set last month from Kinglake. For a blank wall, a practical joke, a Joe Miller, Egren leaves us in the lurch; so for *frayer un chemin*, and *henna* is absent from both the French and English portions. So, too, we search in vain both for *motor-car* and *automobile*. *Pion* is "usher" rather than "monitor," and *college* should not be rendered "college."

A First Arithmetic. By Dr. W. T. KNIGHT. (Price 8d. Relfe.)

In this first volume, which is to be followed by two others, the course covers the first four rules (simple and compound), weights and measures, factors, G.C.M. and L.C.M., vulgar fractions, simple proportion, and practice. The text consists of definitions and rules, proofs and type examples being omitted, as the author considers that the processes must be explained verbally by the teachers, and that everything in a first arithmetic depends on the careful graduation of the exercises. Of these there are nearly two thousand five hundred compressed into eighty-four pages, and, so far as we have examined them, they seem to us to be arranged in order of difficulty. The only fault we have to find with the book is the inclusion of such weights and measures as those used for ale and beer, wine, wool, hay and straw, and bread and flour. These, and possibly also apothecaries' weight, cloth measure, and dry measure, might have been omitted without much loss, if not with advantage.

"Longmans' British Classics."—*Macaulay's Essay on Clive*. Edited and Annotated by A. M. WILLIAMS, M.A. (7 x 4½ in., pp. xxxii., 134, illustrated; price 1s. 6d. Longmans.)

Mr. Williams supplies a general introduction to the study of Macaulay and an essay on literary characteristics. Both are written with care, and are very suitable to their purpose. But the notes, with but few exceptions, are merely abridgments, without acknowledgment, of those in another annotated edition of the essay in the "London Series of English Classics," also the property of Messrs. Longmans. Both in fairness and in courtesy it is usual, when so much borrowing takes place, to indicate the fact. Some slight use has been made of recent books published on the subject, but much more should have been done in this direction.

"Heath's Modern Language Series."—*Gautier's Jettatura*. Edited by A. SCHINZ. Price 1s. 3d.

This admirable story has already been edited for English schools. Dr. Schinz's notes are a little meagre: e.g., "*le voie Consulaire*—the consular street." Mistakes of Gautier like "the Laird of Dumbike," "Tom Cribb's," "Erynies," should have been corrected.

School Music Abroad. By J. SPENCER CURWEN. (Curwen & Sons.)—An interesting little book of notes, from personal observation, on the teaching of school music in most European countries and in America, from which teachers may gather some useful hints.

The Junior Violinist. In four parts. Edited by C. EGERTON LOWE. (Price 1s. 6d. net each. Novello.)—It is always a difficulty to find pieces in the first position which are easy and yet interesting for beginners. Mr. Egerton Lowe seems to us to have been successful in his choice and arrangements, though in the latter, in one or two cases, the accompaniment follows the melody too closely. We have arrangements from Mendelssohn, Mozart, Schubert, and also from modern composers, such as Stainer and Barnby. The bowing is well planned, and the phrasing good; the accompaniments, too, are quite simple.

Novello's School Music and School Songs. Edited by W. G. MCNAUGHT.—In this collection we have several little operettas and songs, with music in the staff and tonic sol-fa notations and piano accompaniments. Of the operettas, perhaps, "Little Snow White" (2s.), founded on the well known fairy story, by J. L. Roeckel, is the most attractive, but in all there is plenty of variety, and the tunes are taking. The songs are published mostly in 6d. parts; Book 118 contains the best selection. In all cases the parts with tonic sol-fa notation can be had separately.

We have also from Messrs. Novello two books of more advanced two-part songs, by BATTISON HAYNES, price 1s. 6d. each. These, if

not containing anything strikingly original, are prettily harmonized and melodious.

We have received a new edition of John Curwen's *Standard Course in the Tonic Sol-fa Method* (price 3s. 6d. Curwen & Sons), revised and partly re-written by professors in the Tonic Sol-fa College.

Messrs. Nelson have published several useful little school song books, price 1s. 6d. each, with music in staff and tonic sol-fa notations and piano accompaniments. The words in the *The Royal Crown Song Book*, in two parts, are taken from "The Royal Crown Readers." *The Infant School Song Book*, also in two parts, has many familiar tunes, and there is plenty of opportunity for action if wanted. These latter books contain also several good marches.

We have received from Messrs. Blackie a new edition of *The Pirate Island* (price 3s.), one of the most exciting of Mr. HARRY COLLINGWOOD's spirited stories of the sea; and a new edition of *Grettir the Outlaw* (price 3s.), by S. BARING GOULD, a wonderful story of an old Icelandic hero, whose prowess must satisfy the most insatiable appetite for daring deeds.

ANNUAL MEETING OF THE FROEBEL SOCIETY.

THE Annual Business Meeting of the Froebel Society was held at the College of Preceptors on Thursday, March 20, at 7.30 p.m., Mr. C. G. Montefiore in the Chair. The Earl Beauchamp was unanimously elected President for the ensuing year, in the place of Mrs. Walter Ward, who retired. Seven retiring members of Council were re-elected; and Mr. Keatley Moore was re-elected Hon. Treasurer, Mr. C. G. Montefiore Hon. Secretary, and Mrs. Harold Cox Auditor. The report and balance-sheet for 1901 were then presented and adopted, which closed the business of that meeting.

The Annual General Meeting began at 8 p.m., the President, Earl Beauchamp, in the Chair. The Chairman, in his opening address, thanked the Council for the honour they had done him, and assured them that he would do his utmost to serve the purposes of the Society. He supposed that the chief object of such a meeting as this was to review what had been done during the past year, and to see how far they had attained to their ideals. A frequent fault nowadays was that people were so busy in looking at the trees that they could not see the forest; and without some occasion of that kind, when they could meet together to cheer each other up, they were apt to fall into a state of pessimism. Their pessimism, perhaps, was not altogether unjustifiable, when they remembered the optimistic prophecies of the last generation regarding the Education Acts which were passed in the seventies, and realized to-day how few of those prophecies had actually come true. Great reforms in education had, however, taken place since that time, though not, in his opinion, among the children of what are called the "upper classes." He considered that the education which is given to the children of rich people was far worse than that provided for the children of the poorer classes. For instance, when he was at Eton, religious instruction was restricted to one hour each week, and generally consisted of the proper construction of Greek particles; while three-quarters of an hour every other week sufficed for history and geography, most of that history and geography relating to ancient Rome and ancient Greece. In his opinion it was little short of ridiculous that the children of the class in whose hands lay the government of the country should be taught so little of the history and geography of their own islands and of the British Empire; and he was convinced that there was an urgent need for a thorough reform of the education of the children of the rich. He mentioned the triennial conference on the welfare and protection of children which was to be held this year in London, and of which he was President, and cordially invited the Froebel Society to send representatives and to bring forward their views. It must be remembered that it was not the clever children who were most important to the country, but the children of merely average abilities, who formed the huge bulk of the child population. Surely the greatness of the Empire lay not so much in its size, or in its exports and imports, as in the character of each individual turned out by that Empire, and it was in education of its children rather than in warfare that its future lay. It was the ambition of Englishmen that their country should be the finest in the world, and to reach this great end each individual could do something to help.

Miss E. R. Murray, of the Maria Grey Training College, then read a paper on "Stories for the Kindergarten and the School," taking the Herbartian view of the educational aim of literature, and maintaining that good stories are literature, and not merely, as is often stated, "an introduction" to it. Though insisting that the story should provide the child with ideals to imitate, and material on which to exercise his moral judgment, Miss Murray protested strongly against the worse than useless practice of tacking on a moral at the end, saying that any story worth telling can point its own moral. Another mistake often made, especially by kindergarten teachers, is that of trying to keep a child in an unreal world, and imagining that he can learn to love goodness without learning to hate evil. Another, a common, practice

condemned in the paper—which it was suggested might perhaps be traced to this desire to keep the child ignorant of any wrong-doing—was that of substituting for real literature feeble stories of the teacher's own manufacture. The ordinary modern child's book came in for very adverse criticism, as tending to limit rather than to widen a child's ideas by presenting only the commonplace, and as calling forth no intellectual effort. Miss Murray proposed to make a bonfire of most of these books, particularly of the "books for girls," saying that the children would then read the good books more frequently, and, if more books were necessary, then Lamb's recipe for "incomparable old maids" might be tried, and the little girls "tumbled into a spacious closet of good old English reading without much selection or prohibition," and there allowed to "browse at will."

Another paper on the same subject was read by Principal Burrell (of Borough Road Training College). Mr. Burrell began by stating the position taken up by him on this subject of story-telling. He maintained that all children had the elements of good story-telling in them; that by story-telling we approach the great literatures, and that the teacher as well as the child ought to be a good story-teller. The teacher usually believes the child cannot tell stories, but the mother knows that the child can. Indeed, the child needs no direct instruction at all, but only encouragement. The lecturer gave some hints to those who aspired to be story-tellers, and pleaded for a more rational method of studying literature than that of to-day, the exceeding badness of which was due to Universities, codes, and examinations in English. The whole paper was a plea for the child as against the teacher, and Mr. Burrell frankly stated his opinion that in all voice work, reading, speaking, gesture, children's chances were taken from them when they were sent to school. A few suggestions were added as to the right sources of good child stories, and one or two stories were told.

Votes of thanks to the Chairman, and to Miss Murray and Principal Burrell, were then passed, also a vote of thanks to the College of Preceptors for the use of their hall.

PRÉCIS OF THE EDUCATION BILL.

The Local Education Authority

is the Council of every county and county borough, except that, as respects elementary education, the Council of a borough with a population over ten thousand, or of an urban district with a population over twenty thousand, is the Local Education Authority.

Education Committees.

Any Council, except as regards the raising of a rate, shall act through an Education Committee or Committees constituted in accordance with a scheme made by the Council and approved by the Board of Education.

The Scheme

shall provide (1) for the selection and appointment by the Council of at least a majority of the Committee; (2) for the appointment by the Council, on the nomination, where it appears desirable, of other bodies, of persons of experience in education, and of persons acquainted with the needs of the various kinds of schools in the area for which the Council acts.

There may be separate Committees for any areas within a county, or Joint Committees for areas formed by a combination of counties, boroughs, or urban districts.

Wales.

Wales and Monmouthshire are excepted from the Act, though at liberty to adopt it.

Finance.

The expenses of a Council under this Act shall, so far as not otherwise provided for, be paid, in the case of the Council of a county, out of the county fund; and in the case of the Council of a borough, out of the borough fund or rate; and in the case of the Council of an urban district, as expenses incurred for the general purposes of the Public Health Acts. But the expenses of any secondary school or college may, at the discretion of the Council, be charged on any parish or parishes which the school or college serves.

A borough or urban district which takes over elementary education may not be aided by a county rate.

The annual Parliamentary grant in respect of any school maintained by a Local Education Authority shall be paid to that Authority and applied in aid of the expenses incurred by them under this part of the Act.

ELEMENTARY EDUCATION.

Resolution of Adoption.

Any Council, as defined in Part I., may pass a resolution of adoption at a meeting of which one calendar month's notice must have been given. This resolution shall come into operation at such time as the Board of Education shall fix, but not sooner than one month after the publication of the resolution. If the resolution has been rejected, it may not be brought forward again before three years have elapsed.

Powers and Duties of Local Authority.

The Local Education Authority shall throughout their area have the

powers and duties of a School Board and School Attendance Committee under the Elementary Education Acts, 1870 to 1900, and the control of all secular instruction in public elementary schools, whether provided by them or not, and School Boards and School Attendance Committees shall be abolished in that area.

Management of Schools.

In the case of schools provided by the Local Education Authority, that Authority appoints the managers. In the case of schools not so provided, the managers are the same as under the Elementary Education Acts, 1870-1902.

Maintenance of Schools.

The Local Education Authority shall maintain and keep efficient all schools within their area, with the following provisos as regards schools not provided by them:—(a) The managers of the school shall carry out any directions of the Local Education Authority as to the secular instruction to be given in the school. (b) The Local Education Authority shall have power to inspect the school, and the accounts of the managers shall be subject to audit by that Authority. (c) The consent of the Local Education Authority shall be required to the appointment of teachers, but that consent shall not be withheld except on educational grounds. (d) The managers of the school shall, out of funds provided by them, keep the school house in good repair, and make such alterations and improvements in the buildings as may be reasonably required by the Local Education Authority. (e) The Local Education Authority shall have the right of appointing such persons as they think fit to be additional managers, so that the number of the persons so appointed, if more than one, does not exceed one third of the whole number of managers.

Provision of New Schools.

When the Local Education Authority or any other persons propose to provide a new school, the managers of any existing school, or ten of the ratepayers, or the Local Authority (if they are not the providers), may appeal to the Board of Education, and the Board of Education shall determine whether the school is necessary or not, but a school actually in existence shall not be considered unnecessary in which the number of scholars in average attendance is not less than thirty.

Power to Enforce Duties.

If the Local Education Authority fail to fulfil any of their duties, the Board of Education may make any order they think proper, and enforce the order by mandamus.

SECONDARY EDUCATION.

The Local Education Authority may supply or aid the supply of education other than elementary, and for that purpose may apply the residue under Section 1 of the Local Taxation (Customs and Excise) Act, 1890, including any balance thereof which may remain unexpended at the end of a financial year, and may spend such further sums as they think fit: provided that the amount raised by the Authority for the purpose in any year out of rates under this Act shall not exceed the amount which would be produced by a rate of twopence in the pound, or such higher rate as the Local Government Board may fix by Provisional Order made as respects any particular county or county borough on the application of the Council of that county or county borough.

Smaller boroughs and urban districts shall have concurrent powers with the County Council, provided that the amount spent by them on higher education does not exceed a penny rate.

Religious Instruction.

No denominational religious instruction shall be required in any rate-aided school or college, and for day scholars there shall be a conscience clause.

Extent and Commencement of Act.

This Act shall not extend to Scotland, Ireland, or, as regards elementary education, to London. It shall come into operation on the appointed day, that is, except as expressly provided, on March 26, 1903, or on such other day within a twelvemonth as the Board of Education may enact. As regards elementary education, the appointed day is the day on which the resolution of adoption comes into force.

PRESS COMMENTS ON THE BILL.

THE *Times*, the *Standard*, and the *Daily Telegraph* approve the Bill, save for its optional character; the *Daily Mail* and the *Daily Express* approve it without reserve.

"A genuine effort to deal in a comprehensive manner with primary and secondary education. The optional clauses met with little favour on either side of the House."—*Manchester Guardian*.

"If the Government alter this optional provision in their Bill, they will have the right to claim that they have established the system of education on an unassailable basis, from the point of view of the educationist."—*Saturday Review*.

"On the whole, the reception of the Bill is very favourable, and most

of the criticisms can be turned by making it stronger and omitting local option. The option probably means that where a new Education Authority is most wanted the old Education Authority will be kept alive."—*Pilot*.

"Alas for the lame and impotent conclusion! Instead of setting the whole decision of the matter on one pitched battle in the Commons, it will set up a guerrilla warfare of a singularly unpleasant kind through the length and breadth of the country."—*Pall Mall Gazette*.

"The scheme provides an authority which is a mere conduit for the flow of public money to the voluntary schools, and it is inspired by an obvious animus against School Boards."—*Westminster Gazette*.

"The proposal to make the adoption of the new scheme optional is simply fatuous."—*St. James's Gazette*.

"No longer will the unfortunate supporter of voluntary schools, while freely paying his rates for the school over the way, have to be making subscriptions in order to keep his own school going."—*Morning Post*.

"Very faltering and tentative in its movement towards co-ordination, and very revolutionary in its attitude to the voluntary schools."—*Daily Chronicle*.

"As favourable a compromise as Churchmen can hope to get, but the optional clauses would go far to deprive the scheme of any real value."—*Guardian*.

The *Spectator* supports the Bill mainly on the ground that it reduces the number of elected bodies, and so tends to the conservation and against the dissipation of electoral energy. The compromise arrived at as to the voluntary schools is eminently fair, and also quite practical. The permissive clauses must go, and those treating the small towns and urban districts as if they were county boroughs should be omitted.

UNIVERSITIES AND SCHOOLS.

OXFORD.

Since my last letter the University has suffered a heavy loss in the death of Dr. S. R. Gardiner, the great historian of the period from the accession of James I. to the Civil Wars. Besides his work as a writer and scholar of the rarest type, he was also for many years an active teacher and indefatigable and incomparable lecturer. Oxford has little to be proud of in regard to her recognition of his work or substantial aid to its progress. Christ Church elected him in 1850 to a studentship, but he lost it in 1851 for theological reasons; and, though his first two volumes appeared in 1863, it was not till 1884 that All Souls awarded him a Fellowship. When Froude died in 1894 he was offered the Professorship; but the recognition, though ample, was too late. He felt the time remaining for his work too short to admit of duties outside it. An exceedingly interesting notice in the *Oxford Magazine* by the most competent and best qualified judge, Mr. C. H. Firth, thus sums up Gardiner's work: "That which he has contributed to English history is not merely a larger knowledge of the facts, but a better understanding of their meaning."

The death is also announced of Mr. G. S. Ward, Senior Fellow and Tutor of Hertford College, and for many years an active and useful Delegate of Local Examinations.

There is nothing further to report (since March 1) in regard to either the proposed improvements of the entrance examination or the scheme for formulating the needs (present and prospective) of the University. As regards the latter, it is to be presumed that the various authorities and boards consulted are considering their suggestions; and the Vice-Chancellor has fixed the end of May as the latest date for their answers to his circular. With respect to Responsions, it is generally known that the Committee of Council mean to present a report involving alternatives for Greek, but further details are understood to be at present unsettled, and whether Council will approve any scheme making Greek optional is just what nobody is in a position to predict.

I may perhaps briefly chronicle a few items of an interest not purely local. Such are the brilliant lecture (March 5) by Mr. A. C. Bradley, the Professor of Poetry, on "The Rejection of Falstaff"; the Teynbee Hall meeting, notable for the presence of Mr. Asquith and the eloquent and impressive tribute he paid to Canon Barnett; Messrs. Longmans announcement (March 8) of a new History of England, in twelve volumes, to be edited by Mr. R. L. Poole and Rev. W. Hunt, and the writers to include at least five Oxford scholars and teachers (Warden of Merton, Prof. Oman, Prof. Lodge, Mr. H. A. L. Fisher, Mr. A. L. Smith); and, last but not least, the completion of Mr. W. L. Newman's great work on Aristotle's "Politics," of which the last two volumes have just been issued by the Clarendon Press.

An interesting bequest to the University has been recently accepted by Convocation, consisting of a sum of money left under the will of Mrs. Arnold to found a prize in memory of her late husband, Mr. Matthew Arnold. The prize is to be given for an essay on some subject connected with English literature, and is to be awarded annually in the Easter Term, at the same time as the other University prizes. One

unusual provision, expressly set forth in the will, has a special interest. The subject for the essay is to be set, not, as usual, by the examiners, but by five persons in rotation—the Professor of Poetry, the Poet Laureate, the Master of Balliol, the Provost of Oriel, and the Head Master of Rugby. No reminder of Matthew Arnold is needed by his successors in the chair, or by Balliol, Oriel, or Rugby. But, perhaps, future Poets-Laureate may be benefited (once every five years) by being forced to recall a true poet and brilliant critic who never occupied their post.

The following appointments have been announced:—To the Ford Lectureship in English History, Mr. Leslie Stephen; to the newly revived Lectureship in Foreign History, Mr. E. Armstrong (Queen's College); to represent Oxford at the Thirteenth International Congress of Orientalists, Mr. A. A. Macdonell, Boden Professor of Sanskrit; Examiners for the Hertford Scholarship, Mr. A. O. Prickard (New College), Mr. R. R. Marett (Exeter College), Mr. R. W. Pickard-Cambridge (Balliol); New Proctors, Mr. A. B. Poynton (University) and Mr. P. Elford (St. John's); Curator of Botanic Gardens, Mr. G. E. Baker (Magdalen); Curator of the Bodleian, Prof. H. F. Pelham (President of Trinity); Delegate of Non-Collegiate Students, Prof. Gandy (All Souls); Delegate of Lodging Houses, Mr. E. M. Walker (Queen's).

Mr. C. H. Firth (All Souls) has been elected a member of the Athenæum, under the regulation which permits the election of persons "distinguished in literature or science."

Degrees.—B.D. and D.D. (by accumulation): Rev. H. M. Burge (University College), Head Master of Winchester College; Honorary D.D.: Right Rev. E. H. Elwin (Merton), Bishop of Sierra Leone; Honorary Doctor of Laws (Aberdeen University): Prof. J. Wright (Exeter); D.Litt.: Rev. H. A. Redpath (Queen's); Grinfield Lecturer on the Septuagint, for work in the Concordance to the Septuagint.

CAMBRIDGE.

The opposition to the Appointments Board proved to be more vehement than serious, and the necessary Grace for its establishment in connexion with the University was carried by 105 votes to 45. The proposal to extend the functions of the Indian Civil Service Board, so as to cover the preparation of candidates for the open competition, was also adopted.

The Special Boards concerned with the Natural Sciences Tripos have brought before the Senate, though with some lack of unanimity, certain suggested changes which may do something to improve the methods of classification now in use. In Part I. a candidate takes three or four sciences, and it is the theory that the aggregate of his marks, however obtained, determines his class. It is now proposed to require for a First Class that he shall, in addition to a sufficient aggregate, reach a high standard in at least one subject. This should tend to discourage polymathic smattering. In Part II., on the other hand, a First Class can be obtained only by a candidate who shows not alone a special mastery of his own subject, but also a "competent knowledge" of a second. The latter requirement has in practice proved a stumbling-block, and its diverse interpretations in different years have led to undoubted hardships. It is proposed to do away with the requirement of a subsidiary subject altogether. Lastly, Human Anatomy, taken in conjunction with Vertebrate Comparative Anatomy, is to be elevated to the rank of a separate subject in which First-Class Honours can be obtained. This is a somewhat tardy recognition of the success of the Anatomy Department, and the brilliant work in the cognate branches which is done by the abler medical students.

The Teachers' Training Syndicate report that they have this year examined 189 candidates in the Theory, History, and Practice of Education, as against 151 last year. For the Certificate of Practical Efficiency 162 candidates presented themselves. The remarks of the examiners are, on the whole, encouraging.

The University accounts for 1901 have been published, and show a slight improvement in the financial position. A larger number of degrees have been taken, with the result that the Chest is about £1,000 to the good. The Common University Fund, derived from the taxation of the colleges, is nearly stationary at about £18,000. The Benefaction Fund has increased by only some £2,200 in course of the year, and amounts to about £60,000.

The following elections and appointments are announced:—Mr. F. J. Foakes-Jackson, Jesus, to be Hulsean Lecturer; Prof. W. H. Bennett, St. John's, to be Doctor of Letters; Mr. S. M. Leathes, Trinity, to be Deputy for the Regius Professor of Modern History; Mr. E. J. Gross, Caius, to be a Governor of Ipswich Endowed Schools; Sir Richard C. Jebb, M.P., to be deputy for the Vice-Chancellor at the celebration of the Owens College Jubilee; Dr. Gow and Dr. Ransom to be Governors of University College, Nottingham; Mr. R. Gaskell, Trinity, to be a Governor of Sir Roger Cholmeley's School, Highgate; Mr. T. H. Havelock, St. John's, to be Isaac Newton Student in Astronomy; Mr. J. S. Budgett, Trinity, to be Balfour Student in Zoology; Mr. F. N. Hales, Trinity, to be Allen Student in Physiological Psychology; Mr. C. Ransford, Emmanuel, and Mr. C. F. Russell, Pembroke, to be Bell

Scholars; Mr. R. Quirk, King's, and Mr. P. J. Rust, Pembroke, to be Abbott Scholars; Mr. G. L. Strachey, Trinity, to be Chancellor's Medallist for English Verse; Mr. J. S. Sheppard, King's, to be Porson Prizeman (Greek Iambics); Mr. H. D. Wakely, St. John's, to be Powis Medallist (Latin Hexameters); Mr. C. P. Goodden, King's, (Greek Ode), and Mr. W. B. Anderson, Trinity (Greek Epigram), to be Browne's Medallists; Mr. T. H. Havelock, St. John's, and Mr. J. E. Wright, Trinity, to be Smith's Prizemen; the Right Rev. Bishop Moule to be an Honorary Fellow of St. Catharine's; Mr. W. E. Johnson, Sidgwick Lecturer, Mr. A. C. Pigou, and Mr. E. J. Dent, to be Fellows of King's; Lord Spencer, K.G., to be an Elector to the Chair of Agriculture.

The School of Semitic Languages loses not only Dr Schechter, to whom a valuable testimonial was presented a fortnight ago, on his departure for New York, but also the aged Prof. Rieu, who has held the Adams Chair of Arabic since 1894, and who died somewhat suddenly, on March 19. Mr. Israel Abrahams, M.A. London, the erudite joint-editor of the *Jewish Quarterly Review*, has been appointed Reader in Talmudic and Rabbinic Literature, in the place of Dr. Schechter.

WALES.

The Executive Committee of the Central Welsh Board has issued an elaborate defence to the criticisms of the Carmarthenshire County Governing Body on its regulations for the awarding of scholarships and exhibitions by the County Governing Bodies, and on other matters. Prof. W. E. Jones, of the Presbyterian College, Carmarthen, has replied, in the course of an interview, to the case of the Central Welsh Board, and has intimated that the matter will be taken from the executive to the general meeting of the Board. The attack on the Central Board was under consideration at the meeting of the Welsh County Schools Association of Head Masters and Head Mistresses held at Shrewsbury on March 22. In the course of the discussion it was stated that the various kinds of criticism of the Board in the newspapers were based on personal grounds, political interests, and the interests of sections. It was contended that the Board had rightly adopted the method of percentage in awarding scholarships; that a thorough system of examination had been organized which gave liberty to the governors and teachers to develop the schools or their own lines and to teach the subjects which they considered the most important, and that the Board had undoubtedly gone as far as it could to foster and encourage the teaching of technical subjects. Mr. J. J. Findlay (Cardiff) stated that no system of control of secondary education he had ever met with, either in Germany or in America, could compare in efficiency with that of the Central Welsh Board, and that the Board is democratic in its constitution, liberal in its methods, and national in its aims. The following resolution was unanimously carried:—"That this Association, having full and intimate acquaintance with the work of the Central Welsh Board, desires to express in the most emphatic manner its loyal confidence in the policy of the Board, and deprecates the spirit in which the recent attack upon the Board has been conducted."

An important meeting of the Court of Governors of the University College of Wales, Aberystwyth, was held at Newtown on Friday, March 24. Principal Roberts referred to the Extension lectures in dyeing in Montgomeryshire and Carmarthenshire, and stated that the results were highly encouraging, and that this new and interesting joint enterprise is likely to have a great influence for good on the textile industry of rural Wales. He also reported that the Council had under consideration the proposal to provide the college with a much-needed experimental farm. It is proposed to promote this object in the first instance by means of a joint conference of the counties and the college on similar lines to those which led to the lectures on dyeing. A contribution *pro rata* from each of the counties, together with a fixed sum to be obtained from private sources towards the stocking of the farm, will enable the college to qualify for an annual grant from the Board of Agriculture towards meeting a substantial part of the cost of maintenance. It was resolved to add a story to the science wing of the College for the extension of the accommodation in the Department of Chemistry at a cost of about £5,500. A resolution was also passed to petition the Court of the University of Wales to make such regulations for the degree of LL.B. as will enable law students to commence their legal studies immediately after passing the Matriculation Examination, and prescribe the same period for that degree as for the degree of B.A.

At the recent Jubilee of the Owens College, Manchester, Principal Roberts, of the University College, Aberystwyth, received the degree of LL.D., and Principal Griffiths, of the University College, Cardiff, that of D.Sc.

The Welsh Language Society has taken steps to publish a quarterly magazine, and has appointed a committee to consider and report upon the best means of inducing the various educational bodies in Wales to adopt the aims of the Society. Considerable progress has been made by the Society in Glamorganshire, especially since the publication of wall-sheets with an accompanying teacher's handbook for the teaching of Welsh by the methods advocated by the Society.

With reference to the Government Education Bill, the Executive Committee of the Association of Head Masters and Head Mistresses of the Welsh County Schools has passed the following resolutions:—(1) "That in Wales and Monmouthshire representation on the County Governing Bodies be so modified as to constitute them the Local Authorities responsible for primary and secondary—including technical—education." (2) "That there should be an upper age limit in the case of primary education, as there is in all schemes dealing with secondary education, with a view to prevent undue overlapping." (3) "That Local Authorities should have the power of co-opting or adding to their number, in a fixed and definite proportion, persons possessing adequate knowledge and experience of the work of teaching in primary and secondary schools." (4) "That it is undesirable that there should be a statutory limit to the rate raised by County and Borough Councils for purposes of secondary and technical education."

An educational society has been formed in Cardiff having for its objects the promotion of social intercourse among all who are interested in educational work; to provide opportunities for the study and discussion of educational questions, and to foster the spirit of research in education. Principal E. H. Griffiths, M.A., D.Sc., F.R.S., of the University College, was elected the first president.

Dr. R. D. Roberts, of Cambridge, Secretary of the Gilchrist Educational Trust, has been elected High Sheriff of Cardiganshire.

A sub-branch of the National Association for the Prevention of Consumption has been formed in connexion with the University College, Cardiff. Dr. Isambard Owen, the Senior Deputy-Chancellor of the University of Wales, gave the inaugural address.

The Court of the University of Wales has approved the recommendation of the Senate of the University that at the forthcoming installation of H.R.H. the Prince of Wales as Chancellor of the University honorary degrees should be conferred on the following:—The Prince of Wales, the Princess of Wales, the Chancellors of Universities in the British Kingdom who intimate their acceptance of the invitation of the University to be present at the installation, Lord Kelvin, Alfred Russel Wallace, George Meredith, Principal John Rhys, Lord Lister, Judge Roland Vaughan Williams, Sir Richard Claverhouse Jebb, and Dr. Edward Caird.

SCOTLAND.

The first annual report of the Carnegie Trust was approved at a meeting of the Trustees held in London at the end of February. The report is almost entirely a record of the work of the Executive Committee in connexion with the payment of students' fees. Among other things it explains the admirable arrangements which have been made for the prevention of possible abuses, and especially for the payment of the money directly to the University authorities. One is glad also to read that "from information voluntarily offered by applicants themselves, the Committee have ample assurance that in a large number of cases the payment of class fees has proved a boon of the greatest value to deserving students; and many acknowledgments of the letter sent to the parents or guardians of applicants express their gratitude for the timely assistance rendered by the Trust." Full statistics are given of the number of beneficiaries in the various faculties of each University, and also of the amount of the fees paid. Glasgow has the largest number of men beneficiaries and the smallest number of women. In most of the Universities the proportion of the women beneficiaries to the whole number of women students is larger than that of the men beneficiaries to the whole number of men students. This may be due in part to the scarcity of bursaries for women, but it will confirm the opinion of those who prophesied a large increase in the number of women students as a result of the Carnegie benefaction.

Reference is made in the report to the action of a Glasgow student who, on gaining a Fellowship, refunded the fees paid for him, with an expression of the pleasure it gave him "to take advantage of the excellent provision of the Trust which gives applicants the opportunity of repayment." There has since been published a letter to this student from Mr. Carnegie, in which he thanks him "for giving me one of the greatest satisfactions of my life," and again points out that "no payment made to a University student in Scotland need be considered as aught but an advance which he can repay." Few students will be in a position to make repayments so soon; but it is to be hoped that in course of time the example will be generally followed.

It is understood that at the meeting of the Trust the proposal (mentioned in this column some time ago) to require medical applicants to pass the Arts Preliminary was generally approved, and all students who are at present beneficiaries, and who desire a continuation of the benefits of the Trust, are now being called upon to submit to the Trustees a report of their work during last Winter Session.

The Trust has now to face the much more difficult problem of University equipment. The reports by the Universities upon their needs have been published, and the demands which have been made are very large. The Glasgow report was summarized here in February. The Edinburgh report appears to ask for less than that of Glasgow; but it leaves the Trust to indicate what amount it may be able to advance towards the permanent endowment of five new professorships

(in French, German, applied mathematics, ophthalmology, and mental diseases) and towards the salaries of an unspecified number of lecturers in science, medicine, and commercial education. It is also proposed, at a later period, to ask for grants for a further extension of the University buildings, and for other academic purposes. It is difficult to estimate the cost of supplying these unfigured demands; but it can hardly fall short of £200,000, and it may amount to much more. The modesty of the Edinburgh report is therefore only apparent, and in reality it asks for very much more than does that of Glasgow. In the first part of the Edinburgh report it is mentioned that during the last twenty-eight years the University has received about £400,000 "for the extension and equipment of buildings devoted to teaching and research in medicine and science," and for the erection of the McEwan Hall. It has also, within the last six or seven years, received £91,000 for the foundation of chairs and lectureships, the promotion of original research, the library, and other University purposes, and numerous other endowments have been made for bursaries, scholarships, &c. The Carnegie Trust is now asked to provide a capital sum of £45,000 and permanent annual grants amounting to £9,000. Of the capital sum £40,000 (to be paid in the course of five years) are to be paid as part of a fund for the erection and equipment of class-rooms and laboratories for natural philosophy and engineering. The remainder is to be devoted in equal parts to structural alterations in the library and to the equipment of museums and laboratories in science and medicine. Of the annual grant, £1,500 are asked for the library, £3,500 for equipment and research in science and medicine, and £4,000 for the maintenance and extension of teaching in the same departments.

The Aberdeen report points out that the University is now (as the result of the recent extension schemes) sufficiently provided with funds for buildings, but that in some respects it is "the most sparingly endowed of the Scottish Universities." As no buildings are required, the cost of the Aberdeen claims is put mainly in the form of annual grants, amounting in all to between £15,000 and £19,000. A capital sum of £12,000 is also asked, of which £10,000 are for laboratory equipment and £2,000 for the library. Of the annual grants it is proposed to spend on chairs and lectureships about £6,000 in Science and Medicine, between £2,000 and £3,000 in Arts, and between £1,300 and £1,800 in Law. The remainder is to be devoted to research fellowships (£1,500 to £2,000), the library (£1,000 to £1,200), laboratories and museums (£1,500 to £2,000), and the salaries of University assistants and examiners (about £2,500). The St. Andrews report declares that the most urgent needs of the University are the alteration of the present buildings at St. Andrews and the erection of new buildings, including research laboratories for chemistry and physics, as well as the erection and completion of the medical buildings at Dundee, the extension and improvement of the library, and the foundation of lectureships in German and geology. For the proposed buildings in St. Andrews a capital sum of £20,000 is asked, and for existing and new lectureships there is required an annual grant of between £2,500 and £2,800. Claims are also made, without indication of the cost, for University Extension lectures, post-graduate scholarships, and grants for museum and laboratory equipment. For University College, Dundee (as a college of St. Andrews University), a capital sum of £66,000 is asked, of which £11,000 are to be devoted to the equipment of the medical buildings, about £53,000 to buildings and equipment for physics, engineering, and chemistry, and £1,000 to the library. In addition to this an annual expenditure of £2,650 is suggested for the maintenance of laboratories, museums, and the library and for research work.

At a meeting held in Edinburgh recently, "The Classical Association of Scotland" was formed, and it has already a membership of more than one hundred. Its objects are to bring together for practical conference all persons interested in classical study and education, to promote communication and comparison of views between Universities and schools, to discuss subjects and methods of teaching and examination, and any other questions of interest for classical scholars. The Association is to meet twice a year, and the meetings are to be held in the four University towns in rotation. Prof. Ramsay, of Glasgow, is the president of the Association, and the committee includes many of the leading classical teachers in the Scottish Universities and schools.

IRELAND.

The Royal Commission on University Education in Ireland will sit in Belfast from April 2, for four or five days. Various members of Queen's College will be examined, also the Rev. Prof. Petticrew, who, as the official representative of the Presbyterian Church, will state the position of the General Assembly on the whole question, as far as it can be stated without reference to Trinity College. At the time of the issuing of the Commission the Presbyterian body expressed much dissatisfaction with the exclusion of Trinity College from the terms of reference, and the General Assembly have already stated their disapproval of both the schemes dealt with by the Commission—the continuance of the Royal with affiliated teaching colleges, or the establishment of two new and distinct Universities, one in the North, Protestant, and another, Roman Catholic, in Dublin. In Belfast three

of the heads of Northern women's colleges will also be examined. The Commission will probably subsequently visit Galway and Cork. It is believed it will hold but one more sitting after April to hear evidence—one in June, either in Dublin or in London.

The exclusion of Trinity College, which is generally held to mean also that of Dublin University, from the terms of reference seems likely to render any satisfactory report by the Commission very difficult. Were Dublin University now to be included, as, perhaps, according to the letter of the wording, it might be, this would necessitate the re-hearing of all the evidence that has been already taken; it would be opposed by the more conservative members of Trinity College, and would, it is believed, lead to the withdrawal of at least one member of the Commission. On the other hand, the Presbyterian body, and a very large majority of Roman Catholics and Protestants of all parties, are strongly in favour of the consideration of a scheme of affiliated colleges under Dublin University. Under such circumstances it would be impossible for the Commission to recommend the creation of a separate Catholic University, and any scheme of improving the present Royal University could only be a temporary makeshift.

On March 14 an exceedingly influential meeting of Catholic laymen was held in the Shelburne Hotel, Dublin, at which some resolutions were passed and afterwards embodied in a statement to be laid before the Commission. This statement has been signed by a large number of the most respected Catholic laymen in Ireland. The subscribers claim that they represent the class most vitally affected by the kind of the University education established. They object to a separate Catholic University as dividing Protestants and Catholics into distinct, mutually unsympathetic sections, and as giving an education that would have a lower value and an inferior degree. They claim the right of Catholics to obtain the best possible education and degrees, and believe that this can only be attained by a college under Dublin University.

The recently published second Blue-Book of the Commission is mainly occupied with the evidence taken on the technical and commercial side of University education, but the evidence of Chief Baron Pilles and of Dr. Mahaffy is given in favour of the Dublin University scheme. The Bishop of Limerick has, at the request of the Commission, since put in a drafted sketch of the constitution of a separate Roman Catholic University, but neither he nor the Bishops are opposed to a college under Dublin University, while some of them, as Archbishop Walsh, are believed to prefer it.

One of the "Catholic Laymen" in a letter to the *Freeman* says that neither the Bishop of Limerick, who represents the Bishops, nor Dr. Delany, who represents the Jesuits, in any way represent the educational Catholic laity, nor did they consult them, and they are startled to find the question being decided without their opinion being sought. Had the Catholic laity taken action when the Commission was issued, and joined the Presbyterian body in demanding the inclusion of Dublin University in its scope, there would not be the danger the Bishop of Limerick now fears, of "wrecking the Commission."

A largely attended meeting of Irish women graduates was held on March 14, at the Gresham Hotel, Dublin, to inaugurate an Irish Association of Women Graduates. A provisional committee was formed to draw up rules to be submitted for adoption to another meeting to be held immediately after Easter. The meeting was held in response to the answers received to one of the queries recently sent out by the Central Association of Irish Schoolmistresses, which asked if the women graduates desired the formation of such an association to protect the interests of women students at the present crisis. Out of 305 answers received only five were against the formation of the association. Sub-committees have been formed in Belfast, Cork, Derry, and Galway to consider the constitution, which it is desired to make as broad and representative as possible, all action being determined by the majority of the votes of all the committees taken together. The immediate object is to secure that under any scheme established women shall receive the same teaching, degrees, honours, and prizes as men students, including the opening of lectures, &c., in the colleges for men students. It is also intended to be a permanent association to promote the interests of University women, including the keeping of a register of those seeking employment. The association will be non-political and non-sectarian, and will not advocate any special settlement of the University question.

Vehement indignation has been created in the Gaelic League by the announcement that the Intermediate Board has appointed the eminent scholar Prof. Kuno Meyer as their head examiner in the Irish language. They contend that an Irishman who speaks modern Irish should have been appointed. There is no proof, however, that Prof. Meyer, who has spent much time in the West of Ireland, cannot speak Irish. Considering the violent and personally insulting language used by the League last year in reference to the supposed insufficient encouragement of Irish in the new scheme of the Board, the appointment is not to be wondered at, but it is probably due to a desire that the examination in Irish shall be in thoroughly competent hands. There has been some suspicion that the examinations may have been made too easy by former examiners.

Prof. Kuno Meyer will give three lectures in Alexandra College on

April 26, 28, and 29 on "Civilization in Ireland in the Second Century." They will be the first of the lectures to be given in connexion with a memorial in honour of Miss Margaret Stokes, the Irish scholar, to found lectures in Irish archaeology in Alexandra College.

VICTORIA COLLEGE, BELFAST.—On Monday evening, March 10, a most successful entertainment, filled to overflowing, on behalf of the Victoria College Hockey Club and games field expenses, was given by the staff and students of Victoria College, in the Exhibition Hall. A large proscenium was specially constructed for the occasion, and no trouble was spared to make the performance a perfect success. Indeed the whole programme was carried out without a hitch from beginning to end. An important feature was "The Songs of the Nations" series, in which Japan, Spain, Switzerland, Wales, and Ireland were severally represented by successive groups of prettily-dressed maidens, the music being rendered by a most efficient choir. The Seasons also formed a charming series, consisting of four groups with a quartette of graceful dancers in each. An amusing dialogue, "The Backward Child," was given with the greatest spirit; and, later on, a scene adapted from "Adam Bede" was cleverly represented. The closing number showed a group of realistic-looking "darkies," who gave, with true nigger pathos, some tender plantation ditties. Altogether the programme was a triumphant success. The object in view was in itself enough to explain the ardour with which the students threw themselves into the work of preparation, Victorians being usually quite as enthusiastic in their games as in the more serious business of college life.

SCHOOLS.

ETON COLLEGE.—Easter holidays began on March 27. The school will reassemble on April 23-25. An unfortunate occurrence marked the end of last term. Some sons of Belial profited by the opportunity of the school concert to stop up the keyholes of classrooms with plaster of Paris. As the offenders have not given themselves up, Dr. Warre has threatened to stop the leave of the whole school next term. An interesting memorial of Eton's most famous classical scholar has been presented to the library by Mr. Wagner—the MS. of Porson's play, which he wrote when a boy at Eton, "Out of the Frying-pan into the Fire: a tragi-comi-operatical farce."

HARROW SCHOOL.—The entrance scholarships have been awarded as follows: (1) for Classics, J. R. M. Butler; (2) for Mathematics, H. M. Sonnenthal; (3) for Classics, A. P. Pallis; (4) for Classics and History, D. L. Murray; (5) for Mathematics, J. K. Mannock; (6) for Classics, H. E. E. Howson; (7) for Classics, L. G. G. Evans; (8) for Mathematics, W. C. D. Browne.

MERCHANT TAYLORS' SCHOOL.—No less than five of the staff are leaving at the end of the Easter term—Mr. W. Brown, Mr. A. Reynolds, and Mr. T. G. Anderson, who have been with us respectively twenty-five, twenty-three, and twelve years; Mr. W. Mansfield Poole who has been appointed Instructor in French to the Channel Squadron; and Mr. L. von Glehn who has joined the staff of the Perse School, Cambridge, under its new Head Master, Mr. Rouse.

RAINE'S SCHOOL.—Of nine entries for the Cambridge Junior, eight passed, three of them in Honours.

ROSSALL SCHOOL.—The prize for Latin Hexameters was gained by R. G. L. Batley, Greek Iambics by J. N. G. Johnson. F. A. Simpson has gained a classical exhibition, Queen's College, Oxford. On February 13 Mr. Herbert Jones gave us a lecture on "The Imperial Tour of the Prince and Princess of Wales." The memorial scheme for adorning the chapel and commemorating O.R.'s has already received promises of £650. In the house matches here again White's were the runners up. Corder's won the cup, through the splendid play of Fabel. In the Debating Society sixty-nine votes against nineteen negated the motion that the Boer is perfectly justified in defending himself to the last; and seventy-one to eleven considered Mr. Kipling's condemnation of athletics unjustifiable. The Museum is steadily arranging itself, and now presents a very fine appearance of curiosities. On February 1 Mr. Tyler lectured on "The Mountains of the Moon"; on March 15 Mr. H. W. Atkinson on "The Three Colour Process." The engagement of Miss Flora Shaw to General Sir Frederick Lugard has much interested his old schoolfellows. The athletic sports will be on Easter Monday. On April 3 term ends, and we return on April 29.

ERRATA.—In the review of Sir George Young's "Victor Hugo" we must apologise for two misprints. For "And thing and person" read "Each thing and person," and for "*Semble élargie*" read "*élargir*."

PRIZE COMPETITIONS.

The Translation Prize for March is awarded to "Nectarine." "Mazeppa" desires to remain anonymous, and at his request we have sent a donation of Two Guineas to the Invalid Children's Aid Association.

And, perhaps, as you make your difficult way through a steep and narrow alley, shut in between blank walls, and little frequented by passers, you meet one of those coffin-shaped bundles of white linen that implies an Ottoman lady. Painfully struggling against the obstacles to progression interposed by the many folds of her clumsy drapery, by her big mud-boots, and especially by her two pairs of slippers, she works her way on full awkwardly enough; but yet there is something of womanly consciousness in the very labour and effort with which she tugs and lifts the burthen of her charms. She is closely followed by her women slaves. Of her very self you see nothing, except the dark luminous eyes that stare against your face and the tips of the painted fingers depending like rosebuds from out of the blank bastions of the fortress. She turns and turns again, and carefully glances around her on all sides to see that she is safe from the eyes of Mussulmans, and then, suddenly withdrawing the *yashmak*, she shines upon your heart and soul with all the pomp and might of her beauty. And this—it is not the light, changeful grace that leaves you to doubt whether you have fallen in love with a body or only a soul—it is the beauty that dwells secure in the perfectness of hard, downright outlines, and in the glow of generous colour. There is fire, though, too—high courage and fire enough—in the untamed mind, or spirit, or whatever it is, which drives the breath of pride through those scarcely parted lips.

You smile at pretty women—you turn pale before the beauty that is great enough to have dominion over you. She sees, and exults in your giddiness; she sees and smiles; then presently, with a sudden movement, she lays her blushing fingers upon your arm and cries out, "Yumourdjak!" (Plague! Meaning, "There is a present of the Plague for you!") This is her notion of a witticism; it is a very old piece of fun, no doubt—quite an Oriental Joe Miller.

By "NECTARINE."

Alors, il se peut, qu'en suivant votre chemin difficile par la pente rapide d'une étroite ruelle, entourée de murs clos et peu fréquentée de passants, vous rencontrerez un de ces paquets de toile blanche en forme de sarcophage qui signifie une dame ottomane. Luttant péniblement contre les obstacles qui empêchent son progrès—les nombreux plis qui l'enveloppent et l'embarrassent, ses grosses bottines contre la boue, et surtout ses deux paires de pantoufles—elle avance avec une certaine gaucherie, cependant il y a un soupçon de coquetterie féminine dans la manière dont elle s'efforce de soulever et de traîner le fardeau de ses charmes. Elle est suivie de près par ses femmes-esclaves. De sa personne vous ne devinez rien, sauf les yeux sombres et lumineux qui vous envisagent hardiment, et les bouts de doigts fardés qui pendent comme les boutons de roses hors des bastions uniformes de la forteresse. Elle se tourne et se retourne, jetant des coups d'œil soucieux partout pour éviter les yeux musulmans, et puis, retirant le *yashmak* avec vivacité, elle rayonne sur votre cœur et votre âme avec toute la puissance et tout l'éclat de sa beauté. Cette beauté—ce n'est pas la grâce frivole et variable qui vous laisse en doute si vous ne vous êtes amouraché d'une substance corporelle ou seulement d'une âme—c'est plutôt la beauté qui se repose sur la perfection des lignes fermes et nettes et sur l'incarnat de la couleur vive. Il y a du feu cependant—assez de courage et de feu—dans l'esprit farouche—esprit, âme, ou quoi que ce soit qui pousse le soufflet de l'orgueil entre les lèvres mi-closes. Vous avez un sourire pour les jolies femmes, vous pâlissez devant la beauté qui est d'une grandeur capable de vous dominer. Elle le voit bien, et elle triomphe de votre vertige; elle le voit, elle vous sourit, et tout à l'heure d'un mouvement vigile elle pose ses doigts roses sur votre bras, en vous criant "Yumourdjak!" (La peste! c'est-à-dire: "Voilà, je vous fais cadeau de la peste!"). C'est là son idée d'une plaisanterie; plaisanterie, sans doute, de haute antiquité—un véritable "bateau" de l'Orient.

We classify the 155 versions received as follows:—

First Class.—Vlaamsche Meisje, Stamboul, Craigellachie, Calliope, Egea, Frank, Grant, Chemineau, Thiergarten, Rolobo, Erin, Verbena, M.O.W., Nectarine, Izara, C.C.C.

Second Class.—Brin, S.S.S., Lavengro, Renée, E.H.O., Mac, Agib, Quod, 100,000, Mars, Hitchhurst, Aida, Tillynaught, Alte Mamsel, Jaquet, Tchichi, Dex; Aie, Snow Flower, Daffodil, Cinderella, Om, Marigold, Lahnstein, M.M., M.C.K.K., Pony, Peashooter, M.D., Vasil, Shion Pen Bont, Shakspeare, Fortes et Fideles, E.G.B., Lanka, Richmond, Dunnabie, Pertinax, Capitaine Fracasse, Gothicus, Isa: Hebi, Arab, Shark, Stedye, A's Triplex, Merrybent, Giowanna, Gjentoges ôgedes, Gipsy, H.M.I., C.J.I., Moloch II., Lucibel, Olga von Stena, Nemo, M.M.M.

Third Class.—A.B., E.M.W., Eta, Muguet, Limousine, Diavolo, Sorbonne, Nepko, Graham, Vedette, Esile, Francesca, Mr. O'Brien, W.S.D., Sine leve decus, The Long Ju-ju, Daydawn, Amstel, Gardez bien, Altnacolle, Sweet Pea, Glenleigh, Carola Socorro, Cuneda Whelig, Glan Padarn, John Lennox, Efficiency, P.J.E., Alban, Quasimodo, Sirach, Seg, O.M., Frig, Esperanza, Navarre, Nemesis, D.H.W., Round Hill, Eluned.

Fourth Class.—Emilia, F.M.R., Neith, Syrtis, Mike, Minian,

THE PLAYS OF ARISTOPHANES.

The Greek Text Revised, and a Metrical Translation on opposite pages, together with Introduction and Commentary. By BENJAMIN BICKLEY ROGERS, M.A.

Vol. V., containing **THE FROGS** and **THE ECCLESIAZUSAE**, is now ready. *Other volumes preparing.*

The Plays may also be had separately, viz., **Frogs**, 10s. 6d.; **Ecclesiazusae**, 7s. 6d.

"At last we are likely to get an edition worthy of the supreme comedian. For here we have a carefully collated text, scholarly notes of explanation, introductions on the history of the plays, their subjects and metres; and, above all, we have an admirable English translation, reproducing for English readers the true spirit of the Athenian in all its moods—the moods of the satirist, the dreamer, the statesman, the jester, the patriot, the candlestick-maker, the monthly nurse, the scavenger, the fried-fish wife, and the decadent poet. Mr. Rogers may be said to be doing for Aristophanes what Jowett did for Plato. No scholar could have a higher aim or finer reward."—*Daily Chronicle*.

London: GEORGE BELL & SONS, York Street, Covent Garden.

Anchor, Anglaise, Laurel, Ben, Kaninchen, Savoia, Mem Sahib, St. George, Great Western, Felicia, Ifan, Ednyfed Fychan, Pericles, Lentulus, W.H.P.S., Violet, Anemone, Enid, M.K.P., F.W.W., Hans Sachs, 79, Microbe, St. Blaise, Argonaut, Billy.

Fifth Class.—Finis, Martin, Noctorum, A.P.W., Captain Bunsby, Whitwarrer, La Pierre Noire, Kruger, Norheimsund, Rejambe, Millia, Savory, Ban.

For the French prose there was a large field. Misdoubting my own judgment, I called in the aid of Mr. J. G. Anderson, the author of "A Manual of French Prose Construction," to decide between the candidates in the first class. His order for the first three was:—Nectarine, Craigellachie, Izara.

This competition bears out fully Mr. Coulton's contention, that to write French prose needs more than a dictionary and a knowledge of accident, and is, in fact, as difficult a task as writing Latin prose. Thus, in the first sentence, the dictionaries will not help you to turn "blank wall." Gasc gives *blanc*, a use not confirmed by Littré or Larousse, and, at any rate, in this case barred because of *toile blanche* or *lin blanc* later on in the sentence. *Mur orbe* is too technical, and *sans portes ni fenêtres* is a cumbersome paraphrase. So we are reduced to *mur de clôture*. "Implies": *dénoncer, trahir, accuser* will all stand; *signifier* is less good, and *vouloir dire* is quite inappropriate. "Clumsy," *lourd* or *génant*, not *maladroit*, only used of persons or actions. "Big mud boots": *bottes à boue* is not French, and Nectarine's version is only one degree better. A sort of overall must be intended, to let the slippers underneath (*habouches* rather than *pantoufles*) be inferred if not visible, and *galoches* is the exact word. "Womanly consciousness," *conscience féminine*. "Tugs," not *tirailler*, "to pluck at," nor *tirer*, "to draw off." For "the burden of her charms" I had one amusing *contresens*—*le jardeau de ses breloques*. "Dark, luminous eyes," *yeux noirs et lumineux* or *brillants*, not *sombres*, which would imply sadness or sullenness. "Blank bastions," *bastions nus*. "Turns and turns again," *se retourne à plusieurs reprises* or *tourne et retourne la tête*; *se tourne* would mean rather "spins round." "Leaves you in doubt," *fait que vous vous demandez*. "Dwells secure," &c., *repose* (*s'enferme sans crainte*) *dans la simple et parfaite netteté de ses contours*. "Glow of generous colour," *l'éclat du vif coloris—couleur généreuse* is not French. *Vous souriez aux jolies femmes* only half expresses the English; *à la vue des or en regardant* is required. *Etourderie*, "thoughtlessness," is obviously inappropriate. *Elle voit et triomphe de votre trouble* was a common error—a mixed construction; we must

write: *elle voit votre trouble et en triomphe*, or *elle s'aperçoit et triomphe de votre trouble*. *Doigts rougissants* is an over-bold conceit for French, and we must sacrifice something—*rose* or *vermeil*. The last sentence was a touchstone of wit, or rather of wits. "A Joe Miller" obviously cannot be retained—it would be quite unintelligible to a Frenchman, yet I can find no exact equivalent in French; *du réchauffé* comes nearest to it. *Une scie* is "a bore" or "a tedious tale"; *un calambour* is a riddle, though it carries a suggestion of staleness; *bateau*, of the prize version, is unknown to me and to the "Dictionnaire de la langue verte." Yet it is not hard to circumvent the difficulty, and I had several ingenious turns—*plaisanterie qui date sans doute des temps de Mahomet, vieille comme le Pont Neuf*. *Fumisterie*, "hoax," might pass, but *jeu de mots* is clearly wrong. *Yachmack* appears to be the recognised French spelling.

I have exceeded my limits, and still left much that calls for comment. Thus the impossible combination, *d'une manière bien assez gauche*, was very common. Again, *il y a du feu pourtant, assez de feu et de fougue, ce je ne sais quoi* (a slight transposition of the order of words) would be an improvement on the prize version.

DEAR PRIZE EDITOR,—In your notes on the versions of Geibel's somewhat uninteresting and conventional *dichés* you appear to invite criticism. It would illuminate us to have some quotations in defence of your use of the word "burly," as a substitute for the usual onomatopoeism "hurly-burly"; also any excuses for the atrocious rime "surely." Why, too, should *Nebel* be rendered "mist and haze and fog"—three identical states of atmosphere which seem merely *crambe repetita*, and rather like *gradus* synonyms. *Aehren* is, of course, "wheat ears," whether Geibel needed the rime, or perhaps, and not unpoetically, regards summer and autumn as mere developments of spring. It seems sheer pedantry to substitute "green blades." Surely the poet is entitled to his traditional licence, and it is not the business of a translator to reduce his botany to scientific facts.

Adherence to double rimes, indigenous to foreign languages, in nine cases out of ten spoil any simple poem when rendered into English. The inevitable distortions and forced jingles unpleasing to any musical ear in your and "G. E. D.'s" versions constitute a strong argument against the bravest endeavours in this direction.—Yours truly,

A CANDID FRIEND.

[I always welcome criticisms, and my only quarrel with those of "A

The Best and Cheapest Dictionary. New Edition. Write for Prospectus.

THE CONCISE ENGLISH DICTIONARY

BY CHARLES ANNANDALE, M.A., LL.D.,

Editor of the "Imperial Dictionary."

ANNANDALE'S CONCISE DICTIONARY has, since its first publication, held a pre-eminent place among One-Volume English Dictionaries. It is now issued, in an extended form, at so low a price as to bring it within the reach of everybody.

The General Vocabulary is very ample. All important modern terms pertaining to Science, Technology, and the Arts are clearly and accurately explained.

The Definitions and Explanations are exceptionally full and detailed, giving so much information that this Dictionary may justly claim the character of a Concise Cyclopædia.

The Etymology shows results obtained by the most recent investigators, and the correct pronunciation of the words is given on an exceedingly simple system.

PRICE 3s. 6d.

SOME OPINIONS OF THE PRESS.

THE ATHENÆUM says:—"We can heartily recommend this neat and handy volume to all who want a copious and trustworthy English dictionary of reasonable dimensions."

THE SPECTATOR says:—"Stands towards other dictionaries of the smaller character in the relation of the 'Imperial' to rival lexicons—in other words, it holds the 'premier' place."

THE ACADEMY says:—"The Concise Dictionary stands first—and by a long interval—among all the one-volume English dictionaries."

THE JOURNAL OF EDUCATION says:—"In clearness of type, in size, shape, and arrangement, the volume leaves nothing to be desired. Till Dr. Murray's great work is completed, it is not likely to be superseded."

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY.

THE NORLAND PRESS PUBLICATIONS.

THE FIRST BOOK: Song and Story for Little Ones.

In stiff covers. Price 1s. 6d. net.

LITTLE FRENCH FOLK.

A First Book in French, written in the everyday speech of French Children.

By CHARLES TALBUT ONIONS, M.A. (Lond.).

With Simple Pictures, by JOHN WILLIAMSON, on nearly every page.

In Picture Covers. Royal 8vo. Price 2s. net.

TALES FROM THE FAERIE QUEENE OF EDMUND SPENSER.

Told by CLARA L. THOMSON, Examiner in English Literature to the Central Welsh Board, and copiously Illustrated by HELEN STRATTON. With Portrait of Spenser and Frontispiece after Mantegna. Price 2s. 6d. net.

SOME FIRST OPINIONS.

LADY ABERDEEN.—"I can only again repeat my admiration of the books, and of the way in which they have been brought out, and my very hearty good wishes for their success."

The Kindergarten School, Bangor.—"The 'Little French Folk' arrived safely this morning. I am sure you would have been pleased to see the children's delight when they were given out to them. The pictures are most fascinating."

Dr. RENDALL, Charterhouse School.—"In matter and in illustrations 'The First Book' seems to me excellent for its purpose."

Miss NOBLE, the Froebel Society.—"I must say that I think Miss Thomson and you are doing capital work in your collections of songs and stories for small children, particularly in 'The First Book.'"

The Head Master, Warwick School.—"The children's books are perfectly delightful, and I shall take every opportunity of making them known."

Mr. JAMES WAUGH, M.A., Higher Grade School, Cardiff, says:—"Everything about the lovely 'First Book,' from cover to cover, is exquisite, and will be, I am sure, a wonder for the little ones. As a teacher who has a delight in the beauty of books, in and about, for our schools I wish to thank you. . . . I feel sincerely grateful to you and Miss Thomson for setting yourself to do such work for the delectation and instruction of our children just at the age when enjoyment ought to be best and purest."

Please address all communications to E. E. SPEIGHT, The Norland Press, Shaldon, South Devon.

LONDON: GEO. BELL & SONS, YORK STREET, COVENT GARDEN.

New York Life Insurance Company.

INVESTED FUNDS..... £59,743,837.
INCOME IN 1902..... £14,548,968.

SUPERVISED BY 82 GOVERNMENTS.

A CAUTION AND WARNING.

The soundness and advantages of the NEW YORK LIFE INSURANCE COMPANY have so commended themselves to teachers that great business is being done amongst them. Determined efforts are being made to alter this, but all that we ask is that, BEFORE JOINING ANY OTHER COMPANY, THE RATES AND ADVANTAGES OF THE NEW YORK LIFE SHOULD BE STUDIED.

If any teacher, desiring to invest, insure, or to provide an annuity will communicate direct with me, full particulars will be forwarded and the applicant placed in communication with an accredited representative of the Company.

TO PROVIDE SUPERANNUATION.

A teacher of 30 years of age, for 6s. 7d. per week, can provide a pension for life, commencing at the age of 60. If death occur at any time between the ages of 30 and 60, £500 will be paid to the relatives of the deceased. If at 60 the pension is not desired, the Company GUARANTEES TO PAY £500 IN CASH and the accumulated profits. These profits last year were £415. Thus, the insured could take £915 in cash or an annuity for life at the rate of £1 13s. a week.

For the fullest advice and particulars as to what the Company can do IN YOUR CASE, send a letter, or apply personally, to

T. A. ORGAN,

Tottenham Chambers, District Manager,
Tottenham Court Road, W. New York Life Insurance Office.

N.B.—There are vacancies in London for three salaried Agency Inspectors, two gentlemen and one lady.

Candid Friend" is that they are somewhat belated. I will answer them *seriatim*.

1. "That with the hurly Death itself awakes" (Shakespeare). "Burly" was a printer's blunder.
2. The imperfect rime *hurly*—surely does not offend my ear; but the point is not arguable.
3. *Die Nebel* is plural, and *mist, haze, fog* are not identical.
4. *Aehren*: as to not correcting or emending the original, agreed; but Flugel gives "spike of grass or corn," and Geibel, I hold, meant the blade or ear still green.
5. As to double rimes, no general rule can be laid down, and my failure and "G.E.D.'s," however gross (is "my and 'G.E.D.'s failures" good English?), are no proof that they are exotics which cannot be naturalized. For "adherence . . . spoil" "A Candid Friend," and not the printer, is responsible.]

EXTRA PRIZE FOR MARCH.

The award of last month's Extra Prize must, of course, have been more or less a matter of taste, but I will state as far as possible my reasons. Lists manifestly much too long for a fortnight's reading were out of the running; also lists which offered various alternatives. The condition of quarantine implied books of amusement, not of instruction; the Bible and Green's "Short History" were not in place. Having thus reduced the lists to some score, I took a *plébiscite* of favourite authors and awarded the prize to the list which best agreed with the voting. "Morlan" gives variety, and all his books may be counted as classics.

By "MORLAN."

A Prize of Two Guineas is offered for the best translation of the following passage from François Coppée:—

J'occupais, dans l'unique auberge du lieu, une grande chambre blanchie à la chaux, sommairement mais proprement meublée, dont la

fenêtre s'ouvrait sur le large. Assis sur une chaise de paille devant une table de bois blanc, j'ai composé alors tout un poème au bruit solennel et berceur des grandes lames qui semblaient me redire sans cesse que le rythme est une loi de la nature. Mais on ne peut toujours faire des vers et écrire, et la promenade à pied était mon hygiène et ma distraction. Le plus souvent, je m'en allais le long de la grève, ayant à ma droite la falaise aride et monumentale, et à ma gauche les espaces découverts par la marée basse, immense désert de sable, taché seulement de quelques groupes noirs de rochers. C'était mon excursion favorite. Pourtant, par les jours de forte brise et de grosse houle, j'abandonnais le bord de la mer et, remontant la rue du village, j'allais flâner dans la lande; ou bien je m'établissais avec un livre, sur un vieux banc, dans le cimetière, où l'on était abrité du vent d'ouest par la masse de l'église. Le bel endroit de tristesse et de rêverie! Vers le ciel d'automne où couraient les nuées, le clocher à jour s'élançait, pieux et svelte. Des corbeaux, qui s'y étaient nichés, s'en échappaient et y revenaient en croissant, et l'ombre de leurs grandes ailes sans cesse glissait sur les tombes éparses dans l'herbe haute. Entre deux des contreforts de l'église, à demi ruinés et dont la pierre grise et rongée par le vent marin se parait çà et là d'un frissonnant bouquet de petites fleurs jaunes, une chèvre noire au piquet, presque effrayante avec ses yeux de flamme et sa barbiche satanique, bêlait et tirait sur sa corde. Le soir surtout, quand, à travers le squelette d'un vieux pommier mort aux branches rageuses, on voyait là-bas, à l'horizon, le soleil couchant saigner sur la mer, ce sauvage cimetière emplissait l'âme d'une poignante mélancolie.

An Extra Prize of One Guinea is offered for the best list of examples of slipshod English culled from contemporary literature (higher-class journals or books).

The list should not exceed ten instances, and should illustrate errors of various kinds.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by April 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

ANNOUNCEMENTS.

MESSRS. J. M. DENT & CO. have in preparation the following Important Educational Works:—
DENT'S FIRST LATIN BOOK (on the Model of the "Modern Language Series"). By J. W. E. PEARCE and H. W. ATKINSON. With Coloured Illustrations by Miss E. DURHAM.
THE TEMPLE SHAKESPEARE FOR SCHOOLS, under the General Editorship of OLIPHANT SMEATON, M.A., commencing with the following Volumes:—*The Tempest*. Edited by the General Editor. Illustrated by WALTER CRANE.—*A Midsummer Night's Dream*. Edited by the Rev. W. H. FLECKER, M.A., D.C.L. Illustrated by R. ANNING BELL.—*Henry V.* Illustrated by PATTEN WILSON.
THE TEMPLE SERIES OF ENGLISH TEXTS, PREPARED FOR SCHOOLS, commencing with Scott's *Lay of the Last Minstrel*. Edited by J. W. YOUNG, M.A.—*Marmion*. Edited by the Rev. R. P. DAVIDSON, M.A.—*Lady of the Lake*. Edited by FLORA MASSON.
THE TEMPLE SERIES OF CLASSICAL TEXTS, PREPARED FOR SCHOOLS. First Volume: *Cæsar's De Bello Gallico*, Book I. Edited by Prof. A. L. WILKINS, LL.D.
MODERN LANGUAGE SERIES.—Dent's Andersen in German. Illustrated by the Brothers ROBINSON.
Further particulars on application to the Publishers.

TWO NEW "SHORT HISTORIES." With Maps. Crown 8vo, cloth, 2s. 6d. net each.

THE ENGLISH COLONIES. By AGNES F. DODD.

"So carefully written and judiciously proportioned as to convey a very good idea of the component parts of the Empire, and how we came by them."—*Journal of Education*.

THE BRITISH EMPIRE. By G. E. GREEN, M.A.

"This is a type of text-book that we should be glad to see more of. . . . We can thoroughly recommend it."—*Practical Teacher*.

DENT'S MODERN LANGUAGE SERIES.

EDITED BY WALTER RIPPMMANN, M.A. Based on the Principles advocated by the Pioneers of the Reform Movement in Germany (Victor, Francke, Walter, &c.), by the Association Phonétique Internationale, and by a large number of prominent Teachers in Switzerland, Scandinavia, and America. *A 16-page List on application.

LEADING VOLUMES.

FRENCH.

- ***DENT'S FIRST FRENCH BOOK**. Based on the Hölzel Pictures of the Seasons. By S. ALGE and W. RIPPMMANN. Sixth Edition. Twenty-third Thousand. Cloth, 1s. 6d. net.
- ***DENT'S SECOND FRENCH BOOK**. By S. ALGE and W. RIPPMMANN. Illustrated by C. E. BROCK. Second Edition. Cloth, 1s. 6d. net.
- ***FRENCH DAILY LIFE**. Common Words and Common Things. Adapted by W. RIPPMMANN from Dr. KRON'S "Petit Parisien." Cloth, 2s. 6d. net.
- ***DENT'S SCHOOL GRAMMAR OF MODERN FRENCH**. By G. H. CLARKE, M.A., and C. J. MURRAY, B.A. 3s. 6d. net. [Just published.] "A very brilliant book."—*Saturday Review*.

By MRS. J. G. FRAZER.

*ASINETTE.

A French Story for English Children. With 200 Marginal Illustrations by H. M. BROCK. School Edition. Cloth, 1s. 6d. net.

Teachers of the Subjects may have Specimen Copies of books marked * free; † half-price. Catalogues and Lists on application.

GERMAN.

- ***DENT'S FIRST GERMAN BOOK**. Based on the Hölzel Pictures of the Seasons. By S. ALGE, S. HAMBURGER, and W. RIPPMMANN. Third Edition. Cloth, 2s. net.
- †**GERMAN DAILY LIFE**. By Dr. KRON. Second Edition. Cloth, 2s. 6d. net.
- FOR TEACHERS.**
- HINTS ON TEACHING FRENCH**. With a Running Commentary to "Dent's First and Second French Books." By W. RIPPMMANN, M.A. Second Edition, Revised and Enlarged. 1s. 6d. net.
- HINTS ON TEACHING GERMAN**. With a Running Commentary to "Dent's First German Book and German Reader." Cloth, 1s. 6d. net.
- NOUVELLES NORMANDES**. Short Stories by JEAN REVEL. Edited, with Notes, by JOSEPH DUHAMEL, M. ès A., Assistant Master in Harrow School. Illustrated. Cloth, 2s. net.
- †**FRENCH LANGUAGE DRILL**. By ULYSSE A. DUTOIT. Part I. Elementary. Cloth, 1s. 6d. net. (A Supplement to "Dent's First French Book.")

J. M. DENT & CO., 29 and 30 Bedford Street, London, W.C.

THE COMMON ROOM AND THE COMMON WEAL.

WOE to him who breathes the secrets of the prison-house. Marooning on a desert island would be a desirable release for one who dared to whisper the relations of a masters' common room. Yet the times are agog with teaching reforms and revised methods for great schools and small alike. And how may the new method be introduced into that vast machine, the school, without the interworking of the masters? And how may mutual effort exist if their relations, private and official, be not harmonious?

The lay world cherishes the impressions of its own school-days. It has never had the opportunity of altering them by a peep into the *penetralia*. The master remains for it an integral part of the mysterious school machine. Repressed twists of temperament, personal characteristics or prejudices not implicated in his magisterial presentment will never be conceded to him. Yet, taken collectively, in a body of men regarding one another, at all events, as human beings, these may form a formidable whole, and the greater the enforced unanimity of the official life the larger the share of such idiosyncrasies in deciding private relations.

No profession less fulfils the conditions generally attached to the title than that of teaching. The temptation it presents to so many men of impatient temperament, the immediate assured independence both of means and position, is not the least unfortunate of its misleading features. In all the recognized professions, the Services, civil and military, the new-comer starts at the foot of the ascent. His subordinate position, both in work and in responsibility, is so clearly defined that its waiving in the personal relations with his superiors is a social grace. With advancing years the dignity and responsibility of position increase: the nature of the work accommodates itself to the growing experience.

The schoolmaster starts in youth at the point where, but for the rare combination of circumstances which leads only one out of thirty to a head mastership (except in the case of a cleric), he will finish in old age. From the first he is on an equality with his oldest colleague. The standard of teaching work for which his ability, or his degree, have marked him out at the start can advance but little with increasing knowledge or experience. The utmost increase of responsibility may be a share in the management of his special subject. Accumulated lore of method or character intuition can never secure him against the insertion of some younger man above his head, the freshness of whose enthusiasm more than compensates for want of experience. The consolation of enjoying the result or progress of his work is not for him. Each term recurs the ever fresh material, to be taken up at one fixed point and left at a second for another to enter upon the improvement. The only change of work is in himself, in a failing power of individual interest and enthusiasm, for which a mechanical facility in drill forms a feeble compensation.

Social life for the majority of schoolmasters may be summed up as the relations with their colleagues in the common room. The common room necessarily consists of a heterogeneous body of different ages, selected for distinct interests, working with different ends, with imperfect sympathy for each other's pleasures and little time to share them, with no opportunity of appreciating the merits of each other's methods and small understanding of them, yet forced by the accident of their common work into a close and continuous contact. Little wonder that the senior grows bitter, as he looks round and realizes that his twenty years' service have brought him no greater recognized promotion than an advance of twelve places up the dinner table. The master of a term has the same vote and voice with himself, and the veriest old fusser, if he but possess a memory for detail or a taste for marks, will carry more weight in the trivial councils. Some position he may achieve by force of character, but the *personnel* of the staff is always changing, new men enter who heed not the charm, and the power of impressing it is past. Worse than all, at any time a young Rehoboam may be set on the head master's throne, in whose eyes the counsel of the young men may meet with more favour. Progressing years bring little access of dignity, but they bear with them the realization that the prospect of success is past, the conviction that the very latest arrival has the better chance of attaining Olympus. Who can wonder, then, if, jealous of his insignificant standing, he

grow tetchy about little personal observances, if some small omission, which he has no right as an official superior to correct, become a pronounced raw. The senior hesitates to be cordial lest the fact of the condescension be not conceded. The junior, hampered at each turn by the fear of infringing some unwritten etiquette, dares not be natural lest he may not seem to be ever conceding it. Hence misunderstandings and cliques and pettinesses more in place in the old women's ward of a workhouse.

The unfortunate effect which such relations must have upon united work is patent, either as definite disturbance, or in the less painful but more frequent paralysis, non-interference carried to the point of avoidance, which the fear of such consequences induces. Individual work is prosecuted vigorously and proportionate results are attained, but co-ordination of the machinery, imperative where a reform is in question, is all to seek.

Opinion, however, is content to demand reform—reform in teaching methods—and to remain comfortably blind to any need of attention to, or alteration in, that precarious organization which is to execute it—the common room. To most it remains the mechanism they conceived it in youth, controlled by the head master; and yet, with human want of logic, the cry is all for sending the young teachers abroad to learn foreign methods and introduce them in the secondary schools; advising, in short, one wheel of a coach to roll diagonally, or an Association football player to introduce the Rugby game on his own wing. There is no "new method" to be learned abroad in the least degree suitable for English boys which does not call for the reorganization of the whole school teaching and examining in order to achieve any result. Regarded as an abstract, the footballer *might* score a goal, if not disqualified; the new teacher, as things stand, could merely lead his class up a lonely little *cul-de-sac*, a very far cry from the examination terminus.

Further, as a member of the common room, it is hard to picture the discomfort of his position, with all the vested years of the established teachers strongly, and perhaps not wrongly, opposing the reorganization on its own merits, and above all resenting personally the infliction of the innovator, and the implied slight upon results to which they may have devoted the better energy of their lives.

What, then, retorts the newspaper letter-writer, is the head master about if he cannot control his own engine and reset what parts he chooses? The customary situation of a head master is one of the acrobatic miracles of the age. He might be represented as with his one hand regulating the current of his common room, testing as it were the whirlpool forces of a Charybdis; with his other deprecatingly shaking hands with each and all the fads of his Scylla of a governing body; while he pilots his school-craft between, on the far from unruffled waters of the British parent. He may well hesitate to attempt further that which would set the eddies of his Charybdis in commotion. There is one object against which a common room can take joint action with a deadly doggedness of negation, a reforming chief who fails to impart his enthusiasms; the more so that the reformer will probably be junior to his senior assistants in years and local knowledge, and consequently be a natural object of criticism and opposition.

Before reform in method and matter can be introduced, the faulty teaching organization, beside which the matter taught is of trifling importance, has to be dealt with. The first step towards this is the tardy recognition of the master as a human being.

To attract men of good class and character something more is necessary than the assurance of a competence and a position of respectable stagnation. University or other early distinctions are an excellent entrance certificate in life, but no service would now uphold the pretension that they afford a permanent evidence of relative capacity in the various professions of after-life. In the teaching profession alone are they maintained officially and clung to personally throughout the career, the latter perhaps with some excuse as in most cases forming the last "honour" obtainable in life. Hence the superfluity of somewhat ineffective "lettered" men in our schools, and the want of men of character or personality, yearly becoming of greater importance with the increasing personal contact between boys and masters; such men naturally shunning a career where they have no chance of competing with their more belettered contemporaries.

A rough sketch of the transformed profession might be made somewhat on the following lines:—A scale of promotion should be introduced which would admit of the nature of the work and the responsibility changing agreeably to increasing age and experience, while the succeeding steps should carry with them an increased dignity of position. In the actual teaching work of the school such distinctions could not be introduced. Educationists would quarrel to the last day about the comparative grades of every separate subject, or the superior difficulty of teaching small boys over big. The traditional titles and usages of our old schools could never be reduced to a common denominator for purposes of magisterial grades, and the value of the several positions in each school would have no meaning for any but its own *alumni*. To produce a satisfactory teaching profession the grades must be officially controlled, independently of the several schools, by a central authority. Somewhat on the system obtaining in the Army, promotion would be granted by the Board of Education according to seniority or merit, substituting the head master's and council's reports for the absurdity of an examination for elder men. The degrees would carry some corresponding title similar to those of the Civil Service—senior assistant, junior assistant, &c.—each with its small social step and a proportionate increase of salary. These salaries would be on a fixed scale, and would be supplemented by Government in proportion to the means of the respective schools. The proportionate shares once defined as between each school and the central authority, the official salary would adjust itself mechanically to the grade and present school of the applicant. The enormous advantage which would at once accrue both to the education of the country and to the individual masters from such an arrangement must be apparent. The *onus* of an insufficient salary would be at once lifted from the poorer schools by the fixed universal rate of payment by grade. The objection of the loss of social and professional *status* in taking work at inferior schools—loss so fatal at present to the prospects because so difficult to recover—would be removed by the fact of the professional rank being held irrespective of the school, and the prospect of its betterment in no way affected by the class of boys taught. Hence the less prominent schools could compete on equal terms with their great rivals for the first-class men in any line, offering the advantage of a clearer field for good work and larger gratitude from head master and council as compensation for inferior creature comforts and boys. On the other hand, the masters, released from the fear of sacrificing their futures, could change freely from the overcrowd of some large school to the chance of more congenial work elsewhere, as occasion offered; bearing with them the blessings of new ideas and fresh aspects, and themselves rubbing off by contact with changed methods and wider experience the fatal growth of narrowness and indifference to all but the rut before them, which seems under present conditions to envelop as surely as time itself the most liberally minded.

On any tendency towards fickle changing or the indulgence of a too easy discontent, the necessity of securing the recommendation of the head master for official advancement would serve as sufficient check, while the facilities for exchanging would lessen the evils of friction between uncongenial colleagues.

The authority naturally appertaining to the central authority, as controlling the promotions and apportioning the salaries, would entitle them to demand a course of preparatory training and a proper supervision during the first years of teaching; subsequent evidence of the teaching capacity, not by examination, but through the medium of the occasional attendance of qualified inspectors during lesson hours, might well supplement the reports of the school authorities. A system of superannuation for the different grades, with graduated pensions, would rid the schools of the encumbrance of the "past" master, who would be forced to retire or seek elsewhere for the recommendation to another step denied him, and would enable the conscientious senior, conscious of failing energy, to withdraw with the comforting assurance of a social recognition of the dignified position he has gained, similar to that enjoyed by other public services.

The one serious objection to the system of promotion on the recommendation of the head master and council is the great responsibility and discretionary power it places in the hands of the former. It is to be feared that very few existing common rooms would accept with confidence such a dependence on their chief. But the head master's position would assuredly not be

exempt from the universal resettlement. The anomaly, peculiar to England, of the young head elected from the ranks to the chief command, has but two arguments to support its popularity. The first, the necessity of a youthful zeal to vivify the scholarship of a school, is a survival of the eighteenth-century notion of a school as a cramming shop for the Universities; whereas the present-day head master's duties are almost entirely of a judicial and administrative character, for which experience is the only efficient training. The second is the need of a youthful "new broom" in order that the inevitable opposition of his assistants to reform may be eliminated by the course of nature, and the school have space to advance smoothly once more on the changed lines. This is met by our new system. With the constant passage of masters from school to school, and the consequent acquirement of wider professional interests and more liberal views, there would not exist the same tendency towards slipping into local grooves. Impartial criticism and comparison would percolate at every grade, and substitute larger educational enthusiasms and professional rivalries for individual school prejudices and jealousies. The movement towards reform would proceed naturally from within, and would no longer need the violent periodic impulse of a new governor, burdened with the sole weight of concentrated charge and the more imperatively autocratic, that he may be able to override an opposition as traditional as the purpose of his appointment. Further, the need of a long reign, to permit of a fair trial on the new ways, would disappear if the responsibility was more evenly distributed among the several ranks of the service. The school administration would proceed according to a definite policy, accommodated to the general trend of educational opinion, and would no longer be forced to swing and vary at the discretion of its autocrat. So long as the school is content to throw the whole burden of its success or failure, the entire responsibility of its conduct and reputation, on a single pair of shoulders, the personality of its temporary ruler must remain the vital spring of its somewhat spasmodic existence. On the newer system, the position would correspond more to that of a colonel of a regiment, autocratic in personal seeming, but constitutional in nature, where personal qualities may be of immense influence, but where the duties in the general system are too permanently regulated and interwoven with those of the subordinates to be materially affected by the substitution of one individual for another. For such a position administrative experience, acquired on an ascending scale of responsible positions, would be a sounder certificate than any quantity of youthful energy.

The actual working life of the school would fall of itself into a natural ladder of preparation for these higher posts. The maturing schoolmaster, qualifying for each step by the grant of the official rank, could surrender to the younger men the larger share of the pure teaching work, in which youth is undeniably more effective, and substitute the more responsible and suitable occupation of school administration; passing, perhaps, from supervising master (of preparation hours and young masters) to house master, and thence, by election from those of sufficient official rank, to the advisory committee co-operating with the head master.

To an energetic man, officially qualified, the absence of vacancies in the higher positions would no longer imply the same years of waiting, with the knowledge that to change means to start at the bottom again. He could shift to where a vacancy offered in some other school, and thence, if desirable, to yet another, without injuring his prospects of return or losing his seniority. Retiring head masters might do valuable service in the delicate work of secondary school inspection.

But it is to be feared that such speculation is a trespass on the peculiar province of the millennium. A schoolmaster must be forgiven if he yet cherish it as his prospective Elysium—one far more agreeable to modern tastes than that which Lamb designed for his former tutor. Any consideration of its feasibility must attend the diversion of the efforts of educationists from profitless tinkering at the matter or method of teaching to the primary consideration of the men.

Lacking this, is there no matter in which those interested, realizing the truth, can improve the present conditions of common room life? A few points of a practical and perhaps somewhat trivial nature present themselves, affecting the life of the master and hence at least approaching the problem of work reformation from the right end.

Primarily with regard to school hours. There are two suggestions of definite value which can be extracted from the chaos of Continental theories—the systematic preparation for individual lessons, and the mutual visiting during lesson hours. It would not seem unreasonable to postulate the need of a quarter of an hour's preparation for every hour's teaching, if any attempt is to be made to accommodate the material to the individual intelligence and substitute learning by awakened interest for the less permanent learning by what may be called driving. Similarly, if a boy's school education is regarded as in itself a whole, the mere portioning out of the ground to be covered between his successive teachers is inadequate. Harmony and sequence in the manner in which the material is presented are imperative for systematic mental development. These can only be arrived at by personal knowledge and comparison of each other's teaching models, enabling the teachers in a special branch, mutually recognizing and compensating the effects of their several individualities, to obtain a relative concordance of method. And more, such intervisiting can conduce still further towards unanimity by the opportunities it offers for friendly criticism of unconscious faults and mannerisms, of which, as things at present stand, the boys alone are cognizant, and by which they not unnaturally profit to the full extent. The recognized visitations of the head master are necessarily too infrequent, and bear with them too artificial an atmosphere, to be of any service. Visiting to be profitable must be customary. Any German school can bear witness to the stimulating effect upon class work of the presence of foreign bodies.

And yet, where are preparation or visiting to be found with us? The length of the conventionally established teaching hours would render either impossible, without an increase of the staff that no school budget could support. The remedy is to be found not in the increase of men, but in the reduction of the lesson hours. The tradition of the lesson as the only medium of teaching, dating from the pre-printing age, is still too firmly rooted for the vastly greater value of preparation-time to have been realized. It is inevitable that the average boy mind, before it has learned how to learn and unlearn, should retain the faulty rendering or solution evolved of itself in preparation at first contact with a subject far more firmly than the subsequent *ex cathedra* recastings of matter already stale, which it shares with some thirty others. A large part of modern class-work consists of hopeless wrestlings to eradicate errors that need never have been allowed to take hold. School hours seem indeed to have been arranged on the assumption that all boys are idle unless under the magisterial eye, and even there lazy: and that it is necessary to keep them for a maximum time at work in order that the chances of their really working during some part of it may be similarly increased; with the natural result that the boy, unable to work genuinely for more than a part of the time, soon learns how to shuffle through part and whole alike inadequately for all purposes but punishment exemption, and contracts a notion of work as only incumbent under the master's eye. Half the hours now spent in school, hammering at a subject to nerve-weariness, or distractingly chopping from one branch of knowledge to another without rest or preparation, were far better spent by the boys in "pupil-room" or preparation under personal supervision, and by masters in vivifying their work or profiting from each other's methods. For purposes of preparation, freed from the trammels of marks and class-room discipline, the proportion of boys to a master can be largely increased. A scheme arranging for parallel hours of school and preparation would thus alternately set a considerable proportion of masters at liberty to attend one another's lessons, and to ponder their own—in both cases with great benefit to their teaching and through their teaching to the school.

The thralldom of marks may seem a small matter, but to how many men are these necessary stimulants for the independent boy Briton a devourer of leisure and of energy! Since their position must be recognized, the burden might be materially lightened by delivering the mechanical labour of addition, reduction to scale, and the rest, into the hands of the paid school clerks or accountants working under the school bursar. Masters and marks would profit equally by the arrangement.

In reorganization of this kind lies the real opportunity for the head master's authority. Few, even of head masters, seem to recognize that their apparent absolutism has its main justification

in the basis it affords for the use of personal influence. Forcing new systems down unwilling throats will make but small progress towards the producing of good work. The only sure way lies through the men to their work, in the personal promotion of concord, and the ameliorating of the details and small surroundings of life. Comfortable service and rooms, absence of formalities, even hot breakfast dishes, may seem unworthy the dignity of an autocrat's attention, but they are of importance in the hard-working lives of an association of men. Some of the money now spent on the advertisements of large speech-rooms and drill-halls were far better employed for the best interests of the school on the improvement of common room conditions. Here and there indeed the mediæval superstition still lingers that comfort tends to neglect of work, a conception singularly inappropriate to the general renunciation of a schoolmaster's life. Only those who have had experience can know the difference of atmosphere created by the small meannesses or the inexpensive liberalities: the chafing of men, stinted, discordant, jarring for "hours-out" and job-payment, with its inevitable effect on their work, and the cordial note of a company well cared for, voluntarily accepting all work for its own sake, with a harmony pregnant of effective results.

There is another field in which the position of a head master can be of great personal value. Young masters are too generally regarded as finished articles and expected to spin mechanically as wheels in the machine; whereas they have their individual ambitions yet uncrushed and their training all to come. One who is wise enough to look upon them as future house and head masters, and to give them the benefit of personal confidence and of practical advice and experience, is doing a work of wide general effect, and creating in his school a public opinion trained and prepared for reforms which it would prove impossible to enforce officially on a body only educated in the conservatism of their seniors.

The compulsory celibacy of the hostel system, which seems to be gaining ground, is the final evil to be cited as demanding treatment in any attempt to patch up the existing profession into a tolerable career. As things exist a master contemplating marriage has to take into consideration not only the halving of a small income, but the surrender of all prospect of increasing it by obtaining a house or dormitory. For poor men this has the effect of practically debarring marriage. The trail of monastic tradition is again apparent in the irrational regulation. The theory that the possession of a home impairs the devotion to the work of life is one that even the Universities have been found to reject. In schools where houses for married men do exist the objection is never upheld, and to modern ideas, realizing ever more the dominant importance of personal character and personal relations in education, such a drawback, if not imaginary, weighs as nothing against the humanizing effect of home surroundings, the diminishing of the inevitable narrowness of old-bachelorhood by wider social obligations, and the permanent attachment and sense of responsibility to a place which the introduction of the home sentiment induces. The disadvantages of marriage in the hostel system exist only as a superstition. Experience has shown that it is as easy to manage all the details of dormitory life from a home seven minutes distant as from rooms at three. Small matters of discipline, requiring continual presence, can be entrusted as a useful experience to selected younger masters. Confidence in a married man greatly facilitates the relations with parents, and it is an obvious grotesquery that marriage should be treated as the one absolute disqualification for the management of children.

For this, as for the other ills, the remedy is simple, yet none the less imperative if any effort is to be made to attract good men into the profession and get good work out of them when there. It cannot be too often repeated that it is at this end that all movement towards reform in the instruction of our secondary schools must begin. Personality is the vital breath of education, and to neglect the problem of the men and muddle exclusively at method is to expend good labour in creating a chaos with futility as its end. The height indicated, of the schoolmastering career as it might be, may be too remote a summit for present effort, but a betterment in the common room conditions, both in the details mentioned and others which they entail, would go further than much Germania towards securing the best development of the young nation. The devotion of the present schoolmaster's life is admirable,

the more so that it is rarely recognized. Few positions can be more heroic than that of masters yearly "marching yet further from their prime"; men who have exhausted the energy and enthusiasm of their natures on material which is ever passing from them and can never yield the natural reward of labour in evident results; whose only return is the growing narrowness which the very unselfishness of their sacrifice of all other interests produces; to whom time and long service bring no change but the consciousness of failing powers to cope with the ever fresh material and the nearer prospect of a blank retirement with the one sustaining interest of life removed. Such lives seem the veriest heroism of pathetic self-abnegation. But heroism is a foolish waste of good energy, when a little thoughtful organization, and perhaps expenditure, would secure without its aid more satisfactory results.

NATURE-TEACHING.

I HOPE that I may take it for granted that those who read this article are convinced of the *desirability* of including Nature-teaching in the home curriculum. This assumption on my part serves to clear the way to some extent, since there is no need for me to dwell upon the reasons why natural history should be taught, but rather upon the method of teaching which may be employed with most advantage.

As regards the educational value of natural history teaching, I should like to direct attention to the following points before proceeding to the more practical portion of my subject:— (1) The study of natural history calls into healthy action the powers of observation and reasoning. (2) The activity of these powers will be greater if the teaching be founded upon the wide and sound basis of endeavouring to assist the child-mind in the expression of its own ideas; for herein lies the secret of the truly *educational* aspect of the training. (3) We must train the physical sight to stimulate and serve the vision of the mind. Let us remember the old saying: "The eye sees what it brings with it the capacity for seeing." Physiologically speaking, there is no separation between the processes of eye perception and mind perception, though they may work independently of one another. The eye is the waiting organ of the mind. But how perfectly it shall discharge its duties in this respect must depend upon the training it receives. The dependence of the mind upon uneducated sight may be compared with the dependence of a master upon an untrained servant. I say *training*, because we must carefully distinguish between *use* and *training*, since the latter is by no means implied by the former. (4) We should therefore seek to inculcate in our children habits of *analytical observation*. This is one of the fruits of careful eye-training. A child should be encouraged to "pull things to pieces intellectually," to turn facts inside out, to learn the "insides of things."

These are a few of the things that we want to accomplish, but the practical question is how to set to work. In attempting to indicate the steps which should mark the progress of the training which we recommend, it is necessary to observe that much weight necessarily attaches to the nature and temperament of the child-pupil, and yet more perhaps depends upon the capability of the parent teacher. It would be difficult or impossible to indicate the exact lines upon which the teaching should proceed; all that is possible is to suggest what appear to be the best and most attractive methods of carrying out the object we have in view.

It is most important that the method of teaching employed should conform with the growth of the child's mental powers, by drawing out his ideas in a healthful manner, by allowing full play to the imagination, and by strengthening and developing the child's own resources. No doubt many parents entertain misgivings as to their ability to teach a subject with which they are only superficially acquainted. The advantage in teaching of possessing a thorough and comprehensive grip of one's subject is unquestionable, but, at the same time, it should be remembered that the ability to teach does not depend so much upon the extent of one's personal acquaintance with the subject as upon the ability to assimilate what one reads, and the power of adapting the knowledge so gained to the aptitude and requirements of the pupil.

If, let us say, we carefully read and digest the contents of a

chapter of a simple book on botany, and if, moreover, we take pains to verify for ourselves the facts therein advanced, we should be prepared to teach the children in our own words all that it is essential for them to know in that chapter. And if, in addition, we take the precaution of reading up in a larger work certain points only touched upon in the smaller book, we ought to be in a position to enlarge upon the lessons, and to draw our illustrations from a wider field.

This plan assumes the necessity of the teacher's keeping at least one chapter ahead of the pupil; and the effort required to enable the teacher to, as it were, turn the matter of his reading inside out, so as to render it in different language, will give him a grip of the subject and test his assimilative powers in a manner not otherwise attainable. In this connexion we shall do well to bear in mind the excellent advice given by Rembrandt to his pupil Hoogstraten: "Try to put well in practice what you know; in so doing you will, in good time, discover the hidden things which you now inquire about." So far, then, as regards our *reading*; but books will not do much towards enabling us to train the power of observing in our children. Books will give us knowledge, but they cannot lend us *eyes*. We must bring ourselves and our children face to face with Nature herself.

This leads to another practical division of our subject—how to observe. We want to know how to observe quite as much as we want to know how to teach. And here let me say a few words about the value of "object-lessons." Objects are used to illustrate lessons in natural history in two different ways. They may be entirely in the hands of the teacher, who describes them to the pupils; or they may be placed in the pupils' hands at first, and the pupils requested to state their ideas about them. The first method is objectionable from several points of view, but chiefly from the *educational* standpoint. I cannot help thinking that such object-lessons are rather apt to partake of the character of the lesson on the sponge, in which the children were directed to note, first, that the sponge was p-o-r-o-u-s; secondly, that it was a-b-s-o-r-b-e-n-t; and, thirdly, that for both these reasons, but especially the second, the sponge was an exceedingly useful article of commerce! (N.B.—All the long words used were to be written out several times in order to impress them upon the infantile memory.) But, observe, not a word was said about the *living* sponge, of which the thing handled by the children was but the bleached skeleton. A few words concerning the marvellous polypes of the living sponge would have lifted the children out of their dull schoolroom into the realms of fairyland; but possibly the teacher had the commercial side of the subject uppermost in his mind, or possessed only a hazy notion of what a living sponge was like.

The frequent causes of failure in what are termed object-lessons arises no doubt from the inability of the teacher to infuse into his pupils the enthusiasm which he himself possibly feels for his subject. And a good teacher, it should be observed, who begins by eliciting the ideas of his pupils on the objects placed before them, will not forget that he has to train their powers of observation by calling their attention to points which they have failed to observe. This method is truly educational, without being in the least didactic. Nor should he forget that his teaching should be more in the nature of an interpretation than anything else; that he must bend himself to the stature of the child-brain before him, seeing with the eyes of the child, grappling with his subject as the child-mind only can grapple with it, and that his mental strength must be always at the level of that of the child. And while he conceals the depth of his own knowledge, as he would conceal his superior physical strength, he encourages, stimulates, and lifts the minds of his hearers, till the pupils catch the fire of his own enthusiasm, until their minds are aglow with his own—when he may carry them whithersoever he listeth.

In dismissing the subject of object-lessons, I would merely add that they do little or nothing towards fostering a desire on the part of the pupil to find out for himself what is to be learnt about the objects which surround him, but rather serve to blunt the desire for self-acquired information. The keynote to the successful training of observation is undoubtedly the economizing to the fullest extent of the material for study. In other words, children should be trained to make the most of their surroundings. It is the old story of "Eyes and No Eyes." Specially furnished object-lessons can never equal the simply invaluable lessons which are to be gained by a minute and accurate survey of the ground over which the pupil takes his

daily walk. The first step is to limit very strictly the area of study. By thus concentrating his powers upon a small space he will avoid the bewildering sense of a multiplicity of detail which is inseparable from attempts to observe upon a large or undefined scale. Let him, for example, assure himself as to every growing thing comprised within a few square yards of meadow or an equivalent extent of hedgerow. By this means his eyes will be trained to detect similar forms when passing over an entire field, or walking beside a long extent of hedge. He will thus gain accuracy in observing, and be led to discover how much he really knows about the objects by which he is surrounded, and with which he may claim to be already familiar. If his observation schools him to appreciate minute differences occurring within the small space, and to realize exactly to what causes such differences are to be ascribed, the power of detecting differences on a very much larger scale must naturally follow.

Having carefully chosen his area of observation, the student, actuated by a sense of proprietorship, would proceed to exhaust its resources conscientiously, and with the healthy object of precluding any attempts to poach upon his preserves. It might be an advantage for two or more students to combine in working out a single area. Thus one pupil might work the plants, another the insects, a third the creatures other than insects, while a fourth might be told to examine and report upon the nature of the soil and such rocks and stones as might be visible at the surface. The great point to be observed is that nothing, however trivial it may seem, is to be overlooked. It is advisable that the pupil should be given a free hand at starting, because the sense of responsibility is stimulating and wholesome, but he should be asked to give his reasons for omitting anything from his report. Such omissions are likely to be frequent at first, and they will generally be found to apply to such objects as are both profuse and familiar, the tyro's aim being the mistaken one of recording only things which are uncommon. This fault needs to be corrected by the teacher, who will wisely seize the opportunity thus afforded of imparting a lesson of the first importance—namely, that the very commonness of the object omitted gives to it the right of first consideration, since it proves that the organization (assuming for the moment that it is a plant) is in some way or other admirably fitted to contest the space allotted for growth. And because it is so successful it compels our attention to two points: (1) How has it succeeded in making itself so common; and (2) in what way has its success affected the plants with which it is associated? It will be seen that these two questions embrace several important points, such as: 1. (a) Does the success of the plant appear to depend upon some peculiarity of structure, mode of growth, or method of reproducing its kind, which is not possessed by the rest? Or (b) does its superiority appear to be due to external causes, such as the nature and condition of the soil, the elevation or depression of the ground, &c.?

With regard to question 2, in what way the success of this particular plant has affected the rest of the herbage, we may carry our lesson into the region of heather and gorse, and there study the effects of unsuccessful competition in the case of many weeds which yet manage to hold their own in the lowland meadows, not forgetting, however, to mark the insignificant, though successful, dodder, which strangles the powerful ling in the very seat of its stronghold; again to the clover field, where excess of numbers counts for nought against the inroads of a few straggling plants of this all-powerful and quickly spreading enemy, the dodder; and yet again to the wheat-field, where red poppies grow luxuriantly amongst the far-outnumbering stalks of corn.

These are but a few of the object-lessons which are called forth by the pupil's significant error in deeming commonness—or, what is the same thing, superiority of numbers—a matter of no import. And it is hardly necessary to point out that some of the most valuable lessons may be illustrated by objects that are within the reach of every teacher who is happily capable of turning to useful account the simplest facts in his everyday experience.

Brought face to face with Nature, and trained to observe systematically, the pupil will gradually acquire the power of mental discrimination. But the accuracy in observing which will result from the method of eye-training here suggested will stimulate the making of comparisons between the objects observed. Points of special interest, observed, perhaps, at

first in a few of the objects which have come under observation, will be looked for in other objects. Certain of these points will be found to be replaced by others no less striking in themselves; and, while the number and variety of mental pictures will thus be gradually increased, the mind will be learning to grasp the essential or distinguishing features of the objects examined. The relations between the various organisms, and their mutual bearings, would likewise come to be recognized, and in this way the meaning and use of diverse points of structure, &c., would be understood. Of this we may give an example in the relation between flowers and insects. We may imagine a pupil entering in his note-book: "I saw a bee collecting honey; it visited a number of plants of red clover, but passed over some buttercups. The buttercups, however, were visited by numerous flies. The clover evidently possesses some special attraction for bees which the buttercups do not possess." Here is a picture connecting clover flowers with the habits of bees; and the pupil would follow this up by observing other flowers, and by endeavouring to find out why bees prefer certain flowers to others; and these observations would lead him to a fuller understanding of the essential parts played by colour, form, and honey-secretion. If the presence of honey were found to be accompanied, in the case of certain flowers, by a peculiar form of construction and colour-marking which seemed to be displayed with the express purpose of attracting insects, the pupil would naturally be led to look for such signs in all flowers which came under his notice; and in the presence, or absence, of such features, to form distinct and accurate impressions as regards the relations of plants and insects, and finally to perceive in the adaptation of certain flowers to certain insects the existence of what may be termed social grades in insect-visited plants.

We do not hesitate to put forward the strongest claims on behalf of botany as a subject specially adapted for parental teaching. Plants are easily obtained, and their structure and growth may be studied *in situ*, whilst their immotile condition offers the fullest facilities for observing the interesting effects of associated growth. The cultivation of the art of drawing, which is so necessary and helpful an accompaniment to Nature-study, is greatly facilitated in the case of plants; and, finally, it is perhaps hardly necessary to point out that the comparative simplicity of structure which characterizes plants in comparison with animals is a further and important point in favour of their selection.

The system of teaching adopted should combine three essential points—(1) accuracy; (2) thoroughness; (3) breadth of treatment. The third point does not imply diffusiveness, but simply the avoidance of narrowness in teaching. It should never be lost sight of that knowledge concerning a particular creature or plant is only of use in so far as it constitutes a stepping stone to knowledge of other creatures and plants. The practical value of teaching, whatever be the method employed, must be measured by the extent to which the knowledge can be applied. Again, with regard to the method, all teaching which is not educational—that is to say, which does not draw out the ideas which are in the child's mind, as well as inculcate fresh truths—is valueless. Every teacher should guard against the blunting effects of teaching solitary, disconnected facts which do not hinge themselves in any way upon the preconceived ideas of the pupil. It is necessary that the endeavour should be made in directing the observation into the right channels to ensure that every idea inculcated should serve to fire a train of ideas in the mind of the child. In this lies the value of suggestive teaching—it should be a stimulus to personal inquiry on the part of the child; each new fact brought under his notice should show, by the method of its implantment, how it is to grow and develop fresh facts. In illustration of this let us instance the case of the stinging-nettle. What does the child observe here? First, it is the leaf which stings the hand; this is the deduction from personal observation, and it starts a train of thought in the child's mind which associates leaves shaped like those of the nettle with the power of stinging. Here we have the impression of the nettle-leaf; but, unless it leads the child to examine and compare the leaves of other plants in order to see whether they sting or not, and, if not, why not, the first formed impression is, as an isolated fact, valueless. The next step, therefore, is to bring the child into contact with the leaves of other plants, selecting first, for the purpose of illustration, the leaves of the white dead-nettle. The points of resemblance between these

leaves and those of the stinging-nettle will be apparent to the child, and he will assume from this resemblance that the dead-nettle leaves have likewise the power of stinging. A trial, however, will convince him that he is wrong, and the impression formed from his previous examination will receive a shock. His next step will be to examine the leaves of the stinging-nettle afresh in order to find out why they sting, and the result of this second and closer examination of the leaves, and comparison with those of the dead-nettle, will be to amend the impression first formed, or, rather, to supplement it by another and more correct one, viz., that it is not the *leaves* of the stinging-nettle which sting, but the curious hairs which grow upon the leaves; and the absence of these hairs from the leaves of the dead-nettle is the reason why the latter do not sting; hence, the resemblance between the leaves counts for nothing—it is the stinging hairs that must be looked for. (Incidentally, however, the child may be led to perceive that this close resemblance between the leaves of the dead-nettle and those of the stinging-nettle may be of great service to the former in protecting its leaves from being eaten.)

A further stage is reached when, by comparison with other plants, the child recognizes that while there may be comparatively soft and flexible hairs which owe their stinging property to their capability of breaking near the point, and thus permitting the poison to flow into the wound, as in the stinging-nettle, there are other hairs which are devoid of poison cells, but, being of a stiff, bristly nature, are capable of entering and inflaming the skin, as we see in the case of the viper's bugloss. The deduction from this comparison would be that the same object, viz., protection, may be secured by different means in different plants. From specially modified hairs with poison-cells, and brittle hairs that pierce the skin and then break off, we may pass on to plants in which leaves, or even entire branches, are transformed into protective spines; whilst, as evidence of protection of a different kind, we observe the downy growths on certain plants intercepting the too-free transpiration of moisture from the air-passages and pores of the underside of the leaves; the downward pointed hairs on the stems, and especially on the flower leaves—the latter in the form of beards and *chevaux-de-frise* in tubular corollas—which serve to exclude unwelcome guests in the shape of creeping, wingless insects, whose object is to devour the precious pollen and honey, and which do nothing for the plant by way of payment for their food.

Thus, step by step, fact hinging upon fact, the study proceeds. Each observed fact is made to throw light upon facts which stand in near relation to it, thus serving to sustain the interest of the child, and to widen his conception of Nature. Teaching carried out on such broad lines as are here indicated must involve an almost unconscious education and training of the mind through the medium of the eye; and it should be satisfactory to note that this happy result may be brought about without the least suspicion of either forcing or cram, without burdening the memory with a string of polysyllabic terms which hedge the divinity of the subject; and without losing sight of the important truth—which, indeed, should be ever before our eyes—that the flower, the bird, and the insect are before all the books which were ever written.

FRANCIS J. ROWBOTHAM.

CALENDAR FOR APRIL.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—Oxford Local Exam. Apply for entry form (up to May 7).
- 1.—London University M.A. Exam. Return forms.
- 1.—Surrey County Council Scholarships. Return forms.
- 1.—Return forms for Leaving Certificates, Scotch Education Department.
- 1.—Return forms for London University M.A. Exam., Branches III., IV., V., VI., and VII.
- 1.—Return forms for Cambridge Higher Locals. (Last day, April 30.)
- 2.—Harrow School. Entrance Scholarship Exam.
- 8.—London University. Last day for entry for M.B. Exam.
- 10.—Oxford Exam. for Women. B.Mus. Return forms.
- 11.—British Child Study Association, Sesame Club. Discussion, "Imitation." Mr. J. H. Bacon and Mr. E. Cooke.

- 14.—Science and Art Department. Return forms for Whitworth Scholarship and Exhibition Exam. Last day for sending in forms for Local Scholarships; also for Exhibitions in Art.
- 15.—Post Translations, &c., for *The Journal of Education* Prize Competitions.
- 15.—Southwark Educational Council. Meeting at Polytechnic Institute, Borough Road, at 8 p.m. Paper, "The Relation of School Work to Commercial Business," by Sir Joshua Fitch.
- 18.—Forms for Edinburgh Local Exams. may be obtained from the Clerk of Senatus, Edinburgh University, and must be returned to him filled up by May 6.
- 20.—Surveyors' Institute Special Exams. Return forms.
- 21.—London Chamber of Commerce. Junior Commercial Certificate Exam.
- 23.—Post School News, items for this Calendar, &c., and Advertisements for the May issue of *The Journal of Education*.
- 24.—St. David's College, Lampeter. Matriculation.
- 25 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the May issue of *The Journal of Education*.
- 28.—Science and Art Department. Candidates not in Science and Art Classes to apply to Local Secretary for admission to Day Exam.
- 28.—Dublin University (Trinity College). Entrance day.
- 29.—City and Guilds of London Institute. Technical and Manual Training Exams. begin.
- 30.—Girton College, Cambridge. Entrance and Scholarship Exam. Return forms, with fees, for June Exam.
- 30.—University College, London. Andrews Scholarships. Return forms.
- 30.—Local Committees to apply for Exam. papers to Science and Art Department, South Kensington, for Day Exam.

The May issue of *The Journal of Education* will be published on Wednesday, April 30, 1902.

SUMMER HOLIDAY COURSES, &c., 1902.

(Preliminary List.)

- ABERDEEN (University of).—July, August, and September. Special Courses in French and German for Teachers. Apply Lecturers in Modern Languages, Marischal College, Aberdeen.
- ABERYSTWYTH.—During August. Sloyd. Under direction of Miss Andrén. Address—31 Blenheim Road, Bradford, Yorks, or apply to Mr. Cooke (see under Naäs).
- AMBLESIDE.—During August. Sloyd. Under direction of Mr. J. Vaughan. Apply to Mr. J. Cooke (see under Naäs).
- ÁVILA (Spain).—August 4-25. Spanish. Apply—The Director of Technical Instruction, County Technical Offices, Stafford.
- CAEN.—July 1-30, August 1-30. French. "Alliance Française" Courses. Apply to Mr. Walter Robins, B.Sc., 9 Northbrook Road, Lee, S.E.
- CAMBRIDGE.—University Extension Summer Meeting, August 1-13, August 14-26. History, Literature, Science, Economics, Music and Fine Arts, Education, Theology. Complete programme, 7d. post free, from R. D. Roberts, M.A., Syndicate Buildings, Cambridge.
- GENEVA.—July 16-August 28. French. Apply to Monsieur Charles Seitz, à l'Université, Geneva.
- GREIFSWALD.—July 14-August 4. German. Apply to Prof. Dr. Siebs, Ferienkurse, Greifswald.
- GRENOBLE.—July 1-October 31. French. Apply Monsieur Marcel-Reymond, 4 Place de la Constitution, Grenoble.
- JENA.—August 4-24. German. Apply to Frau Dr. Schnetger, Gartenstrasse 2, Jena.
- KIEL.—July 6-26. German. Apply to Herr Nissen, Holtenauerstrasse 38, Kiel.
- LAUSANNE.—July 22-August 30. French. Apply to Monsieur J. Bonnard, Avenue Davel 4, Lausanne.
- LEIPZIG.—July, August, and September. Sloyd. Dr. Pabst, 19 Scharnhorst Strasse, Leipzig, or to Mr. Cooke (see under Naäs).
- HONFLEUR.—About August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, London.
- MARBURG.—July 7-27. Modern Languages. (Second Course, August 4-24.) Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
- NAÄS.—June 11-July 23, July 30-September 9, November 5-December 16. Sloyd. [The courses at Naäs, Leipzig, Aberystwyth, Ambleside, and Penarth have been arranged by the Sloyd Association.] Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.
- NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.
- NEUCHÂTEL.—July 15-August 10. (Second Course, August 12-September 7.) French. Apply to Monsieur P. Dessoulavy, Académie de Neuchâtel.

- OXFORD.—July 2–August 28. English Language and Literature for Women Students. Apply to Mrs. Burch, 20 Museum Road, Oxford.
- PARIS.—July 1–31. French. (Second Course, August 1–31.) Apply to Monsieur le Secrétaire, l'Alliance Française, rue de Grenelle 45, Paris.
- PARIS.—Easter and Christmas Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
- PENARTH.—During August. Sloyd. Under direction of Glamorgan-shire County Council. Apply to Mr. W. Hogg, Technical Instruction Committee, Glamorgan, or to Mr. Cooke (see under Naäs).
- SANTANDER (North Coast of Spain).—About August 5–25. Spanish. Apply to General Secretary, Teachers' Guild, 74 Gower Street, W.C.
- TOURS.—August 1–22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, W.C.
- VILLERVILLE-SUR-MER, TROUVILLE.—August 5–26. French, preparation for exams., "Alliance Française." Apply Prof. L. Bascan, 49 Rue Caponière, Caen.

* * Corrections and additions to this list are invited.

Programmes of most of these courses can be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W., where a Table of Foreign Modern Language Holiday Courses, prepared by the Special Inquiries Branch of the Board of Education, can be obtained.

Information as to lodgings for students at Honfleur, Tours, and Santander (Teachers' Guild Courses) will be found in the Handbook, ready at the beginning of May, 6½d., post free, from the Teachers' Guild, 74 Gower Street, London, W.C.

A list of addresses in several other Holiday Course centres, will be found in "Holiday Resorts," 1s. 1d., post free from same address.

The advertisement columns of *The Journal of Education* ("Continental Schools and Pensions") may also be consulted with advantage.

BOOKS OF THE MONTH.

Classical.

- Lessons from Greek Pottery. By J. Homer Huddilston. With Illustrations. Macmillan, 5s. net.
- "Blackie's Illustrated Latin Series."—The Phormio of Terence. Edited by W. Cecil Laming. 4s. 6d.
- Latin Passages for Translation. By M. Alford. Macmillan, 3s.
- Homeri Opera. 2 Vols. Edited by D. B. Munro and T. W. Allen. Clarendon Press, 2s. 6d. paper, 3s. cloth, each vol.
- Plato, Euthyphro and Menexenus. Edited by T. R. Mills. W. B. Clive.

English.

- What is Shakespeare? An Introduction to the Great Plays. By L. A. Sherman. Macmillan, 6s. net.
- "Methuen's Little Library."—Elia and the Last Essays of Elia. Edited by E. V. Lucas. 1s. 6d. net.
- A Text Book of Applied English Grammar. By E. H. Lewis. Macmillan, 2s.
- Lectures and Essays. By T. H. Huxley. Popular Edition. Macmillan, 6d.
- "Blackwoods' English Classics."—Milton, Samson Agonistes. Edited by E. H. Blakeney. 2s. 6d.
- "Blackwoods' Modern English Writers."—Thomas Henry Huxley. By Edward Clodd. 2s. 6d.

Fiction.

- The Girl from St. Agneta's. By J. H. Voxall. Ralph, Holland, & Co., 3s. 6d.
- Lost Property. By W. Pett Ridge. Methuen, 6s.
- The Dark o' the Morn. By S. R. Crockett. Macmillan, 6s.
- Michael Ferrier. By E. F. Poynter. Macmillan, 6s.
- A Heart of Flame. By C. F. Embree. Methuen, 6s.

Geography.

- The International Student's Atlas of Modern Geography. Newnes, 6s. net.
- "Blackie's Illustrated Continental Readers."—Asia. 1s. 6d.

History.

- Companion to English History (Middle Ages). Edited by F. P. Barnard. Clarendon Press, 8s. 6d. net.
- History of Scotland. Vol. II. By P. Hume Brown. Pitt Press, 6s.
- The Fight with France for America. By A. G. Bradley. Second Edition revised. Constable, 6s.

Miscellaneous.

- Games with Aims. Words by Naomi Bent. Music by Bessie Watson. A. Brown & Son, 2s. 6d.
- Health, Speech, and Song: a Practical Guide to Voice Production. By Jutta Bell-Ranske. Sonnenschein, 4s. 6d. net.

- The Story of Euclid. By W. B. Frankland. Newnes, 1s.
- Object Lessons for Rural Schools: Senior Classes. By Vincent T. Murché. Macmillan, 2s. 6d.
- Advanced Perspective. By L. R. Crosskey and James Thaw. Blackie, 4s. 6d.
- Relfe Brothers' Advanced Dictation Sentences and Spelling. 8d.

Modern Languages.

- Chr. Fr. Grieb's Dictionary. Vol. I. English-German. Tenth Edition. Revised by A. Schröer. Frowde, 14s.
- El Pájaro verde. By Juan Valera. Edited by G. G. Brownell. Ginn, 2s.
- Amigos y Auxiliares del Hombre. By S. J. Eddy. Ginn, 3s.
- Spanish and English Conversation: First Book. By A. E. Pinney. Ginn, 3s.
- Storm's Immensee. Edited, with Notes and Vocabulary, by R. A. v. Minckwitz and A. C. Walder. Ginn, 2s.
- A. Dumas' Napoléon. Adapted and Edited by W. W. Vaughan. Macmillan, 2s. Word and Phrase Book to same, 6d.
- Hindustani Self-Taught. By C. A. Thimm. Marlborough, 2s.; or in cloth, 2s. 6d.

Pedagogy.

- Pastor Agnorum: a Schoolmaster's Afterthoughts. By J. H. Skrine. Longmans, 5s. net.
- From Cradle to School. By Mrs. Ada S. Ballin. Constable, 3s. 6d.
- Thoughts on Education: Speeches and Sermons. By the Rt. Rev. Mandell Creighton. Longmans, 5s. net.
- Outlines of Metaphysics. By John S. Mackenzie. Macmillan, 4s. 6d.

Science.

- Elements of Physical Chemistry. By Harry S. Jones. Macmillan, 17s. net.
- Text-Book of Magnetism and Electricity. By R. W. Stewart. Vol. IV. of Tutorial Physics. University Tutorial Press, 3s. 6d.
- Comparative Anatomy of Animals. By Gilbert C. Bourne. Bell, 4s. 6d.
- Elementary Electricity and Magnetism. By D. C. and J. P. Jackson. Macmillan, 7s. 6d.
- Laboratory Manual of Physics. By H. Crew and R. R. Tatnell. Macmillan, 5s.

THE NEW ROMANCE: A FORECAST.

Who holds by Thee hath Heaven in fee
To gild his dross thereby,
And knowledge sure that he endure
A child until he die.

Kipling, "To the True Romance."

UNDOUBTEDLY the child has the clearest vision of the True Romance, because his gaze is from the height that is still illumined by the dawn of life; he looks across to the distant peaks of splendour, and sees not the valley beneath, which lies between himself and them, into the mists and shadows of which he must descend by-and-by, and out of which even the most piercing sight can catch only blurred outlines of the far-off City of God.

It is not merely a conventional ending, but a vivid prophecy, when the child rounds off every story of the only world which he knows—and does he know it by ἀνάμνησις of immortality, or, as Mr. Andrew Lang has somewhere suggested, by some second sight, that fades as childhood passes away?—with the refrain of True Romance, "and they all lived happily ever afterwards." Is not the child repeating to us in his own language that there is a state of being where "there shall be no more pain"?

Yet we older folk, with our eyes bent on our tasks in the valley, smile at this sunny ignorance of the hard facts of what we call "experience." Are we so certain to be right? It is the child—and he whose heart has become as that of a little child—who alone shall enter the kingdom of Heaven. Does not, perhaps, the child-mind see that kingdom afar off, and in his romance reach out his hands towards it, unwitting of the great truth which it is given him to see, ere yet he leaves the hill top, given him for the purpose that he may never lose sight of it, so he hold by God's grace, until he has trodden the last step of that dark road, and emerges into the light of the City whereof it is written that "there shall be no night there."

It is a question not to be answered rashly: "What destroys, or, at least, blunts, in so many the instinct of romance?" It is certainly not toil, nor yet suffering. McAndrews knew more of it than the "Viscount loon" who asked:

Mister McAndrews, don't you think steam spoils romance at sea?

And yet it is a fact that one corner, at least, of the
Sounding labour-house vast
Of being

has remained practically unknown to the seekers of romance.

Here lies a literary subterranean spring, waiting for the true rhabdomancer, who shall come along one day, and, with his divining hazel or willow, shall charm from the depths that lie below the dry and trodden surface a well of clear-springing romance.

The existence of such a supply has been announced, and that officially. Schoolmasters have known of it, probably for generations; but, for no very clear reason, no one has yet thought of trying such ground. At length the truth has filtered through and trickled out in a few sentences of a Blue-book on Education! Romance in a report "presented to both Houses of Parliament"! It is a fact, for all that.

In Fetter Lane has bubbled forth a clear stream of poetry, sparkling out amongst the piled-up masses of facts and statistics, so apparently barren of romance to those "first-class passengers" of McAndrews, who

like it very well
Printed and bound in little books,

that the writer of a leading article in the *Times* concerning this said Blue-book could not wholly repress a tone of disdain for—in fact almost an anxiety to show his ignorance of—such a subject as Preparatory Schools. Yet here stands the statement of one who knows:

They are as a class . . . possessed in a large degree of the spirit of enterprise, even in some cases to the point of extreme rashness. . . . They are not only enterprising, but their enterprises generally succeed. And yet the risk is often a serious one. . . . They are persistent, resourceful, undismayed.

Here are the elements of romance. Here we catch a glimpse of some heart of man, daring, enduring, hoping, suffering, struggling, and reaching out hands of faith, when hope has grown dim in a storm cloud, emerging at length purified, strong, and serene, having learnt to gauge the things temporal at their passing value. Let him who reads run—and find out more:

For to make plain that man's disdain
Is but new Beauty's birth.

"They" are simply head masters of private schools.

No one has dreamed of romance being found among these or their surroundings. Why not? Simply because the schoolmaster—be he head master or, as the leader writer of the *Times* conceived to be still the correct phraseology, "usher"—has for long been a stock conventional puppet in literature.

Convention has tied up and choked a great many things in literature. The persecuted hero's cat or dog is a favourite "property" for the purpose either of making pathetic "business" or of relieving the agony of some situation with by-play. The clergyman, the bishop, the lawyer, the member of Parliament, the doctor, the schoolmaster—one fixed type of each, (with few variations)—is kept in the studio and is copied and recopied faithfully, with but little change, except of name, until we can almost tell precisely what part he will play when any one or other of these walks on to the scene. The clergyman will be a milk-sop, occasionally a rascal (this is preferred by the "powerful" style of writer), the bishop a time-server, the lawyer a scoundrel, the M.P. an ass, the doctor a wind-bag (more or less jocose), the schoolmaster a pantaloons. We readers in search of True Romance are tired of these lay-figures—their joints are wooden, and no ventriloquizing can cheat us into forgetting that they are not flesh and blood. They are sadly flat after the one undying puppet-show of the old world—Punch and Judy. Somehow there is more exhilaration to be obtained by a tired mind out of that extravaganza (be its origin Chinese, Aryan, or miracle play) than out of six months' accumulation of six-shilling novels.

And the writers who search for the True Romance are tired, too. The result is that many who have sought to avoid the entanglements of conventionalism have floundered into puddles and ditches which had best been avoided, and now they stretch forth for our acceptance that which they have found in the mud, and, behold! it is very muddy. If we say that we desire not the Romance of Mud, they reply, hurt and indignant: "But this is realism—it is showing you Things as They Are."

It is not the object of this article to discuss realism or

idealism; but there can be no harm—in fact, no possibility of contradiction—in making the statement that we (viz., the seekers of the True Romance) do not believe that the muck-rake is the only, or the best, implement for showing Things as They Are. The prophet says otherwise. He tells us to draw from real saints—Magdalene, Peter, and Paul; but only "when earth's last picture is painted," and when we have rested for an æon or two, and when a few other conditions have been fulfilled, each finder of the True Romance

Shall draw the Thing as he sees It for the God of Things as They Are.

Meanwhile there are a good many pictures yet to be painted, and there are myriads of things still waiting to be drawn as they are (whether Things be written with capital letters or not), and among these is the schoolmaster. Mr. Cotterill has torn off from his sketch-book what an impressionist painter would call "a note," and it has fluttered to earth and has been caught between the pages of the Blue-book. Who will seize upon that "note" and shape its adumbration into strong lines and cause flesh to come upon the bones and breathe into it, so that it becomes that which man originally was—a living soul? What would all romance have been if man had been kept out of it? One reason alone makes, and for ever will make, romance, and that is that man is a living soul that hopes and fears and sorrows and rejoices, that struggles and dares, that endures and agonizes. Man alone can fight against fate and can mock defeat,

Knowing himself immortal till his work be done.

What does the setting of the picture matter, therefore, or the "incidents" among which you find man in the endless romance of life? All life is made up of "incident"; but only he who sees the True Romance can draw the romance of life's incidents in any and every setting. In tales of thrilling adventure the incidents thrill us only because of the feelings aroused by them in the actors, whereby the electric current is communicated to ourselves, and we (psychologically) "syntonize."

If tempting fate in some hare-brained enterprise, and then fighting against fate until victory is declared for the hero, has constituted the pith of romances hitherto, then surely a New Romance may be written, in which the hero shall be an English gentleman who is "enterprising even to the extreme of rashness." Here will be found as abundant a field for thrilling situations as any voyage, expedition, or *imbroglio* in the politics of some obscure or imaginary State.

This New Romance will not need adventitious aids to make it exciting, such as burglaries, fires, or gruesome accidents. The outwardly smooth surface of a schoolmaster's life is seldom broken by a *cali ruina*—at least, not oftener than the lives of other men in this country; yet beneath that quiet exterior, which others think so humdrum, runs a deep and strong river of feeling, which has its fountain-head far away in unseen hills, and is scarcely more than rippled by the little runnels which trickle into it from the surface-drainage of the petty things of every day.

But the depth of the pathos in a humdrum life is often revealed by the contrast created by its very contact with petty things. This fact has been seen and put to artistic use in other pictures of life. It has passed unsuspected in the schoolmaster's. All are familiar with the dramatic effect in the story of the clown making the theatre roar with his foolery, and then going home from the lights and laughter, broken-hearted, to his dying wife. That is a strong picture, and its appeal is direct. Is the appeal less direct in the case of the schoolmaster, who goes on steadily and with serene exterior in his daily routine, teaching, directing games, and even inventing new pastimes, among all the racket of a wet afternoon spent in the play-room, his inward eye fixed, all the while, sternly on some tragedy going on in his own life? Yet his work seems to outsiders so petty, so devoid of all possible romance; its routine is conventionally supposed to become gradually substituted in his very veins for his original heart's blood; probably the petty details of this work would, in very deed, sooner or later dry up the channels of his mind, and would dwarf his interests, if he really lived and felt in nothing else and for nothing else. But, if Romance has come and taken up in her fingers the fibres of his heart, and has bound them tenderly, yet strongly, round some "incident" of life, and so long as those fibres wither not nor shrivel back upon self, the man is in touch with the heart of Life itself, and its pulse sends returning throbs into his own heart and keeps his blood warm

and tingling with consciousness of the True Romance. According to Carlyle's interpretation of Jean Paul Richter, the universe is permeated with humour. And our new prophet (whenever he shall arise) who "takes up the harp of life and smites on all its chords with might" to draw forth the romance of the schoolmaster, must, if he be a prophet indeed, strike first the oldest theme of all—human nature. And even though that theme, as it wanders through infinite variety of treatment, must ever and anon awaken tears, yet those who listen to the overtones, as they ring in harmonies to each note that is struck, will hear the clear laughter that dwells in those higher vibrations above the sad lower notes of this life.

The humour of a schoolmaster's life does not lie in absurd scenes or undignified situations, such as charlatans invariably describe, endeavouring to provoke laughter by methods suited to pantomime, but foreign to true art and devoid of the pathos which lies ever close alongside, like the shadows in a sunlit scene. The humour is found in his constant contact with the endless "incidents" and "accidents" of human nature. Boy nature is but human nature writ in round-hand text. And this same nature, which he reads so plainly in his boys, he reads again, writ in other types, among his staff and even among the very units of his household, from matron down to bootboy. He perceives the reiteration at first, perhaps, with surprise, but soon with the secret amusement—not unmixed with instruction—of one who has chanced to hear the same story repeated with varying detail, and differing effect, by rival *raconteurs*, each successive one being unconscious that a predecessor has already told the same tale to the same hearer. Any one who has read Mr. Henry Newbolt's discerning and high-minded article, "The Pyramid of Studies," in the June number of the *Monthly Review*, can see that the schoolmaster and his vocation are gradually coming out into a clearer light.

Through the chatter and babel of those who hold that life is buying and selling, who regard education as an asset in the money-market, is beginning to rise a purer voice that is reaching to men's hearts. It seems that the day is approaching when men will listen to the true prophets who teach that education is not confined to the years of the *status pupillaris*, but is commensurate with the life here; that those uses and results of education which fit a man for his position and work in life are only (to use Mr. Newbolt's phrase), a "by-product of his full spiritual activity"; that the schoolmaster is a true schoolmaster only in so far as he recognizes this, and, like Greatheart of old, shares with those whom his task is to guide the romance of the road which leadeth through "the wilderness of this world" unto the kingdom of Heaven.

J. W. RUNDALL.

TEACHERS' GUILD NOTES.

THE Annual General Meeting of the Guild for 1902 will be held on Saturday, May 31. Several reasons have led the Council to think that it will be well to alter the character of the meeting, and to make an effort to give it more practical value in connexion with the organization and development of the Guild. To this end arrangements will be made for a full discussion of the draft of the Annual Report, the Chairman of Council and the Chairmen of Committees taking a leading part. There will be a morning and an afternoon sitting. In the former the discussions will deal with the internal government of the Guild, and with its external policy, excepting the question of Local Authorities for Education. In the latter the President for 1902-3 will give his address, and a discussion on the Local Authorities question will be held. A central place of meeting, where luncheon will be served after the morning sitting, will be chosen. The name of the President and the place of meeting will be given on the notice convening the meeting, which will be sent out before the middle of May. It has been decided that the Central Guild and all the Branches in the United Kingdom shall be specially urged to send representatives to the meeting, so that it may be made the means of expressing the views and wishes of the Guild as a whole.

THE Council of the Guild are taking up the matter of the right order and relation of subjects in secondary schools, with a view to discover whether agreement can be obtained on these points. As a first step, to be followed, it is hoped, by a wider

and more thorough consideration, they are sending round to the Central Guild and the Branches certain questions, and are inviting them, first, to consider them in their Councils, then, to discuss the results of the deliberations of their Councils in meetings of members and others, and to report to the Council of the Guild, not later than the end of January, 1903.

The following are the questions for each school:—

1. What subjects should come under the heads (a) Languages, (b) Literature and History, (c) Mathematics, (d) Science, (e) Other Subjects, including Handwork, Drawing, Music, Physical Education, and Military Drill?

2. In what period should each subject be begun and how long continued? (Periods: 8-10, 10-13, 13-15, 15-17, 17-19.)

3. How much time should be given to each subject in each period? (Whole time for week 30 hours, in and out of school.)

4. Which subjects should be compulsory for all, and which optional or alternative, and in what period or periods?

5. How should the subjects chosen for each period be related to one another?

N.B.—The schools referred to are—Boys': (a) preparatory schools, age 8-13; (b) public schools, age 13-19; (c) middle and grammar schools, age 8-16. Girls': (a) high schools, age 8-18; (b) middle schools, age 8-16.

A letter has been sent to the Education Section of the British Association inviting it to take up the subject of Curriculum for discussion at its meeting in Belfast next autumn, and offering the co-operation of the Guild.

TEACHERS who are interested in this vital subject—i.e., all thoughtful teachers—should study the American "Report of the Committee of Ten on Secondary School Studies," published in 1893 at the Government Printing Office, Washington. This is generally acknowledged to be the most important educational document ever published in the United States. Copies of it are in the Teachers' Guild Library. The Committee carried out its work in a very thorough way by appointing nine sub-Conferences of Ten to deal with the separate branches of their work, viz., Latin; Greek; English; other modern languages; mathematics; physics, chemistry, and astronomy; natural history; history, civil government, and political economy; and geography (in its broadest sense). As the Committee was appointed in July, 1892, and reported in 1893, its work, though thorough, was quickly done. A representative English Committee ought to be able to report in eighteen months from its appointment, especially if it be helped by associations of teachers, and with opinions and facts collected among their constituents.

THE Guild will be glad that the predictions of the press with regard to the prospects of the introduction of an Education Bill this Session have been falsified; and especially glad that its scope is such as to include in one measure both primary and secondary education.

COLONIAL AND FOREIGN NOTES.

FRANCE.

The scheme (of which an outline appeared in our March number) for the reform of secondary education was approved by the French Chamber, with a few slight modifications, none of these affecting our summary. The debate preceding the final vote was marked by a distinction and an elevation for which panting Westminster would toil in vain. If we were asked to account for the superiority of the French display on such occasions, we should refer it to the fact that the Deputies are content to deal with general principles, and to leave details to those whose business it is to understand them. Most educated Frenchmen can talk prettily of the debt of their nation to Rome and Athens; few would attempt to specify the exact scholastic coins with which the debt is to be paid. Your eloquence gains by this reserve, and you leave the difficulties on the proper shoulders. The shoulders, in this case, are those of schoolmasters; and we do not altogether envy them their responsibility. Under the scheme, the conflicting claims of the classical and the modern are reconciled, it will be remembered, by means of a number of options offered to pupils or their parents. But a *plan d'études* is not a time-table, and every such option is an embarrassment in the practical working of a school. Let us suppose, for example, a head master confronted by four boys, fifteen years old, one requiring, for the second cycle, Latin with Greek, another Latin with modern languages, a third Latin and science, and a fourth languages and science, without Latin. The problem of meeting their

wants would tax the resources of a small school heavily, or, indeed, be quite insoluble. To work the system in England we should have to specialize small schools, or to combine them—either of which plans would meet with objections. On one point of the French scheme there will probably be a general agreement of opinion among our readers. The old modern course, for which its advocates demanded equality of right with the classical, lasted six years. The French Minister has set aside their contentions, insisting that the modern course (languages and science) shall be a seven years' course, and not less difficult than the classical; it is only on these terms that it is admitted to parity of privilege. A modern side fails, as English teachers have good reason to know, wherever it is allowed to become the asylum of the sloth and the dullard.

An effect which may or may not have been contemplated by the framers of the reform is to threaten the study of Greek with extinction. Classical boys—that is, boys who take Latin—will have permission, as we have seen, to choose as their second principal subject in the second cycle Greek, modern languages, or science. How many will select the first of these when there is no premium upon it? How many boys in an English school would read Greek if it were not needed for scholarships or entrance to the University? The words of M. Leygues on the subject are curious, almost mystic:—"Greek has not been sacrificed. Greek addresses only an *élite*: the study of it is not to be imposed as a forced labour. Otherwise you arrive at a result opposed to that which you seek to attain; you load your classical forms with a dead weight which oppresses them. You are powerless to raise moderately good pupils to the level of the best, and you are obliged to sink the best to the level of the worst." It is difficult to keep boys together in mechanics; but we do not, on that account, reserve the subject for an *élite*. If Greek has not been sacrificed, we fear that it will have to struggle hard for existence amid its lively competitors. We pass, however, from comment on the scheme to a few notes on a memorable discussion—a discussion rich in lights on French social life, as well as in ideas suggestive to pedagogues.

M. Couyba held that secondary education should be, as far as possible, gratuitous; that at the end of the first cycle an examination should be held before a jury to eliminate those unfit to proceed to the second; and that rejected candidates should not be allowed to pursue, at private institutions, the studies for which the examiners had pronounced them unqualified. His desire, it will be observed, was to place before higher study a barrier that only industry, not wealth, could surmount.

M. Modeste Leroy urged that, without diminishing the number of *bourses d'enseignement supérieur*, a different use should be made of them. "We must take care," he said, "not to draw too many young people into the liberal professions at the risk of their becoming *déclassés*; let us, rather, direct the education of our children into paths where knowledge and practical science will bear profit for the individual and the nation—into the walks of agriculture, commerce, industry, and colonization." This is, in substance, a proposal to grant scholarships to those who are not proceeding to the *baccalauréat*, but follow the short (two years') course, in which sciences are pursued with a view to their application.

M. Levraud pleaded with warmth the cause of the humanities. "There will always be a difference," he said, "in point of general culture between a pupil who has studied Greek and Latin and one who has not; and that for many reasons, of which the first is that Latin is the basis of our own language." M. Ribot earned frequent applause by a brilliant defence of the scheme, of which he, as President of the Commission, was one of the sponsors; but the burden of repelling attack and silencing doubt fell naturally on the Minister of Instruction, M. Georges Leygues. He contended that, whilst giving due weight to science and languages, they were strengthening the classical studies of which France was the ancient home, and to which she owed the qualities that assured her moral influence in the world. She was the bearer of Latin civilization—a civilization dominant on the Mediterranean, that beautiful lake of light, powerful in the young republics of South America, and welcomed even among the practical inhabitants of the United States as a supreme guide to truth and beauty. Was she to abdicate her position before that other civilization, great also, which strove with her for the sovereignty of the intellect, the civilization of the Anglo-Saxon and German race? As to free secondary education, the ideal of a well organized society was not to give the same instruction to all, but to open a way to the highest studies for the brighter minds even in the poorest classes of citizens. For this object there were, and there ought to be more, *bourses* at the service of the children of peasants and workmen. A proof of the opportunities already afforded was the fact that of the *boursiers* now in *lycées* and *collèges* 71 per cent. came from primary schools. On the function of the University in modern life M. Leygues spoke as follows:—

"The struggle among nations for existence is too severe, the competition that we have to meet from our rivals is too keen, to permit the University to stand aloof. In a country like France, where the professional population represents 48 per cent. of the whole, where the commercial capital engaged in agriculture and industry exceeds two hundred milliards of francs, the University cannot content

itself with preparing the young men entrusted to it for liberal careers; it must also prepare them for active life, for action. We have already brought our Universities into contact with the general life; they have come down from the Olympian regions in which they had too long moved. They lend their aid to industry, commerce, and agriculture. Who can complain? We have established a school of tanning at the University of Lyon, a school of brewing at the University of Nancy, laboratories for chemistry as applied to dyeing, laboratories for oenology. The University has not lost rank owing to these steps. It still cultivates pure science, but it cultivates practical science in addition, and it extends its field of action instead of diminishing it. It becomes a force more active and more rich in results."

The passage that we have just translated is instructive as to the present tendencies of education in France, and it furnishes us with an illustration that will bring out the significance of the changes now introduced. *A boy, if he chooses, may get through the lycée without either Latin or Greek and go to the University to learn brewing.* What the effects of the change will be on the future of France it is rather for time to show than for us to conjecture. Nevertheless, in spite of the asseverations of M. Leygues, we may entertain and express the opinion that the scheme will be found, for good or evil, to have wounded Latin, and, as we have already intimated, to have killed Greek. At least in England the classical languages have held their ground because they have been the gateways to learning, emoluments, and honour. We do not here discuss whether it would be wise or not to open other and equally wide portals beside them; we are only considering the scantiness of the band that, if we did so, would pass along the ancient roads. When a study is divested of its prerogatives and "reserved for an *élite*," it is in a parlous state, since, in general, it is the prerogatives that make men wish to be of the chosen few. However, as we have said, the issue is for the future to determine. Meanwhile our French colleagues are congratulating themselves on having obtained "that variety of culture which is the very essence and charm of modern society."

UNITED STATES.

The position of women teachers in the United States presents anomalies upon which comment is being made. First of all, the salaries paid to them are inadequate. The remuneration is, perhaps, highest in Massachusetts; and yet in that State, if we exclude Boston and five other large towns, the salary averages less than 175 dols. a day for the year. At least one-third of the teachers receive only about 1 dol. a day. To compare the value set on the work of other women: a nurse, the *American Journal of Education*—our authority for the facts—tells us, gets 3 dols. a day and board; a dressmaker, the same; and the woman who scrubs floors or washes linen, 15 dols. Social recognition even in America is generally proportionate to the means that one has of maintaining social station; and social recognition is indispensable to the woman. Whilst salary is thus grudged to her, no substantial pension fund affords a guarantee against the evils of age and weakness. Moreover, a bitter injustice is inflicted on her as regards the division of labour. In the elementary schools of cities and large towns more than 95 per cent. of the teaching is done by women; whereas more than 95 per cent. of the administration and leadership is in the hands of men. On School Boards, in the department of supervision, when a plan of study has to be drawn up or books selected, an association to be managed, or teachers appointed, the influence of men is supreme. If boys need the inspiration of the masculine mind, they should have it; if, on the other hand, women are capable of inspiring, they are fit to govern also.

In connexion with the service that women are rendering to education in America, we note with satisfaction their increasing willingness to get for themselves the highest possible education and then to offer the fruits of it to the pupils of primary schools. The subject is happily touched by a contributor to the *Forum*, who writes as follows: "The disposition of graduates of our colleges and best normal schools to accept positions in the elementary schools shows that the new teacher is coming to match the new courses of study. Let no one fear that in such work her highest education will be thrown away. There is nothing in the way of either learning or character gained by the Smith or Wellesley *alumne* from their college course which cannot be made available in substance for the teaching of the enriched curriculum of our elementary schools. If the graduate cannot put the breadth of view and clearness of insight gained by her college course into teaching children of eight or ten, the reason is not that she has learned so much, but that she loves children so little. All the true teacher is and knows comes out in the lucidity of each lesson that her learning illuminates and her logic clarifies. Happy the children who begin their education under the inspiration of one who lures them over the rough beginnings by incentives drawn from her own large acquaintance with the richer fields beyond!"

Among the various branches of manual work basket-making has obtained a firm hold in many American schools. The tools are few and inexpensive; and the material is fairly cheap and easily handled.

The work has been found to possess true educative qualities, beside yielding a product that commands a ready sale.

CANADA.

Of considerable interest is Part I. of the Education Department's Report for the Province of Ontario, which has just been issued. In his general remarks the Minister (Hon. Richard Harcourt) notes an increased attention on the part of the public to educational matters. Many suggestions for amendments to the regulations have been received, and he hopes before long to present some modifications which he deems it desirable to make. "It is just possible," he says, "that in Ontario decentralization in some directions would be an advantage." The success of the travelling libraries, introduced last year, is noted, and opinions quoted to show the benefit of circulating good books among the children of the public schools. The advantages of continuation classes in localities not served by high schools are also being reaped in many sections. The high schools have made substantial progress, and the increase in efficiency has been gratifying in the last few years.

The statistical portion of the Report relates to 1900. It shows a decrease in attendance at both the public and high schools as compared with 1899. The number of elementary schools is as follows:—Public schools, 5,655—an increase of 1; Roman Catholic separate schools, 355—an increase of 3; Protestant separate schools, 7; kindergartens, 120; night schools, 12. There was expended for public-school houses (sites and buildings), 359,138 dols.; for public-school teachers' salaries, 2,809,246 dols.; for all other purposes, 1,060,148 dols.; total expended on public schools, 4,228,532 dols.—an increase of 208,484 dols. There were in the Province 580,105 persons between five and twenty-one years of age—a decrease of 6,245. There were 420,097 persons of all ages registered in the public schools—a decrease of 9,130; while the average attendance was 237,306—a decrease of 6,019. The average attendance in the Roman Catholic separate schools was 25,875—an increase of 108; and in Protestant separate schools 238—a decrease of 8. The number attending kindergartens was 11,234, but the average attendance was but 4,639.

In connexion with secondary education, Mr. Harcourt says: "The demand for free high schools is increasing. In my report of last year I drew attention to the liberality shown by the Americans in having their high schools (at least in the Northern States) all free. It may be doubted whether we can hold our own in the industrial world if equal liberality is not shown by our citizens. The conditions in this Province, educationally considered, are about the same as in the United States; and it is doubtful if it is wise in any part of the Province to adhere to the policy of requiring fees for admission to our high schools. The plan of exacting fees is scarcely in harmony with modern views of education, and is certainly not in keeping with the democratic tendencies of our times. . . . It is satisfactory to notice that High-School Boards in some places in Ontario are abolishing fees for pupils of the first form. Probably a step of this kind will soon lead to similar action regarding the pupils in other forms. In any case it is a matter that may be safely left to the localities concerned; but it is well for the Province generally to recognize the trend of events in connexion with this question." Mr. Harcourt concludes by noting the increased interest in domestic science, in Nature study, in agriculture, and in the formation of high-school cadet corps.

There were employed as teachers in the public schools 8,666 persons, of whom 2,539 were men and 6,127 women—a decrease of 73 men and an increase of 170 women. The number of teachers who had attended a normal school was 4,135—an increase of 330. The average annual salary of male teachers was 404 dols.—an increase of 10 dols.; and of female teachers 298 dols.—an increase of 4 dols. There were 131 high schools and collegiate institutes, with 573 teachers—an increase of 5; 21,723 pupils—a decrease of 737; with 529,245 dols. expended for teachers' salaries, 32,400 dols. expended on high-school houses, 156,056 dols. for other purposes—a total of 718,601 dols.

"It is also worthy of notice," the Report says, "that the number of pupils receiving instruction in temperance and hygiene has increased from 33,926 in 1882 to 190,229 in 1900. Having regard to the great importance of the knowledge of physiology and the injurious effects of alcoholic stimulants on the human system, provision was made by the statute in 1886 for placing this subject on the course of study for public schools. Instruction was also provided under departmental regulation for teachers in training at county model schools and normal schools, to be followed by an examination as an essential prerequisite to their final recognition as duly qualified teachers. In 1893 this subject was made compulsory for entrance to high schools and collegiate institutes; so that no pupil who pursues his study as far as the fifth form can fail to be reasonably well acquainted with the conditions on which his health and physical vigour depend, as well as with the dangerous tendency of stimulants and narcotics to produce weakness and disease.

"Owing to the organization of continuation classes in the public schools," the Report adds, "there has not been much increase of late years in the establishment of additional high schools. In 1867 only 1,283 pupils, or 23 per cent. of the whole number, studied commercial

subjects, such as book-keeping. In 1900 this subject was taken up by 9,712 pupils, or 45 per cent. of the total attendance. In 1867 5,171 pupils, or 90 per cent., studied Latin. In 1900 the number taking Latin was 18,073, or about 83 per cent. In 1867 15 per cent. studied Greek, while in 1900 only 4 per cent. were engaged in studying this subject. In 1867 38 per cent. of pupils studied French, and none studied German. In 1900 the number taking French had increased to 58 per cent., while 18 per cent. were engaged in studying German. The greater attention given to drawing is also a marked feature of the classification.

"When high schools were first established in the Province their primary object was to prepare pupils for the learned professions, and especially for the University. Although their original purpose has not been ignored, the course of study has been enlarged so as to meet the aims of pupils who intend to follow the ordinary pursuits of life. It is in the high schools that most students who desire to become public-school teachers receive their non-professional training. This is a valuable function of those institutions, and one that has done much to commend them to the general public. Many young men, also, who intend to follow mechanical pursuits, or prepare themselves for following scientific agriculture, take advantage of the high schools. The superior culture which is thus received proves a valuable investment. In 1872 the number of high-school pupils entering mercantile life was 486. In 1900 the number had increased to 1,331. In 1872 300 pupils left the high schools for agricultural pursuits, and the number in 1900 had reached 757."

There are 432 public libraries in the Province, of which 380 reported for the year, compared with 371 in 1899; the membership being 147,208, compared with 129,713.

VICTORIA.

EDUCATIONAL REFORM IN VICTORIA.—THE UNIVERSITY TROUBLES.

The educational reform movement in the State of Victoria, Australia, has progressed wonderfully during the past two months (October and November, 1901). The Government has introduced two important measures into the local Legislature: one abolishing the system of payment of teachers by results, and the other completely reorganizing the Education Department and placing the whole State machinery—technical and elementary—under a responsible Director. The Bills have not yet become law, but there is every prospect of their doing so. They will practically work a revolution in the State, especially as they are to be accompanied by a re-classification of teachers, which improves the latter's financial position, and an improvement in training methods which will improve their technical efficiency.

The actual progress of the past two months, however, has not been so much in connexion with elementary education as with secondary and University teaching. The State Government is providing for the inspection of all secondary schools so as to ensure a minimum standard of efficiency; and it is refusing to assist the University of Melbourne out of its financial difficulties unless drastic reforms are introduced. Both actions are having important effects, though neither has reached finality.

Incompetent secondary-school managers are preparing to retire from pedagogy, and the University Council has applied itself to the task of setting its house in order with a vigour which is remarkable. A report has just been issued by a Special Committee, representative of the University management, which makes proposals for reform which will open the eyes of English dons. In the first place, the Committee proposes to admit women to all the benefits of the University equally with men, enabling them to obtain all degrees and sit on the governing body. Suggestions are made for lightening the fees of students at the University, and for drawing the University and the schools of mines scattered over Victoria into closer union. The position of the professors is carefully considered, and the absence of a pension fund lamented. When treating of the discipline to which professors should be subjected the Committee gets out of an awkward dilemma by declaring that it should be made part of the duty of the President of the Professorial Board to report to the Council, without delay, any case of misconduct or inefficiency which he, after inquiry, deems serious.

Not content with their scheme of reforms affecting the scholastic side of the University, the Special Committee and the Council have done something definite with respect to administration. A new Registrar, Mr. A. Sutherland, M.A., a man of wide attainments, has been appointed, and the finances of the University have been put on a business-like footing. The teaching of music at the University has also been the subject of administrative action, a new series of regulations governing the granting of degrees having been passed amid a chorus of approving comment. The change made in existing conditions is designed to enable musicians who have to gain their livelihood by teaching an instrument to obtain a musical degree to use as evidence of practical skill, without imposing on them quite so high a standard in the matter of composition and fugue writing as hitherto was the case. It is surprising to learn that only three "Mus. Bac.'s" of Melbourne

have been produced in the ten years since the Ormond Chair of Music was established.

Friends of educational reform in this State hope that all these outward and visible signs of renewed life in the University will be followed by a real revolution in the matter of matriculation examinations. They claim that "Matric." must be made what it always should be—the test for candidates seeking entrance to the University, not a sort of final goal for the secondary-school lads and girls. If, say those who are now pleading for reform, some test is desired for the work of the secondary schools, let a special examination be devised—do not degrade "Matric." for the purpose. The effect of regarding "Matric." as the end towards which every step in a middle-class boy's education should be directed is that Australian boys are crammed with arbitrarily selected facts or figures all, or nearly all, of which are disregarded or forgotten once the examination is over.

NEW ZEALAND.

The nineteenth Annual Conference of the New Zealand Educational Institute was held at New Plymouth on January 2 and following days. Much of the President's address, as well as a considerable part of the discussion that followed it, turned on questions affecting the social welfare of teachers in the colony. Proper for debate as such matters are, they are of local rather than of general interest. Of resolutions having a wider scope we observe that one urged on the Government the necessity of substituting the decimal system of coinage for the cumbersome one at present in use. Another affirmed the desirability of establishing a fund for the relief of aged and infirm teachers, and for the assistance of the orphan children of teachers. The suggestion that inspectors should be removed periodically from district to district found little support. A proposal that one style of writing should be adopted by all the schools in the colony was also lost; on the other hand, to our astonishment, we learn that the introduction of a uniform set of textbooks was approved. It is just against such fatal bondage that those protest who describe State control as the hand of death.

The Otago University Council has adopted a report recommending the New Zealand University Senate to amend the statutes so as to include the history, science, and art of teaching in the list of subjects for the B.A. degree, and to accept attendance at lectures thereon as a qualification for keeping terms. The Council hopes, moreover, that the Minister of Education will be requested to take such steps as he may think fit to provide for a more liberal course of training for

teachers, by means of efficient relationship between normal schools and University colleges on the lines laid down by the Royal Commission in its report to Parliament. Not only in New Zealand, but in many other parts of the world also, the cry is being raised for some sort of connexion between the University and the normal school; and, now that academies are opening their arms to the students of brewing, they can hardly exclude the primary teacher from all participation in their benefits.

Loyalty is now, not unnaturally, the dominant feeling in the public mind; hence it has been easy for Mr. Murray, Head Master of Kirikiri School, Auckland district, to gain the honours of martyrdom. Early last year the Auckland Board of Education issued a circular instructing its teachers to hoist the flag on the school flagstaffs upon the anniversaries of certain memorable events, such as the signing of Magna Charta, the first landing of Captain Cook in New Zealand, and the birth of Queen Victoria. The Kirikiri School Committee bettered the instruction, and bade the Head Master "teach the children to salute the flag of their country once a week." He refused, and was dismissed. Had he pleaded conscience, we might have mourned for him; since he only disputed the right of the Committee to prescribe what should be taught in his school, he appears as the victim of his own perverseness. In New Zealand opinion is divided as to the merits of the case. For ourselves, we feel that the higher patriotism consists in the faithful discharge of civic duty, not in the multiplying of obeisances before symbols. But, if, as pedagogues, we put the matter so, let none accuse us for that of disrespect to the British flag.

INDIA.

The education of women in India is one of the most imperative duties to which the Government of the country has to address itself, a duty, we need hardly add, to be approached with infinite tact and prudence. An item of news that we borrow from the *Indian Educational Review* will give an idea of the difficulties to be overcome. At Cawnpore a section of the Brahmins of the higher grades held their annual "Kankubj" Conference, and, though this is usually confined to purely caste questions, yet, curiously enough, this year the prominent subject discussed was the education of Brahmin girls. The sense of the meeting was that it was advisable to educate women, to teach them to read and write, and so forth, but always on the condition that their teachers should only be the father, brother, or the husband—no one else.

GINN & COMPANY,

Educational Publishers,

9 ST. MARTIN'S STREET, LEICESTER SQUARE, LONDON, W.C.

Ginn & Company 9 St. Martin's Street, W.C.

TO meet the growing demand for their school and college books, Messrs. GINN & COMPANY, the leading educational publishers of America, heretofore represented in London by an agent, have opened a Branch Office at the above address, under the management of Mr. FRED J. MATHESON, through which all business for Great Britain and Ireland, the rest of Europe, and all British Colonies and possessions, with the exception of Canada, will now be conducted.

INVITATION TO TEACHERS.

All interested in teaching are cordially invited to call at No. 9 St. Martin's Street, where special facilities are given for the inspection of the books published by Messrs. GINN & COMPANY, representative of the most advanced methods in American Education.

SOME SPECIAL FEATURES.

GINN & COMPANY desire to call special attention to their "College Series" of Greek and Latin Authors; "Latin and Greek School Classics"; their "International Modern Language Series"; and their books on Anglo-Saxon.

GINN & COMPANY publish a large assortment of English Classics edited respectively for children and for the students of Higher English.

Excellent stories of Plant and Animal Life, designed to encourage observation and Nature study by the young, are among the publications of this house which have proved most popular.

WORLD'S HISTORY.

A GENERAL HISTORY FOR COLLEGES AND HIGH SCHOOLS.

By P. V. N. MYERS, recently Professor of History and Political Economy, University of Cincinnati.

Half-leather, 7½ × 5 ins., x. + 759 pp., 31 maps, 145 illustrations, 6s. 6d.

A complete outline in one volume of the World's History from that of Eastern Nations to the present time, accepted and recommended by all leading Colleges and Universities in the United States as the best brief course in general history.

"This is a handsome volume, well printed on good, thin paper, admirably equipped with illustrations and maps . . . and bound in half-morocco. The text is clear, readable, and well proportioned (bisecting at A.D. 476), and it attains a high level of accuracy. Altogether, the book strikes us as by far the fullest and cheapest single volume manual of 'General History' with which we are yet acquainted."—*School World*, February, 1902.

Teachers desiring to examine this book with a view to its adoption for class use may obtain a copy on approval by writing for it.

GINN & COMPANY, Educational Publishers, 9 St. Martin's Street, Leicester Square, London, W.C.

OCCASIONAL NOTES.

AFTER reading all the criticisms on the Bill made by those entitled to speak on educational questions (for the fire and fury of the politico-religious zealot is not worth a moment's consideration), we are, of course, convinced that there are serious flaws in the Bill. But what every calm and dispassionate educationalist must ask himself is not: "Is this an ideal Bill?" but: "Is it the best we are likely to get from the present Government?" and: "Is there a reasonable expectation of the advent to power of any other Government willing and able to give us a better?" The answer to the first question must be: "Yes," and to the second: "No." We quite admit that the School Board party are entitled to say: "No Bill at all, now or ever." But this was not the conclusion of the Royal Commission a long seven years ago. Since then we have made no progress to set our educational house in order, unless the shuffling of cards at Whitehall and South Kensington is counted progress. The Local Authority for Secondary Education is given by the Bill. A Local Authority for all education is made possible and may be made imperative. The germ of popular control is contained everywhere in the Bill. Adequate funds for secondary education in all its branches are providable, if not provided. Here we have a foundation upon which further legislation can be built. It is these first steps on the road of educational progress which make us say, better the Bill even as it stands than that the question should be shelved once more. We greatly fear that the agitation set on foot from other than the educational point of view is likely to react on its authors by stiffening the back of the Government to persist in their half and halting measure.

BUT we must insist that what the Government intend to do they do quickly. An Autumn Session means that the Bill cannot possibly be brought into operation in any county larger than the Isle of Ely at any rate until April 1, 1904. Local finance makes it impossible for the machinery to start working except at the beginning of a financial year. But the machinery has to be set up. Even supposing Part III. is made compulsory, and every County Council has to take the initial steps immediately the Bill is passed, no time less than six months will enable them to erect the necessary new machinery. There is, first of all, the scheme for the new Committee to be drawn up and adopted, which is not the work of a day. Then the scheme must go to the Board—very likely to be sent back for amendment. This means three months, for County Councils only meet quarterly. Next there is the office to be staffed, for the new duties cannot be carried out by the aid of an organizing secretary and a junior clerk, which is the present staff in most counties. The Committee will then be called upon to choose its representatives upon many hundred voluntary schools and to select, after consultation, no doubt, with all its District and Parish Councils concerned, the managing bodies for the Board schools. An exhaustive investigation into the finances of all the schools in the county must follow, all of which things must be reported to a meeting of the County Council somewhere about March if a rate is to be raised by the Finance Committee for the coming year. Otherwise the first year of the operations under the new system will result in administrative chaos, and the whole thing will be discredited. Therefore, after the Budget, all the other Bills and the contentious penal clauses of Procedure must go by the board, and the Education Bill must be fought to a finish.

THE only serious indictment of the Bill, on educational grounds, comes from the Right Hon. A. H. D. Acland, who is, of course, well entitled—none better—to be heard on this subject. But, after all, to reverse Mr. Acland now and in 1892. Pope's phrase, his damning is so faint as to be almost praise. He makes two points. First, the secondary part of the Bill is "wholly inadequate." His reasons are that everything is voluntary, the rate in general only 2d., and there are no "sources of stimulus," *i.e.*, equivalent Treasury grant to rate-aid as in Wales. Mr. Acland has forgotten the "Secondary Education (England) Bill" of 1892, brought in by Mr. A. H. D. Acland, Sir H. Roscoe, and Mr. H. Hobhouse. These proposals to which he objects are taken almost *verbatim* from that Bill with one important exception. In 1892 he considered County Councils quite good enough without compulsion or central control to make "such provision for secondary education as they may think fit." They were not to act entirely through their Committees, but might reject the whole proposal and make no provision. The local taxation grant was not to be earmarked for education. No Treasury grant was to be provided to stimulate the Councils. The important difference was that Mr. Acland, who now objects to 2d. as the rate, then thought a limit of ½d. (in addition to the technical instruction 1d., of course) sufficient. Now much water has passed under London Bridge since 1892. Over a hundred new secondary schools have been built and equipped by the County Councils. Nearly all the existing country grammar schools have had their buildings put in order from the same source. South Kensington grants for day schools have enormously increased. Secondary education is at least better by a ½d. rate now; so how "wholly inadequate" must have been Mr. Acland's own proposals in 1892!

MR. ACLAND'S other point deals with the want of popular control involved in the one-third representation of the body which supplies the funds, leaving those who only supply the building in a large majority. He thinks, moreover, that this is inconsistent with the principles governing the education of the middle classes in our public schools. He must be singularly ignorant of the working of the Technical Instruction Act. That Act allowed the Local Authority a representation on the governing body of an aided school proportionate to the ratio of the aid supplied to the other funds. But this has practically never been insisted on by the County Councils. They preferred the offer of the Charity Commission to give them from about one-quarter to one-tenth representation for all time and for all purposes. With this safeguard only they gave, and give annually, large grants to secondary schools, not only those which teach the "Christian faith," as the schemes have it, but those belonging to all denominations. Now we can speak from inner knowledge of the working of this arrangement when we say that it has given the Councils absolutely the "whip hand." Voices with the power of the purse behind them count much more than a mere enumeration of heads. The one or two public representatives on the managing body of a voluntary school will be in exactly the same position. Upon their report of any malfeasance upon the part of, say, the vicar and churchwardens, the Local Authority will act. The result of this action, in case of contumacy, will result in the school being turned into a Board school. With all deference to Mr. Acland, we venture to say that this is as much public control as can be expected at present, and, at any rate, is a very long step in advance of that "one-man" management which so often makes the teacher's life a burden.

IT will no doubt have been observed that one *soi-disant* Government supporter voted against the first reading of the Bill. This was the inevitable Major Rasch, who voices the views of the extreme agricultural party. Their motto is: "More manure and less learning." Their object is to throw all the cost of education—if any education is to be allowed—upon the Imperial taxes, leaving local control in the hands of the small farmers, so that the labourers' children can be converted into "Chinese cheap labour." But, apart from this, there are grievous misconceptions going about as to the amount of rate which will be required in respect of Part III. of the Bill. A writer in the *Church Times* supposes that his rural parish will have a rate of 2s. 6d. This is sheer nonsense, and comes from ignorance of what a county rate means. On an average from two-thirds to five-sixths of the whole county now escape all education rates. Equalize the rates over the whole area, so that all must pay, and you can abolish the subscriptions and the maintenance Board rates alike at a small cost all round. The responsible authorities in three counties—Surrey, Worcestershire, and Northumberland—have already worked out the figures. In the first case, the rate will be under 4d., in the second just over 4d., and in the third (a poor county) about 5d. All over the country, outside the county boroughs, the maintenance of elementary education will average not more than a 5d. rate. As the agriculturist gets half his rates paid by the Treasury, he will escape with about 2½d. He ought to subscribe as much as this at present, but we doubt if he does not prefer to leave this duty to the squire and the parson. In the towns with School Boards the rates will no doubt remain much as they are at present, and the high figure often thus reached

is a strong reason for offering them separate elementary rating powers.

A PART of the Bill which has excited singularly little attention, but is of supreme value, is the very elaborate provision made for the combination into one Committee of the representatives of a county and its boroughs and urban districts. We do not suppose that many of these urban bodies will renounce their rights in favour of the county, nor do we think that, if this means the loss of an extra secondary rd., they should do so. But the Bill, as it stands, gives the urban bodies no voice in the expenditure of the Local Taxation Grant, or in that of the 2d. rate levied over their area by the County Councils. Thus, practically, the whole existing machinery of secondary and technical education is outside their cognizance and control. But the Bill provides that they can, if they like, join with the county in a Joint Committee for Part III., and, if it is agreed upon, this Joint Committee can deal with higher education also. It is obvious that the main intention of the Bill—viz., co-ordination—can best be carried out by one Committee, acting over the whole area and for all grades of education. If some such plan is not acted on, it is very doubtful whether the County Committee would be equitably justified in aiding continuation schools or giving elementary scholarships in the separate urban areas. One would much like to see all this question of the separation of smaller areas made the subject of a Board of Education inquiry, as provided in former Bills and agreed to between the Associations of County Councils and Municipal Corporations. But, in any case, voluntary co-operation ought to come in where legislative enactment fails.

THE will of the late Mr. Cecil Rhodes is a human document of exceptional interest. He who runs may read there the riddle of the "god in the car." But in these columns it is with the educational bequests that we are mainly concerned. A sum of between one and two millions is to be set aside for the maintenance of scholars at the University of Oxford. So far as this may prove an advantage to Oxford we are unfeignedly glad that one of the older Universities should have been singled out. Increasingly large sums of money are now being bequeathed and devoted to education, but in this Danae shower the older Universities have not had their share. It is surely, too, a striking fact that a man of affairs like Mr. Rhodes, a man who has played his part in the making and ruling of empires, should direct that the young men of the present and of succeeding generations, who are to carry on his ideas of Imperial responsibility, should spend three years at a University whose "authorities live secluded from the world, and are like children in commercial matters." Such a man could pay no higher compliment to his old University.

THE Rhodes scholars are to come from all parts of the English-speaking world, to the number of some two hundred. The effect upon Oxford life must be great. An American professor has said that sending students from the States to Oxford will be like putting new wine into old bottles. We grant the age of the bottles. But experience has proved that Oxford can, and does, expand its organization to meet the increasing demands of wider courses of study. Mr. Rhodes regrets that the Oxford School of Medicine is not so good as that of Edinburgh, but he prefers Oxford because Edinburgh has no system of residential colleges. We do not presume to offer an opinion

Scholars
v.
Equipment.

on this subject; but we would point out that efficiency cannot be obtained without money. Scholarships are good, and the University will, no doubt, welcome its new students. But scholarships are not all a University needs. In fact there are too many scholarships already attached to schools up and down the country. To his own college Mr. Rhodes has given a special bequest for the increase of the incomes of resident Fellows. The bequest to the University of a million or two, for the building of new laboratories and hospitals, and for the endowment of professorships, would have indeed been a boon to Oxford. The trustees have, it is said, large sums at their disposal. They may, perhaps, double the value of Mr. Rhodes's gift by providing the wherewithal to bring Oxford up to date in scientific and medical equipment.

MR. RHODES'S ideas on the subject of examination for scholarships are unusual. But none of the papers seem to have noticed that the conditions are identical

*The Selection
of the
Scholars.*

with those laid down for the scholarship Mr. Rhodes gave to the Cape Diocesan College some four years ago, and on which we commented at the time in these columns. Out of a maximum of ten, intelligence, tested by examination, receives three marks; character, attested by the head master, receives also three marks; games and moral qualities together receive four marks. On these two last points the votes of the candidates' schoolmates will be taken. The trustees are not absolutely bound by these conditions, which are characterized in one part of the will as "mere suggestions." We entirely sympathize with the view that a scholar should be a good all-round man, physically, mentally, and morally; but we strongly dissent from making the schoolmates arbiters. Such a course would put a premium on popularity-hunting, and the votes would almost inevitably go to the Steerforths. But, on the whole, we do not doubt that the scholarships will make, as Mr. Rhodes desired, for the unity of the Empire. And the German scholarships will do something to promote harmony between Germany and England. A gift in one direction draws attention to wants in other directions. Mr. Rhodes's generosity may suggest to other benefactors the need of providing better educational equipment for both Oxford and Cambridge; similar advantages for women; scholarships tenable in France and Germany for intending language masters.

WE have refrained from touching on the burning question of confession and absolution till we had before us the authorized Report of the Fulham Conference. The only exponent of Church views as regards public schools was Canon Lyttelton.

*Canon Lyttelton
on Confession
in Schools.*

He held that, in the present state of public opinion, habitual confession was impracticable and also undesirable. But with boys of a certain character and temperament "something like confession, anyhow for a short time, is not only desirable, but necessary, if they are to make head against some of the present temptations of boyhood." Some kind of confession is in almost every school inevitable, and the doctrine of absolution, that is, "the authoritative pronouncement of pardon through the officials who are the mouthpiece of the Church," should be systematically taught. He would certainly not admit any one else to confess his boys. The only comment that Canon Lyttelton's speech provoked came from the Principal of Ridley Hall. Mr. Drury, while agreeing with Canon Lyttelton that the admission of outside direction was impossible, quoted the late Archbishop Benson, who declared that he would not vote for a head

master who even wished to hear confessions from his pupils. We may be content to leave Canon Lyttelton on the horns of this dilemma. A good house master will be on such terms with his house that a right-minded boy will be prompted, in cases of perplexity or need, to come to him spontaneously, whether he be a layman or a cleric, for relief of conscience and advice. Such confessions should be in every way encouraged, but any confession that goes beyond this is utterly repugnant to the traditions of English public schools, and also, according to Mr. Drury, to Anglican formularies: "the exceptional cases named in the Prayer-book did not apply to the young."

ARCHBISHOP BENSON states authoritatively what a head master should not be. The positive of the portraiture, as we conceive it, is admirably limned in the farewell sermon to Marlborough boys by the present Dean of Canterbury:—

*A More
Excellent Way.*

And for six years you know that my house and my study have always been open—open to the very youngest boy, who, if he wished, might come to me at all times unannounced, and, however pressingly I might be occupied, you know that you were never turned away. And sometimes in 'sin and in sorrow, and, before confirmation, some of you uninvited and unencouraged, have come to me quite fearlessly and sought my counsels; and, if I could think that the words of sympathy and advice, then once for all spoken, have been to some of you a blessing and a help to smooth your path in life—if they have taught you always, in every difficulty, to go straight to God and not to man—that thought would make me more happy by far than any other can.

THE Humanitarian League has been, for some years past, publicly attacking the Eton College Beagles. The Governing Body disclaimed responsibility in the matter, and refused to give any opinion upon the alleged cruelty of the sport. The League thereupon turned to the Head Master, and has succeeded in provoking a reply from Dr. Warre, which will be, we hope, the last word upon the subject for some time to come. We may say frankly that we have every sympathy with the effort to correct the natural cruelty of some boys and to inculcate a humane treatment of animals. As a race, we are becoming more sensitive to the sufferings of the inarticulate beings. Bull-baiting and cock-fighting, once popular amusements, are now illegal. Pigeon-shooting is "blown upon," to use an ancient phrase, and the coming generation may, in like manner, condemn coursing. Schoolmasters, as a class, may fairly claim to be in advance of current morality, and it is incredible that the Head Master and staff of Eton College should deliberately encourage cruelty, or what seems to them to be cruelty. So long as hunting wild animals remains the sport of the parent and of the boy during the holidays, it is unreasonable to suppose that the College Beagles can greatly shock healthy sensibilities.

*The Written
Agreement.*

IN a recent dispute between a head master and a member of his staff, the County Court Judge severely criticized the action of both parties, and finally gave a piece of excellent advice. "Why on earth," he said, or words to that effect, "don't you schoolmasters have written agreements?" And echo answers, "Why?" for no solid reason can be given. It is impossible to recall any tenure case where the difficulty has not been increased by the absence of a written agreement, or even of a clear mutual understanding. The scholastic profession is often blamed for its want of practical qualities. In reference to this particular point, the blame is certainly deserved. It is no use urging assistant masters to ask for agreements. They are afraid of appearing too business-like, and as a race they are trustful. Recently an

assistant master who was about to receive an appointment asked for a written agreement. The head master replied that a man of so suspicious a character was not the man for him. It is head masters who ought always to make the conditions of the appointment clear, state them in writing, and affix the necessary stamp. No distrust is implied on the one side or the other; it is simply a matter of mutual convenience.

IT is well that the Women's Local Government Society should persevere in its endeavour to get a distinct clause inserted in the Education Bill to justify, or even to compel, the Local Authority to appoint women on its Education Committee. Mr. Balfour has stated that it was not the intention of those who drafted the Bill to exclude women. Legal opinion maintains that, if women are not expressly mentioned in an Act, they cannot serve on public bodies. If this view be correct, then no woman has a right to a seat upon a School Board. But the case under the present Education Bill will be entirely different. Neither men nor women will be elected directly. They will be appointed by an elected body. There can be little doubt that most bodies would appoint some women on their Education Committee. Still it would be better to have the doubtful point settled by a definite clause. This, too, would prevent backward authorities from ignoring the claims of women.

IT is somewhat singular that Oxford alone should be the subject of the recent discussion on the length of University terms. The usual term at Oxford is eight full weeks of lectures. The undergraduates come up, as a rule, a day or two before lectures begin, and are often kept by examinations after term has ended. Roughly speaking, half the year is the usual length of University life in all countries. We quite realize the force of the argument on the score of expense. Rent, rates, and wages have to be paid for the whole year. It is conceivable that under altered circumstances it might be well to lengthen the annual period of residence. But the addition of even two weeks to each term would appear an intolerable strain to those who know Oxford life as it is. The term is full of interests, lectures, sports, discussions, society. A student is, or should be, continuously absorbing fresh knowledge and fresh ideas for the eight weeks, and would soon suffer from repletion if he had not a long period for digestion. And the tutor and lecturer stand even more in need of a long vacation.

UNDER the title "Raw Recruits for the Inspectorate," the *Schoolmaster* has a slashing article on the list of junior inspectors recently issued by the Board of Education. Eighteen appointments are announced. One man comes from a village national school and one has been in a higher-grade school. The others come from secondary schools, mostly of good repute, such as Bradfield and St. Paul's. We naturally want to know what work these men will be set. Theoretically, there is said to be one inspectorate under the Board; but, practically, there must be at present one staff working under Whitehall regulations and another under South Kensington. The *Schoolmaster* assumes—we do not know how far the assumption is correct—that the new inspectors, without knowledge of elementary education, will be called upon to inspect the work of men who are familiar with the Code. If this be so, the list is indeed a startling one. But we prefer to assume, until we have definite knowledge to the contrary, that the new juniors are to help in the work of inspecting

the "schools of science" and the "day secondary schools" under South Kensington. For such work their previous experience, if it has been sufficiently long, is of the right sort.

THE appeal of University College for a round million is a bold one in these poverty-stricken days; but the claim urged by Lord Reay and his Committee on the citizens of London to support higher education in the capital of the Empire is so urgent and so just that it cannot well fail to meet with a generous response. The £30,000 for which the Drapers' Company make themselves responsible and the £30,000 conditionally promised by a former student of the college will satisfy the first condition of incorporation with the University—that the college shall be free of debt—but far larger sums are needed to render incorporation fruitful. The college needs a quarter of a million to complete the buildings; another quarter, or £6,000 a year, for departmental expenses, including maintenance of laboratories; and half a million or more for the endowment of existing professorships which are as yet unendowed, and the foundation of new chairs. Mr. W. W. Astor has started the subscription list with a donation of £20,000.

TECHNICAL EDUCATION.

WHILE School Boards have been busy passing resolutions against the Education Bill, the County Councils generally have not expressed their views. The Chairman of the Worcestershire County Council, who has issued a memorandum showing the probable effect of the measure as regards rating in that county, says: "The great point for the county to consider is, are they willing, assuming the Bill becomes law, to accept the very large amount of work and responsibility the Bill casts upon them?" He expresses the hope that they will do so without hesitation, and at once consider how best to ensure the efficient and harmonious working of the measure in the county. This is a satisfactory note which it is to be hoped will be echoed in similar quarters in other parts of the country.

THE Chairman of the Worcestershire County Council shows that a rate of 4¹/₁₀d. in the £ would be required in that administrative area to keep the schools in their present position. A memorandum prepared for the Northumberland Technical Education Committee discusses the same question, and presents the case as follows:—

"Voluntary contributions for the maintenance of secular education, which in 1900 averaged 8s. 4d. per scholar, would tend to decrease and would probably only be secured for repairs, alterations and improvements to buildings, &c. On the other hand, as the average cost per scholar—especially in small rural schools—is generally admitted to be lower than it ought to be, the cost of maintaining the schools would tend to increase. The present average annual cost of maintenance per scholar in voluntary and Board schools in Northumberland is £2. 8s. 6d. (the average for England is—Board schools £2. 12s. 10¹/₂d., voluntary schools £2. 5s. 10¹/₄d.) For the purposes of calculation a sum of £2. 10s. may be taken. Dealing with the county area apart from the three boroughs excepted under the Bill, the following figures indicate the probable position of affairs:—

RECEIPTS.		EXPENDITURE.	
Average grant on 41,000 scholars		Maintenance of 41,000 scholars	
at £1. 1s. each	£43,050	at £2. 10s.	£102,500
Fee grant, 10s. each	20,500		
Special Aid grant (say)	5,000		
Contribution under Agricultural Rates Act	1,080		
	£69,630		
Deficit to be made up by County Rate	32,870		
	£102,500		£102,500

"A penny rate on the present rateable value of the whole of Northumberland yields £8,269. 18s. 10d. Deducting from this amount £1,504. 19s. 6d., the product of a penny rate in the three boroughs excepted under the Bill, the sum of £6,764. 19s. 4d. remains. Thus, excluding the cost of administration, but allowing for a small increase in the average cost per scholar, a county rate of 5d. in the pound would

be required to maintain the elementary schools on a uniform basis. For each addition of 1s. in the average cost, an addition in the rate equal to about one-third of a penny would be necessary. The average rate now levied for elementary education in the districts of Northumberland (about one-third of the county) now under School Boards is 8d. in the pound, and the amount now raised by rate, viz., £17,471, is nearly equal to a county rate of 3d. in the pound."

THE careful and complete report of the Staffordshire Technical Instruction Committee, for the session 1900-1901, reviews in detail the results of a many-sided scheme. A summary of the number of pupils under instruction shows that the attendance at classes aided by the Committee reach 11,264; at lectures and classes in rural districts 4,822 pupils were instructed, while in technology (mining, metallurgy, pottery, &c.) there were 534 pupils, and at various classes for the training of teachers 251. Secondary schools were aided to the extent of £1,078, while £2,460 was expended on scholarships. The Committee is well justified in observing "many signs of steady progress in the work."

THE West Riding Technical Instruction Committee, in their annual report, adopt the useful plan of printing comparative statistics showing the advances made from year to year. The number of secondary day schools recognized and aided, which in 1891-2 was 34, educating 2,521 West Riding pupils, was in 1900-1 51 schools with 4,491 pupils. The progress made as regards the accommodation and equipment of technical schools, as compared with 1891, is thus summarized in the organizing inspector's report:

Kind of Room.	No. of Schools having such Rooms.	
	1891.	1901.
Science Lecture Room	13	29
Mechanical Laboratory	—	5
Physical Laboratory	—	19
Chemical Laboratory	16	31
Textile Workshops	8	15
Woodworking Shops	4	28
Plumbing Shops	—	9
Advanced Art Room	18	28
Commercial Practice Room	—	16
Cookery, Laundry, &c.	3	41

In secondary schools the additional accommodation provided since 1891 consists of science lecture rooms, 21; physical and chemical laboratories, 47; manual training shops, 15; art rooms, 5.

SIX new schools have been built—three grammar and three others; eleven grammar schools and three others have been extended, while in nineteen other schools existing rooms have been adapted to special purposes. "It is certain," writes an inspector, "that the provision and equipment of adequate buildings for a school invariably attracts a large number of students from surrounding places, and to this is largely due the growth of some of the more important technical schools of late years. Such schools are capable of carrying students further than they could ever get in local classes, and, so far as they are recruited from students who have done all they could in local classes, one regards their growth with satisfaction."

THE Technical Instruction Committee for Cornwall reports that during the year new and well appointed metallurgical and assay laboratories were opened at the Penzance and Holston Science Schools to meet a rapidly growing demand for instruction in these subjects, while the premises of the Redruth Mining School have also been extended. The number of students under instruction in classes was considerably greater than the previous year, as the following table shows:—

	Science.	Art.	Continuation.	Total.
1900	6,000	2,408	5,686	14,094
1901	6,892	2,526	6,860	16,278

It cannot be too frequently observed that the "free hand" exercised by County Councils in the administration of educational funds during the past ten years has led to the adoption of schemes, suitable to the requirements of different localities, which would not have been possible under the central Board. The Local Authorities would do well, moreover, to jealously guard this freedom from control. Considerable as the changes have been at the Board of Education, and conspicuous as the progress appears to be in a right direction, the old "system" with all its bewildering forms and trivialities dies hard. The Board is still unable to distinguish between a responsible Local Authority charged with the administration of a county area and a body of school managers called into existence to give public sanction to a class in "physiography." It is extremely doubtful whether anything really effective in the way of decentralization will be possible until a few of the large Local Authorities decline to be subjected to a "system" as

irritating as it is ridiculous, and which appears to depend upon unlimited stationery and innumerable clerks.

IN the tenth annual report of the Lindsey (Lincolnshire) Education Committee—which is, in many respects, an excellent document—it is pointed out that methods which may be appropriate in some parts of the country could not, in that county, be adopted with success. "It is sometimes urged," it is said, "that technical education funds should be spent upon central institutions rather than upon a number of scattered schools and classes. But in a county such as Lindsey, with its 460 widely scattered small towns and villages, and without any natural centres, this policy if carried out completely would mean the entire neglect of the rural population." It is shown that, while ten years ago technical instruction in the county was represented by less than half-a-dozen evening classes, the county is now covered with a network of one hundred and seventy local committees carrying on about four hundred classes, with nearly five thousand pupils on the registers and more than three thousand in average attendance.

RELIGION AND MORALITY IN EDUCATION.

By GERALDINE HODGSON.

ON the question of religion and morality in education it seems impossible to write anything new, and the matter is one on which no person, considering the failure which has attended past efforts and the bitterness which any effort appears fated to engender, could enter light-heartedly. The peculiar misfortune of the problem lies in this, that it is one upon which every one feels qualified to form and to express an opinion; and yet, in the main, it is one for experts, for those trained by years of experience, to deal with so complex a tangle; and, even so, it calls for a rare combination of courage, insight, patience, and tolerant sympathy. Such people are few in number, and it is hardly untrue to say that their hands are already over-full. At the same time, the question calls aloud for settlement. In its nature the problem is of such signal importance that men cannot afford to put it aside; cannot even succeed in doing so if they try. Shelved here, fought over there, compromised somewhere else, it recurs and rises again with all its old difficulties, however they may seem to garb themselves anew in the phrases and shibboleths of the passing day. To solve it as some were inclined to do by offering what is called *secular* instruction only is, when they arrive at practice, a sheer impossibility. The practical teacher knows that the "marches" between sacred and profane are an undefined region passing the wit of man to bound or limit.

Moreover, were a child brought up, so far as that is possible, on purely secular lines, were he taught to reverence nothing greater than himself, and that *modicum* of demonstrable reality which his powers of intellect and feeling enable him to grasp, the result for the average person (and education, like legislation, must lay its plans for the average person) is disastrous: he grows up stunted, or, rebelling against his teacher, tends to develop—perhaps develops—into a fanatic.

The attitude of "Wait it out, O Man!" may avail for a few specially constructed people, may even stand them in good stead for a while; a John Stuart Mill may triumph by his own natural power over circumstances which damn a lesser man from the outset—and even he won the victory hardly—but the average man cannot dwell for ever on the outskirts of a great possibility, and content himself so. Silencing all disputes by the power of a central authority, Queen Elizabeth's plan, may prove convenient for a season; but, as we know by experience, the after growth is bitterer feud than ever. While the disputants differ, and fanatics prepare metaphorical stakes for their opponents, myriads of children are actually with us: they cannot wait for their education until problems as old as the hills have been settled. Something must be done.

Education in England to-day, while the new Bill is under consideration, is chaotic; so much so that it is difficult to write of it as a whole. The religious difficulty, however, can occur in every public elementary school, and may arise in every secondary school—has occurred in some.

Perhaps no recent writer has succeeded better in describing the thing with which we must cope than J. S. Mill did nearly thirty years ago:

Besides [he wrote in his essay on "The Utility of Religion"] how tremendous is the power of education: how unspeakable is the effect

of bringing people up from infancy in a belief and in habits founded on it! . . . It is especially characteristic of the impressions of early education that they possess what is so much more difficult for later convictions to obtain—command over the feelings. We see daily how powerful a hold these first impressions retain over the feelings even of those who have given up the opinions which they were early taught.

A little further on in the same essay he wrote :

The power of education is almost boundless ; there is not one natural inclination which it is not strong enough to coerce, and, if needful, to destroy by disuse.

Will any experienced person deny the truth of these statements? If, on the other hand, they are admitted, what a weapon this is which we handle at one time so dubiously, at another so doughtily : it is so powerful indeed that we may ask if any other existing force can match it !

In the pages which follow Mill discusses the loan of morality from religion, arguing first that the noble precepts borrowed from the teaching of Christ and other great religious teachers have become so firmly interwoven in the texture of ethics that morality can now afford to live independently of religion. To some this must appear a strange argument. That morality has borrowed from religion gold of such inestimable value, and has borrowed it so utterly that it can never be relinquished again, scarcely seems to justify a divorce between the two. And Mill himself grows aware, later on, of something amiss in the reasoning when he writes :

The idea that Socrates or Howard or Washington or Antoninus or Christ would have sympathized with us, or that we are attempting to do our part in the spirit in which they did theirs, has operated on the very best minds as a strong incentive to act up to their highest feelings and convictions. To call these sentiments by the name morality exclusively of any other title is claiming far too little for them. They are a real religion.

Whether or no these views contradict others which Mill has expounded elsewhere ; whether or no they fall far short of that mental and moral state to which many persons refer when they use the word *religion*, they are still highly significant, coming from him ; and, coupled with his declaration (quoted further back) concerning the omnipotent influence of education, they prove surely that the question of morality and religion in education is of paramount importance—a problem, as I said before, which calls aloud for settlement. But directly the thing grows urgent, as it does when a teacher comes actually to dealing with the children, the difficulties increase at an alarming pace.

Those first tentative religious feelings of which Mill speaks grow, and in their growth they take on a vesture of authority, tradition, and ritual from which no Church, no sect—not even the newest—can escape quite. Were it only a question of primitive stirrings of feeling, the problem of educating children might be an easier one ; but how vast and varied are the consequences of the initial idea ! In truth, it is no very easy matter to deal with the religious question. If any man were ever qualified for the task—qualified by innate sincerity, by a reasoned enthusiasm for humanity's welfare, by great gifts of literary expression, by philosophical lucidity—such a one was Mill. And yet he fell into contradictions, which were not merely verbal. It is perhaps a harder matter still to deal with this question in the House of Commons—to reduce it within the corners of an Act of Parliament—owing to that quality in political affairs which Matthew Arnold called “our natural love for the bathos.”

But these difficulties pale before those which beset the head of a school at the moment when the time-table must be drawn up, and the hypothetical instructor, who has come and gone at the call of the pamphleteer, essayist, or politician, must be translated into actual concrete X., Y., or Z. of an existing appointed staff. Theory flies to the winds before the definite question : Will X., Y., or Z. best present these fundamental propositions to the unfolding capacities of A., B., C., and the rest—children of to-day, but grown men and women so soon ; capable of wielding so small an influence now, but holding in their ever-widening spheres not their own destinies only, but those of many others, still unborn ?

The sage head knows one or two things very certainly. First of all, *pace* the catholics of all three branches of the Christian Church, *pace* all the Nonconformists and the Freethinkers, Agnostics, and Theosophists, he or she knows that the amount

of doctrine pure and simple which can be rooted and grounded in the mind or intelligence of any normal child is so small as to be practically *nil*. If any one doubts that, let him try. The mind of an average child does not fasten on to doctrine or on to a philosophical disquisition upon conduct ; it can understand action, it can draw meaning from a dramatic or pathetic story or from one which is both at the same time. A genuine teacher can win a response from ordinary children if he take as his material any heroic figure, any striking deed, any clear instance of a definite virtue, any picturesque apologue. But, if, on some occasion, the teacher be compelled to deal with a complex character—say, for instance, in the Scripture lesson with Saul the son of Kish, or in English history with Walpole—then, though he make the greatest possible effort to exhibit clearly the warring principles of such a life, though he take the greatest care to sum up the total result lucidly, let him balance motives and probabilities never so wisely, that teacher will be unusually rewarded if at the end of it all some child (probably more than one) does not ask, “Was he a *good* man?” showing clearly by the question that childhood cannot weigh motives and balance possibilities, but will and must seize on broad outlines, will demand a definite conclusion, drawn without any reservation. That Duke of Buckingham of whom Dryden complained that he was

So over-violent or over-civil

That every man with him was God or devil

had simply not outgrown the normal state of childhood.

No doubt it is part of the business of education to train the growing mind to deal with doubtful issues ; but that does not mean that all the foundations must be left in a shaky condition ; neither a house nor a life can be built satisfactorily on a quaking bog. Somehow or another the child must be taught to distinguish truth and error by their marks, which will never be done by burking the whole question, or by treating religious matters as if every opinion were equally true or equally false.

But it is the limitation of a child's mind which makes the inculcation of doctrine, pure and simple (however desirable or undesirable in itself), a sheer impossibility. A Christian or an Agnostic teacher could no doubt succeed in making a given child believe that Jesus Christ was or was not omnipotent eternal God ; but neither the one nor the other could make an ordinary child take in and assimilate the grounds of either belief, though almost any child might be drilled into parroting some formula, either verbally or in writing—that requires memory merely, a quality which is usually stronger in youth than elsewhere. In other words, the fact stated frequently enough and with sufficient authority would sink in at last, but any doctrine of the Incarnation would remain meaningless words. Combatants on all sides are apt to forget or overlook this, unless they are practical teachers.

Apart from doctrine, and apart from fact, there is one other side of a child's mind that can be influenced—his emotional condition. This, so important, is often forgotten—so important because here a great part of the difficulty lies. Quite removed from doctrine, far off from actual fact, stands the *furniture*, the apparelling of morals and religion. To whichever he belong, even if he belong to none of them all, surely any intelligent person who can clear his mind of prejudice can discern and perceive the stern hard lines of the ideal or actual tabernacle of the extreme “Protestant” or Nonconformist, the warm-coloured habitation of the “Catholic” of whatever degree, the chill white light illuminating the temple of the worshipper of Pure Reason. These things, so different from doctrine or from matters of fact, are external, concrete, to a child most *real* : they appeal to almost every sense at once, and they kindle or petrify imagination—that keen, influential power, which, though life be long and troublesome, or long and joyous, never quite loses the impulse of childhood's impressionable hours. These matters, generally summed up in the convenient and loose term “ritual,” are often dismissed as unimportant and trivial. Yet they mould the taste and inclination of growing children, mould them for good or for evil ; working always along the lines of least resistance, along the inherited tracks and tendencies of individual temperaments.

Some one may argue that taste and inclination are not the arbiters of religious truth. No, probably not ; we may even ask who are those arbiters, and receive no satisfactory reply. But who, with any knowledge, let us say, of normal human nature, will deny that those principles, those arguments, those

aspects of facts gain entrance, just those whose way has been paved and made easy by the cultivation of taste and inclination. Which of us does not know the difficulty of opening his mind to an argument, to a fact, which runs counter to his natural bent, to his desires, to all his mental and moral apparatus which he loves, and to which he clings?

There is hardly one of us who does not know that difficulty. Therefore taste and inclination *are* a very important part of the machinery essential to the reception of truth, and they are moulded and swayed to a great extent by what is known as ritual, whether it be severe almost to disappearance, or rich to excess. Yet the Protestant will not relinquish his bare chapel or unadorned church; the Catholic will never give up his ornate ritual and his dim cathedral aisle, the rationalist will not part with his actual or ideal temple which, since it owns no dark corner, can house in seemingly wise the worship of the white light of proved fact. It is here that not one of them will compromise or yield; and is not that so just because, even though they may not realize it beforehand, it is here that they win or lose the day? Not at all by doctrine, not wholly by morality, but largely by externals, they attract or repel, such hold on every one of us have the discredited senses.

If this really be so, it is futile to dream of compromise and tinker with conscience clauses. Therefore the most practical, if the least attractive, way (to many) out of the difficulty is the concurrent endowment of the sects, the plan of putting various creeds on what may be called a legal and financial equality. No doubt, in a sense, this is putting the clock back; but then possibly we have learnt wisdom from the quarrels of recent years—perhaps strong opponents have learned mutual respect. The fact is—and the growth of the scientific spirit has trained us to look for and build upon ascertained fact—truth appears in different times and places and to varying people under different aspects; and, again, the fact is that human beings, cast in so many different moulds, require diverse kinds of treatment. Consequently, on the old principle that the longest way round is the shortest way home, the apparent putting back of the clock might hasten the striking of the final hour, when, the cloud, whatever it be, which veils the truth, being drawn back, we shall all alike see truth as it is, and not perhaps quite as it has appeared hitherto.

There are two important aspects of the matter when a Bill has to be drawn up and considered. First there is the question of principle. Now it appears that moderate men and women of different parties are feeling more and more that the principle of concurrent endowment would make largely for the country's religious peace. It is hard for extremists at either end to tolerate each other, using that verb in its own sense, and not as a synonym for compromise. But it should not be hard for moderate people to live in amity if it were no longer worth the while of partisan organs to dilate upon the "monstrous assumptions" of the clergy of the Established Church, or upon the "growing encroachments" of the Nonconformists. The present Bill, framed to concede the principle of concurrent endowment of what we have been accustomed to call Board and National schools, makes these methods of procedure not worth while. It is too soon to try to estimate how great an element of peace the common name of elementary school will prove.

Yet old ideals die hard. Doubtless some at this eleventh hour, while the Bill hangs still in the balance, will return to their old hope—is it, such will say, too much to ask from the good sense of honest and sincere men that they should at least unite upon the common virtues of humanity? Even if it be admitted at last that doctrine has so little hold upon youthful minds, still, cannot the virtues and principles exhibited in the great characters of history, sacred and profane, be reduced into text-books for the use of members of all faiths? We may recall what Mill said of Christ.

When this pre-eminent genius is combined with the qualities of probably the greatest moral reformer and martyr to that mission who ever existed upon earth, religion cannot be said to have made a bad choice in pitching on this man as the ideal and representative and guide of humanity, nor even now would it be easy, even for an unbeliever, to find a better translation of the rule of virtue from the abstract into the concrete than to endeavour so to live that Christ would approve our life.

Such a statement made by such a man gives, it must be

admitted, ground and colour for the theory that mutual toleration is, at any rate, a possibility.

Yet, Quaker fashion, we may meet the question with another a legitimate one surely—Have not the upholders of these rival creeds the courage of their convictions? Do we not in our several ways believe (believe effectively that is, and not merely verbally for the sake of imposing argument) in the truth of the grandiloquent aphorism "*Magna est veritas et prævalebit*"? Can it be that, given that children are taught honestly and sincerely, when the moment of final choice comes (it must come—in the life of every thoughtful human being the moment arrives when the individual, according to the light that is in him, must take sides "for Jehovah or His enemies")—can it be that the Protestant, or the Catholic, or the Rationalist fears for his own creed?

What are the answers to these two questions—the question of the idealist: Cannot the sects agree on a common morality? the question of the platform orator: Does any man doubt the force of his own position? Attractive as the first is, stirring as the second, surely the answers are respectively and most emphatically no and yes. In the first place the population of the world is not composed of passionless thinkers like Mill. And then the real difficulty lies, as we saw before, in the fact that the externals of each creed work on and along the lines of natural temperament; doctrine does not move masses, and not every one feels the attraction of the common virtues of humanity, so called perhaps, like sense, because both are so singularly uncommon. And the inculcation of morality has its own peculiar pitfalls. It is a sound rule of criticism to attack the best position, not the weak. So let us take Mill's emphatic *dictum* that religion has not made a bad choice in making Christ the "ideal representative and guide of humanity."

Well, but the personality of Christ presented to a child by a rationalist, a Protestant, a Catholic, in the natural surroundings proper to each, is in each several case a different thing. The opinions and temper of mind of the teacher must colour the thing taught, and the mode of presentment, as well as the thing presented, influences the child, and so must the place and time where and when it is offered. And according to this mode so, acting in harmony with, or struggling counter to, its own predestined moods and temper of mind, will the child receive it.

When the upholder of any form of faith is honest enough to say that he does not find himself willing to let children be taught even the highest morality in a mode and at a time and place not of his approving, in the hope that at the crucial moment the child will choose the "right" theological party, when he is honest enough to say that, he proves himself also a sound observer of human character. These religious differences which vex our peace are a question not so much of doctrine or of virtue as of temperament. There are some few elect souls in whom a kind of high devotion to pure intellect and its appurtenances wins the battle against natural bent: and the attacks of feeling. But they are few. For the average (and again it must be urged that education should be planned for the many, not for the few) it is otherwise. Doctrine and example, precept upon precept, and line upon line gain their power by harmonizing with childhood's memories, inborn tendencies, and gradually acquired tastes.

So much for the question of principle. There remains the other important aspect, which makes up at least half of the total difficulty—the problem of providing schools which will give sound secular instruction, and, amongst them, propagate the various forms of faith in the quantities required by the parents of the children, so that there may be no deficiency in one place, no excess in another. This difficulty, so great in country districts, so entirely a matter not of theory, but of practical means, is hardly met by the present Bill. Indeed, the fair-minded educationist, who cares that the principle of toleration should also be applied tolerantly, is inclined to ask almost in despair whether human wit can meet it. It is true that the Bill provides for—that is, it permits—the erection of a school at the expense of any willing thirty co-religionists, which school may be handed over for maintenance to the Local Authority. It is difficult to believe that this clause was not born of an over-mastering irony in the minds of some at least of the framers of the Bill. It aims, or purports to aim, at consoling small sects. Now, occasionally a small sect may have one or even two wealthy members in its fold, but that is not usually the case. Those who know our country districts best know

how totally beyond the power of some of our small Nonconformist bodies this remedy lies. It surely would be as undesirable as impossible. It is said in no spirit of mockery, but in an honest belief that it accords with the facts, that bitterness is apt to be in an inverse ratio to the smallness and impotence of a body.

The hardship would not fall probably on the Established Church, would not fall on the more powerful Nonconformist bodies; these in large towns, and the first in country districts, are sufficiently numerous to maintain their own rate-aided schools under the new Bill. The hardship will fall on the smaller sects. It is pretty certain that these do not entertain much, if any more, love for one another than they cherish towards the Established Church. The bitterness and intensity of Calvinistic conviction, combined with what is called superstition, still to be found in some parts even of the home counties, might surprise many an educational reformer accustomed to his London. What, for instance, would the average town-dweller say to an old Calvinistic woman who to-day cherishes along with the articles of her dismal creed a firm belief in—no, she would say knowledge of—the meeting of witches on a certain day at a certain hour on a certain common in the high lands of Sussex? But she is a living fact not forty miles from London Bridge.

No human ingenuity perhaps can meet the necessities of these smaller sects in country places, not certainly the present Bill's satirical permission to erect a school. Yet, even here, the concession of the principle is something. We all writhe less under a practical difficulty than under a religious disability. All that can be done to solve the acutest form of this difficulty is to allow these scattered votaries of small creeds to attend which they please of adjacent schools, and to attend protected by a conscience clause. The late Bishop of London laid down apparently as an axiom the principle, "Every parent has a right to have his child educated in his own religion." That some not opposed to definite religious teaching challenge, but no one surely would take exception to another proposition which that one may suggest, namely, "Every parent has a right to exempt his child from religious teaching of which he disapproves."

So, looking at the matter as practical people, it seems that, when once the principle of toleration as distinguished from compromise is conceded, the practical solution is, so far as is possible, to equate the several teaching of creeds to the requirements of a given district, and to do the best possible for the minor sects by allowing them free choice among existing schools, adding the protection of a conscience clause.

Lastly, the sectarian difficulty occurs in some secondary schools, notably in girls' high schools. Hitherto the problem has been to combine in one Scripture lesson matter which can offend no one, of whatever persuasion, with instruction in the higher forms which may prove serviceable in the day of examination. Who is to be the teacher? Any one who tries to find the practical answer in a real school may find it a harder business than it looks on paper.

In the last fifty years we have lived through a period of unrest, of which the net result has been the unsettling of many minds on religious questions. This state of affairs has affected what may be called the intellectual class most—the class from which secondary teachers are drawn. In some schools the members of the staff are expected to be "communicants." This is a loose term, capable of many interpretations. Moreover, the requirement has disgusted those who venture to doubt whether the greatest of the Christian sacraments was originally intended to be a factor in the earning of a livelihood. Certain it is that some teachers who harbour in their minds many doubts are forced to "take the Scripture." There are, it cannot be denied, others who, in the loose parlance of the day, "believe nothing," and who deliberately "save appearances" by seeming to conform, because the tenure of their office requires it.

Can anything be more disastrous? It may be a very sorry thing to behave like this. Yet there are those who have never done it, whom no stress could persuade to do it, but who know the stern details of necessitous lives, who feel more inclined to blame the system than individuals. Suppose for a moment that the religious problem be faced from an everyday standpoint, putting aside temporarily the peculiar nature of the subject, its sacredness, and treating it merely as a branch of instruction.

It is certain that no sane person would suggest that one how

doubts the cogency of the ordinary intuitions of space should teach geometry; that one deaf to music and dull to the claims of æsthetic beauty should deal with literature. Why, then, should a sceptic teach the truths of Christianity, or a member of one sect the faith of another; or, to put the question as widely as possible, why should any person be called upon to propagate a creed in which he does not believe? In demanding this licence we are not asking to profit by membership of a community in whose fundamental faith we do not share. Education is not a creed, but an undertaking made up of many parts. It is a world of wide possibilities, this one of ours: because a person fails in one branch of knowledge, he need not fail in another; because A. cannot teach the Catholic Faith or the Longer or Shorter Catechism, it does not follow that he cannot teach classics or mathematics or science, and very successfully too.

A few years ago men, some men, really believed that religion, "that voice of the deepest human experience," as Matthew Arnold called it, was destined to become a thing of the past, that men and women could be trained to do without it: and, as a step in that training, they believed that unsectarianism had its use and value. But now many are beginning to see, what some saw from the outset, that average people do not outgrow the religious habit, though from time to time they may wax restless under particular religious accretions or perversions. And therefore this use of unsectarianism tends to disappear. Indeed, this common tolerance plan, which was not tolerance at all, but compromise of what a number of people valued greatly, ending in a colourless compound from which the value had been removed, this unsectarianism on which so much enthusiasm has been expended in girls' secondary schools, is as a matter of fact inapplicable to childhood, with its love, its craving for definiteness.

Nor is it only in the actual teaching that the difficulty occurs. For instance, a scheme of "daily prayers," so watered down that they do not offend the Churchman at one end, the Unitarian in the middle, and the Agnostic at the other end, is an unedifying, unconvincing performance. Yet this sacrifice is offered, morning by morning, for about thirty-nine weeks of the year to the fetish of unsectarianism. Sectaries of all sorts are unpleasant: probably they are narrow, at times they are strangely hard to do with; but at the worst they are sincere, at any rate up to a certain point; and the practical teacher can hardly help wondering whether all the people who plan education, but do not execute it, know how much children value sincerity, how much regard they bestow on it, with what unerring instinct they detect an evasion, with what an eagle eye they discern a teacher who offers them a shift instead of a conviction.

Intolerance is hateful, religious bitterness a disgrace to those who harbour it; but an honest belief held generously and with intellectual power has surely not lost its weight with us. At any rate children recognize and respect it.

The present Bill provides that in secondary schools no denominational religious instruction shall be required in a rate-aided school or college, and provides a conscience clause for day scholars. Perhaps this is intended to permit any form. If so, all is well, as in the elementary schools, for the great and numerous sects. The Established Church and the larger Nonconformist bodies can in ordinary towns fill their own schools. And then, as a practical matter, is it not true that education is a solvent of differences among *kinsfolk* in religious matters, and that therefore the difficulty of suiting the members of smaller sects will not be so acute in the case of secondary as in elementary schools, when once the principle has been conceded and the most marked extremes have their own schools. Anyhow, here too let us have the courage of our convictions, and know and settle *what* is taught in a given school; let us commit instruction once and for all, in this to one way of thought, in that to another; let us give up cheerfully, as the Bill bids us, this vain attempt to arrive at a compromise which was not toleration, which experience shows offended many and edified few.

Is this a setting back at all? Is it not rather a recognition of the confusion which has arisen between the words toleration and compromise? We have found in the best of all possible ways, by experience, that compromise means omitting salient points one after another till all the value has vanished. Has not the time come to look the thing fairly and squarely in the face and say:

"We could agree tolerably upon the constitution of the virtues (practice being another matter); we differ profoundly, perhaps irretrievably, on doctrine; we differ, if not more fundamentally, yet with more immediate and practical results in the natural temper of our minds and in the taste which governs the externals of our religion, so much here indeed that we cannot combine on any common course of action save this—that we will each teach our own creed and endeavour to learn respect at least for our neighbours; we will try to believe and teach that no one is wilfully blind, that an honest belief can never be a crime; that no one of us, just because he differs from his neighbours in faith and opinion, is therefore 'either God or Devil' (though he may be either from other causes)": if we did this, would not tolerance itself win the most signal victory it has gained yet?

THE SOCIAL ISOLATION OF ASSISTANT MISTRESSES.

By ONE OF THEM.

IN a recent article, entitled the "Economics of High-School Mistresses," Mrs. Geraldine Hodgson touched lightly upon the subject of the social outlook of the assistant mistress, commenting on the few opportunities she enjoys for social intercourse. This social isolation, which so far seems to have been the usual accompaniment of the high-school teacher's life, is perhaps the gravest drawback of the profession, affecting most injuriously both teachers and taught, and it behoves us to consider earnestly whether it is really a necessary evil. I venture to maintain that such isolation is a most *unnecessary* evil, and one which might be obviated by a little consideration and trouble on the part of head mistresses and parents.

Most people who know anything about the life will be agreed as to the loneliness, the lack of companionship, of the average assistant mistress. I can speak not only from personal experience, which is necessarily limited, but also from the experiences related to me by numbers of assistant mistresses. Let me premise, however, that I do not consider there is any great reason for bewailing the lot of those teachers whose work lies in London or the few large provincial towns, such as Manchester, Liverpool, Birmingham, &c.; in London, most people have some friends or acquaintances, and there are fairly easy means of forming new acquaintanceships, through the agency of clubs or societies. What I have to say applies mainly to the teacher in the small provincial town, who has left her home and her circle of friends behind her, perhaps at the other end of England, and arrives without a single introduction. What happens? She goes into lodgings, which, after a little time, she may perhaps share with a colleague, and for society she has her head mistress and the rest of the staff. Term after term passes by and sees her still in the same condition—living almost solitary, meeting no one, without a chance of making friends outside the school, her only diversions consisting in a tea now and again with the head mistress, and such pleasures as the town affords and her salary will admit of, in the shape of an occasional theatre and concert.

The inevitable result is to turn the teacher into a machine-like being, with interests narrowing day by day, and mind growing more and more limited; it is easy to see why the "happy homes of England do not yearn after" (as Mrs. Hodgson puts it) such unattached females; but whose fault is it that they are such? The most intelligent and intellectual become dissatisfied and restless; even their genuine love of their profession cannot satisfy them for the lack of stimulating intercourse, of male companionship, of everything but the deadening school routine. But we have more to consider than the effect on the mistress herself; her abnormal mode of life must, and does, exercise an injurious influence on those whom she is trying to influence and guide; is it likely that the women who, for three-quarters of the year at least, are leading stunted, narrow lives can be capable of giving wide interests and large ideas to the young minds of their pupils? If we are in any doubt as to the effect on the pupils, we have only to examine the average type of high-school girl when her education is completed, and we shall receive our answer.

There is another aspect of the question which should not be overlooked, and that is the neglect of the teacher by the parents, which places the former in a very false position, and seems to

me frequently to nullify her efforts. How can we expect reverence and respect and admiration on the part of the pupil towards the mistress, when the pupil sees that her parents neither know nor care anything about that mistress, and will even pass her by in the street with a stare? If the parents have not enough kindly feeling for the lonely teacher to make them show her any courtesy and hospitality, can they not see that for their children's interests they should "cultivate" her? Indeed, one feels amazed that any parent should be so indifferent that she seeks to know nothing of the people who take charge of her offspring for three-quarters of each day of their lives. It must be recognized, however, that in many cases it is no want of kindness on the part of the parents which leads to this neglect, but rather a mistaken notion that the teacher will not care for invitations to the children's homes, or that they had better not make friends with her, as it is not the custom. Here I think the head mistress should step in and help to make better relations between parents and teachers, laying the true facts before the former and encouraging them in the right direction. That friendly relations would be an improvement none will deny, and again and again I have heard parents express their pleasure when once they were brought into contact with the teacher, which contact can afford such opportunities for mutual help.

I think it is clear that the teacher suffers greatly, and her work likewise, from the social isolation to which she is at present doomed. Is there no remedy? To me it seems that there are three ways at least, all very simple, by which we may arrive at a happier state. First, then, to take up the question of parents and teachers: it appears to me that the head mistress has it in her power to *start* friendly relations between these.

It is, I believe, the usual custom for the older inhabitants to call upon a new-comer to the town, and for the latter to return such calls, which paves the way to an acquaintanceship. Why should not this procedure be carried out in the case of the high-school mistress? Let us suppose that a new mistress comes to take up work as teacher of the fourth form. Let the head mistress select a dozen or so of the parents of fourth-form children (such parents as will be most likely to respond, of course), and to each of these let her send a note telling them that the new mistress has arrived to take up her work, and, as they will wish to call upon her during the half-term, she encloses her address. I fancy that most of those parents will feel it incumbent on them to call, once the head mistress takes it as a matter of course that they shall do so; and, even if all do not respond, some will do so. The young mistress will then return their calls, and get the *chance* of making some acquaintances—more than that no one can be given.

So much for bringing together parents and teachers. At the same time, in just the same way, the head mistress should send the new mistress's address to all members of the Council, and to the local clergy, requesting them to call. Here, again, these people cannot be forced to become friendly with the new mistress; but it is reasonable to believe that when their duties (and it should be one of the most important duties of Councils to become acquainted with the staff of their own school) are clearly pointed out they will fulfil them.

The second means by which the teacher may obtain some society is directly through the head mistress. Let her invite her staff to meet her own acquaintances in her own house. I am aware that the head mistress is usually a very busy person, burdened with many cares and responsibilities, but the additional trouble would be slight and the expense practically *nil* if she would have an "at home" once a week, to which she invited her own friends in the usual way, and three or four of the staff at a time. This would allow the mistresses to meet with the people of the town, not as the "school teachers," but as ordinary women in the usual social way.

Thirdly, the head mistress might endeavour to supply her teachers with some male society; for, if it is difficult to make fresh female acquaintances, as I have shown it is, it is practically *impossible* for the solitary teacher in lodgings to make any male acquaintances. The head mistress could easily remedy this by establishing friendly relations with the grammar school—there will certainly be one in the town—and, when once she and the head master are allies, mutual invitations can be issued, the masters sometimes visiting the head mistress's house to meet her staff, and *vice versa*. It is obvious how much both masters

and mistresses would gain from this intercourse, not only from the added pleasure and interest in their lives, but also from the interchange of professional views and ideals.

The above suggestions, even though poor ones, would, if carried out, go some way, I venture to think, towards remedying one of the worst features in the life of the woman teacher in the high schools of to-day.

TEACHERS' GUILD NOTES.

THE Right Hon. A. H. Dyke Acland has accepted the Presidency of the Guild for the year 1902-1903, and will give his Presidential Address at the Annual General Meeting, in the City of London School, on the afternoon of Saturday, May 31. Mr. Acland is an old friend of the Guild, and has acted as godfather to more than one Teachers' Registration Bill, drafted either by the Guild alone or by the Guild in co-operation with other bodies. He also helped the Council with valuable advice when first it took up the question of registration seriously some twelve or more years ago. Whatever may be the subject of his address, it is certain to be of great value to the profession at the present time, when clearly cut ideas are needed in dealing with the difficult and delicate situation in education and the many interests involved in any scheme of administrative reform which aims at a thorough co-ordination of primary and secondary education in this country.

THE Council have not yet expressed any opinion on the Bill, as their first meeting after Easter takes place on the 3rd inst. They will then settle their annual report, after hearing the views of their Political Committee on the Bill. On the whole, it is highly probable that they will accept its main provisions with approval, as it concedes most of the points urged by the Guild for many years past, especially in connexion with the establishment of one authority in every area for all school education, and with the constitution of the new Local Authorities for education; though, even under this head, they earnestly hope that an amendment providing for the presence of women, whenever possible, on these Authorities will be introduced.

WITH regard to the political issues involved in the Bill, which occupy the main space devoted to it by the daily Press, the Guild, being an educational body, can leave them largely on one side, noting, with some satisfaction, that the presence of those issues seems to supply the momentum necessary to the carrying through of the strictly educational provisions. The fact that the National Union of Teachers, at its Bristol Conference, blessed the Bill (with reservations, of course) goes far to show that the Government have a good case against the objections of the Free Churches if the situation is regarded broadly from the educational standpoint. No one accuses the Union, as a body, of strong Church proclivities. The general outcry against the permissive element in the Bill, allowing the new Local Authorities to refuse to take over the control of primary education, is likely to be supported by the Council in the interest of unification as against friction and overlapping. A great merit of the Bill is that it supplies the framework for a comprehensive scheme of national education. Judicious amendments in the Committee stage and supplementary legislation within the lines of the Bill, as experience proves its necessity, should supply England with what it has for so long a time needed—a logical and coherent educational system.

THE "Handbook of the Teachers' Guild Holiday Courses in France (Tours and Honfleur) and Spain (Santander)" is now ready (price 6d., post free 6½d., from the Guild Offices, 74 Gower Street, London, W.C.). The handbook sets out all necessary information as to the journey, subjects of the lectures, accommodation for students in private families, excursions to places of interest, and so on. The Spanish course is a new departure, and the carrying out of the programme at Santander depends upon there being not less than thirteen entries of students' names by the end of June. The claims of Tours are well established, and Honfleur should attract a full number of entries, as it is on the coast and has a cool aspect—matters of no little importance in the eyes of jaded teachers at the end of the school year, when, according to Mr. Sadler, they ought not to be thinking of holiday courses at all.

COLONIAL AND FOREIGN NOTES.

FRANCE.

Is some sort of knowledge of Latin and Greek, or of either of these subjects, an essential preliminary to higher study?—That is the topic of the month, and a matter of debate from China to Peru. The centre of disturbance is France, and the cause is the new French scheme, important above all just because it is French—that is to say, has for its origin the land where the tradition of Latin eloquence and clearness of thought has been continuously preserved, and where Greek has been assiduously fostered as in a kindly home. Surrendered in France, the humanities are given up to the affectionate contemplation of Englishmen and to scientific dissection by German investigators. That they have been surrendered grows more and more clear to our neighbours as they reflect on the consequences of their deeds. In particular M. Fouillée, in letters to the *Journal des Débats*, exposes with merciless severity the injury that has been done to classical studies in the school. One of his points is well worth consideration in England. If you teach modern languages on the new, and, as it has been styled, *commercial*, system, not as literature, and at the same time damage classical learning, you are ruining *both the humanities* (the ancient as well as the modern instruments of culture). He is very scornful of the *petite élite*. It will be, he tells us, like a bird under the air-pump, free to breathe were not the air withdrawn from it. The *élite* is as sure to be lost as the drop of fresh water falling in the ocean, and will produce as little effect on the national life. We have already expressed ourselves to the same purpose, and have also pointed out, what seems to have just occurred to our Gallic colleagues, that every option of study (and options, it will be remembered, are the essence of the change) is an obstacle to efficiency in the practical working at least of a small school. At the present moment the air is thick with *heraïres*. From that which has official sanction we gather that history will suffer most in the redistribution of scholastic time; Greek is begun, when it is taken, a year later than before, but has five hours a week at once allotted to it.

SWITZERLAND.

The free air of Switzerland has a special attraction for foreign students, who flock to the Swiss Universities in almost embarrassing numbers. In the last academic year the doctor's degree was awarded to 379 candidates, nearly one half, or to speak precisely 179, of whom were foreigners, 74 being Germans, 58 Russians, and 22 Austrians or Hungarians. Forty-eight of the successes fell to women, 31 of them Russians and 6 Germans or Swiss. At Fribourg, where Poles mostly congregate, out of 355 matriculated students no less than 182 were from some country outside of Switzerland. One wonders if American and German students will take as kindly to Oxford as Russians do to Geneva or Berne—wonders doubtfully.

THE UNITED STATES.

Education in America has sustained an irreparable loss by the death of Colonel Francis W. Parker, head of the School of Education affiliated to Chicago University, and for nearly thirty years one of the foremost school-men in the United States. In his power of attracting disciples, and through them diffusing his influence over ever-widening circles, he has had no equal since Horace Mann. His service to education was not that of a scholar, but of an idealist with a belief in the future and a boundless enthusiasm for humanity. To sweep away obsolete formulas and deadening routine, to breathe new life into the school-room, and to make of teaching not a constraint, but an impulse to growth, these were the objects that he steadily and bravely pursued. "His visions," says the *Educational Review* in a brief tribute, "were those of a seer, and his zeal that of a true prophet of the ideal. His passionate love for both Nature and man, his fervent faith in democracy, and his overflowing affection for childhood were the mainsprings of his great nature, and they made him a teacher by necessity as well as from choice. Massachusetts and Illinois were the immediate scenes of his labours, his trials, and his triumphs; but the teachers of the whole country—North, South, East, and West—came to know his face and form, and to feel the uplifting of the inspiration that he gave wherever he went."

Some remarks on co-education by President Harper, of the University of Chicago, may be set down in this column for the encouragement of all true believers:—"The problems which are connected with the life of women in a University located in a great city are numerous and complicated. The experience of our nearly ten years of work has furnished an important contribution toward the testimony in favour of co-education. Not a few members of our faculties, unfamiliar with the advantages of co-education, came to the University prejudiced against it. A large majority of these have become ardent advocates of the co-educational policy. An extended statement might be made of the arguments and considerations drawn from our own experience, which speak unmistakably in favour of the successful working of the system. That co-education is a permanent feature of higher education, not only in the West, but also, within a few years, in Eastern sections, no one can doubt, and there are few to-day who, with an actual knowledge of the

facts, would have it otherwise. It is the simple and natural method of conducting educational work, and the benefits are equally great to men and women."

A writer in the *School Journal* has been treating of a subject that has hitherto received little elucidation. We are all familiar with the phenomenon known as the "breaking" of a boy's voice. He leaves at a certain age the high-pitched tones of boyhood for the deeper ones appropriate to the larger larynx of the man. Then he tries to forget and lose the old voice; he becomes ashamed to use it, and insists on singing bass. In point of fact the transition need not be abrupt and distressing. Some voices make the change gradually and unaided; all can be led to do so by systematic training begun in early boyhood. Boys may safely sing during the change if their preparation has been cared for scientifically; and none need injure themselves, as so many do, by singing bass when the voice is really tenor.

Progress in America is not always along strictly pedagogic lines, and Ruth Bowles is a precocious girl of the "advanced" type who proves the fact. Mention of her here is due to the fact that she has given her name to a leading case in American law. The State *versus* Bowles decides that the penalty for violating the Compulsory Education Act of Indiana cannot be evaded by marriage. Ruth Bowles would not go to school, although only fourteen years old and within the school age. Her mother asked for her commitment to the Industrial School for Girls. To escape this penalty, Ruth eloped and got married. When the bridal pair returned, the girl was arrested on the charge of violating the Compulsory Education Law and sent to the Industrial School to remain until she is twenty-one years old.

Another item of legal news may also be of interest. The doctrine that children cannot recover damages for personal injuries maliciously inflicted upon them by way of chastisement was repudiated by the Indiana Appellate Court in *The State versus Haggard*. The Court said that an error of judgment would not make a parent or teacher liable for inflicting punishment that was too severe when it is administered in the spirit of kindness. One who vents his rage and malice on a helpless child under his care, however, must answer for the consequences by paying civil damages, as well as by submitting to the penalties of the criminal law. In the case above mentioned it was shown that the defendant, a woman, caught a little girl by the ears and beat her head against the wall. This was done with such violence that the child fell unconscious, and was afterwards a sufferer from concussion of the brain. The Court decided that the teacher must pay 2,000 dollars damages to the child. It took the view that a child is a citizen with certain legal rights of his own, in which the State has an interest because of the future position he may occupy in society. The community, caring for his welfare in childhood, cannot allow that interest to be jeopardized by the caprice or ill-doing of those who have authority over him.

The latest report of Columbia University in the city of New York has reached our hands. The general statement, which serves as a preface, reminds us that the University was, in its original form, an English foundation, being established by Royal Letters Patent in 1754, and having the Archbishop of Canterbury as a governor *ex officio*. The College of the Province and City of New York in America, for such was the old title, has grown in numbers and wealth, so that King George the Second, could he see it, would marvel at the wonders that his word called into being. The institution, with the affiliated Barnard College for Women, has 3,632 students on its books, and a staff of 400 professors and other officers of instruction. Those who would learn of the various agencies by which the teachers care for their charges must turn to the report itself. One matter dealt with in it bears, however, on a question of the hour; for the French reform of secondary education (as we stated) has aroused debate upon the necessity of Latin as a matriculation subject. It may thus be appropriate to consider what are the requirements for admission to Columbia, and the more appropriate here because the method of testing fitness is unfamiliar in England and pedagogically interesting. We may call it the *method of points*. Every candidate for admission to the freshman class is required to offer at the entrance examination subjects estimated at fifteen points. The several subjects are expressed in terms of units. The unit is a course of five periods weekly throughout an academic year of the preparatory school; and units or points are assigned to the subjects in accordance with the time needed to get them up for entrance at college. Writing, for the sake of brevity, E. for elementary, I. for intermediate, and A. for advanced, we reproduce the table of values. Every candidate must offer English, counting 3 points, and E. Mathematics, also counting 3. The candidate may offer any of the following subjects without other restriction than that to offer an advanced subject involves the offering, either at the same time or earlier, of the corresponding elementary subject:—E. Latin (4 points), E. Greek (3), E. History (1), I. French (1), I. German (1), A. Latin (1), A. Greek (1), A. History (1), A. Mathematics (1), A. Physics (1). The candidate may offer not more than four points in all from the three subjects following:—E. French (2), E. German (2), Spanish (2); and not more than two points in all from the five subjects following:—E. Physics (1), Chemistry (1), Botany (1), Physiology (1), Zoology (1). Our readers will see that the student has no difficulty in making up his fifteen points without either Latin or Greek; on the other hand, there is a certain premium on these two

subjects, since the nine points from optional subjects can be got at once by taking both. The pedagogic interest of which we have spoken lies in the assessment of University demands in terms of the school timetable.

The newspapers will have related that the buildings of Wooster University, Ohio, were recently destroyed by fire. We supplement the intelligence with a detail that should not be lost. At a quarter past four in the morning, while the flames were still raging, the Faculty met in the basement of the library, and, after special prayers of unusual solemnity, telephoned to the students in the various houses that Friday's examination would be held on Thursday. We record the incident in no flippant spirit, but with sincere admiration for the truly pedagogic attitude that the professors displayed. They have surely rendered their fire memorable in the world of teachers, whose burden it is to discharge simple duties at the risk of ridicule for their very earnestness. A restoration fund was immediately set on foot, and 350,000 dollars have already been subscribed, 100,000 dollars coming from the bountiful, inexhaustible purse of Mr. Andrew Carnegie.

NEW SOUTH WALES.

Several well known Englishmen have reaped wealth and distinction by teaching in Australia. What are now the prospects for English teachers there? That mine of useful information, the *Year-Book of New South Wales*, enables us to answer the question at least for one of the federated colonies. The State undertakes the task of providing an extensive teaching staff, by means of training colleges and a system of examinations for pupil-teachers, from the ranks of the pupils. This, combined with the fact that the examinations for teachers are more stringent than in the United Kingdom, renders it practically impossible for the ordinary British school teacher to obtain employment in the various State schools. In the higher branches of education the Sydney University affords advantages and facilities beyond the reach of private individuals. There are, however, numerous private high-class educational establishments scattered throughout the State, and competent instructors, content with moderate salaries, are occasionally in demand for these. The most likely openings for teachers desirous of settling in the State will be found in connexion with commercial education, the importance of which is now generally recognized, periodical examinations being held in connexion with the Sydney Chamber of Commerce.

Although the importance of the study of languages is generally recognized, and French and German are supposed to be taught in many of the colleges and schools, the number of competent instructors is limited, and there are few, if any, capable of teaching other modern languages, such as Spanish and Italian. Those capable of imparting instruction in these might be enabled to secure engagements from various collegiate institutions as opportunities arise.

INDIA.

Sir Harnam Singh has given 50,000 rupees to establish a number of scholarships for the assistance of poor Indian students in the Punjab. The trust will be managed by a committee, and rules for its administration are now being framed.

A University Commission is sitting at Madras with a wide scope of inquiry. Among the subjects to which its attention is being directed is the establishment of a teaching University; for the Madras University as at present constituted, although not a purely examining body, does not adequately perform the functions of a University in supplying instruction. Again, witnesses are being invited to give an opinion on the advisability of organizing B.A. Honour Courses, no distinction of pass and class having hitherto been drawn among candidates for the first degree. The old controversy between Government and aided colleges is being revived before the Commission, and proposals are reaching it for the reform of the Syndicate and the Senate. One of the most pressing wants of the Madras University is a good library—might not English hands well be extended to make good the defect?

A hopeful sign of progress in India is the liberal expenditure of labour and ability in the translation of text-books into the native languages. Euclid done into Telugu is the latest example of which we have knowledge. Education through the vernaculars is what pedagogy and common sense prescribe for the intellectual development of the country.

CANADA.

We have never been able to understand why educational statistics take such an unconscionably long time to dress, since nothing is required to prepare them except a type-writer and the four simple rules of arithmetic. After this little grumble we may thank the Minister of Education for the latest issue of the Educational Report for the Province of Ontario, the figures in which bring us down to the year 1900. In that year the total number of registered pupils was 462,494, with an average attendance of 263,181; in 1867 the average attendance was 163,974, so that the progress indicated is satisfactory. About 22 per cent. of the entire population were enrolled in the schools, whilst it appears from the report of the American Commissioner of Education that in the United States a little over 20 per cent. of the people attend school. If we take all the circumstances into account, the colony is more points to the good than would at first be thought. The total annual expenditure on education is four and a half million dollars, or

nearly ten dollars per pupil. We observe with pleasure that the system of kindergarten instruction, first introduced into Ontario in 1882, and subsequently, by the Public Schools Act of 1885, made part of the school system of the Province, has met with encouraging success. A report of the pupils receiving instruction in this way was first made in 1892. The report showed that in the short space of ten years 69 kindergartens had been established, with 160 teachers, attended by 6,375 children under six years of age. In 1900 the number of kindergartens has increased to 120, with 250 teachers, attended by 11,234 pupils under seven years of age.

SOUTH AFRICA.

Loyalty inculcated through the school is now the order of the day in most British colonies. The principle has given rise in Cape Colony to a not unhappy imitation of American methods. The Superintendent-General of Education has established a "Victoria Day" (24th May, or, in this year, 23rd May), and hopes that the real significance of the holiday will be brought home to all pupils. Teachers, he observes, could not do better than spend a portion of the school day on Thursday, the 22nd, in recounting briefly the story of the great Queen's life, and in drawing attention to the high qualities of heart and mind which made her loved and revered far beyond the limits of her own wide dominions.

On Degree Day at the Cape University the Vice-Chancellor (the Hon. Sir John Buchanan) was exceedingly felicitous in surveying the past of education in the colony and in mapping out its field for the future. We extract one or two paragraphs from his speech. "The time," he said, "is within the memory of not a few of us when the only schoolmaster available to many youths scattered through the more sparsely populated districts was the runaway soldier or sailor, or perhaps one of the sad failures of civilization who had drifted into the wilds, there to eke out a miserable existence. Now the Education Department, by means of farm schools as well as by locating in almost every village some teaching centre, has remedied this condition of affairs; and the establishment by the University in 1874 of school examinations has gradually raised the standard of education, and secured something like uniformity of teaching throughout the schools of the Colony."

We quote with particular satisfaction the fine peroration of his address: "Before concluding I would say a word or two to young graduates. It is hardly necessary to tell you that we stand at the opening of an historical epoch of vital importance to our land. Peace will have to be restored to war-ridden South Africa, deep wounds will have to be healed and unity laboured for. The education of our people is necessary to dispel the mists of prejudice, born of ignorance, which prevent the growth of the feeling of mutual respect, the precursor of mutual co-operation and of mutual regard. The diffusion of accurate knowledge offers the surest foundation for united progress, prosperity and happiness. At the least it should indicate the existence of common interests and lead to common effort. In the inevitable course of events the control of such matters will soon pass from the older men. Are you qualified to take the places which they must vacate? Will you seize on the golden opportunity offered you, or will you stand idling while others usurp your birthright? You may have concluded the taking of degrees, but you have not finished learning. You have also to assume the task of applying what you have been taught to your life's work now unfolding itself before your vision. As Goethe says, 'All education should lead to action.' Enter, then, on your labours with all the vigour and energy of youth. Listen to the call of duty: imagine a noble ideal and aim at high accomplishment. Above all be true, true to your best selves, true to your King, true to your God. Let me cite Emerson to you: 'He serves all who dares be true.'"

THE RECTOR OF STONYHURST ON THE "RATIO STUDIORUM."—The "Ratio Studiorum" for three hundred years, in modified and adapted forms, had been the standard of the Jesuits' education. A word as to its origin. In 1584, some forty years after the order had begun to exist, its Superior-General, Aquaviva, named a commission of six members, selected from its principal teaching centres, to draw up a commission on studies. One of these was James Tyre, a Scotchman, though representing the Jesuit colleges in France. After nine months' continuous labour they drew up a scheme, which was then presented to the professors of the Roman College for revision, and was further revised by Aquaviva himself, with a committee of experts. It was then printed, sent to all the order's colleges for criticism, and was finally made law in 1599, after being tried seven years. It had taken fifteen years to elaborate and complete it. "Ratio Studiorum" was a code of practical rules in which no reasons are given nor arguments urged. It was, for the order, a legislative document, but left ample flexibility for varying times, needs, and places. It had been several times revised to bring it completely up to date, and as new branches of learning had been pursued they had always had provision made for them in the "Ratio." There was probably no work on education extant that embodied so much thought in compilation or was based on such a wide mass of experience as the "Ratio."

"THE POET'S POET."

"THE Poet's Poet" one hath called thee, Keats;
The light tongue knowing not what praise it gave
For such are not these rhymers of the streets,
But Nature's self—a Sappho sweet and grave.
He hears a rolling Epic in the wave,
The wind a fitful Elegy repeats,
The rainbow hath a Sonnet's numbered sweets,
And bright Anthologies the woodland pave.
Thy book is one with Nature's. Here are embers
On moss-grown altars, flowering into flame;
Huge sorrows, like the snows of all Decembers
Heaped upon mountains; and the hushed acclaim
(Of fir woods filled with what the wind remembers
Of wide tumultuous waters whence it came.

F. W. BOURDILLON.

Now Ready. School Edition. Crown 8vo, cloth, 2s. 6d.

A BOOK OF VERSES FOR CHILDREN.

Compiled by E. V. LUCAS.

Children are too often taught to read great poetry at an age at which it cannot interest them, and the need has been felt for a book which shall be a kind of stepping stone from the nursery rhyme to the classics of English poetry. This volume has been compiled to meet that need. It contains hundreds of poems by old and modern authors.

THE SPECTATOR says: "A most delightful selection . . . unfailing instinct for children's poetry."

THE SATURDAY REVIEW says: "There is not a verse in the whole collection over the heads of children."

THE GLASGOW HERALD says: "Probably the juvenile taste is harder to hit than that of the average adult, for the 'soaring human boy' is a more ingenious animal than the grown-up, and is not to be gulled into liking what he does not want. That Mr. Lucas has succeeded so well speaks eloquently of his understanding and discrimination. With a perfect instinct he has gathered from the abundant store of narrative and jocular verse some hundreds of poems which boys and girls will find a never-failing source of delight, and which may prove a satisfactory introduction to the higher realms of poetry."

WILHELM DER SIEGREICHE. By KARL ZASTROW. Edited by E. P. ASH, M.A., Master of Modern Side, Haileybury College. Globe 8vo, 2s.

FRIEDRICH DER GROSSE. By FERDINAND SCHRADER. Adapted and edited by R. H. ALLPRESS, M.A. Globe 8vo, 2s.

Word and Phrase Books. With German Translations. Sewed, 6d. each. **Keys to the Appendices.** 2s. 6d. net each.

Mathematics.

AN ELEMENTARY TREATISE ON THE CALCULUS. With Illustrations from Geometry, Mechanics, and Physics. By Professor GEORGE A. GIBSON, M.A., F.R.S.E. Crown 8vo, 7s. 6d.

Nature.—"Among several notable characteristics possessed by this work, the most prominent appears to be the severity of its logic. In one important respect it differs also from the usual English mathematical treatise—it seems to speak to the student, warning him against too probable error and giving him advice. This is a feature which should be encouraged. . . . A work which seems to leave no difficulty unnoticed."

SPHERICAL TRIGONOMETRY FOR THE USE OF COLLEGES AND SCHOOLS. By the late I. TODD HUNTER, M.A., F.R.S. Revised by J. G. LEATHAM, M.A., D.Sc. Crown 8vo, 7s. 6d.

Educational News.—"We must congratulate Dr. Leatham on the way in which he has re-clothed an old friend, and we hope the book may have as long a career of usefulness as its predecessor had."

SOLUTIONS OF THE PROBLEMS AND THEOREMS IN SMITH AND BRYANT'S GEOMETRY. By CHARLES SMITH, M.A. Crown 8vo, 8s. 6d.

MACMILLAN & CO., Ltd., St. Martin's Street, London, W.C.

METHUEN'S NEW LIST

EASY DICTATION AND SPELLING. By W. WILLIAMSON, B.A.,
Head Master of the West Kent Grammar School, Brockley.
Fcap. 8vo, 1s. [May, 1902.]

Ninety-nine Graduated Passages for Dictation, suitable for pupils of from eight to twelve years of age. With an Appendix containing over Six Hundred Spelling Words.

THE MAKERS OF EUROPE. By E. M. WILMOT-BUXTON,
Assistant Mistress, Brighton and Hove High School. With Maps and Plans. Crown 8vo, 3s. 6d. [May, 1902.]

A Text-Book of European History suitable for the Middle Forms of Schools. The whole course is designed to fill about two years at the rate of two short lessons a week.

FRENCH PROSE COMPOSITION. By R. R. N. BARON, M.A.
With Vocabularies and Notes. Crown 8vo, 2s. 6d. KEY, 3s. net.

Suitable for use in Upper Forms and for Candidates for Army Examinations. Adopted at Edinburgh Academy; Victoria College, Jersey; Marlitzburg College, Natal; Marlborough College; University College, Nottingham, &c.

A COMMERCIAL GEOGRAPHY OF FOREIGN NATIONS. By F. C. BOON, B.A. Crown 8vo, 2s.

A companion volume to Lyde's "Commercial Geography of the British Empire."

THE ROSE READER. By EDWARD ROSE. With numerous Illustrations. Crown 8vo. And in Four Parts. [In the press.]

A reader on a new and original plan. The distinctive feature of this book is the entire avoidance of irregularly-spelt words until the pupil has thoroughly mastered the principle of reading, and learned its enjoyment. The reading of connected sentences begins from the first page, before the entire alphabet is introduced.

METHUEN'S JUNIOR SCHOOL BOOKS

Edited by OLIVER D. INSKIP, M.A., LL.D., Head Master of Framlingham College, and W. WILLIAMSON, B.A., F.R.S.L., Head Master of the West Kent Grammar School, Brockley.

Messrs. METHUEN are issuing under the above title a series of school class books. These are adapted to the needs of the Lower and Middle Forms of Public Schools, and are suitable for the use of candidates preparing for the Oxford and Cambridge Junior Local Examinations.

A CLASS BOOK OF DICTATION PASSAGES. By W. WILLIAMSON, B.A. Fifth Edition. Crown 8vo, 1s. 6d.

In use at over two hundred large Secondary Schools, including Bath College, Blackheath School, Bradfield College, Cheltenham College, Edinburgh Academy, Merchant Taylors' School, Mill Hill School, Nottingham High School, St. Olave's School, Southwark, St. Paul's School.

THE GOSPEL ACCORDING TO ST. MARK. Edited by A. E. RUBIE, M.E., Head Master of the Royal Naval School, Eltham. With Three Maps. Crown 8vo, 1s. 6d.

Adopted at Harrow; St. Paul's School; Bath College; Mill Hill School; Owen's School, Islington; King's College, Canterbury; Aravon School, Bray; Grammar School, Kirkby Ravensworth; Moor-side School, Okehampton; Wellington College (Salop); Dronfield Grammar School; &c.

A JUNIOR ENGLISH GRAMMAR. By W. WILLIAMSON, B.A. With numerous Passages for Parsing and Analysis, and a Chapter on Essay Writing. Crown 8vo, 240 pages, 2s.

"The result of thought as well as of reading. It contains the clearest account of the gerund that we remember to have seen. A considerable amount of space is devoted to an explanation of a simple system of analysis. We strongly recommend this grammar to the notice of our readers."—*Secondary Education*.

"Obviously the work of a practical teacher. A prominent place is rightly allotted to sentence analysis. Useful practical hints are given on essay writing, paraphrasing, and punctuation. Altogether this neat little book seems excellently suited to the requirements of those for whom it is intended."—*Educational Times*.

"The teaching is sound and well adapted to junior and middle forms."—*Guardian*.

A JUNIOR CHEMISTRY. By E. A. TYLER, B.A., F.C.S., Science Master at Framlingham College. With 73 Illustrations. 2s. 6d. [Shortly.]

A text work to supplement lecture experiments. Special attention has been paid to the arrangement of the type and matter, with a view to enabling boys to acquire a scientific knowledge of chemistry in the limited time at their disposal.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES at Post Offices are not taken in, but are sent at once to the Returned Letter Office."] All Letters respecting Advertisements and Subscriptions should be addressed—

"THE PUBLISHER, JOURNAL OF EDUCATION Office, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be "crossed."

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

SECOND THOUGHTS ON THE BILL.

LAST month we considered the Education Bill only in its broad outlines, postponing till it had passed the second reading any criticisms in detail. For this we must wait yet another month; but in the interim something may be said as to the reception it has met with in the press and on the platform. Individual utterances are quoted and commented on in other columns, and we will here attempt to form a general estimate of public opinion as far as it has declared itself, and to balance against one another the parties that will support and the parties that will resist the Bill. What does the profession say? That is the first and most important factor to determine. Both in numbers and importance, the National Union of Teachers must rank as the "prerogative tribe," and the Bristol Conference passed an almost unanimous resolution in favour of the Bill. They, in common with ourselves and nearly every educational authority, took exception to local option; but we may now assume that this fatal objection will be removed. It is not hard to conjecture why these permissive clauses were introduced in the first draft. Compulsion, so Mr. Balfour argued, is not always the best way to secure uniformity; let us wait for a mandate (our friend the Duke is still whistling for a wind); give them time, and the County Councils will themselves ask to be compelled; then, like the lady in "Don Juan," we will consent with a good grace.

From other bodies of teachers there has been as yet no public pronouncement, but we have sufficient grounds for stating that the College of Preceptors, the Teachers' Guild, the Association of Head Masters, and the Association of Assistant Masters all regard the Bill with favour.

When we turn from the teachers to the churches a very different aspect presents itself. Open war is declared, and the battle is set in array: on the one side the Established Church and the Roman Catholics; and on the other the Liberation Society and the bulk of the Dissenters. It requires the boldness of a Chamberlain to interpose in such a quarrel, and the peace-maker is like to share the proverbial fate of the arbitrator between man and wife. Yet, without approving Mr. Chamberlain's special pleading (we hold no brief for the Bill), we venture to urge on our Nonconformist friends that the Bill does offer the basis for a fair compromise. You have, we would plead, all along supported denominational schools by paying taxes, and a rate aid involves no new principle. The real question for you is whether you

will get your *quid pro quo*, and your true policy is, so it seems to us, not to pose as city Hampdens or loud and glorious Miltons, but to endeavour yourselves to secure that the public management conceded in return for the rate is a reality, and not, as your political leaders assume it to be, a hollow semblance of control.

As this is the point on which we foresee that the debate in the House will mainly turn, let us look more closely into this section of the Bill. By Clause 8 of Part iii. the Local Education Authority has the right to appoint one-third of the whole number of managers of a voluntary school. It has also the power to regulate the secular instruction, to inspect the school, and to audit the accounts. It has also a vote on the appointment of teachers, but this vote must be exercised only on educational grounds. The plain man without either political or religious prejudices will assuredly see here something more than a hollow semblance of control. True, the voluntary managers will always be in a majority of two-thirds; but is it nothing that the principle of public management is for the first time admitted? Suppose for the sake of argument that the minority representing the public are as powerless as the present Opposition in the House of Commons, and that abuses continue unchecked: will there not then be an irresistible argument in favour of raising their number and adding to their powers? As a fact, we do not believe that any such necessity will arise. The third will have behind them the power of the purse. If the alterations and improvements in the buildings that they think needful are not carried out, if the staff is inadequate or the teaching incompetent, they can report to the Local Authority and hold *in terrorem* over their co-assessors the cutting off of supplies and consequent closing of the school.

One obvious amendment is required both by logic and common sense. In clause 8 (1) (c) read: "The consent of the Local Authority shall be required to the appointment and dismissal of teachers." Clause 9 must be likewise amended; we should prefer to see it cancelled. The only other point we propose at present to raise is the constitution of the Education Committees. As it stands, this is far too elastic and undefined, and in this respect, too, the Bill must be made more rigid. First, at least one-third of the Committee must be required by statute to be members of the Council: the two bodies must be kept in close touch; otherwise, even if they do not come to loggerheads, all the business will have to be transacted twice. Secondly, each County or County Borough Council must act through an Education Committee, not through a committee or committees, as in the Bill. The Bill apparently would sanction the appointment of one committee to deal with primary and of another to deal with secondary education, though such a bifurcation would run counter to the ground-principle of the measure. Thirdly, educational bodies, such as School Boards, must be given by statute a *locus standi* and not depend for recognition on the will and pleasure of a County Council.

Schemes for Education Committees must, it is true, receive the sanction of the Board of Education, which is made in all matters of dispute the final court of appeal. This is some safeguard, but, unfortunately, the existing Board of Education are not brethren who dwell together in unity, and the decision of a court on which Sir John Gorst and Sir George Kekewich sat would probably not be unanimous.

In spite of Mr. Acland and Mr. Bryce and Sir Joshua Fitch—and we freely confess that to find ourselves differing from three such authorities gives us pause; all three educationists first and politicians afterwards—in spite of these and many other eminent opinions, we still hold with Dr. Oliver Lodge that the Bill is a strenuous and conscientious effort to legislate in the right direction, a statesmanlike attempt to grapple with the numerous difficulties that let or hinder a national and democratic system of education.

THE proposal of the London County Council to establish a day training college in connexion with the University of London has taken shape, and a Board of Governors has been constituted for the college, including Mrs. Bryant, Miss Gladstone, Sir Joshua Fitch, the Rev. T. W. Sharpe, Mr. Lyulph Stanley, and Mr. Sydney Webb. It is proposed to open the college in October. The course is schemed mainly for primary teachers, but secondary teachers will be admitted.

SCHOOL PUNISHMENTS.*

"The immediate principal end of punishment is to control action. The action is either that of the offender, or of others—that of the offender it controls by its influence, either on his will, in which case it is said to operate in the way of *reformation*, or on his physical power, in which case it is said to operate by way of *disablement*; that of others it can influence no otherwise than by its influence over their wills, in which case it is said to operate in the way of *example*."

BENTHAM, from whom I have taken this quotation, goes on to point out that there is another, a collateral, end served by punishment, which is the gratification of those injured, directly or indirectly, by the offence; but this end, he says, must never be taken as the main end of punishment, and in dealing, as I now do, with school punishments exclusively, I have no scruple in disregarding it altogether, for this reason, if for no better, that at school the person chiefly offended is the master, and the master is in the position of a judge and must keep himself aloof from all personal feeling, whether of pleasure or of pain. Only in those cases where personal concrete loss has been suffered by an individual can this collateral end of punishment be taken into consideration at school; such cases are comparatively rare, and can probably be met from the injured party's point of view by causing restitution to be made. Hence in discussing the question I have brought before you we can start from the three main ends of punishment, and these I shall call by the names respectively of reformatory, prohibitive, and exemplary. With them clearly before us, I trust that our discussion may prove not unprofitable.

I do not think I need apologize for introducing the subject by a quotation from one of our great social writers. School is but a small world, and in outline the rules that apply to the macrocosm will apply to the microcosm of school. But qualifications are necessary. Though school is a small world, its inhabitants have not yet reached the fullness of the stature of men, and hence we schoolmasters and schoolmistresses find problems confronting us somewhat different from those which beset legislation or the efforts of the social reformer. Let us look for a moment at the three main ends already named. One of them, the prohibitive, it is at once evident, has little bearing, if any, upon school life. We can apply it only in a few cases, and the sole form, one may almost say, of any importance it can take is that of final expulsion. Hence I need, for the rest, say very little about it, but shall confine myself more to the two other ends named—the checking of the offender by way of reformation, and the checking of others by means of example. In life these two ends can be readily distinguished, in theory at least and usually in fact; at school, on the other hand, they are almost always concurrent; for every school punishment must aim at reformation, and, as in most cases, the punishments are inflicted before a class as a whole, and the reasons for them, if not obvious, set forth, they serve as examples as well. Hence, though school is a small State, we must not press the parallel too far. If it is a State, it is a State under despotism—a despotism tempered, perhaps, by a show of popular consultation and a delegation of authority to some of its more enlightened citizens, but in the last resort a despotism of the purest type. And this is necessary; for how shall those whose wills are yet unformed, who have no knowledge of life, no experience of the multifarious and confusing cross currents which form the play of civilization, whose reasons are so undeveloped that they can see only one element in a complicated puzzle of conflicting motives and whose powers are so weak that they cannot defend themselves against dangers—how shall such as these be left to stand alone, to develop their own scheme of self-government, to evolve morality without guidance? Hence no excuse is needed for not considering punishment from the point of view exclusively of social reformers, though the theories of thinkers in this domain of life may help us in the start, and, if qualified by the recognition of the peculiar circumstances to which we have to apply them, may be of value throughout our discussion.

But, before I weigh the nature and the quantity of the punishments that, in view of the main aims which their infliction should always have, are desirable, one difficulty has to be faced. There are theorists who hold that school should admit of no

* A paper read before the Eastern Branch of the Association of Teachers in the Secondary Schools of Scotland.

punishments at all. I have heard of one school where it was attempted to turn this theory into practice. How the scheme worked I do not know, but the school was kept by a gentleman of no small scholastic fame, a gentleman well known, I believe, in this neighbourhood. The experiment has always struck me as wonderful, and I hope some lady or gentleman here present will be able to give us his or her personal experience of a school conducted on these lines. Speaking without knowledge, but criticizing in the abstract, I find it very hard to conceive how such a theory could be carried to a successful issue under ordinary conditions. Partly the question turns on what we mean by punishments. Is it punishment, for instance, to insist upon a boy who had neglected his work or not done it well doing it or doing it over again, as the case may be? Such treatment, I always hold, should not be viewed as punishment, if we would take the strict standpoint; yet in the boys' eyes undoubtedly punishment it is, and it certainly aims at achieving those results which school punishment has in view. If we do not insist upon such a practice, we surely are assuming that children will from the right motives always do just that which is right. Can any one seriously maintain this doctrine? If he has succeeded in finding it practicable, certainly his experience has been more fortunate than mine; perhaps he hails from some blissful Utopia. I can only imagine one set of conditions under which it seems to me that such a theory could be strictly carried out, and that is that the master or mistress has such a hold on the respect and affection of the children that from fear of his displeasure they will never go wrong, or, still better, from fear of causing him grief.

Let us see what the theory, strictly enforced, means. It means, in the first place, that, whenever a child neglects his work, or does not act up to his full powers, the utmost that may be done is to administer reproof; yet even reproof is a form of punishment. Disobedience, again, can only be met by similar measures. What if it is repeated, and is habitual? Grosser faults—lying, stealing, impurity—how are they to be met? Reproof may do something; but is it, or is it not, punishment? Is it sufficient, or is it not, to prevent the recurrence of the fault; and, if the recurrence of the fault is not prevented, does there not remain the grave danger that, with all the respect due to the attempt to allow a child to improve by constant struggle against temptation, we should meantime permit bad habits to grow, through inadequate effort of the will, and thus put off the final victory considerably longer than would otherwise be the case? It is largely a question of comparative values. Is it better to resort to stern measures at once, in the hope of fostering a good habit, even though, to begin with, that habit be based upon the poor and mean motive of fear; or to leave the child unlimited freedom, in the hope that his self-reliance and power to master evil from nobler motives will grow of itself—more slowly, no doubt, than on the other line of action, yet equally, if not more securely, in the final result? Could we be indeed secure that it would thus grow in the final result, we should all be willing to adopt this course, as risks there would be none; but we have to remember that we have little security of the final victory of good in the case of wills which are still weak and characters whose development we cannot forecast, more especially as we are leaving the young exposed to the full force of temptation, with little to help them to overcome it, save a motive whose inadequacy we have already seen proved by the first error of which they have been guilty. Does not the whole training of youth rest upon the theory that we must form good habits, that such habits are the best safeguard against succumbing to temptation, and that we must from the very first try to suppress all tendencies in the opposite direction, remembering that every temptation not conquered means a serious victory of the foe? Those who are still both weak of limb and feeble in knowledge we think it right to guard from danger; and this, in the case of physical dangers, we can do, with some success; the more subtle temptations, involving moral harm, we can, unhappily, not guard against so well, simply because we cannot know when they will come or in what strength. Hence it is needful to bring to bear upon the child a force that will aid him and be always present. We must store in his memory the recollection of an unpleasantness, which will never cease to shoot forth its sting when he is in danger of succumbing to a temptation he has already faced once and not conquered, remembering that by the mere fact of failing to conquer he has been weakened in his struggle

for the future. And, after all, is it not a law of Nature that the infringement of an ordinance shall bring pain and punishment? The punishment is long delayed in many cases, but I should be reluctant to think that it was not sure. Are we not, then, teaching a great moral doctrine by bringing punishment into play immediately after the offence—the doctrine that, in this world—or, at least, in this society, as now arranged—certain actions are to be avoided, because hurtful to the individual, and hurtful, also, to the race? Were we dealing only with children in isolation, we might, perhaps, abandon our punishments altogether; we should be much nearer to the child, and could win a stronger hold; moreover, we could watch and warn with greater certainty—yet, even so, might we not weaken the power of initiative and impair self-reliance? But, at present, I have to deal not with isolated children, but with children in masses, and hence to consider not merely the effect of the two processes of treatment upon the one child, but also their effect upon others—non-offenders. However sure we may be that in an individual case the absence of punishment may in the long run be effectual, we can hardly expect that the young onlookers will know all that has passed in the way of a struggle against temptation in the mind of the culprit who has risked punishment. They will see only the outward result; and that result, at first, will be not improbably a second fall. The final good result which may be the eventual outcome may only show itself after years. Meantime, others will fail to trace it, will lose the force of a strong example. Shall we not have exposed them unjustifiably to temptation? Such a practice—the practice of forbidding punishment altogether—seems to me to require, if strictly carried out, either that the children should be phenomenally good or that the master should be phenomenally strong—neither condition very likely to be fulfilled. In exceptional cases, it is just possible that the theory might work, as the world is at present. I cannot accept it as an adequate theory for schools at large.

There is a striking account given by Count Tolstoi of a village school managed by himself on his estate in Russia, where original views on many points are expressed for which I must confess that I have a sneaking sympathy. Among other features of this strange school, where the children are allowed apparently to do absolutely as they please, is a total absence of punishment—a feature, it seems, from one story told, not present to Count Tolstoi's mind at the first, but one which became a cardinal principle. Certainly the effect recorded in one instance, where a boy was labelled "Thief" for days, is one which must be familiar to every observant teacher—the effect of hardening the criminal and preventing any efforts at self-improvement. The danger is one we are too liable to overlook. We get into routine methods; and, owing to the fact that it is our duty to dispense justice which may appear to every child under our control to be even-handed and impartial, we are liable to adopt an apparently simple method—the same punishment for the same offence. Such a rule, though excellent from one point of view, has the great disadvantage in dealing with the young of making justice seem impersonal—an iron law of Nature, instead of being the expression of a sense of righteous indignation at wrong done—an interference with the rights of others or with the moral law. Moreover, it causes us to overlook the fact that the moral quality of precisely the same act in different children is very different, and therefore deserves a different penalty.

We have to reckon with varieties of disposition, so need often to know with accuracy the different force of temptation, the different strength at command in the effort to resist it, and last, but not least, the varying effect which the same punishment will produce upon varying natures. Certainly the abolition of all punishments enables us to avoid these great difficulties, and in his own school, Count Tolstoi is convinced—indeed, he seems to hold the same of all the world—that the method of non-punishment is the only true one. Among ourselves who are living in a more advanced state of society, and under conditions where we are compelled, whether we wish to or no, to bring pressure to bear upon children and to force them along a narrow and not too interesting path, it may well be doubted whether we could act upon his lines. And, after all, the proof of the real value of the system is not to be found at school. Before passing a final judgment we should want to know what kind of character was produced in after life by this system of discipline, or rather, I should say, no discipline at all. And

here we come face to face with one of the main difficulties of all educators, not merely in their punishments, but in all that they do. The great school is not the school which keeps perfect order and regularly exacts its proper quantity of work well and neatly done, not the school where no stranger could find any fault, not that which sends its pupils with flying colours through examination and reaps for itself a rich harvest of mammon and the admiration of mammon-worshipping parents—no, the great school is that which turns out its pupils well fitted, on the lower plane, for the battle of life, so as to earn their living well and to face trials in this effort with manfulness and perseverance; on the higher, to act always with a moral end before them, doing good to others as well as to themselves. And who can say, while children are still at school, how far the school attains these ends? The result can be judged not till long years later, long years after our pupils have left us, long years, it may be, after we ourselves are dust; but our works live on, and, if rightly done, may produce an influence spreading from generation to generation, though the seed from which the crop has sprung may be no more traceable either by our own sight or by that of others. It is this formation of character which we have to consider; this is the test by which punishments must be judged; but judgment is not possible at the school itself. Life is the great decider.

There remains another theory of punishment at school which it is impossible to pass without a word; for it leans upon the influence of a great name—great in social philosophy, great also in education. Mr. Herbert Spencer's view is well known—that all punishment ought to be the natural outcome of the offence. I have seen it urged against this view that there underlies it a false conception of children's nature, and that, as a guide to practice, it is quite impossible. With such sweeping strictures I cannot agree. Difficulties in practice there may be; but, as a principle, the theory is, I am convinced, sound. As in the case of Tolstoi, it is useful to have our methods criticized by an outsider. I have noted elsewhere the important and curious fact that many of the great educational reformers have not been schoolmasters at all. Schoolmasters—dare I add schoolmistresses?—have much to learn from outsiders, even from theorists whose views we think at first impracticable. I am convinced that the appeal to Nature's methods—or shall I say the methods of our human nature as at present shown in our particular society?—is, at bottom, good; but we must remember that the treatment which Nature seems to give to adults is not necessarily to be a guide in dealing with the young. Still, that the penalty should fit the crime is surely our universal end if we punish at all; the only question is one of means—how can that end be best attained? I do not suppose that even Mr. Spencer would fail to approve as a sound piece of practice Mr. Barnett's recommendation of a good whipping to a child who persisted in sliding down the banisters in a really dangerous place, though he had been told not to do so. The risk is too great to leave all to a natural penalty. We should kill the patient in order to cure him. But surely such instances may be treated as exceptional. If we take Mr. Spencer as our main guide, we do not thereby renounce the right to exercise our reason and disregard the rule in cases where it seems imperatively necessary. We are overridden by a higher consideration—the maintenance of life or the prevention of serious injury. But this is only saying that the principle is not dominant, is not a law of science admitting of no exception, and yet it will carry us far. If a boy is late, he should stop in; if he has not done his work, he should be kept to do it; if he goes out of bounds, he should be limited to places where he can be watched; if he tells a lie, he will be disbelieved in future. Dropping a pen means leaving it lying and inability to do the work at the time, and consequent loss of time hereafter; and, were it not for the pressure of outside agencies, I make little doubt that we could act on such a system almost without exception. Unfortunately, we are driven by other considerations, and many of those punishments which are not natural are inflicted with a view to saving time, and yet effecting some reform in the offender. It is one proof the more of the unsatisfactory conditions under which our schools are at present conducted. But it is worth our while, and worth much thought, to try to adopt such punishments as arise spontaneously and naturally out of the offence committed. No resentment can be felt, and the punishment will be remembered. Moreover, the justice is apparent to every one, and, if ingeniously in-

flicted, will cause others some amusement, thus impressing it upon them as well as upon the offender. Doubtless it is difficult always to see what is the so-called natural punishment; but the resultant gain is worth an effort. If the effort produces nothing else, it, at least, prevents us becoming mechanical, and that is always of vast moment at school; for, after all, to use Thring's words, our greatest enemy is monotony.

The two main aims of school punishment, as I have already pointed out, are, first, reformation, and, secondly, example. They overlap one another much, but yet are, to a certain extent, distinct. Dealing as we are with those who require training, the former end must be supreme, unless, indeed, any one holds the view that children are born perfect and require no correction. Now, from the reformatory end of punishment, there follows one important principle for practice—that our punishments must be as light as is consistent with the attainment of the aim we have set before us. Of two punishments of unequal severity, choose, I would say, the less; and this you can afford to do even when you are not quite certain that all the effect you desire will follow. Experience will show whether it is enough; if not, you will know how to act in future. This principle will carry you far and do much to diminish the objection felt by children to any punishment at all. Certain it is that severity of punishment is a fruitful mother of mischief, producing a rebellious spirit, and, worse still, a tendency to deceit. In my own case I know that when I started as a schoolmaster, owing partly to a belief that, in the long run, severity was the most merciful course, partly to ignorance of the real weight of the punishment as it falls upon a child, I was inclined to punish out of all proportion to the offence. I have grown wiser since, and, as years have passed, have, I believe, been steadily diminishing both the quantity and the quality of my punishments. But it has to be remembered that in all cases—with only rare exceptions—a beginner must needs be more severe than one of longer standing and older years, partly because he will not, in an ordinary case, have yet developed all the moral force which goes so far to render external punishments unnecessary, partly because his class will not know him thoroughly for some time, and will be inclined to speculate whether he means business or not. But a good test of progress for every teacher is to dispense with punishments more and more. From objective punishments we pass to words, from words to looks or even a finger movement—the less the better, provided the offence is checked, and checked for ever.

The great point to bear in mind always is the weakness of children's wills. Many and many are the cases where punishment is inflicted for what is not really an offence at all, but arises from the natural activity of children or weariness at a lesson overdone, or from too long confinement and inability to find a legitimate outlet for that spring of energy which is constantly flowing. Here is one of our most difficult tasks—to distinguish between a wanton fault and what is merely the almost unconscious outcome of a child's being or surroundings. Restlessness, so often visited by punishment by the inexperienced or the unthinking, is, for the most part, a sign of life; suppression of it is not good, unless it actually prevents work. And even then a change of position is often all that is required, or a minute's break in a tedious lesson in order to allow a short free talk or some other refreshment of the exhausted energy. We should, when we punish, not look at the offence alone, but also at the cause from which the offence springs; remove that, and the offence will vanish with it. Sometimes the cause lies distinctly in ourselves—ill-health, strange mannerisms, dullness, voice—many things will produce an irritability in the children which it will require some thought to divine. But divined they must be if we are to produce the best result. In general I am certain that the most effective cure for the great majority of faults—even at times for serious ones—is a quiet talk in private with the offender. I know that in my own case, when I have thought it necessary to use the cane, I have always found that the most important thing is to talk to the offender for some time beforehand. Boys have told others that they did not mind the caning, but they did mind the—expressive term—"jaw." I hope the ladies are not shocked at schoolboy slang.

On the question of how far an offence is wilful, committed with full consciousness of its bearing, how far, on the other hand, it is due to thoughtlessness, and is the natural outcome of a child's activity and love of experimentation, we have to be very careful. Offences of these two very different kinds must

by no means be confounded, else not merely does the child feel that he has been unjustly treated, but he is liable to pass, from mere devildom of despair, from the one class of acts to the other. Such a result means that by our system of treatment we have actually degraded instead of improving. Could any condemnation be more severe of our fitness to be the rulers of children? But, if a boy feels that a clear line of demarcation is drawn between these two dissimilar acts, not merely does he recognize that we are trying to be just—and the feeling of justice must on no account be tampered with—but he is inclined to avoid the more serious faults from his approval of our treatment of him generally. In dealing with these divergent offences we should, if we can, make our punishments differ, and differ in kind as well as in degree. For involuntary offences, or offences of ignorance, usually a word will be found enough; for the others it may or may not be enough, according to the child's disposition and the hold possessed by the master or mistress. But much harm is done by the failure to distinguish offences of these two kinds. Every one who has been unfortunate enough to occupy the position of head of a school must know the difficulty in which he is at times placed by the injudicious action in this respect of his colleagues.

Another most vital point to bear in mind is that we must always be quite sure when inflicting punishment that the offender knows precisely for what it is inflicted and understands that the offence deserves punishment. In some cases this can be taken for granted, but I have been astonished to find, when cases have come up to me on appeal, how often the boy has not known his offence, and even in some instances has not been told that he was going to be punished at all. I should not have thought it necessary to mention what must strike you as so elementary a point if it were not that I have found it overlooked not infrequently. Nothing can well irritate the sense of justice more, nothing more discourage efforts after good, than to feel oneself, as must happen in cases like this, in the hands of a mysterious inscrutable providence which one does not believe to be infallible. All confidence is checked, all trust destroyed; the master becomes a tyrant, to be met with those weapons of secrecy and annoyance to which a tyrant is fairly exposed. Nothing is ever lost by explaining reasons. Sometimes they may be too serious or too lengthy to be discussed before the whole class, but discussed with the offender they must be somehow, and usually in the more important cases the gain is greatest if we discuss them in private. Such private talks give us the finest opening for training to good moral reasoning; it is frequently true that a boy does not realize, unless it is explicitly put before him, the universal nature of all action, and the chaos his conduct would bring into society were it adopted as a model; but this universal character of morality I have rarely found a boy incapable of realizing, when he was rightly approached. Law for one is law for all, and one of the first steps in morality is to thoroughly grasp this fact—a step not difficult, happily, to make, as our sense of justice often leads to it unconsciously to ourselves. Reason then, I say, with those who have done wrong; make sure that they understand why you punish them and why you measure your punishment to the exact amount inflicted; you enlist the wrongdoer's own conscience on your side, and then you need fear for nothing more.

F. H. MATTHEWS.

(To be continued.)

ORAL TESTS IN EXAMINATIONS FOR CERTIFICATES IN MODERN LANGUAGES.

By J. J. FINDLAY.

THE "reform movement" in the teaching of French and German has at length reached the inevitable issue—a conflict with the traditional methods of examination. The same issue has been met and fought out in science teaching; there are now only a few ultra-conservative institutions, such as the London University, which still maintain the old follies of examining a candidate for matriculation in chemistry or physics solely by means of a paper of printed questions. Examining bodies (all such as are closely in touch with the daily business of schools) have come to see that the "simultaneous" printed examination paper, scattered broadcast over a country, will simply not work in the case of practical studies. The casual

"presiding examiner" is discovered more and more to be a useless person, and is to be replaced by a professional person, an examining inspector, whose special training qualifies him to take a responsible share in the award of public certificates.

The science teachers have led the way; now the modern language teachers are following suit, and their claims are putting our examining bodies in a very pretty dilemma. Their attack is all the more effective because they have been abroad; they have visited countries—not so far away after all—where "locals" are unknown, where many thousands of certificates are given of great public importance, and where examinations are held with the confidence of an entire nation, but without any of the machinery which the Civil Service Commission and the boards of examiners consider so indispensable in this country. Any day it may happen that some enterprising modern language teacher may publish a full report on these foreign ways of doing things, and insist that the people who control our public certificates should read his report!

The pressing difficulty now confronting the boards may be formulated thus:—Here are candidates—any number from one hundred to ten thousand—scattered over the country, desiring you to testify, in return for reasonable payment, that their knowledge of French is a real thing; that they can use the language, within limits, in speaking to you, as well as in writing. How are you to arrange a satisfactory, and at the same time cheap, test? True, some presiding examiners know French, but do they know how to test the French of a boy of fifteen?

Another difficulty comes on the heels of that. Some schools are trying to teach French properly—as an art of speech—not only to candidates, but to younger pupils. They are asking their examining boards to send an examiner who is competent to test their work. Of course, in theory, we are all competent for any task of this kind, but, even if we can talk fluently in French, we get into trouble when we try off-hand to make a fair examination of a year's work in elementary French on the new methods.

Under the circumstances it seemed worth while to the staff of a school where modern languages, as such, are taught, to make a non-official experiment by way of helping to solve those difficulties. Since this particular school works under the Central Welsh Board, it has every motive for trying to push this question forward. The Central Welsh Board has realized how favourably situated the Welsh schools are for making progress in modern languages (especially French, English, and Welsh), and is doing its best to encourage work along the new lines. The regulations of the Board, not only in French, but in all branches, offer a freedom of initiative to the schools which is unknown at present in England.

This school happened to receive an unofficial visit for a few days from an examining inspector whose name is well known to the readers of *The Journal of Education*. He had been acting during the previous year as one of the oral examiners under the Central Welsh Board, and hence was familiar with the problem as it presents itself in Wales at this moment. With his assistance we proposed to answer two questions:

1. Given a lower form of say, thirty pupils which has been learning French for two years. An examining inspector visits the school any time during the year, and desires to satisfy himself as to the standard attained by the form in French, so as to be able to write a detailed report on the French work, not on individual boys, but on the class as a whole. How shall he act? How long will he take? What reliance can be placed on his report?

2. Given a group of, say, twenty candidates who have been taught together with a view to a junior certificate. An examining inspector has to certify, towards the close of the school year, that so many have passed, so many failed, so many gained "honours," specifying each by name. How shall he act here? How long will it take? What reliance can be placed on his report?

This last query indicates an uneasy feeling which may soon get abroad, if examining bodies embark on this venture of oral tests without caution. An examiner of papers can shield himself behind the results of written answers, corrected in the remoteness of his study; but when he comes face to face with candidates, whose future depends upon *his* skill, as well as theirs, trouble will arise if the oral test is treated as a casual amusement for a superior gentleman from Paris.

In making our experiment we decided beforehand (1) that

the oral questioning should be based upon the syllabus of work done by the class, not on the examiner's fancies as to what boys of a given standard "ought to know." If the examiner thought that the syllabus was too meagre, he could report his view to his board. (2) This excluded stock conversational phrases, since the reformed teaching of French is not intended to train boys to act as couriers or conversation makers in French hotels.

Test I. (for lower forms).—The examiner prepared himself by running over the teacher's notes of lessons, comprising the syllabus of work started at the beginning of the school year. This included a series of pictures relating to France:—geography, history, manners, &c. The examiner also listened to a lesson given in the ordinary course by the teacher. These preliminaries occupied about two hours. He then took the class for some forty minutes, having before him a list of the names as they sat in their places, so that he could pick out certain boys and handle their minds more thoroughly if he wished.

Allowing a quarter of an hour for writing the report, it may be assumed that a total of three hours was necessary to do this piece of work. The examiner in question said that he could not have done it with any satisfaction to himself in less time. When, in the evening, the examiner discussed the experience with the staff (a most excellent discipline, by-the-by, both for teachers and for examiners) he found that they were by no means satisfied with his questions or treatment of the class. In spite of all the pains taken, the examiner had not got hold of some of the special characteristics of the teaching. There had not been much difficulty in matters of pronunciation, or from the presence of a stranger as examiner, or in the use of novel phrases (for the examiner had taken great pains, such as can never be anticipated under the pressure of ordinary surroundings), but all agreed that he had failed to get at the distinctive features in the teacher's mode of training the class.

The conclusions appear to be: (1) that an examiner should be a permanent official employed by a board year after year, so that he would be closely acquainted with the whole scheme of study in French, and ready on his visit to catch on to the situation, without the preliminary expenditure of much time; (2) that the teacher should conduct the greater part of the examination, being compelled, however, to question his class on portions of the syllabus selected there and then by the examiner; (3) that the examiner should retain the right of questioning the class, but should exercise it sparingly. If such a plan were followed, an examiner, when he once got familiar with a school, might report annually on six lower forms of a school after spending three hours per year on the work; the time could be reduced if the visit was unexpected and if the teachers did not change much from year to year.

Test II.—For certificate candidates the examiner adopted the following plan. He selected a topic from the text presented by the class for the written portion of the certificate examination, and put the teacher to question the candidates together, but in turn, on this topic. The questions and answers were of course in French; for indeed the whole course of instruction is conducted through the medium of that language. Some of the questions dealt with grammatical points, others with the story. The class sat in the following order:—

A	B	C	D	E	F
L	K	J	I	H	G
M	N	O	P	Q	R
			T	S	

This was the order of merit, according to the teacher's marks, which he had assigned to them in the course of regular teaching throughout the year. The names go from A to T in descending order of merit. This plan of names was in the examiner's hands as he sat listening; and he marked in accordance with the answers. Some of the answers were given in two words, others in long sentences; but it was easy in half an hour to get round the class three times. By this process the examiner had gained a fair idea of the merits of most of the class, but, before deciding as to failure or honours, he took them in hand himself, and questioned for another quarter of an hour, especially considering the extremes at the top and bottom of the form. One or two difficult cases he kept behind for a little further conversation. At the close, he produced a list:—four honours, fourteen passes, two failures.

The list conformed very nearly, but not quite, with the teacher's own impressions. One or two boys who are smart and self-possessed in the presence of strangers did themselves more than justice; one or two others, the contrary.

Now there was here a great reliance upon the form teacher; but was there, on that account, any fear of collusion or unfairness? The inspector can control the style and matter of the questioning at any moment—it would be impossible for a teacher, under the eye of an inspecting examiner engaged in this sort of work day by day to "cook" questions and answers.

Some may doubt the wisdom of arranging the class beforehand in order of merit, but it proved to be an excellent and safe means of saving time. Here, again, any unfairness by the teacher would soon be detected by the inspector, if it were not resented by the pupils also. It may be concluded that an inspecting examiner (once more a man who is a permanent officer, knowing the school and the general style of work) could determine certificates in this way at the rate of twenty per hour—for senior or scholarship certificates perhaps ten to five per hour. In the case of these he would probably have read the written work beforehand also.

We have emphasized the importance of employing an examining inspector who is acquainted in successive years with the same school, and can watch its course of study. The same principle is of value in the endorsement of certificates. Instead of simply certifying that "A. B. has satisfied the examiners in French conversation," the certificate should read: "A. B. has been under an approved course of instruction in a recognized school for two or more years, and has now passed an oral examination (*inter alia*) in French."

Thus, "reforms" which begin with some apparently unimportant corner of the school curriculum, and at first only seem to concern the progress of a few young pupils, gradually extend their influence until they affect the entire range of school organization. Teachers of science and teachers of modern languages cannot now rest satisfied until the Board of Education, and its allies, take in hand the whole problem of the inspectorate and of public certificates as depending thereon. Wales has proved a happy field for experiment in the administrative problem of the new Local Authority; perhaps it will also serve the same purpose in regard to these difficult questions of school organization.

This paper is not intended as a final settlement, in the writer's own mind, of the difficulties surrounding the task of oral examining in modern languages; it is merely a report of a single experiment. We are all Heuristics nowadays, though we have only recently learnt to wear that label. Hence it is scarcely necessary to urge the value of repeating such experiments, carefully calculating the quantitative elements involved. The comparison of a few such experimental examinations would soon enable boards of examiners to find their feet in this matter. Some of them, as yet, are not aware that they are stumbling!

THE AMAZING HEURIST.*

By G. C. FRY.

Old things need not be therefore true,
O brother men, nor yet the new.—A. H. CLOUGH.

IF any evidence is wanted of the general up-to-dateness of girls' schools, it may be found in the advertisement columns of *The Journal of Education*, where the diligent reader may find, in reference to vacant situations: "Knowledge of Armstrong method essential," "Armstrong science desirable," and so on. Thus already, within the memory of the youngest of us, Prof. Armstrong has attained the dignity of a classic, and we may look forward to the time when the publishers will send us specimen copies of "The First Principles of Armstrong," "Elementary Armstrong for Schools and Colleges," "Armstrong, Books I. to IV.," &c.

To those who cannot yet see that the heuristic method is the final word of educational science, there is something amusing in the extravagant claims made by the "heurists" for science teaching in schools. Thus, at the British Association meeting

* It may be as well to state that the writer is a science master in a secondary school.

last year, Prof. Armstrong considered that more attention might be given to systematic botany, and science altogether should be taken more seriously in schools, and *at least half the school time* should be given to practical work. And, in his "Special Report on the Heuristic Method of Teaching," he says:—"In the afternoon I would only allow work to be done in the workshop or workroom—a room in which scholars can move about freely—and *several mornings in the week* should also be spent there."

There is much to be said for the afternoons being spent in practical work (only in the summer they would be better spent out of doors); but several mornings a week! "Several" can hardly mean less than three. So we have at most three mornings a week left to be divided between the mathematicians, the classics, the modern language men, the history and geography men.

The Report continues:—"It is very important to emphasize the fact that experimental work, when properly conducted, affords means of developing character *unquestionably* superior to any provided by the other subjects in the school curriculum." The italicized word is characteristic, and the whole pamphlet has the tone of a master dictating a revelation rather than of an advocate arguing a case. The following passages are noteworthy:—"The balance is an all-powerful, indeed the only, instrument which directly enables us to inculcate thrifty habits." "The balance is to be regarded as an instrument of moral culture, to be treated with utmost care and reverence."

And yet Prof. Armstrong accuses psychologists of lacking the saving grace of humour! Is there not something exquisitely ridiculous in this fetish-worship of the balance; this notion that morality and virtue are the direct results of long practice in weighing? We are bidden to set up a Becker's balance, No. 66, price 35s., and teach our pupils to *reverence* it! The modern boy has scant reverence of any kind, and certainly none to waste on balances.

It is generally thought that, if any part of school work has any direct influence on character, that merit can be claimed for the "humanities." It is held by some that history and geography, for instance, can be used, not only to cultivate the imagination, but to instil a rational patriotism which may conceivably diminish the natural jingoism of boys. How can the sense of historic continuity,

with love far-brought

From out the storied Past,

or the feeling of national responsibility, be developed by worshipping at the shrine of the Goddess of Balances?

Far be it from me to deny, however, that scientific work has an important influence on one side of character—the intellectual side. A man scientifically trained has—what "the man in the street" has not—some conception of the value of evidence, a strain of healthy scepticism which may help him to detect the absurdities of political orations and popular clamours, and to disbelieve in patent medicines and scientific articles in the cheap magazines.

But this scientific habit of mind involves a knowledge of some fundamental conceptions which cannot really be understood, much less found out, by immature minds. To ask a boy to rediscover the foundations of physics is to ask impossibilities.

What is, in brief, this new method, with its high-sounding name? It means teaching science by inducing the pupil to use his own intelligence as far as it will carry him. The particular apparatus or special order of experiments is clearly unessential, since every "discoverer" makes his own path. The main thing is the drawing out of intelligence and the discovery of means of solving difficulties. If this is so, have not good teachers aimed at this since the time of Socrates? In what sense is the method new, except in the fact that it deals with new subjects? It is only new just so far as it goes to extremes, and attributes to all pupils a faculty which only few of them possess.

The success of any teaching, from any point of view, depends either on interest or on discipline—generally speaking on both. Now in his Report Prof. Armstrong has abolished discipline; and, as to interest, he unwarrantably assumes it to be a common possession. Many boys like to do experiments; perhaps still more like to see them done. But when there is need of *thinking* the case is quite different. Just as boys will cheerfully work any number of examples in arithmetic and algebra, provided they can use a rule, so they will do any number of experiments in the laboratory, provided they receive full instructions. But, to

think out the best method of attacking a problem, to devise the best form of apparatus, to consider the possible sources of error—this can only be done by a small proportion of them, and the faculty of doing this is innate.

Let us take our honesty in both hands, as it were, and consider how many of our boys have, or ever had, that genius for research, which Prof. Armstrong (who prefers it written r-e-s-e-a-r-c-h) claims for *all* boys. Don't we know from sad experience the blank look that some of the faces in front of us assume when the class is requested to do some thinking on its own account? In every school and every class there are boys possessed of vast mental inertia, boys who will get *no* benefit from heuristic methods—neither knowledge nor a scientific habit of mind.

There are still, of course, as of old, teachers in every subject who are mere information-mongers—walking volumes of *Tit-Bits* without the humour. Still, we may trust that the number of teachers who teach is steadily increasing. No one, at any rate, I think, wants to revive the old, bad lecture system of science teaching, with its cheap and flashy "experiments." But surely there is danger in rushing all at once to the other extreme. Must every boy discover everything he needs to know? That is the confessed ideal of the heuristic method. Is it not something if every one can be induced, not to discover, but to recognize, the processes by which discoveries are made, the ways in which a working hypothesis can be tested, the limits of accuracy in measurement, and so on? The average boy will never under any circumstances discover these for himself, but many boys are capable of understanding them. Half a loaf is better than no bread; but the heurists have not yet "discovered" that life is made up of compromises, and that it is perhaps better for a boy to be taught something than to discover nothing.

Reduce explanations as much as possible, by all means; but a string of leading questions is after all only a disguised explanation; and no man can get even intelligent boys to use their brains in the *right direction* without leading questions—the old, old Socratic method.

Prof. Armstrong, it has been noted, lays great stress on the moral influence of heuristic science teaching. I can see one way in which it has an adverse influence on character. There is a growing tendency for boys to be not only without reverence, either for balances or for anything else, but without respect for their elders and betters. Some of the dust raised by educational conflicts must have found its way to the nostrils of the modern boy, and tickled his nerves with an increased and pleasing sense of his importance. He is becoming complex and over-civilized and self-conscious, like the rest of us. Now, suppose you give a "smart" boy, who stands in continual need of snubbing, the idea that he can unaided discover the great principles which it took centuries of genius to bring to light, and what is the result? The boy becomes more arrogant, more cocksure of his own opinions; he has less faith in his superiors, and less reliance on their advice. "Smartness" is the most detestable of modern affectations, as witness the "smart" journals and the "smart set." I'm not sure that it's such a bad thing for boys, even in the twentieth century, to sit occasionally at the feet of Gamaliel, and recognize the existence of ideals.

There is another, more practical, point to consider. Is it wise to rely wholly on the pupil's interest in his work? Most of our boys, sooner or later, will have to do uncongenial routine work for daily bread; and it is a very valuable part of education to learn how to do uninteresting work.

To do for years the work one dislikes, and to do it thoroughly well, needs more nobility of character than even the best of Becker's balances can inspire.

MANUAL TRAINING THE BASIS OF MODERN EDUCATION.*

By Sir PHILIP MAGNUS.

IT is now nearly ten years since this Association was first constituted. During that time there has been a steady increase in the number of its members, and an equally steady

* Presidential Address to the National Association of Manual Training Teachers, Manchester, April 1, 1902.

improvement in the character of the work it has accomplished. Beginning with a handful of adherents, the Association now numbers 473 members. The increase since our last meeting is 68. At first its operations were confined to London, but now there are ten separate provincial branches, two having been constituted since we last met. A new departure was made last year, when the annual meeting was held in Birmingham, in the splendid Technical Institute recently erected in that city. The meeting, as you know, was eminently successful; and to-day, accordingly, we meet in Manchester, a city associated with all the best educational efforts of the last twenty-five years, in the new Municipal School of Technology, an institution which promises to be the most complete of its kind in Europe, and a noble monument of the civic loyalty and larger patriotism of the citizens of this great centre of academic culture and commerce. These meetings in different parts of England undoubtedly stimulate interest and excite enthusiasm in our work, and emphasize the fact, sufficiently marked by the wide area from which our numbers are gathered, that our Association is truly national in character.

To me, as President, it is most satisfactory to be able to refer to the general recognition which this Association is winning for itself as the professional society directly interested in all educational problems connected with manual instruction. The Association has already succeeded in attaining to the position I ventured to predict for it in my inaugural address in 1894. Many of the improvements that have been introduced into our methods of training are directly traceable to its efforts, and there are other reforms which we are hoping to see effected, and for which, I am sure, you will not cease to agitate. It must be gratifying to you to know that among these improvements are the limitation of the number of pupils under the direction of one teacher—an indispensable condition of sound instruction—the close association of drawing with bench work, and the recognition by Government of the necessity of requiring teachers to undergo a suitable training as tested by an adequate examination.

I am aware of your efforts to obtain a reduction in the present minimum age at which grants are payable by the Board of Education on account of children receiving manual training. The age for commencing such instruction must vary in different places and under different conditions, and, although there is nothing to prevent School Boards or other Local Authorities from fixing the age in accordance with the special requirements of their districts, we cannot expect that the age for commencing manual training will be other than the minimum age fixed by the Code for the payment of grants. It is, I think, now recognized that a reduction in the age from twelve to eleven is desirable in rural districts, where, however much we regret the fact, children leave school at an earlier age than in large towns, and where schools, particularly those assisted by voluntary contributions, are most in need of State aid. Moreover, there is no class of children to whom manual instruction is of more importance than those who are likely to be engaged in agricultural pursuits. At present, therefore, there are many schools too poor to supply manual training without State aid, in which the children obtain very little benefit from the short course of instruction they receive.

Where reforms depend, as this does, very largely on State aid, we must learn not to be disappointed if they are considered from some other standpoint than a purely educational one. The question of ways and means cannot be altogether overlooked. We are, I fear, too apt, in such instances, to blame the heads of our Government Departments; but even "my Lords" do not pretend to be omnipotent. They are very much in the position of the gods of ancient Greece, who were themselves subservient to the decrees of some higher power—

that power, which rules us as with rods,
Lord above lords, and god behind gods,

the power which, in our own State, sits enthroned, stern and relentless as fate itself, within the Treasury Offices at Whitehall.

There is another matter affecting your interests to which I ought to refer, and that is the Order in Council, recently issued, constituting a Register of Teachers. It is largely owing to the representations of this Association that the Teachers' Certificate, issued by the City Guilds Institute to duly trained persons who

have passed two difficult examinations, has been recognized as the qualifying certificate by the educational authorities of England and Wales, Scotland, and Ireland; and the Order in Council to which I have referred permits manual training teachers and teachers of other special subjects to be placed on the authoritative Register of Teachers of the Board of Education. I hope that many of you may apply for recognition by the Board, and may achieve the distinction of having your names placed on that Register.

As regards the City Guilds Teachers' Certificate, I may take this opportunity of anticipating a statement that will appear in the new programme, to the effect that further facilities for obtaining the certificate will, under certain conditions, be offered to competent persons who have been for some time engaged in actual instruction, and who have not been able to comply with the existing regulations. Hard cases have arisen of persons who are themselves engaged in training teachers being unable to obtain the certificate, owing to the rules requiring attendance at a registered class as a preliminary condition of eligibility for examination. The Committee have endeavoured to frame special rules to meet these exceptional cases, which, whilst maintaining to the full the standard of qualification, will enable such persons to be placed on the Register.

And now let me turn from these administrative questions to the consideration of one or two educational matters arising out of the work in which you are engaged.

The recognition of manual training as an essential part of school education is one of the great achievements of the past few years. The movement began, as you know, in a small way with the establishment of workshops in a half-dozen schools, under the direction of a Joint Committee, composed of members of the School Board for London and the City Guilds. Although manual instruction is not yet an obligatory subject in all elementary schools, it forms part of the teaching, encouraged by the larger number of school authorities throughout the kingdom, and receives full recognition in the Government Code. Moreover, the beneficial effects of the teaching in promoting accuracy of thought have led to important changes in the methods of instruction in other subjects, not only in our primary, but also in our secondary, schools. I have no hesitation in saying that at present many of the recognized principles of education are better illustrated in the teaching given in our elementary than in our higher schools; and it is satisfactory to know, both as regards manual training and science teaching, that the methods which have proved so stimulating in our elementary are being gradually adopted in schools of a higher grade. In the future, under the new rules for registration, which will encourage secondary-school teachers to undergo a course of pedagogic training, this assimilation of method is likely to make further progress, and an important step will then be taken in breaking down the too definite barriers which have hitherto separated primary from secondary education. What we want to see is continuity of education from the kindergarten to the University. Hitherto, the distinction between elementary and secondary teaching has been social rather than pedagogic; and this has been largely due to the cost of secondary education, to the comparatively small number of scholarships available for the children of the poorer classes, and to the limited curricula of our secondary schools, in which an undue amount of time has been devoted to the study of subjects having no bearing whatever on the future work of the scholars. With the further organization of our secondary schools, so well begun by our County and County Borough Councils, the curricula will be better adapted to the actual requirements of practical life; facilities for passing from lower to higher grades of schools will be multiplied; and schools of different types will be brought into closer relation with one another. There can be no doubt that the recent introduction of workshops and laboratories into many of our secondary schools has tended to associate more closely primary and secondary teaching. It is now recognized that, although their aims may differ, the methods of both are very similar. It is no longer regarded as a degradation that a boy should be taught to use his hands, or to work at the bench and the drawing-board, after the manner of an ordinary workman. On the contrary, it is now understood that clearness of observation, quickness of perception, and accuracy of thought and judgment are qualities of mind more essential to the educated man than a well stocked memory, and are best acquired by manual exercises and by that kind of

training which accustoms the pupil to suit the action to the word and to make "I can and I will" wait upon "I know."

I have said on more than one occasion that manual training is the basis of our modern education, and that to its introduction into our schools we owe the final break with the faulty methods of teaching which have brought our school system of education into disrepute. It is so. All who were present at the recent meeting of the Education Section of the British Association, presided over by Sir John Gorst, must have realized the fact that we have already entered upon a new chapter in our educational history, and that our future methods of teaching will owe more to workshop practice than to exercises in Greek or Latin grammar. The aim and purpose of our teaching have been changed. The attitude of the teacher to his pupil has been altered. Education no longer aims at filling the mind with facts and words, or even with the thoughts of others, but at creating in the mind of the pupil a potentiality of action and an ability to use for the purposes of life all the appliances and instruments which former workers have placed at our disposal. Essential as it is to be placed in a position to know and to understand what has been achieved by others, education, to fulfil its purpose, must show us how we may be enabled to do something more—to advance beyond the outposts of our predecessors, and to bring within the bounds of knowledge fresh tracts of the unknown. This is our new attitude towards all educational problems. The ability to construct, rather than a capacity to retain, is what we have to cultivate. The direction into useful channels of the spontaneous activity of the infant is the recognized function of the kindergarten, but spontaneous activity does not cease with infancy. The restlessness of childhood, the activity of youth are capable of guidance; and it should be the aim of school teaching to cultivate this activity and to train it in the methods of investigation and in the art of discovery and construction. All progress has been largely due to the fact that man is naturally inventive, and education should aim at stimulating and usefully directing this inventive-ness.

If this be the aim of education, it is the teacher's duty to watch and to guide, and to act as foreman to his class of workers. His functions are very different from those of the schoolmaster of a few years since, who did little more than set lessons to be learned and hear his pupils repeat them. That method of teaching has passed to the limbo of forgotten things, and teaching has become an art, dependent upon the application of scientific principles, which can only be acquired by careful training. The great value of manual instruction is that it illustrates and exemplifies that art, and that its methods are applicable to the teaching of other subjects, such as natural science, history, and language. We have to realize the fact that the workshop has become an essential part of the equipment of every well furnished school, and that the methods of good teaching are closely associated with workshop practice.

It is for this reason essential that workshop instruction should form part of the training of our teachers for primary and secondary schools. This has long been recognized in France, and the practical exercises which teachers in training are required to complete in the *écoles normales* are tests of constructive skill of a very high standard. In the regulations recently issued for the conduct of training colleges in this country the value of manual training is also recognized; and I look forward to a great development in the intelligence of our children, in their mental independence and self-reliance, in consequence of their being brought under the influence of teachers who have themselves been trained to see, to think, and to act.

During the whole of the past century we have been crying out for more education, for further facilities of instruction, for grants of money to bring a larger number of pupils into our schools, and for aid in increasing the number of subjects to be taught. At the beginning of the present century our thoughts are fixed on the quality, rather than on the quantity, of education. We recognize that many of our experiments have proved at best only partially successful; that many have been failures, and that the results have not been commensurate with the cost. We are trying now to remedy this, to economize our expenditure—not by limiting its amount, but by rendering it more productive. By the co-ordination and orderly arrangement of our different types of schools, so that they may meet all wants without unnecessarily overlapping, and, most of all, by

improving our methods of instruction, this economy will be effected. For better results we have to look to the further adaptation of the principles of workshop teaching to education generally. Better organization depends on large measures of reform requiring legislative action. It is now generally recognized that the welding together of our different schools into a national system would be facilitated by placing all schools within the same area under the direction of a single Local Authority; and, although it cannot be said that we have as yet decided how that Authority should be constituted, we are approaching, I think, unanimity of opinion as regards the advantages to be gained from the substitution of a single for a dual control.

In the new Education Bill now before Parliament that one important point is distinctly recognized and duly emphasized. I think I may say that we are all agreed that legislation in that direction is desirable and urgent, and that what is known as the permissive clause should be made an obligatory one. But the Bill has other useful features. It creates the machinery for providing, subject to public control, the aid so urgently needed to place voluntary schools on a satisfactory footing, and thus helps at supplying efficient instruction to more than one half of the children of school age, whose education, so far, has not been altogether satisfactory. Further, it will have the effect, if passed, of associating more closely primary and secondary education, and of breaking down the barriers that have, to some extent, isolated and driven into a Union for the protection of their interests elementary-school teachers. These are solid advantages to set against any minor differences that may divide us. But I feel that further reference to the Bill might lead us into the consideration of thorny questions of some difficulty, about which we might not be so well agreed as I trust we are with respect to those matters relating to manual training to which I have briefly and imperfectly referred in this opening address.

A QUONDAM SCHOOLMASTER.

Namque . . . meminī me
. . . vidisse senem.—VIRGIL.

AND so it had come to this. After more than fifty years of teaching he found himself at last in the Almshouses, thanks to the efforts of a few friends and old pupils who had saved him from the much dreaded Workhouse by procuring for him the benefit of an ancient charity. Up to the age of more than seventy years he had advertised himself as preparing pupils in Latin, Greek, French, German, and Italian for the usual competitive examinations. Nor did the list of his accomplishments end here. He was also qualified to give lessons on the violin, 'cello, piano, and harmonium. About his musical talents there was no doubt. Music was his hobby; and his passion for it afforded an illustration of both the advantages and disadvantages that "devotion to something afar" may involve.

Report had it that, years ago, he conducted a fairly successful private school in a London suburban town. But the proximity of the Crystal Palace, with its orchestral concerts, in which he was an occasional performer, proved too seductive, and extra half holidays were frequent in his school. Of course the pupils did not object to this, but what the parents thought of it may be guessed. Still things did not go badly with him until an ambitious scheme for a larger school led him to move into more extensive premises. The scheme proved a failure for various reasons, some of them of a private nature for which he was not responsible. No doubt, also, an unbusiness-like habit of mind and a savour of unworldliness about him militated against his chances of success. Anyhow the school was given up, and henceforth he devoted himself to the work of private teaching, advertising regularly for pupils in the manner referred to above.

In his boyhood and youth he received a classical education on the old lines at a good grammar school in a small Midland town. Then a residence for some time in the South of France had given him a knowledge of French, to which he added an acquaintance with German and Italian. Though he had never studied at a University, his abilities were good, and as a teacher

forty years ago he must have been above the average. Born in comfortable circumstances, family losses had compelled him to seek some employment, and, with his good education, he naturally took up teaching. He was never married, and lived quite alone during the greatest part of his life. His habits were simple, and he was most abstemious. Yet, if money did come to him from his work, it managed to slip away. One would suspect that books, of which he had a large quantity, musical instruments, and concert-going absorbed a good deal of his hardly earned money. Anyhow, at seventy-five he was practically destitute; and, being able to do but little work, even if that little were procurable, after some hesitation and natural shrinking, he was induced to enter the harbour of refuge into which a few friends had gained him admission. It was there I came to know something about the old man, and was able in some measure to brighten his forlorn and lonely condition. And it *was* a lonely condition; for the sole remaining relative left him in the world lived at a distance, and was unable either to get to him or to render him any assistance whatever.

The other residents in the Almshouses were lower in the social scale, and had friends and relatives living in the same town, who came in every day and did the rough work of cleaning, and prepared their meals for them. But our old schoolmaster was obliged to do most of his work himself, for he could only afford to pay for occasional help. It was trying work for him at times, especially on cold winter mornings, for he was liable to attacks of sciatica if he got a chill. Moreover, at seventy-six one expects the decline of life to be made a little easier. But you might see him any day at his menial work—a very slender, bowed figure, a thin face, with grey beard and clean shaven upper lip, hair only slightly grey, and plenty of it, eyesight very dim, and small gold-rimmed spectacles, slipping half way down his nose. Such was the man as I knew him—an old-fashioned gentlemanly pedagogue, with just a smack of pedantry about him. He was scrupulously tidy in his dress, always appearing out of doors in a frock coat and wide open waistcoat, displaying a great quantity of shirt front. But his tidiness did not extend to his room; disorder reigned everywhere. His few pieces of furniture—remnants of more prosperous days—were yet sufficient to crowd the humble dwelling room of the Almshouse. Very reluctantly he had parted with such of his books and musical instruments as were saleable, but a considerable quantity of the former remained, and completely filled one side of the small room, besides making a mound on the floor in an inconvenient corner. From these habitats the books were accustomed to stray, spreading themselves over the table, the chairs, and the window sill in a most bewildering fashion. If you wished to sit down on a chair, you first removed a pile of books to the table, a risky proceeding, for they invariably upset the equilibrium of the pile already on the table, thus augmented by the pile from the chair.

Disregardless of his own comfort, my old friend would frequently sit very gingerly on the edge of his easy chair, not caring to disturb the pile of music books, old newspapers, &c., behind him. Occasionally, after rising to greet one of his very, very few visitors, he would absently try to avail himself of the full seating capacity of the chair, and slide off on to the hearth-rug along with its curious shifting upholstery! But for all these things there was balm in Gilead. Talk to him about music, and the discomforts and hardships of his lot were forgotten. His body would sway to and fro, tears would come into his eyes, and his thin, worn hands, with their long delicate fingers, would move in rhythmic time, as he dilated upon the beauties of the old masters, not omitting to decry the excesses of the modern craze for Wagner.

In one of these moods let us part with him. He had ceased to bewail his lot. Of the world's justice and injustice he never complained. Perhaps he was too apathetic for this. Who could tell? Fifty-five years of a teacher's life, with its vicissitudes, had left their mark upon him. Success and failure had come to him in turn, and, from the world's point of view, the latter claimed him as its victim. His sorrows were many; but he had his joys, of which music was the chief. Under its influence one could see that he realized the truth of Browning's beautiful lines in his "Christmas Eve":

Earth breaks up, time drops away,
In flows heaven with its new day
Of endless life.

C. FISHER.

THE SOLACE OF EXAMINERS.

EXAMINATION is in one sense the very opposite of Mercy. Speaking generally, it blesses neither him that gives out the paper nor him that takes it; neither him that writes nor him that reads. Indeed, it seems a somewhat sad thing that at certain seasons so much neat, clean paper should be, by order, disfigured and defaced. A sadder and more curious fact is this, that one of the "certain seasons" spoken of above should be the height of summer heat. If the Head Masters in their Conference could ever bring their brains to deal with such a paltry detail, they might discuss the question, Why the most important school examination of the year should be held at a time when mind and body are, to state truths mildly, least inclined for toil? A boy fancies, happy innocent! that there is nothing nastier than to be examined. If he lives to be a schoolmaster, he finds out his mistake: to examine is far worse. He who writes is not now thinking of the person called Examiner—he need not take the work unless he likes, and is paid for his performance: the people thought of at this moment are the assistants in some schools who do a good part of the work of looking over papers, but neither set the papers nor receive the pay. The "outside examiner" exists to please the public—especially the parents: he is the bright poker or the figure head; the dirty pokers—like the stokers on board ship—are not exhibited to public view. But the title of this paper is the "solace" of examiners, not the sorrows.

Let something be said about the solace to be found even in the perusal of an English paper set to small boys. The first point to remark is the influence of the present war on some young minds, which led them to see scarlet everywhere. For instance, "dirge" is a dagger or a sword to the mind of one boy who seems to have heard something of a dirk, while to a second boy it is "a kind of war dance," and to a third a spear; to yet another a "guerdon" is a dagger. This is a new view as to the meaning of that word. Five-and-twenty years ago a boy described it as "a thing you do fish upon"—evidently a grid-iron.

One of the more curious explanations was that of the word "shallop." "Shallop is Fitzjames when he cast a lingered look at her." That boy would seem to have listened to the well known song, "Linger longer, Lucy," and to have fancied that the singer's prayer was answered. In answer to the question, "In what different ways have Latin words been introduced into the English language?" one boy wrote this simple statement, without stops of any kind, "In old battles with the Romans words crept in as butter cheese milk and also the Latin words are nearly the same as vallum wall." Another young scholar is anxious to instruct his examiner, if not his grandmamma, for, being asked to account for the word "monarch," he writes as follows:—"Monarch comes from *monco*, I advise, and *arch*, above, a Latin and a Greek word." Another publishes his private views about the derivation of the word "seclude": "Seclude (*sec* is Latin) = follow." And yet another gives a graceful mixture of two languages by way of accounting for "syntax," "this means weaving together from *syn* and *texo*." As to weaving, by the way, one boy has his theory; being asked to give the masculine of "spinster" he writes "weiver." "Seclude" also has to undergo another explanation: "Seclude, secl-ude, suffix ude." One boy cannot be bothered about derivations. Being asked to account for the word "anarchy," he contents himself by saying merely: "Anarchy is a plot."

This answer may be inadequate, but it is clear enough. The same cannot be said about the following explanation of the word "dirge." "Dirge goes down to, alter to," was the beginning and the ending of one answer. The examiner, fearing that such brain as he had ever had was going (so incapable was he of seeing any meaning in the answer), sent for the examinee and asked him as a favour to explain his words. He looked a little troubled by the dullness of the inquirer, and said that he referred to the low note of the dirge, and with this reply the master had to seem content. "Till judgment speak the doom of fate" is not a very cryptic utterance, but it is not simplified by the following explanation:—"He looked as if an angel was taking his gloom from him"; and the same remark holds good here also, "Careless their merits or their faults to scan," *i.e.*, "Careless were their merits and in scanning faults." One boy did not even know the name of the author whose work he had so long been studying—"Auburn is the fancy name Sir W. Scott gives it."

THE INCORPORATED ASSOCIATION OF ASSISTANT MASTERS.

[*The Executive Committee of the Council of the Assistant Masters' Association, in accordance with a resolution passed on December 8, 1900, adopted as a medium of communication among its members "The Journal of Education"; but the "Journal" is in no other sense the organ of the Association, nor is the Association in any way responsible for the opinions expressed therein.*]

THE hopes to which we gave utterance last month in our note upon the Registration Order have been realized: we are this month in a position to congratulate Mr. J. L. Holland, our Chairman, on his appointment to the Registration Council by the President of the Board of Education. Although Mr. Holland is not technically our representative, we look upon his appointment as a recognition of the right of assistant masters in secondary schools to be consulted in the administration of the new Order. We have also to congratulate Mr. Holland on his election to the Council of the College of Preceptors, which has taken place this month.

It is not often that an honorary degree is conferred upon an assistant master. When it is so conferred we may be sure that it has been earned by honourable work, and is not a mere official compliment. We are pleased to record that on the occasion of the Jubilee of Owens College the honorary degree of M.Sc. was conferred upon Mr. T. E. Jones, the senior science master at Manchester Grammar School, and an energetic member of the Lancashire and Cheshire Branch.

The removal of Christ's Hospital to Horsham has affected us very seriously. Mr. S. E. Winbolt has been obliged to resign his position as Honorary Secretary on account of the great increase of responsibility which the removal has brought him; in his own words he feels that he is an assistant master first and a member of the Association afterwards. Though the Executive Committee must needs acquiesce in Mr. Winbolt's resignation, they recognize how very difficult it will be to replace him.

The secretary of our youngest sub-committee, Mr. C. E. Browne, is also going to Horsham. His successor, Mr. A. E. Bernays, has already taken up the important work of the Education Sub-committee. We hope that when their school has become at home in the new surroundings both Mr. Winbolt and Mr. Browne will be able once more to go on active service for the Association.

The Welsh Pension Scheme is, we fear, in a precarious position. The assent of the County Governing Bodies, who have to find the greater part of the money, has to be given before the scheme can be started. The scheme is now under consideration by the governing bodies. At the present time one county, Flintshire, has definitely adopted it, while another, Monmouthshire, has rejected it; two counties have postponed the consideration of the scheme in view of the Education Bill now before Parliament. The Newport County Borough Governing Body have expressed their regret that financial reasons preclude the adoption of the scheme at present. The Parliamentary Sub-committee, after consultation with the Welsh Branches, have decided to memorialize all the governing bodies urging them to adopt the scheme.

The April Council Meeting was mainly devoted to the discussion of the Standing Orders. Time was found, however, to debate the Registration Order and the Education Bill. Two resolutions were passed upon the Registration Order: (1) "This Council welcomes the Order in Council providing for the formation of a Register of Teachers." (2) "This Council is of opinion that provision should be made for the inclusion on the Register of all teachers who, by length of service and good work, have already proved themselves thoroughly efficient previous to the formation of the Register."

JOTTINGS.

THE report of Sir John Gorst's Bradford speech reaches us just as we are going to press, and we can only note one or two salient points. Sir John's opinion of the present national system is already familiar—nothing could be worse. Nor is his estimate of the Board of Education more favourable—"a number of people sitting round a table in Bradford were just as wise as those in Whitehall." Finally, his aim and the aim of the Government was "to level up all elementary schools to the level of the best Board schools in existence." A noble object; but with the details of the Bill or the lion in the path Sir John did not trouble himself—he was that night in a "philosophic mood."

THE petition requesting the University Members of Parliament to support the claim of women graduates to be registered as Parliamentary electors, though signed by over seven hundred women graduates of

Great Britain and Ireland, received no very encouraging response. It was only noticed by two M.P.'s—Mr. Lecky and Mr. Talbot—and they, while appreciating the work of women in the teaching profession and in municipal legislation, politely deprecated their entrance into the political arena.

MR. PERCY GODFREY, whose "Coronation March" has gained the Musicians' Company's prize of fifty guineas, is the music master at King's School, Canterbury.

THE LATEST IRISH BULL.—President's Address: "My Lord Mayor, Ladies, and Gentlemen,—Just seven years have elapsed since our Annual Congress was held."—*Irish Educational Journal*, April 4, 1902.

SCHOOLGIRL DEFINITIONS.—"A vacuum is an empty space full of nothing but floating Germans." "Autonomy is the science of decaying matter, derived from 'autumn' and a Greek word meaning science."

IN an admirable address by Archdeacon Wilson on "The Profession of Teaching" (*Kendal Mercury and Times*, price 6d.), an old Cambridge story is retold. For the Mastership of St. John's College there were two candidates. One, in the language of the day, was a learned rakehell, and the other a religious dunce. At the election meeting the Senior Fellow pleaded the claims of the learned rakehell. "And he gave two reasons. The first reason was that learning could not be counterfeited, but that religion might, so that they would be at any rate sure of something; and the second was that there was more hope of converting a rakehell to godliness than a dunce to learning. The reasons were unanswerable, and the learned rakehell was duly elected Master of my old college."

THE Archdeacon, it is needless to add, if the same painful alternative presented itself in the choice of a head master, would give his vote for the dunce, though apparently the Senior Fellow has his sympathies. At any rate, the moral that he draws from the story is the grievous loss to the nation from the absence of professional ideals, "the lack of training of teachers, the lack of a high standard of knowledge and of the value of research, and the lack of intelligent organization." Regardless of *scandalum magnatum*, he actually hints that the President of the Board of Education has no ideal for national education, and boldly informs the episcopal bench that our theology needs refurbishing no less than our science of the schools. The address comes as an opportune counterblast to Bishop Creighton's "Thoughts on Education," the thoughts of a teacher who boasts that he never read an educational treatise in his life.

THE Fifth Annual Conference of the British Child Study Association will be held at Liverpool on May 8 and 9. Members and delegates will be received by the Lord Mayor and by the Principal of University College. A paper on "Suggestion," with experiments, will be read by Prof. Sherrington, and an address will be delivered by the President, the Rev. W. J. Adams, on "What the Education Authorities have done and may do for the Child." On May 9 also the London Branch will hold its last monthly meeting for this session at the Sesame Club, Dover Street, Piccadilly. A paper by Prof. Earl Barnes will be read, a review of the work of the session will be made, and a brief discussion held regarding arrangements for next session.

THE REV. CORNWALL ROBERTSON, senior mathematical master of St. Peter's School, York, has been appointed Head Master of King Edward's School, Stratford-on-Avon, in the place of the Rev. E. J. W. Houghton, who succeeded Mr. Upcott at St. Edmund's School, Canterbury.

MR. ALFRED TRICE MARTIN, assistant master of Clifton College, has been appointed to the Head Mastership of Bath College.

Vanity Fair applauds the Bill as the death warrant of School Boardism, a worse plague than medieval sacerdotalism. What evil, we ask, have the School Boards done? They have "rudely destroyed the wholesome humility of ignorance." What higher tribute to their worth could School Boards desire?

THE Children's National Guild of Courtesy has held its ninth annual meeting. The membership is nearly thirty-two thousand, in upwards of five hundred branches.

THE Nature Study Exhibition will be held in the gardens of the Royal Botanic Society, Regent's Park, on July 23 and following days.

THE University Extension Summer Meeting is to be at Cambridge this year, from August 1 to 26.

A LIST has been published of twenty-nine higher elementary schools recognized by the Board of Education.

MR. F. B. SMITH, Vice-Principal of Wye College, has been appointed agricultural adviser to Lord Milner.

THE difficulty of the booking clerk in reference to half-price tickets for children has been solved by the Swiss steamboat companies in a practical manner. Children less than two feet in height travel free. Between two feet and four half price is charged.

A MUNICIPAL body is advertising a vacant modern language post. The salary is £100. The languages required are French, German, Latin, and Spanish. The reform method is preferred.

THE Bluecoat boys have paraded before the Lord Mayor and received their guineas or shillings, probably for the last time. No doubt the Corporation of London will find other means in future to show their interest in the new school at Horsham.

THE Registration Council was summoned for the first time on the 25th ult., and met at the Offices of the Board of Education, South Kensington. Sir John Gorst presided, and explained to the Council its functions and duties as prescribed by the Order in Council. A Chairman was then elected for the day, and it was resolved that the Council sit weekly till further notice.

AT a reception given on April 23 to mark the closing of the Bluecoat School, the Rev. E. H. Pearce assured the company that, whatever else might go, the two corner-stones of the foundation—connexion with the City and connexion with the Church of England—were safe, and, further, that blue and yellow would still be worn on the Sussex Downs.

IN recognition of the services to education of the late Principal of the University College of South Wales, his widow has been awarded a pension from the Civil List.

THE REV. DAVID MILLER KAY has been appointed to the Professorship of Hebrew and Oriental Languages in the University of St. Andrews.

CALENDAR FOR MAY.

[Items for next month's Calendar are invited. Matter should reach the Office, 3 Broadway, Ludgate Hill, London, E.C., by the 23rd inst.]

- 1.—Return forms, &c., for London University Matriculation June Exam.
- 1.—Army Exams. Sandhurst and Woolwich. Latest day for returning forms.
- 1.—Board of Education. Certificate Exam. Apply for permission to sit.
- 1.—Yorkshire College (Leeds) Scholarship Exam. Return forms.
- 1.—Liverpool University College Scholarships Exam. Return forms.
- 3.—Institute of Chartered Accountants. Preliminary Exam. Return forms.
- 5.—London University. M.B. Exam. begins. (Pass only.)
- 6.—Oxford Exams. for Women. B.Mus. Exam. begins.
- 7.—Society of Arts. Return forms for Practice of Music, Vocal and Instrumental.
- 7-8.—Law Society's Preliminary Exam.
- 9 (about).—City and Guilds of London Institute. Practical Exams. begin.
- 9.—Oxford and Cambridge Schools Exam. (Higher Certificate.) Return forms.
- 9.—Return forms for Oxford Local Examination to Local Secretaries with Fees.
- 10 (about).—Royal University, Ireland. Send forms for First Exam.
- 10.—Institute of Chartered Accountants. Intermediate Exam. June, send in notice and fees.
- 11.—Return forms for Society of Arts. Practice of Vocal and Instrumental Music Exam.
- 12.—Birmingham University. Last day to return entry forms for Matriculation Exam.

- 12-17.—Liverpool University College. Entrance Scholarship Exam.
- 13.—University College, London. Exams. for Andrews Entrance Scholarships begin.
- 14.—University College, London. Presentation for Degrees.
- 14.—Return forms for Victoria University Preliminary, Intermediate, Final, and other Exams.
- 14.—Associated Board of the Royal Academy of Music. Scholarship Exam. Return forms.
- 15 (about).—Return forms for Royal University of Ireland Matriculation Exam. (Pass and honours.)
- 15.—Post Translations, &c., for *The Journal of Education* Prize Competitions.
- 15.—Newnham College, Cambridge. Send in names and fees for Entrance Exam.
- 16.—Return Forms for Institute of Chartered Accountants, June Final Exam.
- 16.—Oxford Easter Term ends.
- 17.—Cambridge Teachers' Training Syndicate. Return Forms.
- 17.—Oxford Trinity Term begins.
- 21.—Oxford Exams. for Women. Second Public Exam. Return Forms.
- 22.—Post School News, items for this Calendar, &c., and Advertisements for the June issue of *The Journal of Education*.
- 23.—Oxford and Cambridge Schools Lower Certificate Exam. Return Forms.
- 26.—Herts County Council Minor Scholarship Exams.
- 26 (first post).—Latest time for receiving urgent prepaid school and teachers' advertisements for the June issue of *The Journal of Education*.
- 27.—Yorkshire College, Leeds, Scholarship Exam.
- 27-29.—St. Andrews University L.L.A. Exam.
- 28.—Oxford Exams. for Women. First Public Exam. Return Forms.
- 31.—Tonbridge School Entrance Schools. Return Forms.
- 31.—Bristol College Entrance Scholarship Exam. Return Forms.

The June issue of *The Journal of Education* will be published on Saturday, May 31, 1902.

SUMMER HOLIDAY COURSES, &c., 1902.

(Preliminary List.)

- ABERDEEN (University of).—July, August, and September. Special Courses in French and German for Teachers. Apply Lecturers in Modern Languages, Marischal College, Aberdeen.
- ABERYSTWYTH.—During August. Sloyd. Under direction of Miss Andrén. Address—31 Blenheim Road, Bradford, Yorks, or apply to Mr. Cooke (see under Nääs).
- AMBLESIDE.—During August. Sloyd. Under direction of Mr. J. Vaughan. Apply to Mr. J. Cooke (see under Nääs).
- ÁVILA (Spain).—August 4-25. Spanish. Apply—The Director of Technical Instruction, County Technical Offices, Stafford.
- CAEN.—July 1-30, August 1-30. French. "Alliance Française" Courses. Apply to Mr. Walter Robins, B.Sc., 9 Northbrook Road, Lee, S.E.
- CAMBRIDGE.—University Extension Summer Meeting, August 1-13, August 14-26. History, Literature, Science, Economics, Music and Fine Arts, Education, Theology. Complete programme, 7d. post free, from R. D. Roberts, M.A., Syndicate Buildings, Cambridge.
- GENEVA.—July 16-August 28. French. Apply to Monsieur Charles Seitz, à l'Université, Geneva.
- GREIFSWALD.—July 14-August 4. German. Apply to Prof. Dr. Siebs, Ferienkurse, Greifswald.
- GRENOBLE.—July 1-October 31. French. Apply Monsieur Marcel-Reymond, 4 Place de la Constitution, Grenoble.
- JENA.—August 4-24. German. Apply to Frau Dr. Schnetger, Gartenstrasse 2, Jena.
- KIEL.—July 6-26. German. Apply to Herr Nissen, Holtenuerstrasse 38, Kiel.
- LAUSANNE.—July 22-August 30. French. Apply to Monsieur J. Bonnard, Avenue Davel 4, Lausanne.
- LEIPZIG.—July, August, and September. Sloyd. Dr. Pabst, 19 Scharnhorst Strasse, Leipzig, or to Mr. Cooke (see under Nääs).
- HONFLEUR.—About August 1-22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, London.
- MARBURG.—July 7-27. Modern Languages. (Second Course, August 4-24.) Apply to W. G. Lipscomb, Esq., County High School, Isleworth.
- NÄÄS.—June 11-July 23, July 30-September 9, November 5-December 16. Sloyd. [The courses at Nääs, Leipzig, Aberystwyth, Ambleside, and Penarth have been arranged by the Sloyd Association.] Apply to Mr. John Cooke, 131 Percy Road, Shepherd's Bush, W.

NANCY.—All the year round, holidays included. French. Apply to Monsieur Laurent, rue Jeanne d'Arc 30, Nancy.

NEUCHÂTEL.—July 15–August 10. (Second Course, August 12–September 7.) French. Apply to Monsieur P. Dessoulavy, Académie de Neuchâtel.

OXFORD.—July 2–August 28. English Language and Literature for Women Students. Apply to Mrs. Burch, 20 Museum Road, Oxford.

PARIS.—July 1–31. French. (Second Course, August 1–31.) Apply to Monsieur le Secrétaire, l'Alliance Française, rue de Grenelle 45, Paris.

PARIS.—Easter and Christmas Holidays. French. Apply to W. G. Lipscomb, Esq., County High School, Isleworth.

PENARTH.—During August. Sloyd. Under direction of Glamorgan-shire County Council. Apply to Mr. W. Hogg, Technical Instruction Committee, Glamorgan, or to Mr. Cooke (see under Nâas).

SANTANDER (North Coast of Spain).—About August 5–25. Spanish. Apply to General Secretary, Teachers' Guild, 74 Gower Street, W.C.

TOURS.—August 1–22. French. Apply to Secretary, Teachers' Guild, 74 Gower Street, W.C.

VILLERVILLE-SUR-MER, TROUVILLE.—August 5–26. French, preparation for exams., "Alliance Française." Apply Prof. L. Bascan, 49 Rue Caponière, Caen.

*• Corrections and additions to this list are invited.

Programmes of most of these courses can be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, S.W., where a Table of Foreign Modern Language Holiday Courses, prepared by the Special Inquiries Branch of the Board of Education, can be obtained.

Information as to lodgings for students at Honfleur, Tours, and Santander (Teachers' Guild Courses) will be found in the Handbook, 6½d., post free, from the Teachers' Guild, 74 Gower Street, London, W.C.

A list of addresses in several other Holiday Course centres, will be found in "Holiday Resorts," 1s. 1d., post free from same address.

The advertisement columns of *The Journal of Education* ("Continental Schools and *Pensions*") may also be consulted with advantage.

UNIVERSITIES AND SCHOOLS.

OXFORD.

The chief event of local interest that occurs in the spring vacation is the Classical Honours list in Moderations; and this year, in which the Honours are distributed for the first time over four classes, instead of the time-honoured number of three, there was a certain curiosity to see how the new system would affect the proportions of the classes. Those who advocated the reform were unanimous in not desiring to raise the standard of the First Class; but they hoped to see the unwieldy bulk of the Second materially reduced. They expected that the new arrangement would effect both these desirable modifications; and the list just issued seems to justify this forecast, as far as judgment can be based on one year's results. The First Class contains about a fifth of the whole number of candidates, which is the normal proportion; and the Second and Third are both large, the Second being, however, considerably reduced; the new Fourth Class is comparatively small. The number of the "gulfs," *i.e.*, those who pass the examination but are not classed, is a little smaller than usual, and the "ploughs" are about the average. In short, the top and the bottom of the list remain much as usual: the intermediate grades, to which one has been added, are more evenly distributed. The result will probably satisfy the reformers; and, if it be urged that there is not very much change, they will probably reply, with much justice, that it is very undesirable to have such changes other than gradual. Whether the coming years will accentuate the change, it is too soon to prophesy; and, so far, the moderators will be held to have acted judiciously. As regards the performance of the colleges, the one striking point is the success of Balliol, with the unusual number of nine First Classes. Once more they have distanced all competitors.

The only other event closely affecting Oxford which has occurred in the vacation is the remarkable will of Cecil Rhodes, with the legacy of £100,000 to Oriel College and the institution of Rhodes scholars to be chosen from the English-speaking world and from Germany. The press has given vent to some "audible smiles" at the frank observations of the testator in regard to the business qualities of Oxford dons; but there are few colleges, if any, who would not gladly submit to such mild censures for so handsome a bequest. The arrangement for the choice of the scholars, with its rather childish provisions for the marks to be given for diverse mental, moral, and physical qualities, will be difficult to carry out satisfactorily; but that is the affair of Mr. Rhodes's trustees, and not of the University.

The following elections to scholarships at the Halls have been announced since my last letter:—At Lady Margaret Hall scholarships have been awarded as follows (names in order of merit): the Mary Talbot Scholarship of £40 a year for three years to Henrietta Haynes (Modern History), Miss Clarke's, Warrington Crescent; a scholarship of £50 to Ethel Harvey (Classics), High School, Manchester; one of £30 to E. Constance Wordsworth (Classics), High School, Bedford; and one of £21 to Ellen C. C. Salmon (English Literature), High School, Clifton. Commended: Violet A. Gould (Latin and French), High School, Baker Street, and Dorothy H. C. Saunders (Modern History), High School, Plymouth. The scholarships offered for competition in March, 1903, are: A scholarship of £60 a year for three years, one of £50, one of £30, and the Old Students' Scholarship of £30. At St. Hugh's Hall the Clara Mordan Scholarship of £40 a year for three years has been awarded to Zoe Eppstein (Mathematics), High School, Clapton, and a Hall Scholarship of £25 to Margaret J. Tew (Modern History), High School, Winchester. Commended: Bertha Hedley (Physics), St. Elphin's School, Warrington, and High School, Winchester. One Hall Scholarship of £25 a year is offered for competition in March, 1903, and exhibitions of smaller value may be awarded.

CAMBRIDGE.

The Easter term began for practical purposes on April 21; so there is not much to record this month.

Mr. K. Pendlebury, Senior Wrangler and Smith's Prizeman in 1870, and for thirty years mathematical lecturer at St. John's, died suddenly at Keswick on March 13. In his younger days he was one of the most intrepid of Alpinists, and in the Dauphiny was the first to climb many perilous peaks. He was also a notable musician, deeply erudite in the history and theory of the art. His gifts of early classical music to the Fitzwilliam Museum have made the collections contained in its library unusually rich and complete; and he was equally generous in endowing the library of his college with rare works bearing on the history of mathematics.

The election to the Chair of Arabic, vacant by the death of Prof. Rieu, will take place on April 29. It is considered likely that the Lord Almoner's Reader will be promoted.

Mr. Claude Montefiore has signified his intention of contributing to the University a sum of £250 a year for the better endowment of the Readership in Talmudic Literature held by Mr. Israel Abrahams.

Dr. Fletcher gives this term a course of six lectures on the educational views of Pestalozzi, Froebel, Herbart, and Arnold. Mr. Sidney Lee continues his Clark Lectures on the foreign influence affecting Elizabethan literature.

The first members of the new Appointments Board are the Vice-Chancellor, the Master of Emmanuel, Dr. Donald MacAlister, Mr. Durnford, Prof. Darwin, and Mr. Shipley. The contributing colleges have still to nominate their representatives.

WALES.

The dispute between the Central Welsh Board and the County Governing Body of Carmarthen still continues to excite considerable interest in the Principality. The Carmarthen County Governing Body, at its last meeting, considered at great length the statement issued by the Central Welsh Board in answer to the resolutions passed by the County Governing Body on January 8, 1902, relating to the alleged discouragement of technical education by the Central Welsh Board, the grievance as to the effect of the adoption of the Central Board's regulations for the award of county exhibitions, the alleged usurpation of the powers of the local managers by the Board's inspectors, and other matters. On the proposition of Prof. D. E. Jones, of the Presbyterian College, Carmarthen, further resolutions were carried strongly condemning the action of the Board.

At a meeting of the Honourable Society of Cymmrodorion, held at 20 Hanover Square, London, on April 11, under the Presidency of Sir George W. Kekewich, K.C.B., Mr. T. Marchant Williams read a paper on "The Romance of Welsh Education."

It was Mr. Fearon, of the Charity Commission, who first drew public attention to the subject. The Bill introduced by Sir Robert Peel's Government in 1843 for the better education of children in factory districts received the uncompromising opposition of Nonconformists, who rightly held that it aimed at placing the education of the working classes under the absolute and exclusive control of the Church of England. The Bill was promptly withdrawn, but it had opened the eyes of the Welsh people to the deplorable state of education in the Principality at that time. If the first chapter of the romance of Welsh education began with the fruitful activities of Griffith Jones, of Llandowror, and Madame Bevan, and ended with those of Thomas Charles, of Bala, the second chapter covered the period which began with the year 1843 and ended with the year 1881, when the Departmental Committee made its report. The improvement of the state of education among the working classes under the proposed Bill of the Peel Government was to be effected either wholly by voluntary effort

or by such effort supplemented by Government aid. These were the two alternatives presented to Nonconformists, alternatives which caused them to be divided into two hostile sections. The pure Voluntarists—including in England Edward Baines, Edward Miall, and John Bright—held that the school was a religious institution and formed part of the machinery of a Christian Church, and that the State therefore had no more right to interfere with its management than it had to interfere with the management of the Church itself. On the other hand, many Nonconformists, such as Dr. Robert Vaughan in England, and Hugh Owen in Wales, held that it was the duty of the Government to promote popular education, and that the acceptance of aid from Government for educational purposes was in no sense inconsistent with the fundamental principles of dissent. In South Wales the Voluntarists, whose leading spirit was Henry Richard, were very numerous, very active, and very aggressive. In North Wales the supporters of the opposite principle, led by Hugh Owen, carried everything before them. The lecturer quoted the memorable letter dated August 26, 1843, in which Hugh Owen unfolded a scheme for the establishment of British schools in every district of the Principality. He traced the growth of the British school movement, showing how in North Wales it extended rapidly from the appointment in November, 1843, of the Rev. John Phillips as agent of the British and Foreign School Society, whilst, owing to the unfortunate division in Nonconformist ranks, an agent for South Wales was not appointed till 1853, when the Rev. William Roberts (Nefydd) accepted the post. To promote popular education the English Congregationalists offered to raise £100,000, and the result was a conference of Voluntarists at Llandovery, in 1844, when it was resolved to establish a training school for teachers and make every effort to meet the educational wants of Nonconformists without the aid of the State. A college was established at Brecon, and afterwards moved to Swansea, and schools were set up, but all were ultimately converted into or superseded by State-aided schools. Meanwhile, the Church Education Committee greatly increased the number of their day schools, and founded the training college at Carmarthen and the Carnarvon College (removed to Bangor in 1892). In 1856 steps were taken to establish a training college for British school teachers in North Wales, and it was opened in 1862, and the Rev. John Phillips was the principal till his death in 1867. The scheme initiated by Hugh Owen in 1854 to establish Queen's colleges in Wales failed. It was the period of the Crimean War and Indian Mutiny, and the time was inopportune. It was eight years later when the late Dr. Thomas Nicholas published a series of articles on higher education, which came to the notice of Hugh Owen. The outcome of communication between them was the meeting on December 1, 1863, at the Freemasons' Tavern in London, the chairman being the late Mr. William Williams, M.P., when it was resolved to establish a University for Wales. One by one Hugh Owen's colleagues on the Executive Committee retired, till he was left to fight the battle of Welsh higher education as best he might. All his friends did not desert him. One was still living—Mr. Stephen Evans, Chairman of the Cymmrodorion Council. The late Lord Aberdare, Sir Lewis Morris, and others came forward to fill the gaps. Though the one great tangible result of Hugh Owen's labours—viz., the Aberystwyth University College—was opened in 1872, the storm and stress of his life were not over until 1881, when the Departmental Committee made their report on Higher and Intermediate Education in Wales. Hugh Owen died in November, 1881. For well-nigh forty years he had been the one central figure and moving spirit of the Welsh educational movement. After his death his spirit went on conquering and to conquer. The national spirit has often died out—fortunately to be again and again revived—in many a Welsh district, but from time immemorial it has never even slumbered in the breasts of the Welshmen of London, who, when they revived the Hon. Society of Cymmrodorion and established the National Eisteddfod Association, provided the Principality with two of the most powerful educational agencies of this generation. Here again Hugh Owen was foremost in action, both societies owing their existence very largely to his initiative. The lecturer outlined the work which resulted in the passing of the Welsh Intermediate Education Act in 1889, and the establishment of the Welsh University, of which Dr. Isambard Owen was the great central figure. Upon him had fallen the mantle of Sir Hugh Owen, and it was no small praise to say that he was not lost within its folds. Dr. Owen's active interest in Welsh education began with the Society for the Utilization of the Welsh Language in 1885. At a meeting of the Cymmrodorion section of the London National Eisteddfod in 1887 the late Principal Viriamu Jones read a paper on "A Welsh University." Principal Thomas Charles Edwards presided, and on that day the foundation stone of the University was laid; in seven years the work was done. He was not in a position to apportion the credit for this wonderful achievement. Some of the credit was due to the late Lord Aberdare, some to that fine Welsh patriot Tom Ellis, some also to Principal Reichel, Principal Roberts, Mr. Brynmor Jones, Mr. George Kenyon, Mr. Humphreys-Owen, &c.; most of it was due to the late Principal Viriamu Jones and Dr. Isambard Owen. Such was the outline of the growth of the present system of Welsh education. It was said of old, "The Red Dragon will

lead the way." It took the lead on the fields of Crecy and of Bosworth in the days of long ago. Sir George Kekewich and Mr. Fearon would tell them that it took the lead at Whitehall to-day. Did it not all sound to them "like a romance"?

The Chairman (Sir George Kekewich) said he had found at Festiniog, in North Wales, the most interesting object-lesson he had ever had of perfect co-ordination between elementary and secondary schools. Cordial co-operation existed among the teachers, and the quarrymen of the district had contributed over £900 towards their secondary school buildings. He regretted they could see nothing of that kind in England. He had no hesitation in saying that Wales had secured a secondary system superior to any that now existed in the United Kingdom. At present only in Wales could a boy reach the top of the educational ladder from the bottom rung without any financial expense. One thing that had specially struck him while listening to Mr. Williams's paper was that no religious difficulty and no religious discussion could ever, in the long run, stand in the way of education. The results achieved could never have been attained without unanimity between the nation and their representatives in Parliament. With regard to the teaching of the Welsh language, he had ardently supported its being taught in the schools, for, if English was to be the language of commerce and trade, Welsh was the language of the hearth and the home, of music and of song. It increased the intellectual force and improved the reasoning faculties of a nation to talk and to think in two languages. He trusted he might end his days in what the Saxon called the wilds of Wales, but which were far more civilized than anything England could show.

SCOTLAND.

The Rev. David Miller Kay, B.D., B.Sc., of the Church of Scotland Mission, Constantinople, has been appointed by the Crown to the Chair of Hebrew and Oriental Languages in St. Andrews University, vacant by the death of Prof. Birrell. Prof. Kay had a distinguished career as a student at St. Andrews and Edinburgh, and he was for some time assistant to Prof. Kennedy, of Edinburgh. He translated from Syriac the "Apology of Aristides" for the Ante-Nicene Library, and he is also the translator of Dalman's "Die Worte Jesu." The appointment has given complete satisfaction in St. Andrews.

Under the will of the late Mr. Robert Irvine, F.R.S., Edinburgh University is in course of time to receive a Professorship of Bacteriology, with a class-room and laboratory. For this purpose the residue of Mr. Irvine's estate is to be retained until it accumulates to a sum of £25,000 or £30,000. Glasgow University has received £10,000 from Mr. James S. Dixon, Fairleigh, Bothwell, for the foundation of a Lectureship (to be ultimately erected into a chair) of Mining. The first Lectureship in Italian at a Scottish University has also been instituted at Glasgow.

The General Councils of Aberdeen and St. Andrews have been further considering the question of the bursary competition. The Aberdeen Council adopted the resolution of the Senatus and the University Court, that the maximum number of marks attainable at the competition should be the same for all candidates. This resolution, of course, cannot be carried out as regards all the bursaries without a new ordinance; but the Council resolved to "direct the attention of the Court and Senatus to the fact that the terms of their own resolution can be given effect to in awarding twenty-three open bursaries, to which the provisions of the ordinance do not apply." It was also resolved to deprecate the present practice of allowing five subjects to be taken in the competition, on the ground that this involves far too severe a strain upon the candidates. The St. Andrews Council has not finally expressed its opinion; but there is before it a proposal to limit the number of subjects to four, one of which shall be chosen by each candidate as his Honours subject, and shall have double marks assigned to it, while the maximum attainable marks shall be the same for all candidates. If the Aberdeen resolution is carried out as regards the bursaries, which are not subject to the provisions of the ordinance, we shall have an interesting experiment, the results of which will probably be valuable for guidance in future action.

In Edinburgh and Glasgow there has been a very considerable increase in the number of entrants for the Preliminary Examinations. In Glasgow the increase is over 40 per cent. in Arts and Science, and about 50 per cent. in Medicine. In Edinburgh it is over 20 per cent. in Arts and Science, and about 35 per cent. in Medicine. In St. Andrews it is about 20 per cent. in Arts and Science, while in Medicine there is no change. In Aberdeen there is a slight decrease in the number of entrants for both of the examinations. The increase is doubtless mainly due to the Carnegie benefaction; but it is hardly possible to make any definite inference from the figures, as a large proportion of new students (especially in Arts) take the Leaving Certificate instead of the Preliminary Examination.

The Rev. H. M. Gwatkin, D.D., Dixie Professor of Ecclesiastical History in the University of Cambridge, has been appointed Gifford Lecturer in the University of Edinburgh for the years 1903 to 1905.

(Continued on page 330.)

BLACKIE & SON'S NEW LIST

WRITE FOR COMPLETE EDUCATIONAL CATALOGUE.

Blackie's Illustrated Latin Series.

General Editor—Prof. R. Y. TYRRELL, Litt.D.

NEW VOLUMES.

TERENCE—PHORMIO. Edited by W. CECIL LAMING, M.A. Cloth gilt, 4s. 6d.

This contains 22 Illustrations, including several reproductions from the Vatican MS. There is no Vocabulary.

HORACE—THE ODES. (*Complete.*) Edited by STEPHEN GWYNN. Cloth gilt, 5s.

This is the prettiest annotated edition of the Odes in existence. It contains 48 Illustrations, including 3 coloured plates. There is no Vocabulary.

VIRGIL—GEORGICS III. and IV. Edited by S. E. WINBOLT, M.A. With or without Vocabulary. 1s. 6d. each.

THE LATIN PERIOD. An Elementary Latin Exercise Book. By E. A. WELLS, M.A. 1s.

This book contains well-graded hints towards the construction of Latin periods, with copious exercises. It will prove an excellent introduction to Latin prose.

A FIRST LATIN COURSE. A Latin Book for Beginners, based throughout on Oral Methods of Teaching. By E. H. SCOTT, B.A., and FRANK JONES, B.A. 1s. 6d.

A FIRST LATIN READER. By R. A. A. BERESFORD, M.A. With Vocabulary. Fully Illustrated. 1s. 6d.

Blackie's Illustrated Greek Series.

General Editor—Prof. TYRRELL, Litt.D.

AESCHYLUS—EUMENIDES. Edited by LIONEL D. BARNETT, M.A., Litt.D. 3s. 6d.

The *Athenaeum* says: "The work is on the whole excellently done."

The *Educational Times* says: "A judiciously illustrated and well edited school edition. Indeed we consider it on the whole to be unquestionably the best school edition so far produced."

HOMER—ODYSSEY. Book I. Edited by the Rev. E. C. EVERARD OWEN, M.A. 2s.

The *Educational Times* says: "A bright, serviceable, and scholarly edition. . . . The well executed illustrations enhance the value of the book."

XENOPHON—ANABASIS II. Edited by the Rev. G. H. NALL, M.A. 2s.

English.

KING LEAR. Edited by D. NICHOL SMITH, M.A. (*Warwick Shakespeare.*) 1s. 6d.

RICHARD THE SECOND. Edited, with Introduction, Notes, &c., in *The Picture Shakespeare*. Cloth, 1s.

ENGLISH TALES IN VERSE. With an Introduction by Prof. C. H. HERFORD, M.A., Litt.D. In decorated cover, 3s. 6d.

MILTON—LYCIDAS. Edited by H. B. COTTERILL, M.A. 1s. 6d.

MILTON'S ENGLISH SONNETS. Edited by E. H. BLAKEY, M.A. Paper, 2d.; cloth, 3d. [*Nearly ready.*]

German.

A SKELETON GERMAN GRAMMAR. By Prof. H. G. ATKINS, of King's College. Cloth limp, 1s. 4d. [*Immediately.*]

This, the first of a series of Skeleton Grammars, is designed to give the necessary minimum of grammar, sufficient to enable the student to begin reading. Important points are emphasised by the use of red ink in printing.

FIRST STEPS IN GERMAN. By W. SCHOLLE, Ph.D., and G. SMITH, M.A. [*In May.*]

A book of reading lessons, conversations, and songs, the whole designed on the new method, for use with Hölzel's pictures.

A GERMAN GRAMMAR. By the same Authors. [*In May.*]
Designed as a systematic companion to First Steps in German.

Blackie's Little French Classics.

Price, cloth, 4d. each.

VICTOR HUGO—WATERLOO. Edited by G. H. CLARKE, M.A., of Hymers College, Hull.

MUSSET—SELECTIONS IN VERSE AND PROSE. Edited by F. W. B. SMART, M.A., of Eastbourne College.

CHATEAUBRIAND—SELECTIONS FROM LES MARTYRS. Edited by E. T. SCHORDELIN, B.A., of Highgate School.

CORNEILLE—LE CID. Edited by LOUIS BARBÉ, B.A.

RACINE—LES PLAIDEURS. Edited by D. LOWE TURNBULL, M.A., of George Heriot's School, Edinburgh.

SELECTIONS FROM RABELAIS. Edited by E. C. GOLDBERG, M.A., of Tonbridge School.

MOLIÈRE—SCENES from LE MÉDECIN MALGRÉ LUI. Edited by W. J. CLARK, M.A., Ph.D.

LESAGE—SELECTIONS FROM GIL BLAS. Edited by H. W. ATKINSON, M.A., of Rossall School.

PROSPER MÉRIMÉE—MATEO FALCONE, &c. Edited by J. E. MICHELL, M.A., of Westminster School.

MADAME DE SÉVIGNÉ—SELECT LETTERS. Edited by Miss M. F. VERNON HARCOURT, of Notting Hill High School.

BOSSUET—ORAISONS FUNÈRES. Edited by the Rev. H. J. CHAYTOR, M.A., of Merchant Taylors' School.

LA FONTAINE—LONGER FABLES. Edited by A. H. WALL, M.A., of Marlborough College.

THÉOPHILE GAUTIER—LE PAVILLON SUR L'EAU. Edited by W. G. HARTOG, of Liverpool Institute.

BRUEYS AND PALAPRAT—L'AVOCAT PATELIN. Edited by E. B. LE FRANÇOIS, of Redcliff House, Clifton.

ERCKMANN-CHATRIAN—CONTES FANTASTIQUES. Edited by Miss MARGUERITE NINET. [*In May.*]

MICHELET—SELECTIONS FROM L'INSECTE. Edited by MAURICE GEROTHWOHL, B.Phil. [*In May.*]

French.

FRENCH IN PICTURE AND TALK. A Series of Eight Pictorial Conversation Sheets. Printed on strong Manilla paper, and mounted on roller. Price 6s. per set.

FRENCH IN PICTURE AND TALK. A Handbook of Conversational French, corresponding to the sheets. By MARGUERITE NINET. Price 2s. 6d.

SKELETON FRENCH GRAMMAR. By Prof. H. G. ATKINS, of King's College. Price 1s. 4d. [*Immediately.*]

A PRIMER OF HISTORICAL FRENCH GRAMMAR. By Prof. WEEKLEY, M.A. Crown 8vo, cloth, 2s. 6d.

Mathematics.

EASY MATHEMATICAL PROBLEM PAPERS. By CHARLES DAVISON, Sc.D., Mathematical Master at King Edward's High School, Birmingham. Containing numerous Problems in Algebra (up to and including the Binomial Theorem), Euclid, Books I.—VI. and XI., and Trigonometry to the Solution of Triangles and Geometrical Applications. With Answers and Hints for Solution. Cloth, 2s. 6d.

EDUCATIONAL STUDIES.

By T. G. ROOPER, M.A.

Contents.—Séguin—Manual Training—Obedience—Lord Collingwood's Theory and Practice of Education—Gaiety in Education—Individualism in Education—The Tree of Knowledge and the Tree of Life—On Spencer's "Education"—Geography in Elementary Education—On Methods of Teaching Geography—Miguel de Cervantes Saavedra—An Experiment in School Gardening. Crown 8vo, cloth, 2s. 6d. net.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY, E.C.

The St. Andrews University Court has appointed Mr. Peter S. McIntyre, M.A., to a studentship in the British School of Archaeology in Rome. This is the first studentship of its kind that has been instituted out of the general funds of a Scottish University, although Aberdeen has for many years had an independently endowed travelling Fellowship for archaeological research.

IRELAND.

The Royal Commission on University education in Ireland commenced its third sitting for the hearing of evidence on April 2, in Belfast. A very large number of witnesses were briefly examined during the four days the Commission remained in Belfast, chiefly professors and others connected with Queen's colleges, representatives of the Presbyterian body, and some heads of women's colleges. A day was spent in Londonderry in connexion with the Magee College, and the Commission then visited Galway and Cork Queen's Colleges. In the latter towns memorials from the local Councils were laid before the Commission, praying that the establishment of facilities for University teaching in the towns might be recommended by the Commission.

It is expected that the Commission will hold another, and probably its last, sitting in June, but it is not known when it will send in its final report. At present there appears to be a strong feeling in favour of the scheme of colleges under Dublin University among many different sections. At the meeting of the Synod of the Irish Episcopal Church, held in Dublin in April, the Primate, the venerable and distinguished Dr. Alexander, advised some broad and generous final settlement, and advocated this scheme. The Catholic laymen's memorial to the same effect has been largely signed. The Roman Catholic Archbishop of Dublin has published his letters on the distinction between Dublin University and Trinity College in pamphlet form. The scheme seems to be eagerly seized on by those who are opposed to sectarian education, although, if the colleges had the extreme autonomy that is suggested, they would be denominational to a very large extent.

At the Synod also attention was drawn to the teaching given in the Divinity School of Trinity College, which is believed by a section of Churchmen to have a High Church tendency. It was defended with great vigour by the Provost and others, who, however, showed too little consideration for the rights of their opponents in raising the question, and the motion was defeated.

The Graduates' Memorial in Trinity College is at length approaching completion. The funds were raised ten years ago among Trinity College, Dublin, graduates and undergraduates, as a memorial of the tercentenary of Dublin University, 1892. The new building will give a home to the various college societies, and to a Union of the members of the college. The project was long delayed by the opposition and procrastination of the Board, the difficulty found in obtaining their consent, and their approval of a site and the plans. It is now at last accomplished, and the Union will be opened, it is expected, on May 30.

Mr. Lecky, the historian, the distinguished Parliamentary representative of Dublin University, is about to resign his seat in the House of Commons. Mr. Campbell, K.C., late member for the Stephen's Green Division, and Mr. Arthur Samuels, K.C., both eminent and able lawyers, have already announced their intention of standing for election. There is, however, a strong feeling that, if possible, the University should be represented by a man of academic and literary distinction (as is the case in Oxford and Cambridge), rather than by an ambitious lawyer. The difficulty is to find such a man who is willing to sit in Parliament. In the present state of the Irish University question, and the certainty that changes and reforms in Trinity College cannot long be postponed, it is of much importance that Dublin University shall have, not only an able and energetic defender in the House, but also a representative versed in the needs of University education, and holding large and moderate views on Irish education and Irish politics.

The Intermediate Board met soon after the Easter holidays to draw up their rules and programme for 1903—no easy task, considering the mass of hostile criticism on those for 1902 that they have had to confront. The Rev. Andrew Murphy, head of St. Margaret's College, Limerick, at a meeting of the Catholic Head Masters' Association about Eastertide, proposed and carried resolutions asking the Intermediate Board to appoint a consultative committee of the heads of intermediate schools, to which they would submit their rules, when drafted, or any important changes, before deciding on them. It was pointed out that criticisms and suggestions from practical educationists would be found valuable, and also that the schools might be saved from the inconvenience and injury of having to carry out for a year unsatisfactory arrangements, which the Board will not alter when once they are published. It is suggested that such a consultative committee could be formed by allowing each of the educational associations to elect one or two representatives. The resolutions have been joined in by the other associations, and it is to be hoped that the Board will adopt the suggestion. None of the members of the Board are men who have had any considerable experience of school-teaching, nor do they consult the heads of schools; hence many of their rules are found to be unworkable, or to have results, when applied, that they never intended.

PRIZE COMPETITIONS.

The winner of the Translation Prize for March is Miss Alice Harford, Blaise Castle, Henbury, Bristol.

The winner of the Extra Prize for March is David Rees, Esq., County School, Rhyl.

The Translation Prize for April is awarded to "T.B.C.S."

The Extra Prize for April is awarded to "E.A.O." There were only four competitors.

J'occupais, dans l'unique auberge du lieu, une grande chambre blanchie à la chaux, sommairement mais proprement meublée, dont la fenêtre s'ouvrait sur le large. Assis sur une chaise de paille devant une table de bois blanc, j'ai composé alors tout un poème au bruit solennel et berceur des grandes lames qui semblaient me redire sans cesse que le rythme est une loi de la nature. Mais on ne peut toujours faire des vers et écrire, et la promenade à pied était mon hygiène et ma distraction. Le plus souvent, je m'en allais le long de la grève, ayant à ma droite la falaise aride et monumentale, et à ma gauche les espaces découverts par la marée basse, immense désert de sable, taché seulement de quelques groupes noirs de rochers. C'était mon excursion favorite. Pourtant, par les jours de forte brise et de grosse houle, j'abandonnais le bord de la mer et, remontant la rue du village, j'allais flâner dans la lande; ou bien je m'établissais avec un livre, sur un vieux banc, dans le cimetière, où l'on était abrité du vent d'ouest par la masse de l'église. Le bel endroit de tristesse et de rêverie! Vers le ciel d'automne où couraient les nuées, le clocher à jour s'élançait, pieux et sveltes. Des corbeaux, qui s'y étaient nichés, s'en échappaient et y revenaient en croissant, et l'ombre de leurs grandes ailes sans cesse glissait sur les tombes éparses dans l'herbe haute. Entre deux des contreforts de l'église, à demi ruinés et dont la pierre grise et rongée par le vent marin se parait çà et là d'un frissonnant bouquet de petites fleurs jaunes, une chèvre noire au piquet, presque effrayante avec ses yeux de flamme et sa barbe satanique, belait et tirait sur sa corde. Le soir surtout, quand, à travers le squelette d'un vieux pommier mort aux branches rageuses, on voyait là-bas, à l'horizon, le soleil couchant saigner sur la mer, ce sauvage cimetière emplissait l'âme d'une poignante mélancolie.

By "T.B.C.S."

I occupied, at the only inn in the place, a large white-washed room, simply but neatly furnished, overlooking the sea. Seated in a rush-bottomed chair before an unvarnished table I wrote a complete poem, to the solemn measured beat of the great waves—they seemed to be for ever repeating to me that rhythm is one of the laws of nature. But one cannot be always making verses and writing, and I used to take walks for exercise and recreation. I generally went along the beach, with the barren cliffs towering up majestically on my right, while on the left stretched the reaches uncovered by the outgoing tide, a vast sandy waste broken only by a few dark groups of rocks. This was my favourite walk. On windy days, however, when there was a heavy sea, I used to leave the shore, ascend the village street, and wander over the moor. Or I would install myself with a book on an old bench in the cemetery, sheltered by the church from the west wind, an ideal spot for dreaming and melancholy. The slender, open-work steeple, eloquent of things divine, rose up into the cloud-swept autumn sky. Some ravens that had built their nests in it kept flying in and out with noisy croaking, and the shadows of their great wings skimmed incessantly over the tombs dotted about in the long grass. A tethered black goat, looking quite uncanny with its fiery eyes and satanic beard, bleated and strained at its cord between two of the half-ruined buttresses of the church, the grey stone of which, worn by the sea-breezes, showed here and there waving clusters of little yellow flowers. In the evening especially, when through the weird leafless boughs of an old dead apple-tree the setting sun could be seen far away on the horizon tinging the sea with blood-red light, this neglected cemetery filled one with poignant melancholy.

We classify the 242 versions as follows:—

First Class.—Hampstead, Stella, Peter Quince, E.A.H., Sans gène, Aviemore, Agricola, Gempy, Kopje, Patrick, Chingleput, Chemineau, Queltette, Laureen, Petra, Paddy, Ouard, Vlaamsche Meisje, Penserosa, Lley, Crescent, Sandpiper, I.B.C.S., Altnacaille, Zig-zag, E.M.W., Skeat, Arrow-head, E.H.O., Erlach, Neuenburgh, Vedette, J.C.S., Music.

Second Class.—C. H. Fowler, Verhena, Gabriel, A.T., Conservatorist, C.H.C., Ulmi, Helvetia, Carola Socorro, L.A.D., Rosamira, D.D.D., Ζών πολιτικόν, Sirach, Davy, Gowan, Young April, Hitchhurst, Nivelle, Grahamstown, M.M.P., Mars, Match-box, Annie Laurie, Primrose, En avant, La Souris, H.D.T., Hannington, Francesca, P.A.J., Lavengro, Daffodil, Kaninchen, Nessko, E.A.M., Fortes et Fideles, Paul Dombey, Mititica, S.M.C., Crux, Day Dawn, Anchor, A.A., Jason, Mac, S.T., Pat, Caker, Corbar, Sahara, C.R.W.,

Third Class.—C.K., Wilts, Halfa, Garth, Topsy, Pea-shooter, Mothvin, Bluebell, Glendower, M.C., Æs Triplex, Emilia, Cnyan, Elie, Graham, Howt, P.J.E., Aida, Astronomer, Tyro, Firenze, Podder, Ellis, Merrybent, Stedye, Prig, Rex, H.M.F., Hibou d'Anjou, Market, Arvonensis, Towser, L.M.S., Pré Catelan, A.C.D., Saprobane, Caller Herrin, Yehta, Ambulator, Philip, M.C.K.K., Lusignan, Mandalay, T.G.G., Parrot, E.M.T., φα, A.L.O.W., Lorna Doone, Falcon, Sea-Gull, Beachy Head, Roundhill, Great Western, Phi, U.P.C.N., Eothen, Thetis, D.H.W., Misscot, Saint Blaise.

Fourth Class.—Dugneschen, Peterite, Robin, Hanover, Paris, Felicia, Paddy, Portal, Limousine, Big Tom, Massy, Kins, T.B., Calculus, Birkedom, Blobsbs, Condor, Kurz, Balliol, Kreena, Mélanie, Lilium, Scintilla, F.M.R., C.J.T., Bernardine, No Name, Ariel, Neith, Pélerin, O.M., Karo, M.M.M., F.W.W., Anglaise.

Fifth Class.—Emerald Isle, Junot, Margaret, Viola, Una, Quae, Salsify, Satrap, Snik, Oules, Gyp, Oundel, Pascal, F.S., Prado, Simulac, Nerveless, Anne.

The Coppée was easy save for two phrases that needed careful turning. One pitfall will account for a good many of the fourth classes: *se parait* has nothing to do with *paraître*. *Le large* is "the offing," not "the open country," and it is more natural to say "which looked out on," suppressing "the window of which." *Une chaise de paille* is a straw or rush-bottomed chair, not a straw chair. *J'ai composé*, "I wrote during my stay there a whole poem," not "I have written." It is a small matter, but I may note in passing that fifty at least, misled by the French, spelt "rhythm" with one *h*. *Monumentale* is "towering, beetling, standing as a landmark," not "monumental" nor (though this is nearer) "immemorial." *La lande*, "moor" or "dunes," not "inland." *La masse de l'église*, "the church fabric," not "the huge church." *Le bel endroit*, "What a place for sad day dreams," or "an ideal spot," &c. *Le clocher à jour*, "the open-work steeple," or "bell-tower with its lantern, pointed with tapering finger to the autumn-sky befecked with scudding clouds." Here a literal translation is hopeless; "rose slender and saintly," sounds ridiculous. *Corbeaux* is the generic name, and it is impossible to determine whether ravens or crows

or jackdaws (*corneilles des clochers*) are meant; *grandes ailes* are in favour of the first, but neither ravens nor crows are gregarious. In any case rooks, which only build in trees, are out of the question. *Aux branches rageuses* is difficult, and several suggested the emendation *rugueuses*. The word to my mind pictures the knotted, angular, aggressive-looking branches of a dead apple tree; "wizened" is the nearest I can get. *Saigner sur la mer* is bold; "sinking blood-red in the sea," or Shakespeare's "incarnadine" might serve.

Mr. C. R. Haines writes from Uppingham:—"Your prize list of books suitable for a boy in quarantine to read seems open to many criticisms. (1) 'Gulliver's Travels' is *absolutely* unsuitable. The satire is beyond a boy; the coarseness and offensiveness alone are likely to cling to his memory. It awakes my astonishment that a competitor should select the book and that you should 'crown' his selection. (2) In the prize list no scope is given to originality of selection. All the stock books are put together. A competitor who had never read any literature could have made up such a list merely from general reputation. It reminds one of the story: 'The style as we likes is the humdrum.' (3) Contemporary literature is ignored—if we except 'Treasure Island,' which is a pure plagiarism from other writers, such as E. A. Poe. Such splendid boys' books as the 'Jungle-Books,' 'Eothen,' and 'The White Company' are much more to the point than some of these. (4) 'Robinson Crusoe' is a book for an earlier stage than fourteen, and may be considered to have been read. Ditto perhaps 'Westward Ho!' (5) One touch of poetry at least is wanted."

[This seems to us rather captious criticism. Of "Gulliver's Travels" there are plenty of expurgated editions, and ignorance of the political satire does not spoil the romance. There is more force in the objection to "Robinson Crusoe," but we would wager that not one schoolboy of ten has read it. "Eothen" is a classic, but very few boys of fourteen would appreciate it. No touch of poetry in "Westward Ho!" or "Ivanhoe"!]

The following spirited translation in verse of the passage set in March was sent us by an English friend, who apologizes (needlessly, our readers will deem) for "a loose paraphrase, faite à la diable":—

Voici, mon cher ami, mon essai pour le prix
Qu'a gagné vaillamment la dame "Nectarine";
Elle a traduit le sens et m'a vraiment surpris
(Admettant que son cœur ne suit pas la doctrine)

(Continued on page 334.)

GINN & COMPANY,

Educational Publishers,

9 ST. MARTIN'S STREET, LEICESTER SQUARE, LONDON, W.C.

Ginn & Company, 9 St. Martin's Street, W.C.

TO meet the growing demand for their school and college books, Messrs. GINN & COMPANY, the leading educational publishers of America, heretofore represented in London by an agent, have opened a Branch Office at the above address, under the management of Mr. FRED J. MATHESON, through which all business for Great Britain and Ireland, the rest of Europe, and all British Colonies and possessions, with the exception of Canada, will now be conducted.

INVITATION TO TEACHERS.

All interested in teaching are cordially invited to call at No. 9 St. Martin's Street, where special facilities are given for the inspection of the books published by Messrs. GINN & COMPANY, representative of the most advanced methods in American Education.

SOME SPECIAL FEATURES.

GINN & COMPANY desire to call special attention to their "College Series" of Greek and Latin Authors; "Latin and Greek School Classics"; their "International Modern Language Series"; and their books on Anglo-Saxon.

GINN & COMPANY publish a large assortment of English Classics edited respectively for children and for the students of Higher English.

Excellent stories of Plant and Animal Life, designed to encourage observation and Nature study by the young, are among the publications of this house which have proved most popular.

WORLD'S HISTORY.

A GENERAL HISTORY FOR COLLEGES AND HIGH SCHOOLS.

By P. V. N. MYERS, recently Professor of History and Political Economy, University of Cincinnati.

Half-leather, 7½ × 5 ins., x. + 759 pp., 31 maps, 145 illustrations, 6s. 6d.

A complete outline in one volume of the World's History from that of Eastern Nations to the present time, accepted and recommended by all leading Colleges and Universities in the United States as the best brief course in general history.

"This is a handsome volume, well printed on good, thin paper, admirably equipped with illustrations and maps . . . and bound in half-morocco. The text is clear, readable, and well proportioned (bisecting at A.D. 476), and it attains a high level of accuracy. Altogether, the book strikes us as by far the fullest and cheapest single volume manual of 'General History' with which we are yet acquainted."—*School World*, February, 1902.

Teachers desiring to examine this book with a view to its adoption for class use may obtain a copy on approval by writing for it.

GINN & COMPANY, Educational Publishers, 9 St. Martin's Street, Leicester Square, London, W.C.

THE CORONATION

THE CORONATION

OF HIS MAJESTY KING EDWARD THE VIIITH.

A UNIQUE OFFER TO OUR SCHOOLS.

With the view of associating themselves with Head Masters and Principals of Schools in providing the pupils with instructive and lasting Souvenirs of the coming Coronation, **THE EDUCATIONAL SUPPLY ASSOCIATION** have decided to make the following unique offer:—

Subject to the sole condition that the book is either given to the children or sold to them without profit, the Association will supply, until June 30th, their new book (now publishing at rs. 6d.)—

KING EDWARD'S REALM.

Crown 8vo, 224 pages, superior Illustrations, bevelled boards, sides gilt lettered, at the nominal price of 6d. each net.

And a SUPERIOR EDITION of the same (published at 2s. 6d.) at 1s. each net.

This Superior Edition is on superfine paper, sides and backs gilt lettered, and with gilt edges, and will make a most elegant Gift or Prize Book. It is now being very largely ordered for this purpose.

It is felt that no more **interesting, instructive, and lasting** Souvenir of the Coronation could possibly be found than this simply told story of the growth and greatness of the vast Empire over which King Edward is called upon to reign.

In addition to the above, the following Souvenirs have been provided at prices ranging from 2d. to 6d. The exceptionally low prices at which they are offered place them quite outside all ordinary commercial transactions, and have been made possible only by the production of enormous quantities.

PHOTOGRAPH OF HIS MAJESTY THE KING.

CABINET SIZE (6½ in. x 4¼ in.)	On thick white cardboard mount, with facsimile of King's Signature	8d. each NET.
	On thick tinted mounts, with gilt edges and strut at back, with King's Signature stamped in gold	4½d. each NET.
EXTRA LARGE SIZE (9½ in. x 6½ in.)	On thick white cardboard mount, with facsimile of King's Signature	4d. each NET.
	On thick tinted mounts, with gilt edges and strut at back, with King's Signature stamped in gold	6d. each NET.

CORONATION CARD (Size 9½ in. x 7½ in.). A special and very elegant design.

Beautifully illuminated in gold and 12 colours, on thick, superfine card ... (15s. per 100) 2d. each NET.

Illustrated Circulars, giving full particulars, together with Specimens of any of the Souvenirs, may be had on application.

THE EDUCATIONAL SUPPLY ASSOCIATION, Limited,

42 HOLBORN VIADUCT, LONDON, E.C.

These School and Teachers' Advertisements are continued from page 294.

THE OWENS COLLEGE, MANCHESTER.

HALL OF RESIDENCE FOR WOMEN STUDENTS,
ASHBURN HOUSE, VICTORIA PARK, MANCHESTER.
Warden—Miss H. M. STEPHEN.

Fees, 36 to 50 guineas the Session. Degrees open to women (including Medicine and Teacher's Diploma). One Bursary of £15, renewable for two additional years, will be awarded at the Entrance Scholarship examinations at the Owens College in June.
Apply to the WARDEN before May 7.

UNIVERSITY OF ST. ANDREWS.—UNIVERSITY HALL.

RESIDENCE FOR WOMEN STUDENTS.

Warden—Miss FRANCES H. MELVILLE, M.A., with First Class Honours in Mental Philosophy.

There are some VACANCIES in the Hall for next Session.

Students are received in residence during the Preliminary and other University Examinations in September.

The Classes and Degrees of the University, and some Bursaries and Scholarships, are open to Women.

For further information, apply to the WARDEN, University Hall, St. Andrews, N.B.

BEDFORD KINDERGARTEN TRAINING COLLEGE.

14 THE CRESCENT, BEDFORD.

Head Mistress—Miss AMY WALMSLEY.

A thorough training is given at the above College to Students preparing for the National Froebel Union Examinations.

Opportunity for Class Teaching is afforded in the Kindergarten, Transition, and Preparatory Classes of the School.

House of Residence for Students—Shenstone Lodge, Ashburnham Road.

For terms and particulars, apply to the SECRETARY, Mill Street, Bedford.

HARTLEY COLLEGE, SOUTHAMPTON.

Principal—S. W. RICHARDSON, D.Sc. (Lond.).

SUMMER COURSE OF NATURE STUDY FOR TEACHERS.

A Summer Course of Nature Study will be held at Sandown, in the Isle of Wight, from August 2nd to August 16th, 1902. The arrangements will be made by Dr. RICHARDSON, Principal of the Hartley College, and T. G. ROOPER, Esq., H.M.I. The Higher-Grade School at Sandown has been kindly lent by the Sandown School Board for the purpose of lectures and demonstrations. The main feature of the Course will be work on the Downs and the sea-shore. The Course will be conducted by J. T. JENKINS, D.Sc., Ph.D., Lecturer in Biology and Geology at the College.

For further particulars apply to D. KIDDLE, Registrar.

DAY TRAINING COLLEGE FOR WOMEN (UNIVERSITY COLLEGE, LIVERPOOL).

The College is open to consider applications for admission from Candidates under the conditions of Art. 115 and Schedule viii. of the Government Code.

Students are required to read for the Degrees of the Victoria University. Such work forms the greater part of the course of study necessary for the Government Teacher's Certificate.

Principal—Professor WOODWARD, B.A.

Tutor in Education—Miss C. GRAVESON, B.A.

Terms of Admission and Forms of Application may be obtained from the SECRETARY of the Day Training College, University College, Liverpool.

BEDFORD—CRESCENT HOUSE LADIES' COLLEGE.—Spacious buildings. Visiting Masters. Resident Foreign Mistresses. Tennis, Gymnastics, Riding, &c. Terms 60 guineas. Address—Mrs. E. CARROLL, Bedford.

GYMNASTICS, HOOKEY, &c.

MISS SPENCER HARRY, Principal of West Norwood Gymnasium, Knight's Hill, is open to additional engagements, visiting, in London or vicinity.—41 Binfield Road, Clapham, S.W.

LECTURES ON CURRENT EVENTS.

By CHARLES S. JERRAM, M.A. Oxon.,

Author of "The Armies of the World," &c., Lecturer at the Birkbeck, Goldsmiths' Institute, and for the Navy League.

ADDRESS—4 LAVELL STREET, ALBION ROAD, STOKE NEWINGTON, N.

The following Principals of schools heartily commend Mr. Jerram's Lectures:—Mesdames Brichta, De la Mothe, Power, Ramsay; Misses Boyer-Brown, Cox, Coke-Smyth, Hill, Langhorne, Michôd, Wilkie, Woods.

These Lectures are an attempt to put in practice Mr. John Morley's well known suggestion.

J. LANGHANS, M.A. Oxon. (Hertford College),

German Taylorian Scholar; Holder of French Taylorian Certificate; Author of "The German Empire and its Evolution under the Hohenzollern."

TUTOR IN MODERN LANGUAGES.

Ladies' Colleges and Schools visited in London and country.

Special subjects: Advanced French and German (Grammar, Composition, and Literature). A Course of Ten Lectures on French and Ten on German Literature, either in French, German, or English, with extracts from famous authors, specially prepared for Schools.

Address—46 Albion Road, South Hampstead, N.W.

ART STUDENTS' HOME, 4 & 5 BRUNSWICK SQUARE, W.C. (Established 1879), for Ladies studying Art, Science, Music, and Medicine. For particulars apply to the SECRETARY.

MISS ANNA LÖWE, A.R.C.M. (Pupil of Fraulein Eugenie Schumann), desires Visiting Post in Ladies' School for Advanced Pupils. Brilliant Solo Performer. Successful Teacher. Also accepts Engagements for Concerts and at Homes. — 97 Oxford Gardens, North Kensington, W.

Par la force des mots qu'elle a choisis pour dire
Que l'Orient se fiche, aussi bien que l'Europe,
Des gens mal élevés qui prennent leur loisir
A lorgner une femme en la croyant myope. H. E. H. J.

Tandis que vous suivez un chemin difficile
Par un étroit sentier entouré de murs clos,
Peu fréquenté, rapide ! (allure peu facile)
Peut-être verrez-vous un paquet, un ballot
En forme de cercueil, un tas de toile blanche.
N'en doutez pas, c'est bien la femme d'Orient
Luttant péniblement contre une jupe ou manche,
Et les plis tortueux de son drap trop pliant,
De grossières bottines et d'affreuses babouches...
Gauchement elle avance et révèle son sexe
Dans des efforts constants ; des touches et retouches
Pour soulager un peu son fardeau trop complexe...
Que dis-je ? le fardeau de ses brillants attraits.
Ses femmes esclaves la suivent de bien près.
Vous ne pouvez rien voir de son visage même,
Si ce n'est ses yeux noirs vous fixant à l'extrême,
Et les bouts trop fardés des cinq doigts de sa main,
Comme boutons de rose aux bastions d'un Kremlin ;
Voyez : elle se tourne, a peur d'être surprise,
Et se retourne encor comme il sied à sa guise,
Guettant de tous côtés le regard musulman
Qu'il lui faut à tout prix éviter maintenant ;
Mais voilà tout d'un coup son *yashmack* qui s'envole,
Et la femme se montre—oui—sans voile ou contrôle,
Inondant tout votre être et d'extase et d'alarme,
Au merveilleux soleil d'une beauté qui charme.
Notez bien, ce n'est pas un caprice léger,
Une grâce factice et qu'on doit ménager,
Qui vous porte à douter si son corps ou son âme
Vous ont amouraché de cette belle femme ;
C'est tout bien sa beauté : ces grands traits réguliers,
Cette vive couleur, ces contours familiers,
Ce feu, que le courage, assurément pour elle,
Inspire à sa personne, à son âme—Dieu sait quelle !—
Ce brillant, cette fougue et non moins cet orgueil
Que respire sa lèvre et qu'on dit un écueil.
La femme fait sourire, mais la beauté domine,
Vous pâlissez devant la splendeur qui vous mine...

Elle s'en aperçoit, et d'un oeil tout malin
Vous contemple et sourit doucement, puis, soudain,
Ses cinq doigts à la fois, ces cinq boutons de rose
Sur vos bras elle plante et sur l'un se repose
En criant "*Yamourdjak* ! Mon ami, pour tout beau,
De la peste, en un mot, je vous fais le cadeau !"
C'est sa façon de plaisanter, façon d'abeille...
Un *Joe Miller*, ici ; là-bas, histoire vieille.

A Prize of Two Guineas is offered for the best translation of the following hymn by Spitta :—

Wir sind des Herrn, wir leben oder sterben !
Wir sind des Herrn, der einst für alle starb !
Wir sind des Herrn, und werden alles erben !
Wir sind des Herrn, der alles uns erwarb !
Wir sind des Herrn ! so lasst uns ihm auch leben,
Sein eigen sein mit Leib und Seele gern,
Und Herz und Mund und Wandel Zeugnis geben,
Es sei gewislich wahr : Wir sind des Herrn !
Wir sind des Herrn ! So kann im dunklen Thale
Uns nimmer graun ; uns scheint ein heller Stern,
Der leuchtet uns mit ungetrübtem Strahle ;
Es ist des Gottes Wort : Wir sind des Herrn !
Wir sind des Herrn ! So wird er uns bewahren
Im letzten Kampf, wo andre Hülfe fern ;
Kein Leid wird uns vom Tode widerfahren,
Das Wort bleibt ewig wahr : Wir sind des Herrn !

EXTRA PRIZE.

At the coronation feast of Henry V. there were antelopes, eagles, and other strange fowl "with subtilties in their bills." A Prize of One Guinea is offered for the best triplet of subtilties or mottoes for the coming coronation dinner.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by May 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C.

ESTABLISHED 1858.

Manufacturers of School, College, and Church Furniture,
370 STRAND, LONDON, W.C.

THE LOUISE SINGLE DESK.

No. 25, DUAL DESK.

Proprietors of "Premier" Patent Sliding and Folding Partition for Dividing Schoolrooms.
CATALOGUE OF SCHOOL OR CHURCH FURNITURE FORWARDED ON APPLICATION.
Estimates given for completely Furnishing Schools.

FRANCE AND ENGLAND: AN OBJECT-LESSON.*

THE seventh volume of "Special Reports" comes at an opportune moment. It deals, indeed, with a limited subject—Rural Education in France—but French education is all of a piece, and in performing their allotted task Mr. Brereton and Mr. Medd, especially the former, have felt compelled to survey the whole field, and incidentally to touch on the salient points of contrast between the educational systems of France and of England.

It is solely to this aspect of the Report that we desire now to call attention, and we hope our readers will buy the volume for themselves, not merely for the sake of the technical information not otherwise easily procurable, but as throwing a side-light on French life and character all the more valuable because this was not the direct object of the authors. The matter is so interesting that we cannot help regretting that it is marred by Mr. Brereton's careless English, his gallicisms, and disregard of syntax. The printers' reader is as much to blame as the author and reviser.

In spite of Royal Commissions and Departmental Reports and Matthew Arnold, how little we still know of our neighbours! If the average educated Englishman—let us say a Cabinet Minister—were asked what is the *différence* of French primary education, he would probably answer: "It is highly centralized; the Minister of Education is an autocrat, appoints all the teachers, and has an army of inspectors who see that his curriculum is carried out to the letter; and the schools are all godless." Our readers, even if they have not read this volume, need hardly be informed that the opposite of these statements would be nearer the truth. Education is far more localized in France than it is in England; the powers of the Minister of Education are strictly circumscribed and limited; he has nothing to do with the appointment of teachers or of inspectors (except of the eleven General Inspectors); the curriculum of town and country schools is differentiated, as it has yet to be in England; and a third of the children of France are still under religious instruction.

Let us take *seriatim* the main points of contrast, and begin with the most important factor of all, the teacher. In France every primary teacher has been trained; Article 68, the properly vaccinated female help, is unknown. Only a small and fast disappearing remnant of those who were teachers before 1881 survive, without *brevet* or diploma. Again, there is in France no question of tenure. Teachers, though appointed by the Prefect on the recommendation of the Academy inspector, are paid by the State, and can only be dismissed by the central authority. But how about the pay? Our friends at Bristol the other day waxed indignant at the 40s. a week which is the average wage of an assistant master in England. That, Mr. Brereton tells us, is about as much as a French teacher can get at the top of the tree. "The highest paid teachers in France are only earning the same salary as the average paid teacher in England." If, then, English teachers are discontented with their lot, there must in France be smothered mutiny or open rebellion. Not a bit of it. Mr. Brereton and Mr. Medd were both struck by the general air of comfort and contentment, and hardly once heard a murmur. What is the explanation? "The humblest teacher in the most out-of-the-way hamlet, acting, as it were, as the pioneer of new ideas and new traditions, often in the midst of open indifference or covert hostility, feels that he has got a whole Ministry behind his back, just as the lonely sentry feels that he has in his rear an army of his own friends." Among these "godless" teachers *esprit de corps* and the missionary spirit are strong, and with high thinking goes plain living. Prices rule higher than in England, but the standard of comfort is lower.

To turn to the schools. In 1878 France cut at a stroke the knot that we are fumbling at in 1902. The law of June imposed on every commune the obligation of erecting or acquiring a school or schools of its own. There was no haggling over the cost. In the succeeding nineteen years £34,000,000 have been spent on buildings alone. In 1881 followed the abolition of school fees, and the next year its corollary, compulsory attendance. A fourth law, which consummated the work of State education for the people, followed in 1886; it decreed the

laicization of schools and "cut the painter once and for all between the public and private schools, between the State and the different cults."

What have been the results of this drastic and uncompromising application of the aphorism that the State has all to do with education and nothing to do with religion, beyond keeping the peace and seeing fair play between the various sects? Mr. Brereton's evidence goes to show that on the whole the balance is in favour of undenominationalism. The bulk of the nation is content, the antagonism of the *curés* is dying out; the State schools are far superior, at least as regards profane learning, to the Congregationalist schools that they have superseded, and there is no suggestion in these Reports that the morals of the nation have suffered from the exclusion of dogmatic teaching. In fact, the one dissentient note, or rather minor chord, that we can discover is the opinion of an inspector who thought that

Perhaps Jules Ferry went too far; had he allowed the *curé* to enter the school in order to teach the Catechism to those whose parents wished for it, the result would probably have been peace in the long run. For, if the *curés* could have given up their schools with honour, they would have done so long ago, as their schools constitute a very heavy drain on the clergy.

Denominational schools in France, as we remarked before, still educate one-third of the population; yet they receive not one penny from rates and taxes, and, as regards building, plant, and qualifications of staff, they are under State supervision. Our so-called voluntarists have already three-fourths of their expenses paid by the Treasury, and yet they groan under the "intolerable strain," and demand to be relieved of the remaining fourth, and to occupy the ground in perpetuity, paying only a peppercorn rent, the cost of broken tiles and windows. When looked at through French spectacles the claim seems somewhat extravagant.

Of administration and the elaborate scheme whereby the central and the local authorities are co-ordinated we cannot now treat, but must confine ourselves to what concerns us most nearly at the present moment, the constitution and working of the local authority.

The *conseil départemental* is the analogue of the education committee of Mr. Balfour's Bill. The main difference is that the constitution of the former is rigidly defined, while the latter may be as various in size and form as the forty-one counties of England, provided the scheme be approved by the Board of Education. The *conseil départemental* is presided over by the prefect and contains delegates of the *conseil général du département*, which corresponds roughly to our County Council.

It is not in any sense a representative body of the ratepayers, as the pedagogical members are in a large majority. The Academy inspector acts as vice-president. Other members are heads of the two normal schools, two male teachers and two female teachers elected by their colleagues, and two primary inspectors. On the discussion of certain questions the private schools have a right to be represented by two delegates. Experts can also be summoned. The duties of the Council are pedagogical, administrative, and judicial. They see that the programmes are duly carried out, and discuss the educational condition of the schools. Their administrative functions permit them to determine the number, nature, and situation of the primary schools, as well as the number of the masters. . . . Its judicial functions make it an appeal court in the question of the opening of a private school. Its disciplinary powers are very great, extending to a complete prohibition to teach in any school.

Lastly, as regards finance, though it has no power of directly levying a rate, yet it can indirectly compel the communes to spend money on education.

It would be tedious to point the differences between this carefully contrived and adjusted piece of mechanism, which works almost automatically and without apparent friction, and the happy-go-lucky take-it-or-leave-it, *fais ce que voudra* scheme of the Government Bill as it stands. No legislation could bring about the homogeneity of the French system, the product and result of French genius. We do not want uniformity. We thank God, as Mr. Skrine has it, that "He has made us Englishmen, and not as masters and boys are abroad." Yet on any who read these Reports with an open mind the reflection must be borne that the Englishman's watchword, "Elasticity, variety, spontaneity," may become a fetish, no less than the "Liberty, equality, fraternity" of the French Republic. In the long run our unchartered freedom tires. We lack what Mr. Brereton has happily termed the "power station" at the centre;

* "Special Reports on Educational Subjects." Vol. VII.: "Rural Education in France." (Price 1s. 4d. Eyre & Spottiswoode.)

we lack what the Bill promises to give us, the machinery for co-ordinating primary and secondary education, not only at the centre, but in each local area; and we lack still more, what the Bill does not profess to give, the power of compelling each Local Authority to provide an adequate supply of primary, secondary, and higher education, and in particular, of training institutions.

REVIEWS AND MINOR NOTICES.

The Great Persian War and its Preliminaries: a Study of the Evidence, Literary and Topographical. By G. B. GRUNDY, M.A., Lecturer at Brasenose College, and University Lecturer in Classical Geography, Oxford. With illustrations. (Price 21s. net. John Murray.)

His studies of Plataea and Sphakteria had already done more than introduce Mr. Grundy to notice; they had given him a claim to speak with authority on problems of Greek topography and military history. Consequently the appearance of this, the first volume of a connected work on Hellenic warfare, has been eagerly expected. The method on which he has relied is simple, but strictly scientific: proceeding from the postulate that, in order to discuss such problems with profit, it is necessary to be accurately acquainted with all the relevant facts which are accessible, armed with a theodolite and a measuring chain, a bold and industrious explorer may render invaluable service to armchair critics; though he must hardly expect their gratitude. He must face brigands, malaria, mosquitos, and an unspeakable cuisine; but he may hope, in good time, to send many German programmes and some more pretentious treatises to the pastry-cook. To the history of the great Persian War Mr. Grundy has contributed an exploration and survey of Plataea and Thermopylae which must serve as the basis of all future criticism; and this service alone should win for him the warm gratitude of all genuine students of Greek history.

There was, not so very long ago, a period in history when every tyro repeated with flippant assurance that the Father of History was the father of lies. No doubt they spoke better than they knew. Every historian is—or should be—well aware that history cannot be true—absolutely, objectively true. Consider the growth of an anecdote and the stimulant qualities of a dish of tea; and then consider the fertile imagination of the Greeks and the sources for history at Herodotus's disposal. Herodotus himself was deeply religious: he wanted to be truthful and to do justice. He spared no personal pains in his quest. He is, therefore, to be trusted for the facts he records, but not for the motives by which he seeks to explain them. This, in brief, is Mr. Grundy's first principle of criticism. Succinctly stated it is sound enough; but its value will depend upon its application. Mr. Grundy, justly enough, protests unceasingly for the good faith of Herodotus. His only endeavour, in rationalizing history, is to save the author's reputation. His motives are honourable and his advocacy benevolent. But, in the effort to vindicate, Mr. Grundy claims rather too often the prerogative of reconstruction. It would seem, indeed, as if Herodotus can only be defended from the charge of forgery by imputing to him the meanest capacity—an honest painstaking soul, but of simple wits! Mr. Grundy is very ready, on occasion, to eke them out from his own store, and to act the part of the perfectly sincere but officiously candid friend.

Take, for example, his interpretation of Herodotus's story of the events leading to the outbreak of the Ionian revolt. He holds that, pursuant to the disastrous failure of Darius's Scythian expedition, a widespread conspiracy was hatching amongst the Ionian Greeks, that the Persian attack on Naxos was really due to the machinations of the conspirators, who wanted an opportunity of consulting each other undetected, and of uniting and mobilizing the united Ionian fleet; that Aristagoras, and not Megabates, the Persian, ruined the attack by sending secret information to the Naxians; that—but why continue? It is Herodotus turned inside out; and there is not a scrap of evidence to back it. Even the malignant author of the pamphlet "On the Malignity of Herodotus" never ventured so audacious a flight.

Take a still more striking case. Mr. Grundy offers an

entirely novel setting for the indisputable fact of the last stand of Leonidas and his heroes at Thermopylae. He asks us to believe that when Leonidas "sent away" the 2,800 Greeks, he really despatched them, on hearing that the Persians had discovered "the upper path" and were advancing by it, to seize it before the Persians had time to debouch from it in any strength. It was no piece of noble devotion, but a strategic reason, which kept the Spartans, Thebans, and Thespians at Thermopylae. Afterwards the Spartans elected rather to dazzle posterity with a lie than to tell the truth about their cowardly allies; and the 2,800 cowards sealed their own lips in "a conspiracy of silence," which it has been left for Mr. Grundy to detect! It is a magnificent conjecture; but it is quite incredible.

We think that Mr. Grundy has, perhaps, most reason to be satisfied with his work on Plataea. Here he has, indeed, with admirable acumen, judgment, and industry, constructed an intelligible campaign out of chaos. With perhaps one exception (page 493), his argument is throughout convincing, and the entire concision which results from the minute study of the text of Herodotus and a careful survey of the ground enhances the reader's faith in Herodotus and his good will to Mr. Grundy. But even here it seems to us doubtful whether Mr. Grundy does not press his favourite canon of criticism rather too hard. "Herodotus's account," he says, "exemplifies in a peculiar way both his excellences and his limitations as a military historian. His own diligent inquiry led him to make the best use possible of the evidence at his command; but that evidence was not obtained from one who was conversant with the plans of those who directed the operations, nor had the historian himself such knowledge and experience as would enable him to form sound inductions as to the nature of those plans from information of the kind which was at his disposal." Is Mr. Grundy so sure of all this? It is singular that he has entirely overlooked the fact that Olympiodorus, son of Lampon, commander of the three hundred picked Athenians who so boldly came to the rescue of the distressed Megareans (Herodotus IX. 21), was almost certainly, either himself, or through the medium of his son Lampon, the prophet of Thuri, one of Herodotus's sources. He probably fought through the campaign; and there is no reason to suppose that one who, at any rate, must have been a competent tactician should have been altogether ignorant of strategy.

Mr. Grundy's style is not altogether attractive; it is least irritating when it does not aspire to the grandiose. He would seem to have stitched his sheets rather hastily together, and to have left many inconsistencies and repetitions which a more careful revision might have removed. To have omitted all discussion of the pass by which the host of Xerxes entered Thessaly is extraordinary; the narrative and criticism of the Persian attack on Delphi is inadequate (e.g., all reference to Herodotus, IX. 42, is omitted); and we were a little surprised that he should have made no attempt, when dealing with Salamis, to solve the riddle of Keos and Kynosura. Mr. Grundy's accuracy leaves usually little room for complaint. We note, however, in conclusion, one or two points which might be altered or cleared up in a future edition. The date 519 for the "commendation" of Plataea to Athens is usually held to be ten years too early (page 179). A reference to the actual passage in Herodotus (VI. 109) will show that Miltiades did not urge the immediate offensive (page 180). This is a small point, but, as Mr. Grundy will see, something turns upon it. The second paragraph on page 202 is, at the least, misleading. Finally, the δεικνύου should not be confused with Rodney's famous manoeuvre of "breaking the line."

Pastor Agnorum: a Schoolmaster's Afterthoughts. By JOHN HUNTLEY SKRINE. (Price 5s. net. Longmans.)

"A cum talis sis utinam noster esses!" is the first expression of our feelings as we lay down this fascinating volume. A better afterthought succeeds; we recall the *naturaliter Christianus* of St. Augustine, and acknowledge to ourselves that, though he is a clerical head master, though he mocks at pedagogics and speaks disrespectfully of the registration of teachers, the Warden of Glenalmond is one of the elect and a true shepherd. He has sat at the feet of Edward Thring, and learnt his trade at Uppingham. We are not greatly concerned if he overlooks or even looks down upon the professional element; he both by precept and example shows that the teacher's is a high vocation and calling, and the greater includes the less.

Thus, in treating of extraneous work, he lays down that the schoolmaster may be author, poet, or man of science, provided always that the school comes first in his affections, and that all his other work is subsidiary or complementary. The same rule holds good of the clerical master, and Mr. Skrine admits it, though he puts the case somewhat differently.

I stand by monarchy in the school. If we cannot come at it from one end, let us from the other; if we cannot find a cleric good enough to rule our school, if, that is, we cannot have a priest-king—king because he first is priest—then let us have the king-priest; let our layman feel that, having the temporalities, he must occupy the spiritual command as well.

Of course he must. However it may be with primary schools, it is not possible in secondary boarding schools to divorce sacred and profane learning, and Mr. Skrine points out the disastrous consequences of the experiment at St. Alphage—that is, Lancing College. Nor is there any just cause or impediment why a layman should not occupy the pulpit, as did Dr. Potts, Mr. Hart, and Mr. Millington; aye, and publish his lay sermons, which, to the reader, are indistinguishable from the clerical, and which, it can hardly be doubted, produced the same effect on the listener, though Mr. Skrine still clings to the efficacy of the surplice.

And no doubt there is a force in a laic's utterance; but it is the force of surprise. When in old Rome a bull spoke in the Forum he gained attention; not, however, by wisdom or sincerity, but because for a bull to speak was unusual. The force of surprise, however, decays by repetition.

Taken with the context the jest is comparatively harmless, yet it seems to us a remnant of the old leaven of malice and wickedness whereof Mr. Skrine has not wholly purged himself, lover as he is of sincerity and truth. We have ourselves unconsciously fallen into the besetting sin of the reviewer and picked out the mote in our brother's eye. To brothers of the craft the book is dedicated, and a brother will forgive us for plain speaking. We make at once the *amende honorable*, and give one or two passages which reveal the true "Pastor Agnorum." First one on the burning question of tenure, with an apology for the curtailment:

I am persuaded that it is not wrongs to the pocket, but wrongs to the pride, which oftenest wreck the peace of an order. To believe that your chief takes himself for more than one, and you for less than one—there is the sting of subordination. It is not absolutism which envenoms, but contempt. Personal government may be criticized and deplored; it is not hated till it ignores the personality of a colleague. If the chief would always remember that his table is round, and one gentleman at it as good as another, . . . that the head must work his work upon the school not by him as a tool, but *through* him as a life; if, I say, the chief will be thus chivalrous, will his men ever be disloyal?

The next passage shall be the ending of an idyll, a prose poem, as perfect in its way as any of Ruskin's. We would that we could quote it entire:

For we, whose flock was youth, we also knew why we were shepherds, by the taste of the frank airs and the music of the free waters, and that sunlight of this region of ours, which is always and for ever morning-land. And we knew it also by that which an old loved Oversepherd used to call "the blessing of the weary at the close of day," the labourer's joy at a day's work harvested. And, best of all, we knew it, even we, by the Presences which visit the sheep-walk.

We had marked other passages for quotation, but it is a hopeless task to convey by extracts the charm of a work of art which, to be appreciated, must be perused as a whole.

History of Scotland, Vol. II. By P. HUME BROWN, M.A., LL.D. With four Maps and Plan. (Cambridge University Press.)

Prof. Hume Brown, in his middle volume, narrates the history of Scotland from the accession of Mary to the "glorious" Revolution of 1689. It may seem somewhat disproportionate to assign one volume in three to a period of only a century and a half; but there is sufficient justification in the importance of the events, and in the peculiarity of the characteristic motives that governed them. The dominating force in the determination of the course of the national development was religion—a force stirred to the keenest activity by the Roman Catholic faith of Mary, and reduced to a subordinate political influence by the time of the Revolution settlement only by the educative effects of severe experience. Prof. Hume Brown has not infused into

his work the preservative of style, nor is he even exempt from clumsy or negligent expressions that divert the reader's mind from the matter of the text; but he seems to improve with practice. By way of compensation, however, he is industriously plodding; he has sought out the facts with indefatigable persistence, weighed conflicting evidence—and there is much of it—with calm judgment, and set forth the story, in somewhat colourless fashion indeed, yet in as near an approach to the truth as is reasonably to be expected under present conditions.
